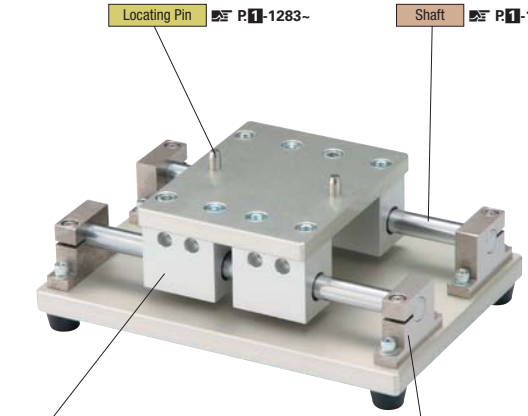
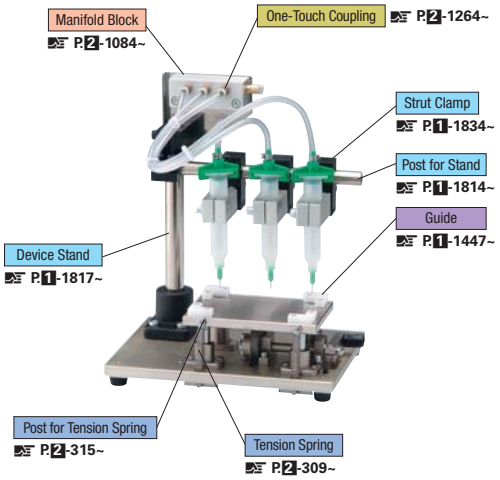
Example of Use 1: Standard Components

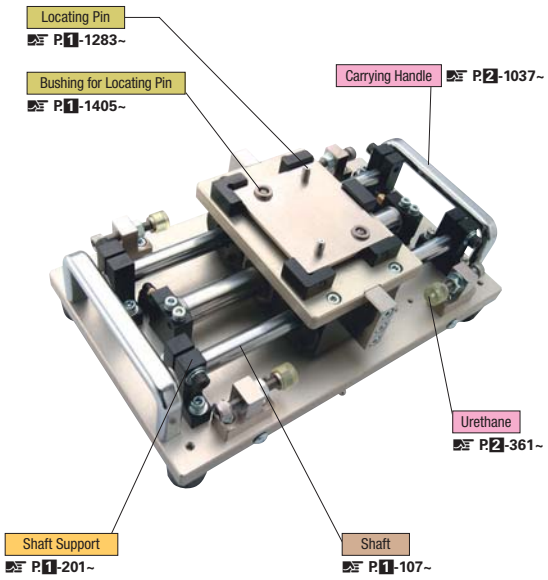
Oil Free Bushing Sliding Unit



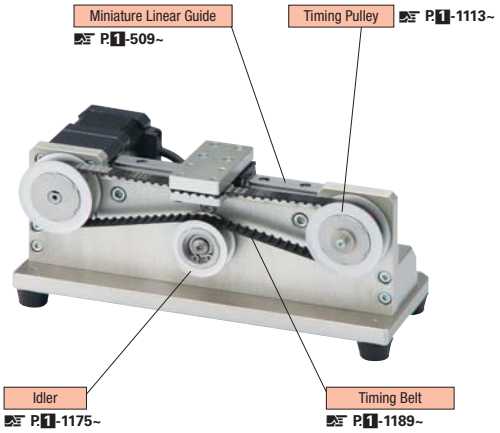
Dispense Unit



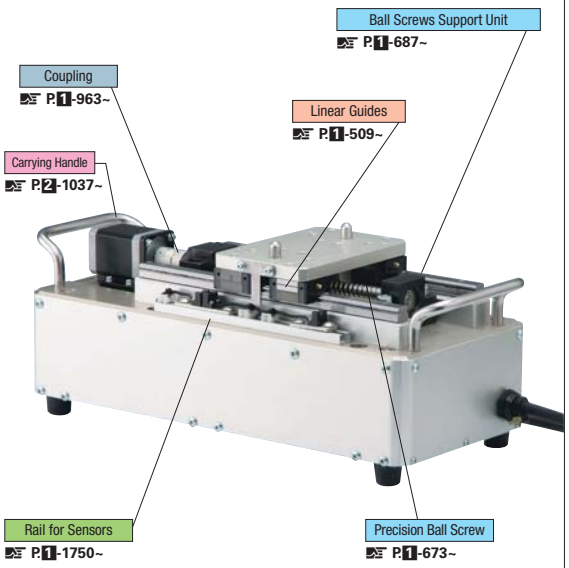
Cylinder-Driven Stage



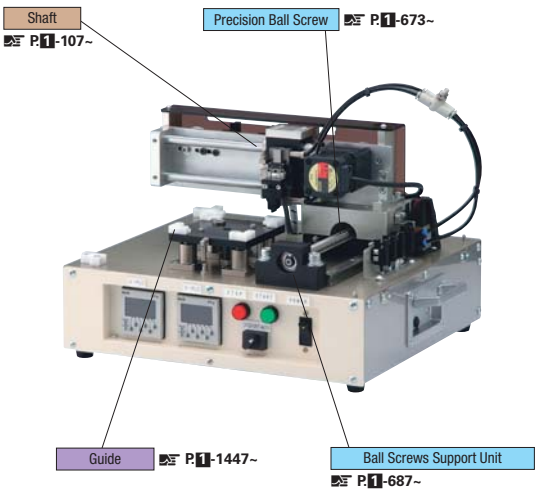
Belt-Driven Shuttle Unit



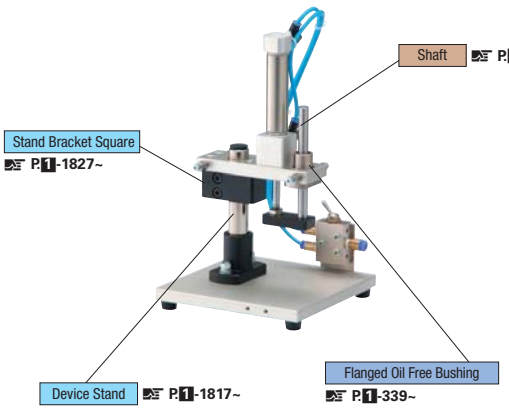
Ball Screw Linear Motion Unit



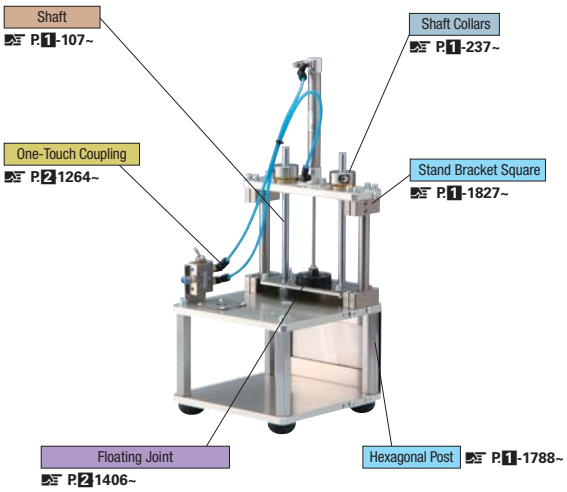
IC Chip Transfer Equipment



Vertical Movement Unit

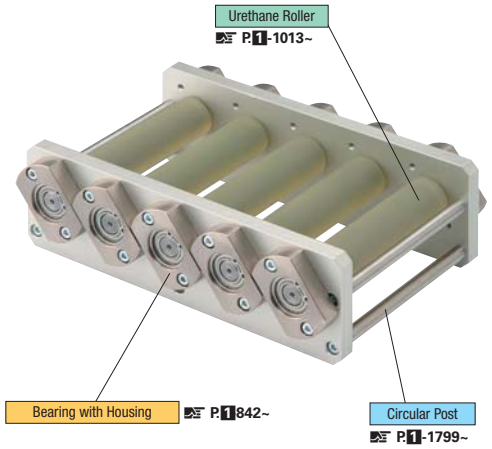


Shutter

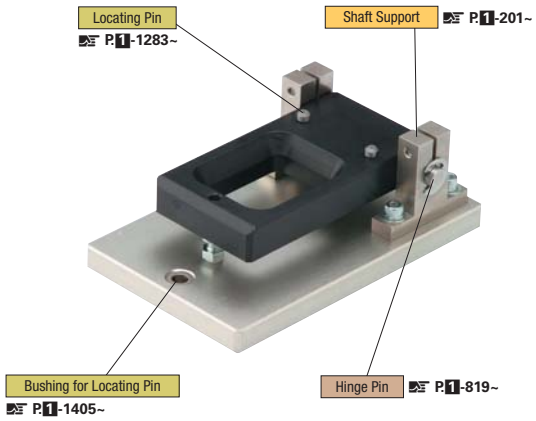


Example of Use 2: Standard Components

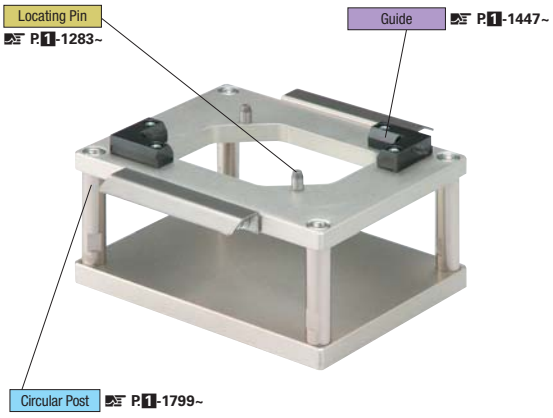
Urethane Roller Conveyor



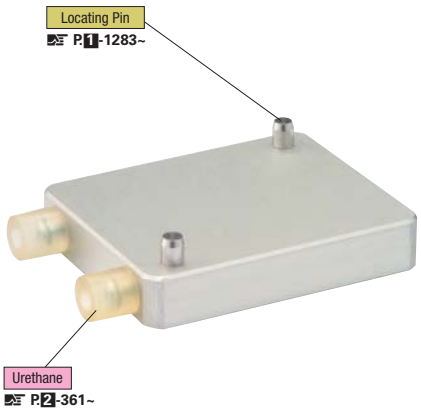
Assembly Jig



Positioning Jig



Pallet

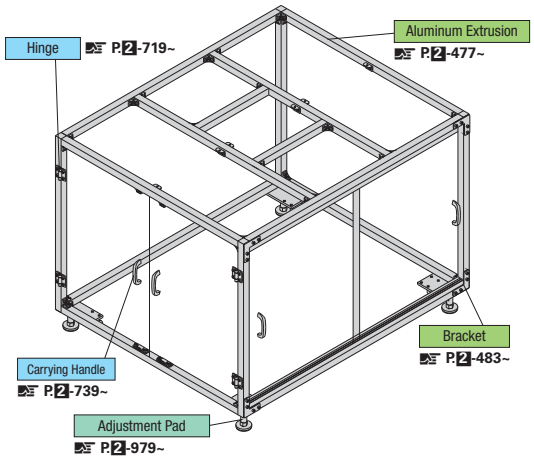


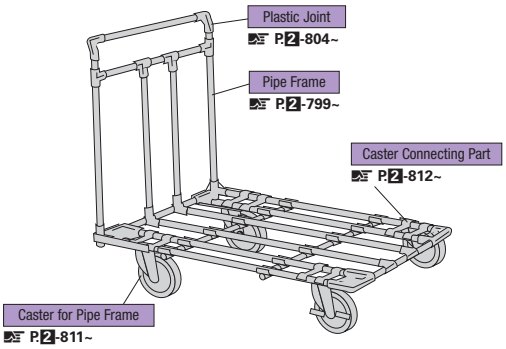
Aluminum Extrusions

Pipe Frames

Factory Frames

Frame-relevant Components





■ **Aluminum Extrusions Standard Design Support Software** P.2-783~

Designing, load calculation, DXF data, component list and order form can be created easily on your PC. Available for free.

■ **3D Structure Conformational Analysis Software**

Warpage of the structure composed of aluminum extrusions can be analyzed. BMP, CSV and DXF Export compliant. (Paid software)

■ **Pipe Frames Standard Design Support Software**

DWG data and the order form can be created by simply selecting the shape, dimensions and components on your PC. Available for free.

How to Use the Catalog

•How to Use the Catalog ····· 83
•Guide of Marks ····· 85
•MISUMI's Environmental Awareness and RoHS Compliancy ····· 86
•General Ordering Information ····· 87
•Delivery Times, Express Orders ····· 88
•Item Number Configuration ····· 89

•WOS Explanation ····· 91

How to Use Catalog

Product Name

Part Number

Product Photograph

Material

- Our products are manufactured from materials according to the Japanese Industry Standard (JIS) For better understanding,the materials are given in the catalog according to EN or DIN. Comparison table.

Specifications

Drawing

Specification Table

- The Product Number is made up of variable sizes (blue or green letters on white background).
  It is composed in steps from the Catalog Number and its selected size, from left to right.
- All the dimensions are therefore contained in the catalog number.
  Sizes from blue highlighted tables are fixed sizes and are not used in the catalog numbers.

Price

- Prices are set and shown based on quantity 1.
- Volume discount rates are available for most products.

  <Calculation Example>
  The unit price for ordering 20 pieces of linear shafts
  SFJ12–300
  6,80×0.85=5,78 Euro per pc.
- Volume discount rate does not apply to alteration fees.

Alterations — Part Number SFJ30 - L - 250 - (LKC / SC...etc.) LKC

10 Days (RSFJ is to be shipped on the 13th day after order)

DKC alterations was discontinued in June 2010. Please specify new part numbers; SFU, SSFU, PSFU and PSSFU on the left page to place orders.

Alteration Details P.105

Alterations	Code	Spec.	Price Adder
LKC	LKC	L Dimension Tolerance Changes (Precision) Order number LKC When using LKC, L dimensions can be specified in 0.1 increments. ℗ L<200 ···›L±0.03; 200≤L<500 ···›L±0.05; L≥500 ···›L±0.1	4,00
SC	SC	Adds a set of wrench flats. Order number SC5 Application Notes Applicable to D = 6 and over SC=1mm Increment ℗ SC+ℓ₁≤L ℗ SC=0 or SC≥1 ⊗ can not be used with WSC	4,00
WSC	WSC	Add wrench flats at two locations Order number WSC12-X8 Application Notes Applicable to D = 6 and over Specify WSC/X in 1mm increments ℗ WSC+X+ℓ₁x2<L ℗ WSC (X)=0 or WSC (X)≥1 ⊗ Cannot be machined on the same plane. Can not be used with SC.	8,00
FC	FC	Add Set Screw Flat at one location Order number FC10-A8 Specify FC and A in 1mm increments. ℗ FC≤3xD ℗ When 1.5xD<FC, FC≤L/2 ℗ A=0 or A ≥ 2 ⊗ Can not be used with WFC	2,00

MISUMI's Environmental Awareness and RoHS Compliancy

■Green Procurement

MISUMI has formulated Green Procurement Guidelines to observe the legal restrictions, and other requirements concerning environmental chemicals, and to help build up a recycling society. By preparing Green Procurement Guidelines and continuously striving to improve our environmental preservation and environmental chemicals management activities, we seek to eliminate environmental chemicals from our products. We ask our customers and business partners for their cooperation with these efforts.

Please refer to our website for details regarding the MISUMI Green Procurement Guidelines.
http://www.misumi.co.jp/about_e/environment/green/index.html

■What is RoHS?

Official Name : Restriction of the Use of Certain Hazardous Substances in Electrical and Electronic Equipment
RoHS is the directive to speculate and restrict the use of certain hazardous substances in electrical and electronic equipments.
It aims to minimize the hazards on environment and health through the life cycles of products from production to disposal.

■RoHS Restricted Substances (Compliant with EU Directive came into force on 1 July 2006)

Substances			Subject Items and Application	Threshold value *	
1	Cadmium (Cd) and Its Compounds		Cadimum contained in alloys with zinc content (brass, zinc, diecast, lead-free solder, etc.), plating, plastic, rubber, oating, etc.	100 ppm or less	For packing materials, less than 100 ppm combined of cadmium, lead, mercury and hexavalent chromium
		Exemption	Cadmium and its compounds in electrical contacts and cadmium plating except for the uses prohibited under 91/338/EEC which is a revision of the EU directive 76/769/EEC	–	
2	Lead (Pb) and Its Compounds		Lead contained in all types of alloys, solder, all items other than the following exemptions	1,000 ppm or less	
		Exemption	Lead which is alloyed with steel	3,500 ppm or less	
			Lead which is alloyed with aluminum	4,000 ppm or less	
			Lead which is alloyed with copper	40,000 ppm or less	
			Lead used in solder which contains more than or equal to 85% of lead	–	
3	Mercury (Hg) and Its Compounds		Mercury contained in all items aside from small fluorescent light bulbs and straighttube fluorescent light bulbs	1,000 ppm or less	
4	Hexavalent chromium (Cr6+) and Its Compounds		All Hexavalent chromium in chromate treatment, plating, coating, etc.. Chromium metal and chrome in metal alloys are exempted.	1,000 ppm or less	
5	Polybrominated Biphenyls (PBBs)		Flame retardant	1,000 ppm or less	
6	Polybrominated Diphenylethers (PBDEs)		Flame retardant	1,000 ppm or less	

*Threshold value is, whether consciously or not, the maximum concentration value set for each homogeneous material which cannot be mechanically disjointed into different materials.

General ordering information

1 How to Order

For customers from Europe & Africa:
Customers can contact our Customer Service directly under +49 (0) 61 96 / 77 46 – 0
or by using our website www.misumi-europe.com under „Services“.
Existing Customers may send their order, including item name, item number and quantity directly by fax to +49 (0) 61 96 / 77 46 – 3 60, by E-Mail to sales@misumi-europe.com or use our „online service“ at www.misumi-europe.com under “eCatalog/WOS”.

2 Quantity

No minimum order quantity! Misumi accepts 1-piece orders without surcharge.

3 Delivery Times

The respective delivery time in working days for each product can be seen by the delivery times symbol.
Please notice that items which are marked as stock items are available for quick delivery.
For deliveries outside of Germany the delivery time can be slightly extended due to the respective customs clearance.
Orders which are made Mon. to Thurs. before 4:00 pm and Fri. before 3:00 pm are processed the same day.

4 Express Deliveries

To shorten delivery time we offer an express delivery service.
For more information please contact our customer service.

5 Terms of Delivery

Deviating from our general terms of delivery (see T&C):
Other shipment modes can be used depending on size, weight and dimensions of the shipment .
For truck deliveries the customer is responsible for ensuring that a Fork Lift Truck or Pallet Truck is available.

6 Changes or Cancellation of an Order

Orders may be changed or cancelled on the same day as initiated.
For changes or cancellation of an order on the next day, please contact our customer service.

7 Returning Items

Items which are on stock may be returned after contact with us.
We cannot accept returns of items which were not on stock, unless they were delivered with defects.
For individual cases please contact our customer service.

8 Claims

We make every attempt to guarantee the quality of our products irrespective of the quantity ordered by our customers.
If you believe that the delivered items do not fulfill the expected quality requirements, have the wrong dimensions or are of incorrect quantity, please contact our customer service.
We will find a solution for YOU.

Delivery times, Express Orders

3 Delivery Times

What is the „Delivery Time“?

Delivery Time Delivery time means the number of workdays needed until delivery.

(from the first workday after your order is received).

Symbols for Delivery Time

Delivery Time is 2 workdays ···› Delivery time **2 Days**

Delivery Time is 5 workdays ···› Delivery time **5 Days**

Delivery Time is 6 workdays ···› Delivery time **6 Days**

≀

Delivery Time is 15 workdays ···› Delivery time **15 Days**

If „on inquiry“ is indicated in the quantity table, the offer also has a delivery date. In certain cases the delivery date can change with the quantity ordered, even if „on inquiry“ is not indicated.

Volume Discount P.87

No. pieces	1~3	4~7	8~10	11~29	50~
Discount	Price List	5%	10%	15%	on inquiry

4 Express Deliveries

Express Service

For your urgent orders we are offering an express service for many products.
Our express service is avaible for products, wich are marked by one of the following symbols.

2 Days

8 Days Express **A**

10 Days Express **B**

13 Days Express **C**

The avaibility of this service depends on the dimensions and the specification of the article and on the country of origin of the customer.
Different receipt date of orders, in some cases have a small effect on delivery schedule.
For detailed information please ask our customer service.

Delivery time reductions of 1-3 days are typical.

Expresscharge

8 Days

Express **A** 2,00 EUR/piece

A flat charge of 5,40 EUR for 3 or more identical pieces
The term flat charge designates the maximum amount, wich has to be paid independently of the number of items for a supply by express.

Example:
1 pieces = 2,00 euro surcharge
2 pieces = 4,00 euro surcharge
3 pieces = 5,40 euro surcharge
10 pieces = 5,40 euro surcharge

Remaining delivery terms (carriage free within Germany) remains unaffected.

Alterations

Options and special models

Options can be ordered without drawings

With the aid of our Alterations service you can select additional product characteristics and tolerances.
To order an alteration simply add the desired alteration code to the catalog number as illustrated.
You do not need to create a drawing for us.

There is no discount applicable for alterations.

An example of the Option Service (Steel shafts for linear movements)

MISUMI 24/7 e-Commerce
-How does it work?-

Step 1:
Product search

You can search for MISUMI products by product name or part number under the product search tab. You can search the entire site by key phrase under the website tab.

Step 2:
Configure / check prices

You can automatically generate a part number by selecting parameters with our configurator. Check price & delivery date on the spot.

Step 3:
2D / 3D CAD data download

You can download FREE 2D/3D CAD data.
We have more than 30 different data formats.

Step 4:
Quote / Order

You can quote/order MISUMI products online and check the results immediately.

With MISUMI 24/7 e-Commerce quickly to target: How to solve your design problems

Register

The registration occurs online (**www.misumi-europe.com**) by using the respective form. After completing all required information, you will receive a PDF document which you need to print out, sign and send back to MISUMI Europa GmbH. Subsequently, we will activate your account. The registration might require up to two working days.

In order to register successfully, please agree to the MISUMI privacy policy as well as our terms and conditions . If you are already registered as standard-user you can get a free upgrade to premium-user without having to fill in the customer registration form again. This upgrade is possible at any time. Please contact our customer service team by phone at +49 (0) 6196 7746 0 or mail at:sales@misumi-europe.com“.

Two account options are available:

MISUMI Tutorial videos

Why MISUMI?

- ···› Easily realisable solutions
- ···› Configurable components in 1mm increments
- ···› All in one catalogue
- ···› more components than you could ever imagine

Are you also struck by the 3.000 pages of the catalogue and do you have difficulties finding the required components quickly? MISUMI now provides you with a helpful tool.

Video tutorial "How to use the paper catalog"

Our **video tutorial** will show you how to use our paper catalog. The video is approx. 6 minutes long.

Adobe PDF

"Manual eCatalog/WOS" as PDF file or brochure

Here you can find a guide for the use of our eCatalog/ WOS system as **PDF file**. If you prefer the brochure as a **hardcopy**, you can write us an e-Mail via sales@misumi-europe.com or order it by phone at +49 (0) 6196 7746 0.

Are you interested in using MISUMI 24/7 e-Commerce and are you looking for more details?

MISUMI provides a comprehensive tutorial video: **www.misumi-europe.com**

Tutorial videos are available
or download helpful PDF-documents.

MISUMI Catalogue One for All

Our main catalogue provides all technical and commercial component information at a glance!

- ···› Details on tolerances, materials and coatings
- ···› All information regarding dimensions and configuration including options
- ···› Component drawings and sample applications
- ···› Delivery times and prices with bulk discounts, surcharges for additional optional extras or express delivery
- ···› To request a catalogue (DE/EN/IT/FR/CZ), please go to **www.misumi-europe.com**

MISUMI Info DVD

This DVD contains comprehensive information about MISUMI. The DVD contains:

- ···› Catalogue “Mechanical Components for Assembly Automation” (DE/EN/IT/FR/CZ) (PDF)
- ···› Catalogue “Standard Components for Plastic Mold & Diecast” (EN) (PDF)
- ···› Catalogue “Standard Components for Press Dies” (EN) (PDF)
- ···› Company presentation (DE/EN/IT/FR/CZ) (Powerpoint)
- ···› Video tutorials (DE/EN/IT/FR/CZ)

Product Brochures

Product Brochures can be downloaded as PDF files. Some of the brochures are also available as printed versions. Send an informal e-mail to **insales@misumi-europe.com**

We have gathered information on some selected products of our extensive product portfolio. Here you can find brochures with detailed information on these selected parts which can be downloaded as PDF files. Some of the brochures are also available as printed versions. For example: Linear units LX/KUA, linear unit RS, Toggle clamps, XY stages, G-Manifold, Aluminum frame etc.

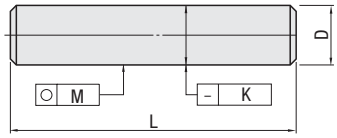
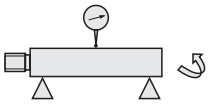
Shafts - Precision Standards

Accuracy Standards

Circularity · Straightness · L Dimension Accuracy



Straightness Measuring Method



Shaft ends are supported on V-blocks and turned 360 degrees to measure shaft runout using a dial indicator. 1/2 of measured runout is defined as the straightness.

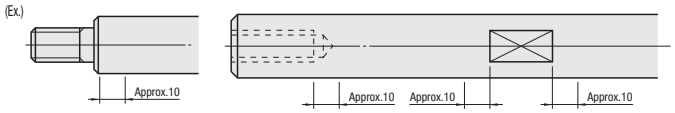
12 / 13	0.7 or more	Over 0.5
15~20		0.7 or more
25~50	1.0 or more	

Notes on Hardening and Surface Treating.

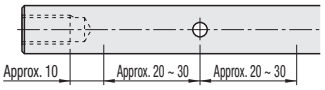
Reduced Hardness around Machined Areas

Alterations will be applied after base materials are case hardened.
In the example below, annealing required for machining may result in reduced hardness of the machined area +10mm fore and aft.



Annealing required for machining may lower hardness of following parts:
- All threaded shafts
- All stepped shafts
- Female Thread holes: if M≥D/2, RC threads, two tapped holes on ends, hard chrome plated 1.4125/X105CrMo17 products.
- Retaining ring grooves, keyway, tapers, hexagonal socket holes, wrench flats, set screw grooves
- Keyway, flats, 90-deg. flats, V-grooves
- Shaft Ends Configurable Type (G · H shape), Hollow Shafts (lateral hole on one side)

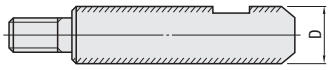
(Note) Excluding "Full Length Hardness Guaranteed Type"



-For 1.3505/100Cr6 material Shafts with cross-drilled holes and 20mm around 1.4125/X105CrMo17 material machined area, annealing may lower hardness in the range of 30mm around machined area.

Surface Treatment Plating Layers

Machining is applied after the base material is surface treated.
For the case below, only D area ////// is treated with hard chrome plating and LTBC plating.
Hard chrome plating or LTBC plating will be removed from stepped, tapered and machined areas.
For features of LTBC, please see **P.118**
As hollow shaft interior surfaces are not treated with plating, it may cause rust.



Other above-said plating finished shapes are:
- Male Thread and tapped shafts
- Retaining ring grooves, keyway, tapers, hexagonal socket holes, wrench flats, set screw grooves
- Keyway, flats, 90-deg. flats, V-grooves

Fully Plated Shafts will have the plating on the entire shaft except centering holes and tapped sections.

Cross-drilled Hole Dimension Details.

■ Cautions for Alteration Selections

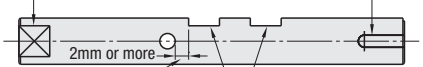
Ⓟ Alterations may lower hardness. P.104

Ⓟ When selecting multiple alteration additions, more than 2mm is needed between each feature to be added. (See below)

Ex.1

Wrench Flats (SC)
Ⓟ When the flats are to start from the ends, specify as "SC0".

Keyway Alteration (KC)
Ⓟ See Rotary Shaft pages for more variations. P.733~P.792 (Rotary Shaft Index)



When Selecting Multiple Alterations
Ⓟ 2mm or more separation is required between machined sections.

Set Screw Flat
Ⓟ Not available on the same plane.
- WFC (Set Screw Flat)
-WSC (Wrench Flats)
-WRC (90-deg. Set Screw Flats)
-WKC (Keyway Alteration)

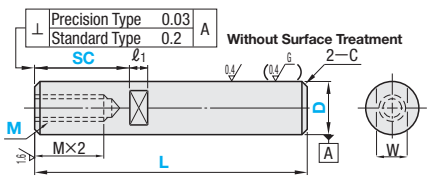
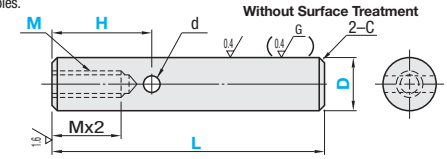
- Annealing required for machining wrench flats and shaft end threading (effective thread length + approx. 10mm) may lower hardness. P.104
- Cross-drilled hole areas may be out of O.D. tolerances due to deformations caused by annealing.
- Changes in Circularity, Straightness, Perpendicularity, Coaxiality and Hardness. P.103
- Features of LTBC P.118

When Mx2.5+4≥L, tap pilot hole may go through.

With wrench flats

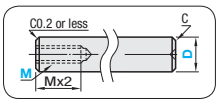


With cross-drilled holes. (8≤D≤30, L≤500)



Features of Precision Type

Squareness is ⊥ 0.03



Precision Type has center holes at the end faces.

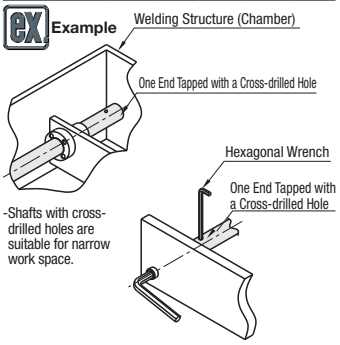
Price Deductions for Shafts with Cross-drilled Holes

D	Price Deductions
8 · 10	
12 · 13 · 15 · 16 · 18 · 20	
25 · 30	

Example



-Shafts with cross-drilled holes are suitable for narrow work space.

For Shafts with cross-drilled holes, the prices on the right page are to be subtracted from the prices above. (Applied to 8≤D≤30,L≤50)

Alterations

Part Number - L - M (MSC) - SC - H - (LKC...etc.)
SFJC30 - 250 - M12 - SC10 - LKC

Keyway machining (KC) only.
10 Days
(RSFJC and RSFHC are to be shipped on the 13th day after order)

DKC alterations was discontinued in June 2010. Please specify new part numbers; SFUC, SSFUC, PSFUC and PSSFUC on the left page to place orders.

Alteration Details P.105

Alterations	Code	Spec.	Price Adder
	LKC	Alteration to L dimension tolerance Ordering Code LKC Application Notes Applicable when L=200 or less for precision type When using LKC, L dimensions can be specified in 0.1 increments. L<200 ···L±0.03 200≤L<500 ···L±0.05 L≥500 ···L±0.1	4,00
	FC	Add Set Screw Flat at one location Ordering Code FC10-E8 Application Notes ⊗Not applicable to precision type Specify FC and E in 1mm increments. FC≤3xD When 1.5xD<FC, FC≤L/2 E=0 or E≥2 ⊗ Can not be used with WFC D: 6~18 h:1; 20~40 h:2; 50 h:3	2,00
	WFC	Add Set Screw Flats at two locations Ordering Code WFC8-A8-E2 Application Notes ⊗Not applicable to precision type Specify WFC, A and E in 1mm increments WFC≤3xD When 1.5xD<FC, 2WFC≤L/2 A (E) = 0 or A (E) ≥ 2 ⊗Machining on the same plane is not applicable. Can not be used with FC. D: 6~18 h:1; 20~40 h:2; 50 h:3	4,00
	SX	Add wrench flats at two locations Ordering Code SX15 Application Notes Only applicable for Shafts with Wrench Flats Specify SX in 1mm increments SC+SX+ℓ1x2<L SX = 0 or SX ≥ 1 ⊗Not available on the same plane. D: 6 W: 5 ℓ1: 8; 8 7; 10 8; 12 10; 13 11; 15 13; 16 14 ℓ1: 10 D: 18 16; 20 17; 25 22; 30 27; 35 30; 40 36; 50 41 ℓ1: 10; 15; 20	4,00

Alterations	Code	Spec.	Price Adder
	DKC	Change to h5 O.D. tolerance Ordering Code DKC Application Notes ⊗Shaft with Cross-drilled holes, Precision Type, D Tolerance f8, Not applicable to LTBC Plated Shafts.	-
	MSC	Change to fine thread tap. Ordering Code MSC14 (M is changed to MSC) Application Notes Applicable for D = 6 or more	3,00
	RC	Add 90-deg. set screw flat at one location Ordering Code RC10 Application Notes Applicable for D=10 ~ 30 ⊗Not applicable to precision type ⊗Can not be used with WRC	5,00
	WRC	2 x 90-deg. set screw flats Ordering Code WRC10-Y10 Application Notes Applicable for D=10 ~ 30 ⊗Not applicable to precision type ⊗Cannot be used in combination with RC. ⊗Not available on the same plane.	10,00
	KC	One keyway is added. Ordering Code KC10-G10 Application Notes Applicable only to D = 12, 16, 20, 25 or 30. ⊗Not applicable to precision type	5,00

For details, please see Alterations Overview P.105

Please see Alteration Guides for details if provided. P.105
For more than one alteration, 2mm or more separation required between machined sections.
Alterations requires more than 2mm separation between wrench flats and cross-drilled holes.
Alterations may lower hardness. P.104

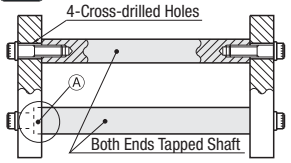
Example



-Unlike Type A, Precision Type requires no steps and is effective for assembly.

Alterations Part Number - L - M (MSC) - N (NSC) - (LKC...etc.)
SFJW30 - 500 - M8 - N10 - LKC

Days to Ship

DKC alterations was discontinued in June 2010.
Please specify new part numbers; SFUW, SSFUW, PSFUW and PSSFUW on the left page to place orders.

Alteration Details P.105

Alterations	Code	Spec.	Price Adder
	LKC	Alteration to L dimension tolerance Ordering Code: LKC Application Notes: Applicable when L=200 or less for precision type When using LKC, L dimensions can be specified in 0.1 increments. (P) L<200 ····L±0.03 200≤L<500····L±0.05 L≥500 ····L±0.1	4,00
	WSC	Add wrench flats at two locations Ordering Code: WSC12-X8 Application Notes: Applicable to D = 6 and over Specify WSC/X in 1mm increments. (P) WSC+X+ℓ1x2<L (P) WSC (X)=0 or WSC (X)≥1 ⊗ Not available on the same plane. ⊗ Cannot be combined with FC.	8,00
	FC	Add set screw flat at one location Ordering Code: FC10-A8 Application Notes: ⊗Not applicable to precision type Specify FC and A in 1mm increments. (P) FC≤3xD (P) When 1.5xD<FC, FC≤L/2 (P) E=0 or A≥2 ⊗ Can not be used with WFC	2,00
	WFC	Add set screw flats at two locations Ordering Code: WFC8-A8-E2 Application Notes: ⊗Not applicable to precision type Specify WFC, A and E in 1mm increme (P) WFC≤3xD (P) When 1.5xD<FC, 2WFC≤L/2 (P) A (E) = 0 or A (E) ≥ 2 ⊗Machining on the same plane is not applicable. Can not be used with FC.	4,00

Alterations	Code	Spec.	Price Adder
	DKC	Change to h5 O.D. tolerance Ordering Code: DKC Application Notes: ⊗Not applicable for Precision Type, Shafts with D tolerance f8 and LTBC plating.	-
	MSC NSC	Change to fine thread tap. Ordering Code: MSC14 (M is changed to MSC) NSC14 (N is changed to NSC) Application Notes: Applicable to D = 6 or more	3,00
	RC	Add 90-deg. Set Screw Flat at one location Ordering Code: RC10 Application Notes: Applicable for D=10 ~ 30 ⊗Not applicable to precision type ⊗Can not be used with WRC	5,00
	WRC	2 x 90-deg. Set Screw Flats Ordering Code: WRC10-Y10 Application Notes: Applicable for D=10 ~ 30 ⊗Not applicable to precision type ⊗Cannot be used in combination with RC. ⊗Not available on the same plane.	10,00

For details, please see Alterations Overview P.105

(P)Please see Alteration Guides for details if provided. P.105
(P)For more than one alteration, 2mm or more separation required between machined sections. P.106
(P)Alterations may lower hardness. P.104

Shafts -Standard Type / Precision Type-

-Both Ends Female Thread with Wrench Flats / Both Ends Female Thread with Cross-drilled Holes-

For Shafts w/o wrench flats or cross-drilled holes, please see P.113

Annealing required for machining wrench flats and shaft end threading (effective thread length + approx. 10mm) may lower hardness. P.104
Cross-drilled hole areas may be out of O.D. tolerances due to deformations caused by annealing.
Changes in circularity, straightness, perpendicularity, coaxiality and hardness P.103
Features of LTBC P.118

Full Length Hardness Guaranteed Shafts

-One End / Both Ends Female Thread Short Types-

Feature: Other shaft products may suffer from lowered hardness areas due to annealing required for tapping.
The "Full Length Hardness Guaranteed" shafts maintain the case hardness over the entire length, well suited for short stroke applications.

RoHS

Features of LTBC P.118
Changes in Circularity, Straightness, Perpendicularity, Coaxiality and Hardness.

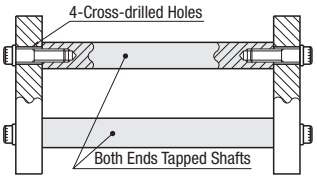
Example

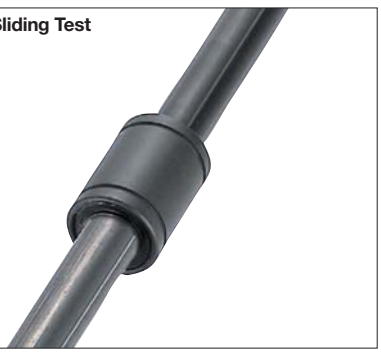


As Full Length Hardness Guaranteed shafts cause no hardness loss, they are well suited for short stroke sliding.

■ LTBC plating on linear shafts:

Type: LTBC plating without fluoropolymer layer.
Thickness: 1μm~2μm thick. Shaft outer diameter tolerance remains g6 after LTBC plating is applied.
Corrosion protection: Normal rust prevention effect (better than black oxide, and less than LTBC with fluoropolymer layer on top and suitable in normal environment.
Material benefits: Chemically deposited at low temperature without any change in material structure.
Peeling: The coating is resistant to cracking from extreme and repeated bending. Even hairpin-shaped bending won't cause cracks. Plating won't be exfoliated by repeat bending (Any superficial coating particles that may come off the rolling contact surfaces are mixed in with the grease and remain its lubricity).
Optical benefits: Less reflections (suitable for places where light reflections are undesirable when used in combination with LTBC plated linear bushings (**P. 1-278**).)

Shaft after Sliding Test



Order Example See each product page for details.

Days to Ship **10 Days** **13 Days**

Alterations See each product page for details.

Sliding Test Conditions
Linear Bushings :LMUR12
Shafts :RSFJ12
50km sliding test was conducted on Linear Bushings under 412N load.

LTBC Plated Shafts (regular products): Shipped on the 13th day after order

Material	Applicable shaft diameter	Applicable Shaft Length
1.3505/100Cr6	Ø3~Ø30	Up to 500

Full Length Hardness Guaranteed Shafts: Shipped on the 13th day after order

Material	Applicable shaft diameter	Applicable Shaft Length
1.3505/100Cr6	Ø6~Ø20	Up to 150

Precision Shafts: Shipped on the 10th day after order

Material	Applicable Shaft Diameter	Applicable Shaft Length
1.3505/100Cr6	Ø4~Ø30	Up to 448
1.4125/X105CrMo17 equivalent		

(Note 1) Wiping LTBC plated products with solvents may result in loss of color but its anti-rust property will be unaffected.
Color will settle over a month and become resistant to discoloration.
(Note 2) Female Thread threads will not be coated with LTBC.
(Note 3) LTBC plated shafts may have centering holes on the ends for surface treatment.

Days to Ship

8 Days — Express A 8,00 EUR/unit P.88

A Express Charge of 21,60 EUR for 3 or more identical pieces.

Alterations

Part Number	L	F	B	P (PMC / PSC)	M (MSC)	N	(LKC / SC / FC...etc.)
PSSFIG30	1000	F4		P10	M6	N10	LKC

For more than one alteration, 2mm or more separation required between machined sections. P.106
Alterations may lower hardness. P.104

Alterations	Code	Spec.	Price Adder
	LKC	Changes "L Tolerance". Ordering Code LKC L<200 ···L±0.03 200≤L<500···L±0.05 L≥500 ···L±0.1 When using LKC, L dimensions can be specified in 0.1mm increments. ⊗Not applicable to One End Male Thread when D-P≤2 ⊗Not applicable to One End Male Thread Shafts - Thread O.D. = Shaft O.D Type	4,00
	SC	Adds a wrench flat. Ordering Code SC5 SC=1mm Increment SC+ℓ1≤LSC=0 or SC≥1 SC machining is not applicable to pilot machined areas SC≤L-ℓ1-ℓ-2 D / W / ℓ1: 12 10 / 13 11 / 15 13 / 16 14 → 10; 18 16 / 20 17 / 25 22 / 30 27 → 10; 15	4,00
	FC	Add screw flats. Ordering Code FC10-E8 Specify FC and E in 1mm increments. FC≤Dx3 When 1.5xD<FC, FC≤L/2 E=0 or E≥2 FC machining is not applicable to pilot machined areas E≤ℓ+2 D / h: 12~18 → 1; 20~30 → 2	2,00

Alterations	Code	Spec.	Price Adder
	PMC / PMS	Changes the threads to Fine Threads shown in the table below. (PMC → Applicable to Bearing nut fine threads) (PMS → Applicable to Cylinder fine thread pitches) Ordering Code PMC17 Applicable to "One End Male Thread" type only. D / PMC: 12 5 6 8 10 / 13 5 6 8 10 12 / 15 5 6 8 10 12 / 16 5 6 8 10 12 15 / 18 5 6 8 10 12 15 17 / 20 6 8 10 12 15 17 / 25 8 10 12 15 17 20 / 30 8 10 12 15 17 20 25 / Pitch 0.5 0.75 1.0 1.5 Please replace P dimensions with PMC (PMS) to specify. P dimension is equal to PMC (PMS).	3,00
	MSC	Female Thread thread changed to fine thread listed in the table below. Ordering Code MSC14 Only applicable to One End Female Thread. D / MSC: 12 / 13 8 / 15 / 16 8 10 / 18 8 10 12 / 20 8 10 12 14 / 25~30 8 10 12 14 18 / Pitch 1.0 1.25 1.5 Specify using MSC in place of M. M dimension is equal to MSC.	3,00

Shafts -Standard Type-

-One End Male Thread with O.D. same as Shaft O.D.-

For One End Male Thread Shafts with different diameters, please see P.125

RoHS

For Shaft End Machined Area (Effective Thread Length + approx. 10mm) Annealing could reduce hardness. P.104

For Changes in Circularity, Straightness, Perpendicularity, Coaxiality and Hardness. P.103

For Features of LTBC P.118

Alterations

Part Number - L - B - (SC...etc.)
SFAQ12 - 500 - B20 - SC10

Keyway machining (KC) only.

10 Days (RSFAQ is to be shipped on the 13th day after order)

DKC alterations was discontinued in June 2010.
Please specify new part numbers; SFUQ, SSFUQ, PSFUQ and PSSFUQ on the left page to place orders.

Alteration Details P.105

Alterations	Code	Spec.	Price Adder
	SC	Adds a set of wrench flats. Ordering Code SC5 Application Notes Applicable to D = 6 and over SC=1mm Increment SC+ℓ1≤L SC=0 or SC≥2 ⊗can not be used with WSC D: 6, 8, 10, 12, 13, 15 — W: 5, 7, 8, 10, 11, 13 — ℓ1: 8	4,00
	WSC	Add wrench flats at two locations Ordering Code WSC12-X8 Application Notes Applicable to D = 6 and over Specify WSC/X in 1mm increments. WSC+X+ℓ1x2<L WSC (X)=0 or WSC (X)≥2 ⊗Machining on the same plane is not applicable. Can not be used with SC. D: 16, 18, 20, 25, 30 — W: 14, 16, 17, 22, 27 — ℓ1: 10, 15	8,00
	FC	Add set screw flat at one location Ordering Code FC10-E8 Specify FC and E in 1mm increments. FC≤3xD When 1.5XD<FC, FC≤L/2 E=0 or E≥2 ⊗Can not be used with WFC D: 3~5, 6~18, 20~30 — h: 0.5, 1, 2	2,00
	WFC	Add set screw flats at two locations Ordering Code WFC10-A8-E20 Specify WFC, A and E in 1mm increments WFC≤3xD When 1.5xD<FC, 2WFC≤L/2 A (E) = 0 or A (E) ≥ 2 ⊗Machining on the same plane is not applicable. Can not be used with FC. D: 3~5, 6~18, 20~30 — h: 0.5, 1, 2	4,00

Alterations	Code	Spec.	Price Adder
	DKC	Change to h5 O.D. tolerance Ordering Code DKC Application Notes ⊗Not applicable to shafts with diameter f8 tolerance and LTBC plating.	-
	RC	Add 90-deg. set screw flat at one location Ordering Code RC10 Application Notes Applicable to D=10 ~ 30 ⊗Can not be used with WRC	5,00
	WRC	2 x 90-deg. set screw flats Ordering Code WRC10-Y10 Application Notes Applicable to D=10 ~ 30 ⊗Cannot be used in combination with RC. ⊗Not available on the same plane.	10,00
	KC	Keyway is added at one location Ordering Code KC10-G10 Application Notes Only applicable to D=12 / 16 / 20 / 30	5,00

For details, please see Alterations Overview P.105

Please see Alteration Guides for details if provided. P.105
For more than one alteration, 2mm or more separation required between machined sections.
Alterations may lower hardness. P.104

Alterations

Part Number - L - F - B - P (PMC / PSC) - (LKC...etc.)
SFAN30 - 250 - F40 - B30 - P10 - LKC

Keyway machining (KC) only. 10 Days (RSFAN is to be shipped on the 13th day after order)

DKC alterations was discontinued in June 2010.
Please specify new part numbers; SFUN, SSFUN, PSFUN and PSSFUN on the left page to place orders.

Alteration Details P.105

Alterations	Code	Spec.	Price Adder
	LKC	Alteration to L dimension tolerance Ordering Code LKC Application Notes Applicable when L=200 or less for precision type When using LKC, L dimensions can be specified in 0.1 increments. Ⓨ L<200 ···L±0.03 200≤L<500···L±0.05 L≥500 ···L±0.1 ⊗Not applicable when D-P≤2	4,00
	FC	Add set screw flat at one location Ordering Code FC10-E8 Application Notes ⊗Not applicable to precision type Specify FC and E in 1mm increments. Ⓨ FC≤3xD Ⓨ When 1.5XD<FC, FC≤L/2 Ⓨ E=0 or E≥2 ⊗Can not be used with WFC D / h: 4~5 / 0.5; 6~18 / 1; 20~40 / 2; 50 / 3	2,00
	WFC	Add set screw flats at two locations Ordering Code WFC8-A8-E4 Application Notes ⊗Not applicable to precision type Specify WFC, A and E in 1mm increments Ⓨ WFC≤3xD Ⓨ When 1.5xD<FC, 2WFC≤L/2 Ⓨ A (E) = 0 or A (E) ≥ 2 ⊗Machining on the same plane is not applicable. Can not be used with FC. D / h: 4~5 / 0.5; 6~18 / 1; 20~40 / 2; 50 / 3	4,00

Alterations	Code	Spec.	Price Adder
	DKC	Change to h5 O.D. tolerance Ordering Code DKC Application Notes ⊗Precision type, D tolerance and Not applicable to LTBC Plated Shafts.	-
	RC	Add 90-deg. set screw flat at one location Ordering Code RC10 Application Notes Applicable to D=10 ~ 30 ⊗Not applicable to precision type ⊗Can not be used with WRC	5,00
	WRC	2 x 90-deg. set screw flats Ordering Code WRC10-Y10 Application Notes Applicable to D=10 ~ 30 ⊗Not applicable to precision type ⊗Cannot be used in combination with RC. ⊗Not available on the same plane.	10,00
	PMC	Change to fine threads. Ordering Code PMC14 (P is changed to PMC) PMS14 (P is changed to PMSC)	3,00
	KC	Keyway is added at one location Ordering Code KC10-G10 Application Notes Applicable only to D = 12, 16, 20, 25 or 30. ⊗Not applicable to precision type	5,00

For details, please see alterations overview P.105

Ⓨ Please see Alteration Guides for details if provided. P.105
Ⓨ For more than one alteration, 2mm or more separation required between machined sections.
Ⓨ Alterations requires more than 2mm separation between wrench flats and cross-drilled holes.
Ⓨ Alterations may lower hardness. P.104

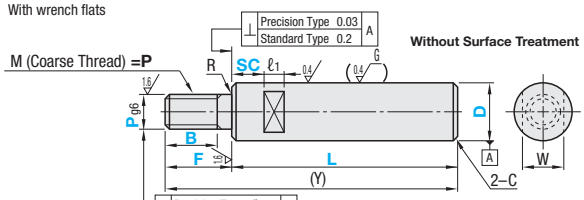
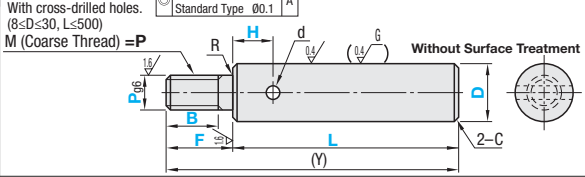
With wrench flats



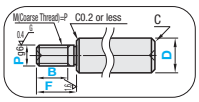
With cross-drilled holes. (8≤D≤30, L≤500)



Features of Precision Type

Coaxiality is ◎ Ø0.02

Perpendicularity is ⊥ 0.03



Precision shafts have centering holes at the ends and grinding undercut at the bottom of threads.

Annealing required for machining wrench flats and shaft end threading (effective thread length + approx. 10mm) may lower hardness. P.104

Cross-drilled hole areas may be out of O.D. tolerances due to deformations caused by annealing.

Changes in circularity, straightness, perpendicularity, coaxiality and hardness. P.103

Features of LTBC P.118

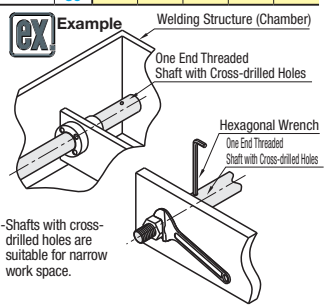
■ Price Deductions for Shafts with Cross-drilled Holes

D	Price Deductions
8 · 10	
12 · 13 · 15 · 16 · 18 · 20	
25 · 30	

Example



-Shafts with cross-drilled holes are suitable for narrow work space.

For Shafts with cross-drilled holes, the prices on the right page are to be subtracted from the prices above. (Applied to 8≤D≤30,L≤50)

Alterations

Part Number - L - F - B - P (PMC / PSC) - SC - H - (LKC...etc.)
SFAS30 - 250 - F40 - B30 - P10 - SC10 - LKC

Keyway machining (KC) only. 10 Days (RSFAS and RSFHN are to be shipped on the 13 th day after order)

DKC alterations was discontinued in June 2010.
Please specify new part numbers; SFUS, SSFUS, PSFUS and PSSFUS on the left page to place orders.

Alteration Details P.105

Alterations	Code	Spec.	Price Adder
	LKC	Alteration to L dimension tolerance Ordering Code LKC Application Notes Applicable when L=200 or less to precision type When using LKC, L dimensions can be specified in 0.1 increments. L<200 ···L±0.03 200≤L<500···L±0.05 L≥500 ···L±0.1 ⊗Not applicable when D-P≤2	4,00
	FC	Add set screw flat at one location Ordering Code FC10-E8 Application Notes ⊗Not applicable to precision type Specify FC and E in 1mm increments. FC≤3xD When 1.5XD<FC, FC≤L/2 E=0 or E≥2 ⊗Can not be used with WFC D: 6~18 h:1; 20~40 h:2; 50 h:3	2,00
	WFC	Add set screw flats at two locations Ordering Code WFC8-A8-E4 Application Notes ⊗Not applicable to precision type Specify WFC, A and E in 1mm increments WFC≤3xD When 1.5xD<FC, 2WFC≤L/2 A (E) = 0 or A (E) ≥ 2 ⊗Machining on the same plane is not applicable. Can not be used with FC. D: 6~18 h:1; 20~40 h:2; 50 h:3	4,00
	SX	Add wrench flats at two locations Ordering Code SX15 Application Notes Only applicable to Shafts with Wrench Flats Specify SX in 1mm increments SC+SX+ℓ1x2<L SX = 0 or SX ≥ 1 ⊗Not available on the same plane. D: 6 W:5 ℓ1:8; 8 W:7; 10 W:8; 12 W:10; 13 W:11; 15 W:13; 16 W:14; 18 W:16; 20 W:17 ℓ1:10; 25 W:22; 30 W:27 ℓ1:15; 35 W:30; 40 W:36; 50 W:41 ℓ1:20	4,00

Alterations	Code	Spec.	Price Adder
	DKC	Change to h5 O.D. tolerance Ordering Code DKC Application Notes ⊗Shafts with Cross-drilled Hole / Precision Type / Not applicable to shafts with diameter f8 tolerance and LTBC plating.	-
	RC	Add 90-deg. Set Screw Flat at one location Ordering Code RC10 Application Notes Applicable to D=10 ~ 30 ⊗Not applicable to precision type ⊗Can not be used with WRC	5,00
	WRC	2 x 90-deg. Set Screw Flats Ordering Code WRC10-Y10 Application Notes Applicable for D=10 ~ 30 ⊗Not applicable to precision type ⊗Cannot be used in combination with RC. ⊗Not available on the same plane.	10,00
	PMC	Change to fine threads. Ordering Code PMC14 (P is changed to PMC) PMS14 (P is changed to PMSC)	3,00
	KC	Keyway is added at one location Ordering Code KC10-G10 Application Notes Applicable only to D = 12, 16, 20, 25 or 30. ⊗Not applicable to precision type	5,00

For details, please see Alterations Overview P.105

Please see Alteration Overview for details. P.105
For more than one alteration, 2mm or more interspace is required between machined sections.
For alterations, more than 2mm separation is required between wrench flats and cross-drilled holes.
Alterations may lower hardness. P.104

Alterations

Part Number - L - F - M (MMC / MMS) - (LKC...etc.)
SAFN30 - 250 - F20 - M10 - LKC

Keyway machining (KC) only. 10 Days (RSAFN is to be shipped on the 13th day after order)

DKC alterations was discontinued in June 2010.
Please specify new part numbers; SFNU, SSFNU, PSFNU and PSSFNU on the left page to place orders.

Alteration Details P.105

Alterations	Code	Spec.	Price Adder
	LKC	Alteration to L dimension tolerance Ordering Code LKC Application Notes Applicable when L=200 or less to precision type When using LKC, L dimensions can be specified in 0.1 increments. Keyway L<200 ···▸L±0.03 200≤L<500 ···▸L±0.05 L≥500 ···▸L±0.1 ⊗Not applicable when D-M≤2	4,00
	FC	Add Set Screw Flat at one location Ordering Code FC10-E8 Application Notes ⊗Not applicable to precision type Specify FC and E in 1mm increments. Keyway FC≤3xD Keyway When 1.5xD<FC, FC≤L/2 Keyway E=0 or E≥2 ⊗Can not be used with WFC D: 8~18 h: 1; 20~40 h: 2; 50 h: 3	2,00
	WFC	Add Set Screw Flats at two locations Ordering Code WFC8-A8-E4 Application Notes ⊗Not applicable to precision type Specify WFC, A and E in 1mm increments Keyway WFC≤3xD Keyway When 1.5xD<FC, 2WFC≤L/2 Keyway A (E) = 0 or A (E) ≥ 2 ⊗Cannot be machined on the same plane. Cannot be combined with FC. D: 8~18 h: 1; 20~40 h: 2; 50 h: 3	4,00

Alterations	Code	Spec.	Price Adder
	DKC	Change to h5 O.D. tolerance Ordering Code DKC Application Notes ⊗Precision type, D tolerance and Not applicable to LTBC Plated Shafts.	-
	RC	Add 90-deg. Set Screw Flat at one location Ordering Code RC10 Application Notes Applicable to D=10 ~ 30 ⊗Not applicable to precision type ⊗Can not be used with WRC	5,00
	WRC	2 x 90-deg. Set Screw Flats Ordering Code WRC10-Y10 Application Notes Applicable for D=10 ~ 30 ⊗Not applicable to precision type ⊗Cannot be used in combination with RC. ⊗Not available on the same plane.	10,00
	MMS	Change to fine threads. Ordering Code MMC14 (M is changed to MMC) MMS14 (M is changed to MSC)	3,00
	KC	One keyway is added. Ordering Code KC10-G10 Application Notes Applicable only to D = 12, 16, 20, 25 or 30. ⊗Not applicable to precision type	5,00

For details, please see Alterations Overview P.105

Please see Alteration Guides for details if provided. P.105
For more than one alteration, 2mm or more separation required between machined sections.
Alterations may lower hardness. P.104

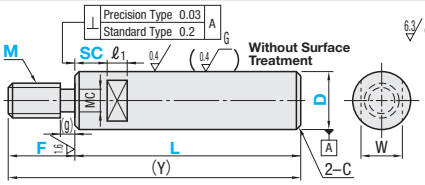
Annealing required for machining wrench flats, cross-drilled hole and shaft end threading (effective thread length + approx. 10mm) may lower hardness. P.104

Cross-drilled hole areas may be out of O.D. tolerances due to deformations caused by annealing.

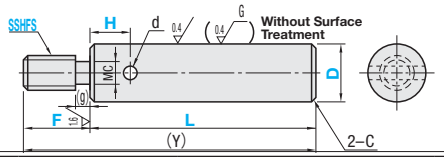
Changes in Circularity, Straightness, Perpendicularity, Coaxiality and Hardness. P.103

Features of LTBC P.118

With wrench flats

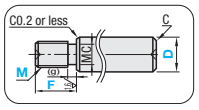


With cross-drilled holes. (D≤30, L≤500)



Features of Precision Type

Squareness is ⊥ 0.03



Centering holes will be spotted on shaft ends of precision type.

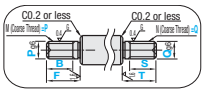
Precision Type



Features of Precision Type
Concentricity is ◎ Ø0.02
Perpendicularity is ⊥ 0.03

Annealing required for machining wrench flats and shaft end threading (effective thread length + approx. 10mm) may lower hardness. P.104
Changes in Circularity, Straightness, Perpendicularity, Coaxiality and Hardness. P.103
Features of LTBC P.118

When B = 0 or S = 0, no thread machining will be performed. D>P (Q)

Precision Type has grinding undercuts at the bottom ends of threads and center holes at the ends.

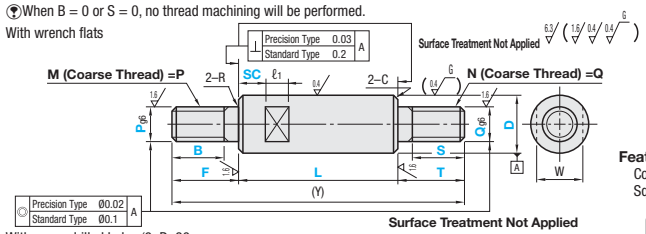
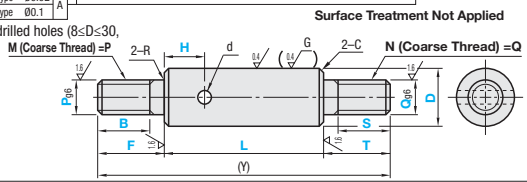
When B = 0 or S = 0, no thread machining will be performed.

With wrench flats



With cross-drilled holes (8≤D≤30, L≤500)

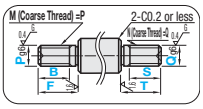


Surface Treatment Not Applied

Features of Precision Type

Concentricity is Ø0.02

Squareness is 0.03



Precision Type has grinding undercuts at the bottom ends of threads and center holes at the ends.

Annealing required for machining wrench flats, cross-drilled hole and shaft end threading (effective thread length + approx. 10mm) may lower hardness. P.104

Cross-drilled hole areas may be out of O.D. tolerances due to deformations caused by annealing.

Changes in Circularity, Straightness, Perpendicularity, Coaxiality and Hardness. P.103

Features of LTBC P.118

Alterations

Part Number - [L] - [F] - [M (MMC · MMS)] - [T] - [N] - (LKC...etc.)
SAFM30 - 300 - F40 - M20 - T48 - N16 - LKC

DKC alterations was discontinued in June 2010.
Please specify new part numbers; SFMU, SSFMU, PSFMU and PSSFMU on the left page to place orders.

Alteration Details P.105

Alterations	Code	Spec.	Price Adder
	LKC	Alteration to L dimension tolerance Ordering Code LKC Application Notes Applicable when L=200 or less for precision type ⊗Not applicable when D-M (N)≤2 When using LKC, L dimensions can be specified in 0.1 increments. ⓟ L<200 ···→L±0.03 200≤L<500···→L±0.05 L≥500 ···→L±0.1	4,00
	WSC	Add wrench flats at two locations Ordering Code WSC12-X8 Specify WSC/X in 1mm increments. ⓟ WSC+X+ℓ1x2<L ⓟ WSC (X)=0 Or WSC (X)≥1 ⊗Machining on the same plane is not applicable. D W ℓ1: 8 7 8; 10 8; 12 10; 13 11; 15 13 10; 16 14; 18 16 D W ℓ1: 20 17 10; 25 22; 30 27 15; 35 30; 40 36 20; 50 41	8,00
	FC	Add Set Screw Flat at one location Ordering Code FC10-E8 Application Notes ⊗Not applicable to precision type Specify FC and A in 1mm increments. ⓟ FC≤3xD ⓟ When 1.5xD<FC, FC≤L/2 ⓟ A=0 or A ≥ 2 ⊗Can not be used with WFC D h: 8~18 1; 20~40 2; 50 3	2,00
	WFC	Add Set Screw Flats at two locations Ordering Code WFC8-A8-E4 Application Notes ⊗Not applicable to precision type Specify WFC, A and E in 1mm increments ⓟ WFC≤3xD ⓟ When 1.5xD<FC, 2WFC≤L/2 ⓟ A (E) = 0 or A (E) ≥ 2 ⊗Machining on the same plane is not applicable. Can not be used with FC. D h: 8~18 1; 20~40 2; 50 3	4,00

Alterations	Code	Spec.	Price Adder
	DKC	Change to h5 O.D. tolerance Ordering Code DKC Application Notes ⊗Not applicable to Precision Type, Shafts with D tolerance f8 and LTBC plating.	-
	RC	Add 90-deg. Set Screw Flat at one location Ordering Code RC10 Application Notes Applicable for D=10~30 ⊗Not applicable to precision type ⊗Can not be used with WRC	5,00
	WRC	2 x 90-deg. Set Screw Flats Ordering Code WRC10-Y10 Application Notes Applicable to D=10 ~ 30 ⊗Not applicable to precision type ⊗Cannot be used in combination with RC. ⊗Not available on the same plane.	10,00
	MMS NMC NMS	Change to fine threads. Ordering Code MMC14 (M is changed to MMC) MMS14 (M is changed to MMS) NMC14 (N is changed to NMC) NMS14 (N is changed toNMC)	3,00

For details, please see Alterations Overview P.105

ⓟ Please see Alteration Guides for details if provided. P.105
ⓟ For more than one alteration, 2mm or more separation required between machined sections. P.106
ⓟ Alterations may lower hardness. P.104

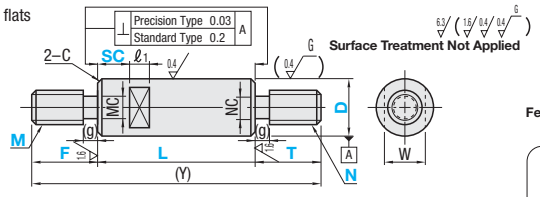
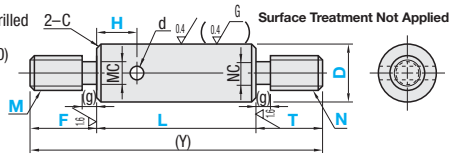
With wrench flats

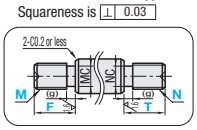


With cross-drilled holes. (D≤30, L≤500)



Features of Precision Type

Squareness is ⊥ 0.03



Centering holes will be spotted on shaft ends of precision type.

Annealing required for machining wrench flats and shaft end threading (effective thread length + approx. 10mm) may lower hardness. P.104

Cross-drilled hole areas may be out of O.D. tolerances due to deformations caused by annealing.

Changes in Circularity, Straightness, Perpendicularity, Coaxiality and Hardness. P.103

Features of LTBC Plating P.118

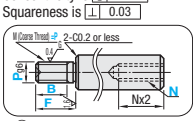
Features of Precision Type : Concentricity is Ø0.02, Squareness is 0.03



Annealing required for machining wrench flats and shaft end threading (effective thread length + approx. 10mm) may lower hardness. P.104

Circularity, Straightness, Perpendicularity, P.103

Features of LTBC P.118

Overall length L requires Nx3≤L.

When D=P, please specify F=B as B dimensions. L and F dimensions, however, have priority to build, thus B dimensions should be F-(Pitch x 2).

Precision shafts have grinding undercut section at the bottom of threads. Shaft ends

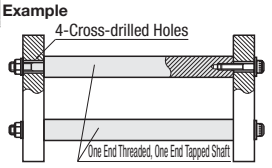
Example



Alterations

Part Number - L - F - B - P (PMC / PSC) - N (NSC) - (LKC / WSC...etc.)
SFAD30 - 250 - F40 - B30 - P10 - N10 - LKC

DKC alterations was discontinued in June 2010.
Please specify new part numbers; SFUD, SSFUD, PSFUD and PSSFUD on the left page to place orders.

Alteration Details P.105

Alterations	Code	Spec.	Price Adder
	LKC	Alteration to L dimension tolerance Ordering Code LKC Application Notes Applicable when L=200 or less for precision type ⊗Not applicable when D-P≤2 When using LKC, L dimensions can be specified in 0.1 increments. Ⓟ L<200 ···› L±0.03 200≤L<500···› L±0.05 L≥500 ···› L±0.1	4,00
	WSC	Add wrench flats at two locations Ordering Code WSC12-X8 Application Notes Applicable to D = 6 and over Specify WSC/X in 1mm increments. Ⓟ WSC=X+ℓ1x2<L Ⓟ WSC (X)=0 or WSC (X)≥1 ⊗Not available on the same plane.	8,00
	FC	Add set screw flat at one location Ordering Code FC10-E8 Application Notes ⊗Not applicable to precision type Specify FC and E in 1mm increments. Ⓟ FC≤3xD Ⓟ When 1.5xD<FC, FC≤L/2 Ⓟ E=0 or E≥2 ⊗Can not be used with WFC D / h: 4~5 / 0.5; 6~18 / 1; 20~40 / 2; 50 / 3	2,00
	WFC	Add Set Screw Flats at two locations Ordering Code WFC8-A8-E4 Application Notes ⊗Not applicable to precision type Specify WFC, A and E in 1mm increments Ⓟ WFC≤3xD Ⓟ When 1.5xD<FC, 2WFC≤L/2 Ⓟ A (E) = 0 or A (E) ≥ 2 ⊗Machining on the same plane is not applicable. Can not be used with FC. D / h: 4~5 / 0.5; 6~18 / 1; 20~40 / 2; 50 / 3	4,00

Alterations	Code	Spec.	Price Adder
	DKC	Change to h5 O.D. tolerance Ordering Code DKC Application Notes ⊗Precision type, D tolerance and Not applicable to LTBC Plated Shafts.	-
	RC	Add 90-deg. Set Screw Flat at one location Ordering Code RC10 Application Notes Applicable to D=10 ~ 30 ⊗Not applicable to precision type ⊗Can not be used with WRC	5,00
	WRC	2 x 90-deg. Set Screw Flats Ordering Code WRC10-Y10 Application Notes Applicable to D=10 ~ 30 ⊗Not applicable to precision type ⊗Cannot be used in combination with RC ⊗Not available on the same plane.	10,00
	PMC	Change to fine threads. Ordering Code PMC14 (P is changed to PMC) PMS14 (P is changed to PMS)	3,00
	NSC	Change to fine thread tap. Ordering Code NSC14 (N is changed to NSC) Application Notes Applicable for D = 6 or more	3,00

For details, please see Alterations Overview P.105

Ⓟ Please see Alteration Guides for details if provided. P.105
Ⓟ For more than one alteration, 2mm or more separation required between machined sections. P.106
Ⓟ Alterations may lower hardness. P.104

NEW

Shafts -Standard Type / Precision Type-

-One End Male Thread and One End Female Thread w/Wrench Flats / One End Male Thread and One End Female Thread w/Cross-drilled Hole-

For Shafts w/o wrench flats or cross-drilled holes, please see P.143

RoHS

- Annealing required for machining wrench flats and shaft end threading (effective thread length + approx. 10mm) may lower hardness. P.104
- Cross-drilled hole areas may be out of O.D. tolerances due to deformations caused by annealing.
- Changes in circularity, straightness, perpendicularity, coaxiality and hardness P.103
- Features of LTBC P.118

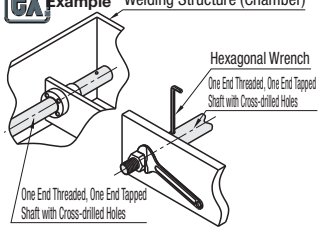
Example Welding Structure (Chamber)



- Shafts with cross-drilled holes are suitable for limited work spaces.

Alterations

Part Number - L - F - B - P (PMC · PSC) - N (NSC) - SC - H - (LKC...etc.)
SFAZ30 - 250 - F40 - B30 - P10 - N10 - SC10 - LKC

DKC alterations was discontinued in June 2010.
Please specify new part numbers; SFZU, SSFZU, PSFZU and PSSFZU on the left page to place orders.

Alteration Details P.105

Alterations	Code	Spec.	Price Adder
	LKC	Alteration to L dimension tolerance Ordering Code LKC Application Notes Applicable when L=200 or less for precision type ⊗Not applicable when D-P≤2 When using LKC, L dimensions can be specified in 0.1 increments. (P) L<200 ···›L±0.03 200≤L<500···›L±0.05 L≥500 ···›L±0.1	4,00
	SX	Add wrench flats at two locations Ordering Code SX15 Application Notes Applicable to "Shafts with Wrench Flats" only. Specify SX in 1mm increments (P) SC+SX+ℓ₁x2<L (P) SX = 0 or SX ≥ 1 ⊗Not available on the same plane. D / h: 6~18 / 1; 20~40 / 2; 50 / 3	4,00
	FC	Add Set Screw Flat at one location Ordering Code FC10-E8 Application Notes ⊗Not applicable to precision type Specify FC and E in 1mm increments. (P) FC≤3xD (P) When 1.5xD<FC, FC≤L/2 (P) E=0 or E≥2 ⊗Can not be used with WFC D / h: 6~18 / 1; 20~40 / 2; 50 / 3	2,00
	WFC	Add Set Screw Flats at two locations Ordering Code WFC8-A8-E4 Application Notes ⊗Not applicable to precision type Specify WFC, A and E in 1mm increments (P) WFC≤3xD (P) When 1.5xD<FC, 2WFC≤L/2 (P) A (E) = 0 or A (E) ≥ 2 ⊗Machining on the same plane is not applicable. Can not be used with FC. D / h: 6~18 / 1; 20~40 / 2; 50 / 3	4,00

Alterations	Code	Spec.	Price Adder
	DKC	Change to h5 O.D. tolerance Ordering Code DKC Application Notes ⊗Shafts with Cross-drilled hole, Precision Type, D Tolerance f8, Not applicable to LTBC Plated Shafts.	-
	RC	Add 90-deg. set screw flat at one location Ordering Code RC10 Application Notes Applicable for D=10 ~ 30 ⊗Not applicable to precision type ⊗Can not be used with WRC	5,00
	WRC	2 x 90-deg. set screw flats Ordering Code WRC10-Y10 Application Notes Applicable to D=10 ~ 30 ⊗Not applicable to precision type ⊗Cannot be used in combination with RC. ⊗Not available on the same plane.	10,00
	PMC	Change to fine threads. Ordering Code PMC14 (P is changed to PMC) PMS14 (P is changed to PMS)	3,00
	NSC	Change to fine thread tap. Ordering Code NSC14 (N is changed to NSC) Application Notes Applicable for D = 6 or more	3,00

For details, please see Alterations Overview P.105

(P)Please see Alteration Guides for details if provided. P.105
(P)For more than one alteration, 2mm or more separation required between machined sections.
(P)Alterations may lower hardness. P.104

Alterations

Part Number - L - F - M (MMC · MMS) - N (NSC) - (LKC...etc.)
SAFD30 - 250 - F40 - M20 - N20 - LKC

DKC alterations was discontinued in June 2010.
Please specify new part numbers; SFDU, SSFDU, PSFDU and PSSFDU on the left page to place orders.

Alteration Details P.105

Alterations	Code	Spec.	Price Adder
	LKC	Alteration to L dimension tolerance Ordering Code LKC Application Notes Applicable when L=200 or less for precision type ⊗Not applicable when D-M≤2 When using LKC, L dimensions can be specified in 0.1 increments. ? L<200 ···L±0.03 200≤L<500···L±0.05 L≥50 ···L±0.1	4,00
	WSC	Add wrench flats at two locations Ordering Code WSC12-X8 Specify WSC/X in 1mm increments. ? WSC+X+ℓ1x2<L ? WSC (X)=0 or WSC (X)≥1 ⊗Not available on the same plane. D: 8, 10, 12, 13, 15, 16, 18 / W: 7, 8, 10, 11, 13, 14, 16 / ℓ1: 8 (D 8–10), 10 (D 12–18) D: 20, 25, 30, 35, 40, 50 / W: 17, 22, 27, 30, 36, 41 / ℓ1: 10, 15, 20	8,00
	FC	Add Set Screw Flat at one location Ordering Code FC10-E8 Application Notes ⊗Not applicable to precision type Specify FC and E in 1mm increments. ? FC≤3xD ? When 1.5xD<FC, FC≤L/2 ? E=0 or E≥2 ⊗Can not be used with WFC D: 8~18 / h: 1; D: 20~40 / h: 2; D: 50 / h: 3	2,00
	WFC	Add Set Screw Flats at two locations Ordering Code WFC8-A8-E4 Application Notes ⊗Not applicable to precision type Specify WFC, A and E in 1mm increments ? WFC≤3xD ? When 1.5xD<WFC, 2WFC≤L/2 ? A (E) = 0 or A (E) ≥ 2 ⊗Cannot be machined on the same plane. Cannot be combined with FC. D: 8~18 / h: 1; D: 20~40 / h: 2; D: 50 / h: 3	4,00

Alterations	Code	Spec.	Price Adder
	DKC	Change to h5 O.D. tolerance Ordering Code DKC Application Notes ⊗Not applicable for Precision Type, Shafts with D tolerance f8 and LTBC plating.	-
	RC	Add 90-deg. Set Screw Flat at one location Ordering Code RC10 Application Notes Applicable for D=10 ~30 ⊗Not applicable to precision type ⊗Can not be used with WRC	5,00
	WRC	2 x 90-deg. Set Screw Flats Ordering Code WRC10-Y10 Application Notes Applicable for D=10 ~ 30 ⊗Not applicable to precision type ⊗Cannot be used in combination with RC. ⊗Not available on the same plane.	10,00
	MMS	Change to fine threads. Ordering Code MMC14 (M is changed to MMC) MMS14 (M is changed to MMS)	3,00
	NSC	Change to fine thread tap. Ordering Code NSC14 (N is changed to NSC) Application Notes Applicable for D = 6 or more	3,00

For details, please see Alterations Overview P.105

? Please see Alteration Guides for details if provided. P.105
? For more than one alteration, 2mm or more separation required between machined sections.
? Alterations may lower hardness. P.104

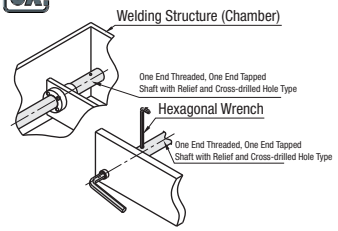
Example



- Shafts with cross-drilled holes are suitable for limited work spaces.

Alterations

Part Number - L - F - M (MMC · MMS) - N (NSC) - SC - H - (LKC...etc.)
SAFZ30 - 250 - F40 - M20 - N20 - SC10 - LKC

DKC alterations was discontinued in June 2010.
Please specify new part numbers; SFBU, SSFBU, PSFBU and PSSFBU on the left page to place orders.

Alteration Details P.105

Alterations	Code	Spec.	Price Adder
	LKC	Alteration to L dimension tolerance Ordering Code LKC Application Notes Applicable when L=200 or less for precision type ⊗Not applicable when D-M≤2 When using LKC, L dimensions can be specified in 0.1 increments. (P) L<200 ···▸L±0.03 200≤L<500···▸L±0.05 L≥500 ···▸L±0.1	4,00
	SX	Add wrench flats at two locations Ordering Code SX15 Application Notes Applicable to "Shafts with Wrench Flats" only. Specify SX in 1mm increments (P) SC+SX+ℓ1x2<L (P) SX = 0 or SX ≥ 1 ⊗Not available on the same plane.	4,00
	FC	Add set screw flat at one location Ordering Code FC10-E8 Application Notes ⊗Not applicable to precision type Specify FC and E in 1mm increments. (P) FC≤3xD (P) When 1.5xD<FC, FC≤L/2 (P) E=0 or E≥2 ⊗Can not be used with WFC	2,00
	WFC	Add set screw flats at two locations Ordering Code WFC8-A8-E4 Application Notes ⊗Not applicable to precision type Specify WFC, A and E in 1mm increments (P) WFC≤3xD (P) When 1.5xD<WFC, 2WFC≤L/2 (P) A (E) = 0 or A (E) ≥ 2 ⊗Cannot be machined on the same plane. Cannot be combined with FC.	4,00

Alterations	Code	Spec.	Price Adder
	DKC	Change to h5 O.D. tolerance Ordering Code DKC Application Notes ⊗Shafts with Cross-drilled hole, Precision Type, D Tolerance f8,Not applicable to LTBC Plated Shafts.	-
	RC	Add 90-deg. Set Screw Flat at one location Ordering Code RC10 Application Notes Applicable to D=10 ~ 30 ⊗Not applicable to precision type ⊗Can not be used with WRC	5,00
	WRC	2 x 90-deg. Set Screw Flats Ordering Code WRC10-Y10 Application Notes Applicable to D=10 ~ 30 ⊗Not applicable to precision type ⊗Cannot be used in combination with RC. ⊗Not available on the same plane.	10,00
	MMS	Change to fine threads. Ordering Code MMC14 (M is changed to MMC) MMS14 (M is changed to MMS)	3,00
	NSC	Change to fine thread tap. Ordering Code NSC14 (N is changed to NSC) Application Notes Applicable for D = 6 or more	3,00

For details, please see Alterations Overview P.105

(P)Please see Alteration Guides for details if provided. P.105
(P)For more than one alteration, 2mm or more separation required between machined sections.
(P)Alterations may lower hardness. P.104

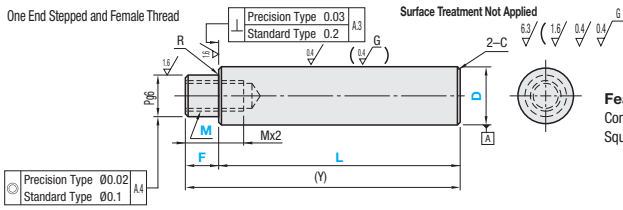
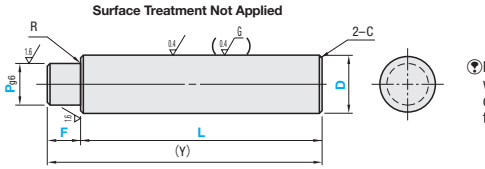
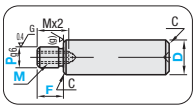
One End Stepped and Female Thread



One End Stepped



Features of Precision Type
Concentricity is ◎ Ø0.02,
Squareness is ⊥ 0.03



Precision Type will have an undercut (max. width: 1mm, max. depth: 0.1mm) at the base of stepped section, and centering holes on the ends.

Shaft End Machined Area (Effective Thread Length + approx. 10mm)hardness may be reduced by annealing. P.104

Changes in circularity, straightness, perpendicularity, coaxiality and hardness P.103

Features of LTBC P.118

Alterations

Part Number - L - F - P - M - (LKC · FC...etc.)
SFAG30 - 400 - F25 - P16 - M10 - LKC

- Keyway machining (Only KC and WKC) 10 Days (RSFAG and RSFAC are to be shipped on the 13th day after order)

DKC alteration was discontinued in June 2010. Please specify new part numbers; SFUG, SSFUG, PSFUG, PSSFUG, SFCU, SSFCU, PSFCU and PSSFCU on the left page.

Alteration Details P.105

Alterations	Code	Spec.	Price Adder
	LKC	Alteration to L dimension tolerance Ordering Code LKC Application Notes Applicable when L=200 or less for precision type ⊗Not applicable when D-P≤2 When using LKC, L dimensions can be specified in 0.1 increments. L<200 ···›L±0.03 200≤L<500···›L±0.05 L≥500 ···›L±0.1	4,00
	FC	Add set screw flat at one location Ordering Code FC10-E8 Application Notes ⊗Not applicable to precision type Specify FC and E in 1mm increments. FC≤3xD When 1.5xD<FC, FC≤L/2 E=0 or E≥2 ⊗Can not be used with WFC D: 8~18 h:1; 20~40 h:2; 50 h:3	2,00
	WFC	Add set screw flats at two locations Ordering Code WFC8-A8-E4 Application Notes ⊗Not applicable to precision type Specify WFC, A and E in 1mm increments WFC≤3xD When 1.5xD<WFC, 2WFC≤L/2 A (E) = 0 or A (E) ≥ 2 ⊗Cannot be machined on the same plane. Cannot be combined with FC. D: 8~18 h:1; 20~40 h:2; 50 h:3	4,00

Alterations	Code	Spec.	Price Adder
	DKC	Change to h5 O.D. tolerance Ordering Code DKC Application Notes ⊗Not applicable for Precision Type, Shafts with D tolerance f8 and LTBC plating.	-
	RC	Add 90-deg. Set Screw Flat at one location Ordering Code RC10 Application Notes Applicable to D=10 ~ 30 ⊗Not applicable to precision type ⊗Can not be used with WRC	5,00
	WRC	2 x 90-deg. Set Screw Flats Ordering Code WRC10-Y10 Application Notes Applicable to D=10 ~ 30 ⊗Not applicable to precision type ⊗Cannot be used in combination with RC. ⊗Not available on the same plane.	10,00
- Keyway at one location :KC  - Keyways at two locations :WKC 	KC WKC	Keyway Ordering Code KC10-G10 WKC10-C8-KC10-G10 Application Notes Applicable only to D = 12, 16, 20, 25 or 30. ⊗Not applicable to precision type	KC 5,00 WKC 10,00

For details, please see Alterations Overview P.105

Please see Alteration Guides for details if provided. P.105
For more than one alteration, 2mm or more separation required between machined sections.
Alterations may lower hardness. P.104

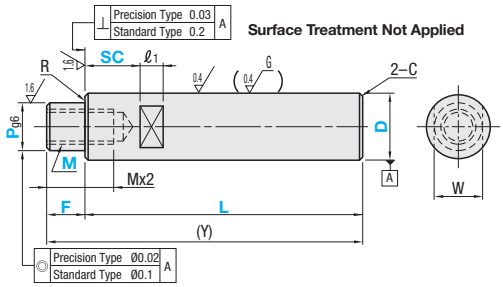
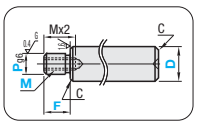
Surface Treatment Not Applied



Features of Precision Type

Concentricity is Ø0.02

Squareness is 0.03



Precision Type will have an undercut (max. width: 1mm, max. depth: 0.1mm) at the base of stepped section, and centering holes on the ends.

Annealing required for machining wrench flats and shaft end threading (thread effective length + approx. 10mm) may lower hardness. P.104

Changes in circularity, straightness, perpendicularity, coaxiality and hardness P.103

Features of LTBC P.118

M + 3 ≤ P is required for P Dimension. For Precision Type, (Y) dimensions needs to be Mx4≤(Y). Tap pilot hole may go through.

Alterations

Part Number - L - F - P - M - SC - (LKC / FC...etc.)
SFPG30 - 400 - F25 - P16 - M10 - SC10 - LKC

- Keyway machining (Only KC and WKC) 10 Days (RSFPG is to be shipped on the 13th day after order)

DKC alterations was discontinued in June 2010.
Please specify new part numbers; SFPU, SSFPU, PSFPU and PSSFPU on the left page to place orders.

Alteration Details P.105

Alterations	Code	Spec.	Price Adder
	LKC	Alteration to L dimension tolerance Ordering Code LKC Application Notes Applicable when L=200 or less for precision type ⊗Not applicable when D-P≤2 When using LKC, L dimensions can be specified in 0.1 increments. ? L<200 ···L±0.03 200≤L<500···L±0.05 L≥500 ···L±0.1	4,00
	SX	Add wrench flats at two locations Ordering Code SX15 Specify SX in 1mm increments ? SC+SX+ℓ1x2<L ? SX = 0 or SX ≥ 1 ⊗Not available on the same plane. D / W / ℓ1: 8/7/8; 10/8/8; 12/10/10; 13/11/10; 15/13/10; 16/14/10; 18/16/10; 20/17/10; 25/22/10; 30/27/15; 35/30/15; 40/36/20; 50/41/20	4,00
	FC	Add set screw flat at one location Ordering Code FC10-E8 Application Notes ⊗Not applicable to precision type Specify FC and E in 1mm increments. ? FC≤3xD ? When 1.5xD<FC, FC≤L/2 ? E=0 or E≥2⊗Can not be used with WFC D / h: 8~18/1; 20~40/2; 50/3	2,00
	WFC	Add set screw flats at two locations Ordering Code WFC8-A8-E4 Application Notes ⊗Not applicable to precision type Specify WFC, A and E in 1mm increments ? WFC≤3xD ? When 1.5xD<FC, 2WFC≤L/2 ? A (E) = 0 or A (E) ≥ 2 ⊗Machining on the same plane is not applicable. Can not be used with FC. D / h: 8~18/1; 20~40/2; 50/3	4,00

Alterations	Code	Spec.	Price Adder
	DKC	Change to h5 O.D. tolerance Ordering Code DKC Application Notes ⊗Precision type, D tolerance f8 shafts and Not applicable to LTBC Plated Shafts.	-
	RC	Add 90-deg. Set Screw Flat at one location Ordering Code RC10 Application Notes Applicable to D=10 ~ 30 ⊗Not applicable to precision type ⊗Can not be used with WRC	5,00
	WRC	2 x 90-deg. Set Screw Flats Ordering Code WRC10-Y10 Application Notes Applicable to D=10 ~ 30 ⊗Not applicable to precision type ⊗Cannot be used in combination with RC. ⊗Not available on the same plane.	10,00
- Keyway at one location :KC  - Keyways at two locations :WKC 	KC WKC	Keyway Ordering Code KC10-G10 WKC10-C8-KC10-G10 Application Notes Applicable only to D = 12, 16, 20, 25 or 30. ⊗Not applicable to precision type	KC 5,00 WKC 10,00

For details, please see Alterations Overview P.105

?Please see Alteration Guides for details if provided. P.105
?For more than one alteration, 2mm or more separation required between machined sections. P.106
?Alterations may lower hardness. P.104

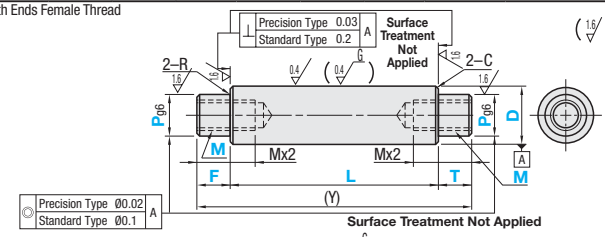
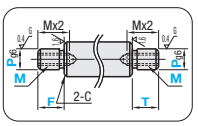
Both Ends Female Thread



Features of Precision Type

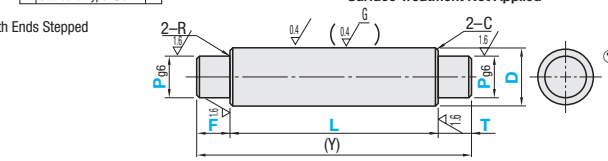
Concentricity is Ø0.02,

Squareness is 0.03



Precision shafts have grinding undercuts at stepped sections (max. width 1mm / max. depth 0.1mm).

Both Ends Stepped



Annealing required for machining wrench flats and shaft end threading (effective thread length + approx. 10mm) may lower hardness. P.104

Changes in circularity, straightness, perpendicularity, coaxiality and hardness P.103

Features of LTBC P.118

-Both Ends Female Thread

For D tolerance h5, 2,00 EUR is added to the prices above.

-Both Ends Stepped

For D tolerance h5, 3,90 EUR is added to the above prices. And then the prices on the right page are subtracted.

For D tolerance g6, the prices on the right page are subtracted from the above prices.

Alterations

Part Number - L - F - P - M - T - (LKC · WSC...etc.)
SFAH20 - 400 - F25 - P16 - M10 - T20 - LKC

- Keyway machining (KC / WKC) only 10 Days (RSFAH and RSFAJ are to be shipped on the 13th day after order)

DKC alteration was discontinued in June 2010. Please specify new part numbers; SFUG, SSFUG, PSFUG, PSSFUG, SFCU, SSFCU, PSFCU and PSSFCU on the left page.
Please specify SFUH, SSFUH, PSFUH, PSSFUH, SFUJ, SSFUJ, PSFUJ and/or PSSFUJ to place orders.

Alteration Details P.105

Alterations	Code	Spec.	Price Adder
	LKC	Alteration to L dimension tolerance Ordering Code LKC Application Notes Applicable when L=200 or less for precision type ⊗Not applicable when D-P≤2 When using LKC, L dimensions can be specified in 0.1 increments. ? L<200 ⋯›L±0.03 200≤L<500⋯›L±0.05 L≥500 ⋯›L±0.1	4,00
	WSC	Add wrench flats at two locations Ordering Code WSC12-X8 Specify WSC/X in 1mm increments. ? WSC+X+ℓ1x2<L ? WSC (X)=0 or WSC (X)≥1 ⊗Not available on the same plane. D W ℓ1: 8 7 8 / 10 8 8 / 12 10 10 / 13 11 10 / 15 13 10 / 16 14 10 / 18 16 10 / 20 17 10 / 25 22 15 / 30 27 15 / 35 30 15 / 40 36 20 / 50 41 20	8,00
	FC	Add set screw flat at one location Ordering Code FC10-E8 Application Notes ⊗Not applicable to precision type Specify FC and E in 1mm increments. ? FC≤3xD ? When 1.5xD<FC, FC≤L/2 ? E=0 or E≥2⊗Can not be used with WFC D h: 8~18 1 / 20~40 2 / 50 3	2,00
	WFC	Add set screw flats at two locations Ordering Code WFC8-A8-E4 Application Notes ⊗Not applicable to precision type Specify WFC, A and E in 1mm increments ? WFC≤3xD ? When 1.5xD<FC, 2WFC≤L/2 ? A (E) = 0 or A (E) ≥ 2 ⊗Machining on the same plane is not applicable. Can not be used with FC. D h: 8~18 1 / 20~40 2 / 50 3	4,00

Alterations	Code	Spec.	Price Adder
	DKC	Change to h5 O.D. tolerance Ordering Code DKC Application Notes ⊗Precision type, D tolerance f8 shafts and Not applicable to LTBC Plated Shafts.	-
	RC	Add 90-deg. Set Screw Flat at one location Ordering Code RC10 Application Notes Applicable to D=10 ~ 30 ⊗Not applicable to precision type ⊗Can not be used with WRC	5,00
	WRC	2 x 90-deg. Set Screw Flats Ordering Code WRC10-Y10 Application Notes Applicable to D=10 ~ 30 ⊗Not applicable to precision type ⊗Cannot be used in combination with RC. ⊗Not available on the same plane.	10,00
	KC WKC	Keyway Ordering Code KC10-G10 WKC10-C8-KC10-G10 Application Notes Applicable only to D = 12, 16, 20, 25 or 30. ⊗Not applicable to precision type	KC 5,00 WKC 10,00

For details, please see Alterations Overview P.105

? Please see Alteration Guides for details if provided. P.105
? For more than one alteration, 2mm or more separation required between machined sections.
? Alterations may lower hardness. P.104

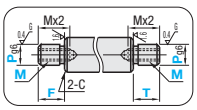
Features of Precision Type

Concentricity is ◎ Ø0.02

Squareness is ⊥ 0.03



Precision shafts have grinding undercuts at stepped sections (max. width 1mm / max. depth 0.1mm).

Annealing required for machining wrench flats and shaft end threading (thread effective length + approx. 10mm) may lower hardness. P.104

Changes in circularity, straightness, perpendicularity, coaxiality and hardness P.103

Features of LTBC P.118

M + 3 ≤ P is required for P Dimension. For Precision Type, (Y) dimensions needs to be Mx4≤(Y). Tap pilot hole may go through.

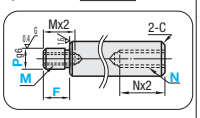
Features of Precision Type
Concentricity is Ø0.02
Squareness is 0.03



Precision shafts have grinding undercuts at stepped sections (max. width 1mm / max. depth 0.1mm). Grinding undercut(max. width 1mm / max. depth 0.1mm) is added.

					50	25~1498		11~47	6 8 10 12 16 20 24 30	12 16 20 24 30	1500		

M + 3 ≤ P is required for P Dimension. When D-P≤4, stepped section chamfer C is 0.2 or less. L dimension of "One End Stepped - One End Female Thread" shafts needs to be N x 3 ≤ L.
When Mx2.5+4+Nx2.5+4≥(Y), tap pilot may go through. When Mx2+Nx2≥(Y), effective thread length of larger diameter tap has priority. In such case, Y needs to be Y≥Mx2.5+4+N or Y≥Nx2.5+4+M.

M + 3 ≤ P is required for P Dimension.
When Mx2.5+4+Nx2.5+4≥(Y), tap pilot may go through. When Mx2+Nx2≥(Y), effective thread length of larger diameter tap has priority. In such case, Y needs to be Y≥Mx2.5+4+N or Y≥Nx2.5+4+M.

Alterations

Part Number - L - F - P - M - N (NSC) - SC - (LKC / NSC...etc.)
SFPPA30 - 400 - F25 - P16 - M10 - N10 - SC10 - LKC

DKC alterations was discontinued in June 2010.
Please specify new part numbers; SFUP, SSFUP, PSFUP and PSSFUP on the left page to place orders.

Alteration Details P.105

Alterations	Code	Spec.	Price Adder
	LKC	Alteration to L dimension tolerance Ordering Code LKC Application Notes Applicable when L=200 or less for precision type ⊗Not applicable when D-P≤2 When using LKC, L dimensions can be specified in 0.1 increments. Ⓥ L<200 ···>L±0.03 200≤L<500···>L±0.05 L≥500 ···>L±0.1	4,00
	SX	Add wrench flats at two locations Ordering Code SX15 Specify SX in 1mm increments Ⓥ SC+SX+ℓ1x2<L Ⓥ SX = 0 or SX ≥ 1 ⊗Not available on the same plane.	4,00
	FC	Add set screw flat at one location Ordering Code FC10-E8 Application Notes ⊗Not applicable to precision type Specify FC and E in 1mm increments. Ⓥ FC≤3xD Ⓥ When 1.5xD<FC, FC≤L/2 Ⓥ E=0 or E≥2⊗Can not be used with WFC	2,00
	WFC	Add set screw flats at two locations Ordering Code WFC8-A8-E4 Application Notes ⊗Not applicable to precision type Specify WFC, A and E in 1mm increments Ⓥ WFC≤3xD Ⓥ When 1.5xD<FC, 2WFC≤L/2 Ⓥ A (E) = 0 or A (E) ≥ 2 ⊗Machining on the same plane is not applicable. Can not be used with FC.	4,00

Alterations	Code	Spec.	Price Adder
	DKC	Change to h5 O.D. tolerance Ordering Code DKC Application Notes ⊗Not applicable for Precision Type, Shafts with D tolerance f8 and LTBC plating.	-
	RC	Add 90-deg. set screw flat at one location Ordering Code RC10 Application Notes Applicable for D=10 ~ 30 ⊗Not applicable to precision type ⊗Can not be used with WRC	5,00
	WRC	2 x 90-deg. set screw flats Ordering Code WRC10-Y10 Application Notes Applicable to D=10 ~ 30 ⊗Not applicable to precision type ⊗Cannot be used in combination with RC. ⊗Not available on the same plane.	10,00
	NSC	Change to fine thread tap. Ordering Code NSC14 (N is changed to NSC) Application Notes Applicable to D = 6 or more	3,00

For details, please see Alterations Overview P.105

Ⓥ Please see Alteration Guides for details if provided. P.105
Ⓥ For more than one alteration, 2mm or more separation required between machined sections.
Ⓥ Alterations may lower hardness. P.104

Alterations

Part Number - L - F - B - P - M (MMC · MMS) - T - S - Q - N (NMC · NMS) - (LKC...etc.)
SFAX30 - 300 - F40 - B30 - P20 - M16 - T50 - S30 - Q16 - N10 - LKC

- Keyway machining (KC) only

10 Days (RSFAF and RSFAX are to be shipped on the 13th day after order)

DKC alteration was discontinued in June 2010. Please specify new part numbers; SFUG, SSFUG, PSFUG, PSSFUG, SFCU, SSFCU, PSFCU and PSSFCU on the left page. Please specify SFUF, SSFUF, PSFUF, PSSFUF, SFUX, SSFUX, PSFUX, and/or PSSFUX to place orders.

Alteration Details P.105

Alterations	Code	Spec.	Price Adder
	LKC	Alteration to L dimension tolerance Ordering Code LKC ⊗Not applicable to D-P (Q)≤2 When using LKC, L dimensions can be specified in 0.1 increments. (?) L<200 ···›L±0.03 200≤L<500···›L±0.05 L≥500 ···›L±0.1	4,00
	SC	Adds a set of wrench flats. Ordering Code SC5 SC=1mm Increment (?) SC+ℓ1≤L SC=0 or SC≥1 ⊗Can not be used with WSC D: 8, 10, 12, 13, 15, 16 — W: 7, 8, 10, 11, 13, 14 — ℓ1: 8, 10	4,00
	WSC	Add wrench flats at two locations Ordering Code WSC12-X8 Specify WSC/X in 1mm increments. (?) WSC+X+ℓ1≤L (?) WSC (X)=0 or WSC (X)≥1 ⊗Cannot be machined on the same plane. Can not be used with ⊗Not applicable to One End Stepped and Male Thread Shafts D: 18, 20, 25, 30, 35, 40, 50 — W: 16, 17, 22, 27, 30, 36, 41 — ℓ1: 15, 20	8,00
	FC	Add set screw flat at one location Ordering Code FC10-E8 Specify FC and E in 1mm increments. (?) FC≤3xD (?) When 1.5xD<FC, FC≤L/2 (?) E=0 or E≥2 ⊗Can not be used with WFC ⊗Not applicable to "Both Ends Male Thread and Stepped" D: 8~18, 20~40, 50 — h: 1, 2, 3	2,00
	WFC	Add set screw flats at two locations Ordering Code WFC10-A8-E20 Specify WFC, A and E in 1mm increments (?) WFC≤3xD (?) When 1.5xD<FC, 2WFC≤L/2 (?) A (E) = 0 or A (E) ≥ 2 ⊗Machining on the same plane is not applicable. Can not be used with FC. ⊗Not applicable to "Both Ends Male Thread and Stepped" D: 8~18, 20~40, 50 — h: 1, 2, 3	4,00

Alterations	Code	Spec.	Price Adder
	DKC	Change to h5 O.D. tolerance Ordering Code DKC Application Notes ⊗Not applicable to shafts with diameter f8 tolerance and LTBC plating.	-
	RC	Add 90-deg. Set Screw Flat at one location Ordering Code RC10 Application Notes Applicable to D=10 ~ 30 ⊗Can not be used with WRC	5,00
	WRC	2 x 90-deg. Set Screw Flats Ordering Code WRC10-Y10 Application Notes Applicable to D=10 ~ 30 ⊗Cannot be used in combination with RC. ⊗Not available on the same plane.	10,00
	MMS NMC NMS	Change to fine threads. Order Code MMC14 (M is changed to MMC) MMS14 (M is changed to MMS) NMC14 (N is changed to NMC) NMS14 (N is changed toNMC)	3,00
	KC	Keyway is added at one location Ordering Code KC10-G10 Application Notes Applicable only to D = 12, 16, 20, 25 or 30. ⊗Not applicable to Both Ends Stepped and Male Thread	5,00

For details, please see Alterations Overview P.105

(?) Please see Alteration Guides for details if provided. P.105
(?) For more than one alteration, 2mm or more separation required between machined sections.
(?) Alterations may lower hardness. P.104

DKC alteration was discontinued in June 2010. Please specify new part numbers; SFUG, SSFUG, PSFUG, PSSFUG, SFCU, SSFCU, PSFCU and PSSFCU on the left page.
Please specify SFUA, SSFUA, PSFUA, PSSFUA, SFUB, SSFUB, PSFUB, and/or PSSFUB to place orders.

Alteration Details P.105

Alterations	Code	Spec.	Price Adder
	LKC	Alteration to L dimension tolerance Ordering Code LKC ⊗Not applicable to D-P (Q)≤2 When using LKC, L dimensions can be specified in 0.1 increments. L<200 ···›L±0.03 200≤L<500···›L±0.05 L≥50 ···›L±0.1	4,00
	SC	Adds a set of wrench flats. Ordering Code SC5 SC=1mm Increment ⊗SC+ℓ1≤L SC=0 or SC≥1 ⊗can not be used with WSC	4,00
	WSC	Add wrench flats at two locations Ordering Code WSC12-X8 Specify WSC/X in 1mm increments. WSC+X+ℓ1x2<L WSC (X)=0 or WSC (X)≥1 ⊗Cannot be machined on the same plane. Can not be used with	8,00
	FC	Add set screw flat at one location Ordering Code FC10-E8 Specify FC and E in 1mm increments. FC≤3xD When 1.5xD<FC, FC≤L/2 E=0 or E≥2 ⊗Can not be used with WFC	2,00
	WFC	Add set screw flats at two locations Ordering Code WFC10-A8-E20 Specify WFC, A and E in 1mm increments WFC≤3xD When 1.5xD<WFC, 2WFC≤L/2 A (E) = 0 or A (E) ≥ 2 ⊗Machining on the same plane is not applicable. Can not be used with FC.	4,00

Alterations	Code	Spec.	Price Adder
	DKC	Change to h5 O.D. tolerance Ordering Code DKC Application Notes D Tolerance f8 / Not applicable to Low Temperature Black Chrome Plated Shafts.	-
	RC	Add 90-deg. Set Screw Flat at one location Ordering Code RC10 Application Notes Applicable for D=10 ~ 30 ⊗Can not be used with WRC	5,00
	WRC	2 x 90-deg. Set Screw Flats Ordering Code WRC10-Y10 Application Notes Applicable for D=10 ~ 30 ⊗Cannot be used in combination with RC.	10,00
	QC	Undercut Ordering Code QC Application Notes Applicable when M=6 or more ⊗Not Applicable when D=Q	Free of charge
	QMC QMS	Change to fine threads. Ordering Code QMC14 (Q is changed to QMC) QMS14 (Q is changed to QMC)	3,00

For details, please see Alterations Overview P.105

Please see Alteration Guides for details if provided. P.105
For more than one alteration, 2mm or more separation required between machined sections.
Alterations may lower hardness. P.104

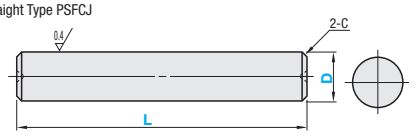
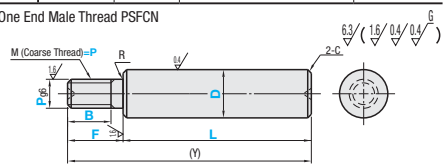
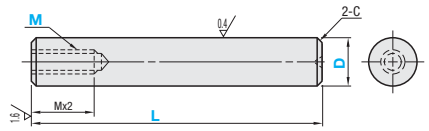
Straight Type PSFCJ



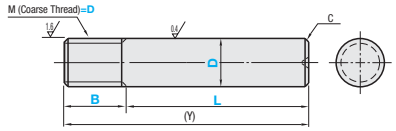
One End Male Thread PSFCN



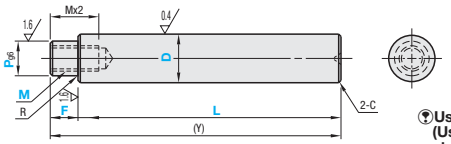
One End Female Thread PSFCT



One End Male Thread - Thread O.D. = Shaft O.D PSFCQ



One End Stepped and Female Thread PSFCG



Changes in Circularity, Straightness, Perpendicularity, Coaxiality and Hardness.☞P.103

Shaft End Machined Area (Effective Thread Length + approx. 10mm) Annealing could reduce hardness.

Shaft may have center holes at its end faces depending on shape.

L does not include incomplete threads.

Use "Oil-free Bushings" for sliding applications. P.325~352 (Using rolling ball elements such as linear ball bushings on electroless nickel plated shafts may result in flaking of the nickel plating layer.)

Alterations

Part Number - L - F - B - P (PMC · PSC) - M (MSC) - (LKC...etc.)
PSFCN30 - 250 - F40 - B30 - P10 - LKC

For more than one alteration, 2mm or more separation required between machined sections. P.106

Surface treatment will be also applied to altered areas.
Alterations may lower hardness. P.104

Alterations	Alteration to L Dimension Tolerance	Wrench Flats	Set Screw Flat
			Code	LKC	SC	FC
Spec.	Changes "L Tolerance". Ordering Code LKC L<200···L±0.03 200≤L<500···L±0.05 L≥500···L±0.1 L dimension can be specified in 0.1mm increments for LKC. ⊗Not applicable to One End Male Thread when D-P≤2. ⊗Not applicable to One End Male Thread Shafts - Thread O.D. = Shaft O.D Type	Adds a wrench flat. Ordering Code SC5 SC=1mm Increment SC+ℓ1≤LSC=0 or SC≥1 D / W / ℓ1: 8 / 7 / 8; 10 / 8; 12 / 10; 15 / 13 / 10; 20 / 17 D / W / ℓ1: 25 / 22 / 10; 30 / 27 / 15; 35 / 30; 40 / 36 / 20; 50 / 41	Add screw flats. Ordering Code FC10-E8 Specify FC and E in 1mm increments. FC≤Dx3 When 1.5xD<FC, FC≤L/2 E=0 or E≥2 D / h: 8~15 / 1; 20~40 / 2; 50 / 3

RoHS

- Features of LTBC ☞P.118
- LTBC plating is not applied to the inside of hollow shafts, taps, bored holes and lateral holes, and may rust.
- Changes in circularity, straightness, perpendicularity and hardness ☞P.103
- Circularity and outer diameter tolerance may not meet precision specification in areas approximately 10mm from each wrench flat end.
- Annealing required for machining wrench flats and shaft end threading (effective thread length + approx. 10mm) may lower hardness.

D≥N+4+W
R≥M+3
W≥N+3

Tap Depth
Mx2
Nx2

T

D-J (Z) tan15°x2≥2
(Tip diameter Ø2 or more)

- L needs to be L-J (Z) ≥20
- When both ends are in T shape, needs to be L-(J+Z) ≥20

When only one end requires alteration, select Shape A for the opposite end that does not require alteration. G and H will not be symmetrical when applied to both ends of the shaft.
When D = P or D = N is selected for shaft shape C, B (S) needs to be specified as F = B (T = S). However, L, F, and T dimensions have manufacturing priority and B (S) dimension will be F (T)-(Pitch x 2).

Shaft Supports Guide

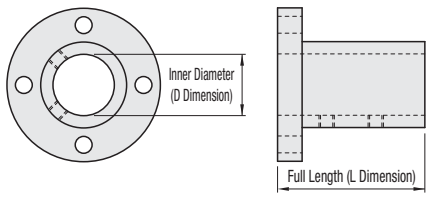
■About Inner Bore Accuracies

Features: - Combination use of MISUMI Shafts (standard g6, f8 and h5) and MISUMI Shaft Supports are recommended.
- Slit is machined after the mounting hole D is bored to H7 tolerance. Tolerance may become H8 or so depending on the machining condition.

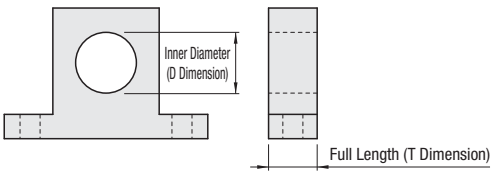
■Relationship between inner diameter (D dimension) and full length of guide (L, T dimensions)

Features: - Standard Type spec. is L,·T=Dx1.3 or less approx. Long Sleeve Type / Wide Type spec. is L,·T=Dx1.3 to 2.0 approx.
- Rigidity of Long Sleeve Type and Wide Type is enhanced as they have longer shaft holding area.
- L=Dx2.0 or more are available under the index of Posts. Please refer to **P.1813~P.1832**

(Ex.)**Flanged Mount**



(Ex.)**T-shaped**



■Manufacturing Method

Features: MISUMI shaft supports are available in machined types and precision cast types.
Precision cast products are offered at lower prices than machined products. Precision cast supports have slight de-molding draft and gritty surfaces but the dimensions are precisely finished as shown in the catalog.

■About Materials

Features: 1.1191/C45E · 1.4301/X5CrNi18-10 and Aluminum materials (EN AC-51300/G-AlMg5 for Precision Cast) are available.

•: Existing Products

	Basic Shape	How to Mount	through hole	With Pilot	Dowel Hole	Female Thread Hole
								Characteristics	Mounted by using tapped holes on mounting plate	Easy positioning during assembly. Easy repeatability during maintenance.		Suitable when mounting plates are thin or may have insufficient strength like aluminum.
Precision Cast	**Flanged Type**		**Features**: Most economical. Longer sleeve than standard type improves shaft gripping power.			
	 * Long Sleeve type available		• **P.209**	-	-	-
Machined Products	**Set Screw**		**Features**: Set screws may scratch the shaft during clamping; however, this is the most economical machined product.			
	 * Long Sleeve type available		• **P.201** • **P.203** (Thick Sleeve)	• **P.202** • **P.204** (Thick Sleeve)	• **P.202** • **P.204** (Thick Sleeve)	• **P.201**
	Slit		**Features**: Tightening doesn't damage shafts during clamping.			
	 * Long Sleeve type available		• **P.205**	• **P.206**	• **P.206**	-
	Compact Type		**Features**: Small outer diameter contributes in space saving designs. Tightening doesn't damage shafts.			
	 * Long Sleeve type available		• **P.207**	-	-	-
	Split		**Features**: Easy shaft removal for maintenance.			
			• **P.208**	-	-	-
	Back Mount		**Features**: Shaft can be tightened securely using a tapped hole on shaft end.			
			• **P.208**	-	-	-

•: Existing Products

Basic Shape	Shaft Securing Methods	Set Screw	Slit	Side Slit	Split	Hinged
							Characteristics	Most Economical	Shafts can be secured without damages.		Easy maintenance	Enhanced working efficiency with only one tightening screw.
Precision Cast / Machined Products	**T-shaped**	**Features**: Suitable when lengthwise space is limited.

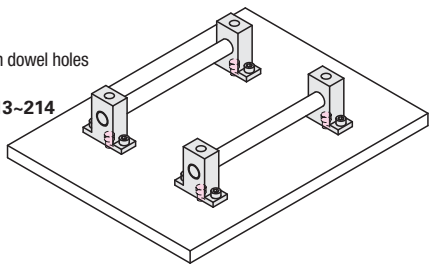
	 * Wide Type Available		• P.217	-	• P.217	• P.218	-
	Bottom Mount	**Features**: Screw mount from underside is effective when the mounting host is too thin to tap, and in space limited applications.				
	 * Wide Type Available		• P.225	• P.226	• P.228	• P.227	• P.220
	Side Mount Type	**Features**: Side mounting on plate is possible.				
			• P.229	• P.229	• P.230	• P.230	• P.220

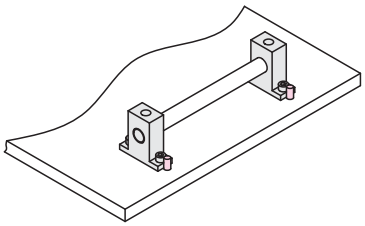
■Positioning and Repeatability

• Support units are located with dowel holes on the units and dowel pins pressed into the mounting plate.

Use support units with dowel holes shown in pages
☞P.201~206, P.213~214

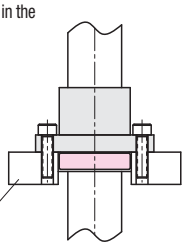


• Support units are located with dowel pins pressed into the mounting plate against unit housing's vertical faces.

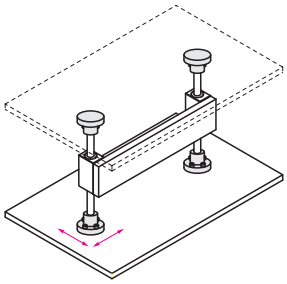


• Support units are located with the housing pilot and a precision bored (H7) mounting hole made in the mounting plate.

Use Pilot Type shown in pages
☞P.201~206



• Use clearances of mounting hole (through hole) and make adjustments and positioning on site.



Shaft Supports -Flanged Mount-

-Standard Type with Through or Female Thread Mounting Holes / Long Sleeve Type / With Pilot / With Dowel Hole-

Features: Female Thread Mounting Hole Type is suitable when tapping is difficult due to insufficient mounting plate strength (aluminum) or thickness.

Standard Type Through Mounting Holes, Female Thread Mounting Holes RoHS

•Caution in selection of Standard type

Price of Female Thread Mounting Holes type (Type:_ _ _ _T) = Price in the left table + Express Charge of 2,00 EUR
Ex. STHRBT10 (2,00 EUR) = STHRB10 (13,70 EUR) + Tapping Charge (11,70 EUR)

Female Thread Mounting Holes type are available only for D dimension denoted with * mark.

Aluminum is not available for D dimension 8M and 10M products.

Features: Easy positioning during assembly.

Shaft Supports -Flanged Slit (Precision Cast)-

-Standard Type · Long Sleeve Type-

CAD Data

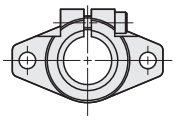
Features: Most economical and popular shaft support type. Machined products are recommended for precision requiring applications.

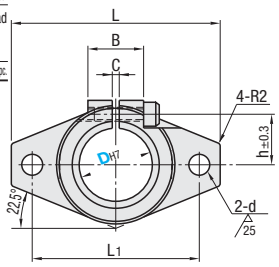
Standard Type

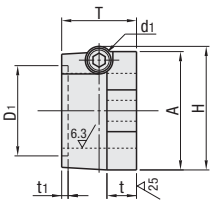
RoHS

Type	Material	Surface Treatment	Accessories
SHFT	1.1191/ C45E	Black Oxide	Hexagon Socket Head Cap Screw 1 pc.
SHFM		Electroless Nickel Plating	Hexagon Socket Head Cap Screw 1 pc. (JIS SUS)
SHFSS	1.4301	-	
SHF	EN AC-51300/ G-AlMg5	White Alumite	
SHFD		Black Alumite	Hexagon Socket Head Cap Screw 1 pc.

SHFT, SHFM and SHFSS may be replaced with 2 cutout type.







Slit is machined after the mounting hole D is bored to H7 tolerance. Tolerance may become H8 or so depending on the machining condition.

Part Number Type	D	L	T	t	H	A	L1	d	d1	D1	t1	B	C	h	Tightening Screw M	Mass g	€ Unit Price SHFT	SHFM	SHFSS	SHF	SHFD

D dimensions 30 ~ 50 come with 2 screws.

25 (6.3) 1.6

Slit is machined after the mounting hole D is bored to H7 tolerance. Tolerance may become H8 or so depending on the machining condition.

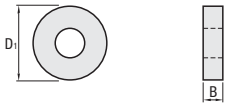
Shaft Collars Guide

■About Inner Diameter Tolerances

Features - MISUMI Shaft Collars have positively toleranced inner dia. (except some products) to prevent shafts from being scratched during insertion.
- Combination use of MISUMI Shafts (standard g6, f8 and h5) and MISUMI Shaft Collars are recommended.

■Product Variations

Features - 216 total product types consisting 119 industry standard products and 97 MISUMI original products are available. (Including material variations)
- The Compact Type has small width (B dim.) and O.D. (D1 dim.) helpful in space saving designs.



■Material Variations

Features- In addition to the industry standard material 1.1191/C45E · 1.4301/X5CrNi18-10 · EN AW-2017/AlCu4MgSi, Plastics and thread inserts integrated EN AW-2017/AlCu4MgSi and plastic products are offered.

- Thread Inserts integrated type is recommended for aluminum or plastic collars that are lighter in weight but the threads cut directly in materials may be damaged by repetitive screw tightening and loosening. P.255
- Specific Gravity 1.1191/C45E:7.9, 1.4301/X5CrNi18-10:8.0, EN AW-2017/AlCu4MgSi:2.8, Polyacetal:1.4, MC Nylon:1.1

■Set Screw Type

Features - Reasonably priced.

Shaft Collars Guide

-Keyless Bushing Mechanism · Wedge Mechanism · Clamping Force Data-

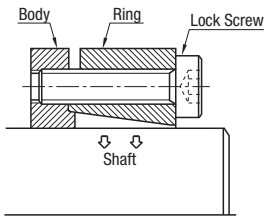
■Keyless Bushing Mechanism Features

- Clamping force increased up to 2.2 times *D35 is used for comparison.
Compared with the conventional Shaft Collars, these Collars can clamp the shafts firmly. **Refer to Clamping Force Data on P.236.**

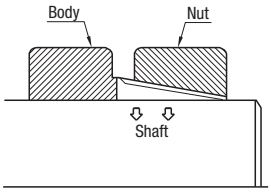
- Easy installation in space-savings
Collar tightening action is applied in axial direction from the front, effective where radial access is limited.

- 8 Parts are reduced by using the Sensor-less System.
As these Collars can clamp the shafts firmly, the Shaft Collar can be used as a home position.

■Keyless Bushing Type - Standard Type Mechanism



■Keyless Bushing Type - Nut Type Mechanism



■Installation

(1) Clean (wipe off) shaft surface.
(2) Clean (wipe off) contact surface of the body and ring (nut) as well.
(3) Temporarily assemble the body and ring (nut) and insert the shaft.
(Do not tighten the screws without a shaft inserted.)
(4) After positioning the collar, tighten the locking screws with a torque wrench in a diagonal order, beginning lightly (approx. 1/4 of the specified tightening torque).
(5) Tighten the screws further to an increased torque (approximately 1/2 specified torque).
(6) Tighten the screws to specified torque.
(7) Finally, tighten the lock screws in circumferential order.

■Cautions for Installation

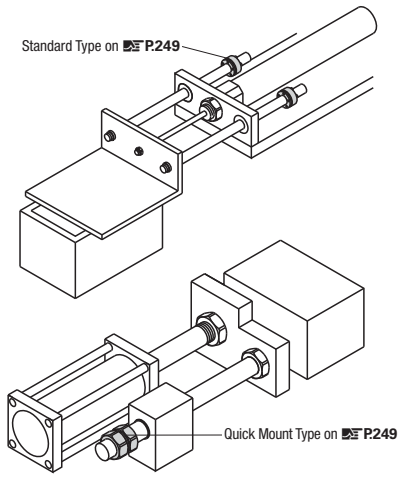
- For Keyless Bushing Type, tighten the screws after the shaft is inserted. (If the screws are tightened before the shaft is inserted, the locking mechanism would be deformed.)
- Use a torque wrench to tighten the screws.
- Do not use lock screws other than those included.

P.236 For the recommended tightening torque, please refer to Clamping Force Data.

■Removal

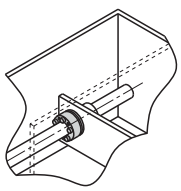
- Be sure the system is completely shut down and stopped before beginning the work.
- Loosen lock screws in circumferential order.
- Insert screws in removal holes and tighten evenly.
- Repeat "Installation" process for re-installation.

Example ■Cylinder Stopper



■Tightening from axial direction

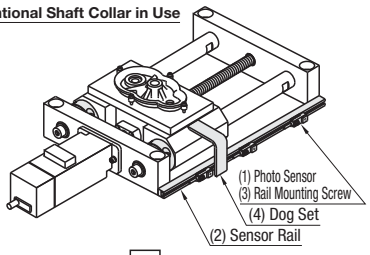
Use Standard Type on P.249



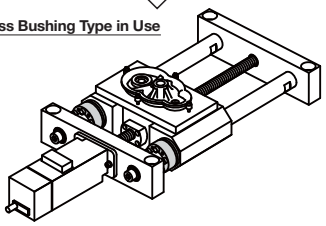
■Proposals for Parts Reduction

*The Shaft collar is used as a home position.
*Motor with an absolute encoder is used for this example.

Conventional Shaft Collar in Use



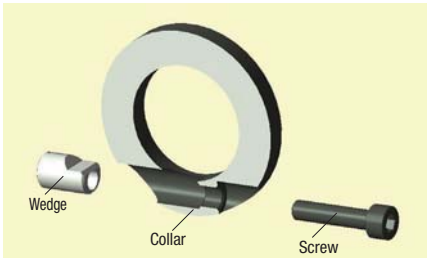
Keyless Bushing Type in Use

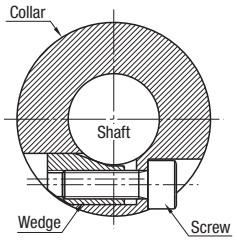


Advantages of sensor-less systems
- Reduced parts count (in the case above)
(1) 3 Photo Sensors + (2) 1 Sensor Rail
+(3) 3 Rail Mounting Screws + (4) 1 Sensor Target
= 8 parts can be reduced.
- No breakdown by sensor disconnection.
- Troubles from sensor errors can be reduced.
- Adjustments and maintenance can be reduced.

■Wedge Mechanism Features

- The screws pull a wedge and the shat is clamped; this structure requires less force for tightening.
- Good work efficiency; suitable for use in frequent positioning adjustments like width guide applications.
  The wedge for "With Clamp Lever Type" (P.261) is made of brass and does not damage shafts.



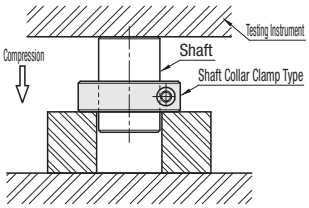


■Clamping force of Clamp Type · Wedge Type and Keyless Bushing Type shaft collars.

■Testing Conditions

1. Shaft: MISUMI Hardening Shaft (SFJ) Page **P.107**
2. Testing Instrument: Universal Tester
3. Tightening Torque: Select Tightening Torque from the tables on the right depending on the conditions of use.
4. Condition of antirust oil: Wiped with a cloth as arrived.

■Testing Method



■Definition of Max. Thrust Load

The shaft collar is tightened to torque value(s) shown in the chart below, then compressive load is applied with the tester.
The compressive load where the shaft begins to move is defined as the Max. Thrust Load.

■Clamp Type / Wedge Type

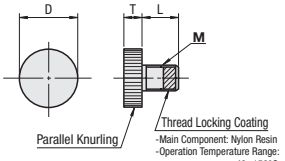
Alterations
Part Number - B - (KB / WKB)
SCCN12 - 10 - KB

Alterations	With Knurled Knob (Hand Tightening Type)
Code	KB(1 pc.) / WKB(2 pcs.)
Spec.	Attaches a knurled knob. *For detailed dimensions, see the right-hand side. A Set Screw is also included. Order Code KB (or WKB) D≤3 8≤B≤18
€	KB:B8 2,00 EUR/B10, 12 3,00 EUR/B15, 18 4,00 EUR WKB:B8 2,00 EUR/B10, 12 3,00 EUR/B15, 18 4,00 EUR

■Knurled Knob Details



M Material: 1.4301/X5CrNi18-10

B Selectable	M (Coarse Thread)	D	L	T

	6			
12	5	11.5	10	4
	6			
15	6	14.5		
18	6	15.5	10	5

■Features
- Replacing the Hexagon Socket Set Screws with Knurled Knobs enables easy installation and removal of the Shaft Collar by hand.
- Set Screws come with loose-prevention coating (*For details, see P.251).
  * The knob that matches with dimension "B Selection" and dimension " M (Coarse) " is included.
  Ex. When a Knob is specified for SCCN10-8, Knurled Knobs of B8 and M4 are included.

Thread loosening prevention measures for Balanced Type

- Threads are coated with special resin with superior elasticity as well as resistance to abrasion and oil.
- Effect is maximum at the first use, and it will gradually decrease after the fourth use.

Example

Tips on Assembly
When using collars as shown in the diagram on the right, clamping the shaft with the screw (1) after the collar is fully tightened to the plate with the screws (2) is not possible.
The type shown on P.247 that can be fully mounted first with the screws (2) is recommended.
P.247

Recommended Shaft Tolerance

Shaft Outer Diameter	g6 (h7)

Finish the surface roughness to: Ra = 1.6a or better.

Cautions for Installation

Use a torque wrench to tighten the screws.

Shaft Collars -Standard Type with Urethane - Compact -
-Clamp Type / Split Type-

Features: Standard Type with Urethane: Reduces noise generated by metal-to-metal contact.
Compact Type with Urethane: Smaller by up to 44% in width (B dimension) and 25% in outer diameter (D_1 dimension) than Standard Type with Urethane.

Example

Shaft Collars -Hinged / One Touch-

-Hinged Type / One Touch Standard Type / One Touch Mount Hole Type-

CAD Data

Feature: Compared with conventional shaft collars, hinged structure enables easy fitting and removal in limited work space.
Washer fitted onto hexagon socket head cap screw reduces the chances of the screw falling out when the collar is removed from the shaft.

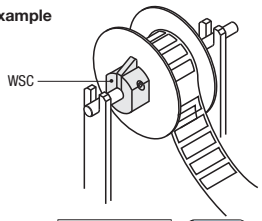
Features

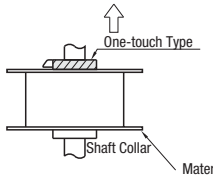
- The lever pressed by the spring gives consistent pressure on the shaft.
- Shaft collar can be easily removed by moving the lever down with a finger.
- Shafts do not require any flat alterations to secure the collar as in the case with Set Screws and can be clamped without damage.
- Working time can be reduced for frequent collar mounting / removal.
- Suitable for use in holding spools of material such as paper, film, metal foil, etc., and for uses in applications where there is no load on the collars.

Example

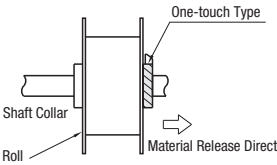


<WSC/WSCB/WSCM>

(1) Vertical Use Material Release Direction



(2) Horizontal Use



(3) Never use this collar in directions where loads apply.

Shaft Collars -With Key Escapement Groove-

-Set Screw Type / Clamp Type-

CAD Data

Feature: The shaft key can escape through the groove b. (The Key Escapement Groove is not for key-locking the collar itself.)

Linear Bushings

-Features / Antirust Performance Comparison Test / Various Grease Application Services-

■Features

Linear Bushings utilize the rolling motion of steel balls to produce infinite linear motion travels. They are capable of linear motion with high accuracy and low friction, and widely used for parts of semiconductor, electronic parts, and food package machinery, etc.

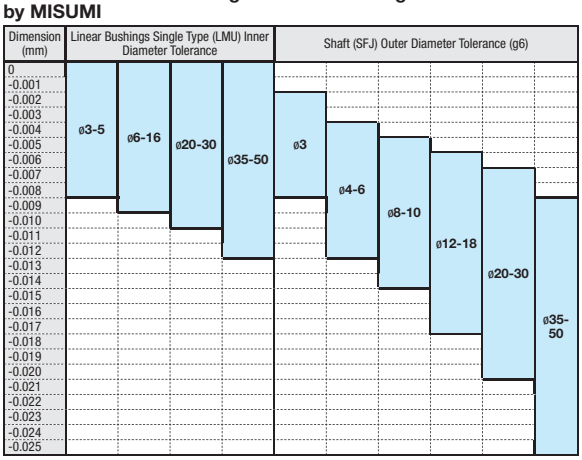
■Lubrication

Although MISUMI Linear Bushings, except for Lubrication Unit MX type, are coated with rust protection oil which hardly affect the effect of lubricant such as grease at the time of delivery, use with grease applied after cleaning and drying is recommended. Apply grease to the rows of balls on inner surface of linear bushing before use and repeat it appropriately.
In addition to Lubrication Unit MX type, MISUMI provides L, G and H greased type.

■Shaft Fits

For MISUMI linear bushings, use in combination with MISUMI shafts (hardened with g6 tolerance) is recommended (Normal clearance fit).
* Shaft P.107~

Reference: Tolerance range of linear bushing and shafts made by MISUMI



■Allowable Load

-Basic Dynamic Load Rating (C)
Basic Dynamic Load rating is defined as: A load applied and ran under equal condition on a group of linear system specimen where 90% of specimen will reach 50 x 10^3m without experiencing any flaking of rolling surfaces due to rolling fatigues.

-Basic Static Load Rating (Co)
Basic Static Load rating is defined as: A load applied on non-moving linear guides where a sum of rolling element plastic deformation amount and rolling surface plastic deformation amount becomes equal to 0.0001 times that of the diameter of the rolling element (balls).

■Operating Life

Rated Life can be obtained from the Basic Dynamic Load Rating and the actual load applied on the linear bushings, as shown below.

$$L=\left(\frac{fH \cdot fT \cdot fC}{fw} \cdot \frac{C}{P}\right)^3 \cdot 50$$

L : Rated Life (km)
C : Basic Dynamic Load Rating (N)
P : Applied Load (N)
fw: Load Factor (Refer to Table 4)
fH : Hardness Factor (Refer to Figure 1)
fT : Temperature Factor (Refer to Figure 2)
fC : Contact Factor (Refer to Table 3)

P.1902

Life hours can be obtained by calculating travel distance per hour. When stroke length and stroke cycles are fixed, see the equation below.
* Fig. 1 · Fig. 2 · Table 3 · Table 4 P.1902

$$Lh=\frac{L \cdot 10^3}{2 \cdot \ell s \cdot n_1 \cdot 60}$$

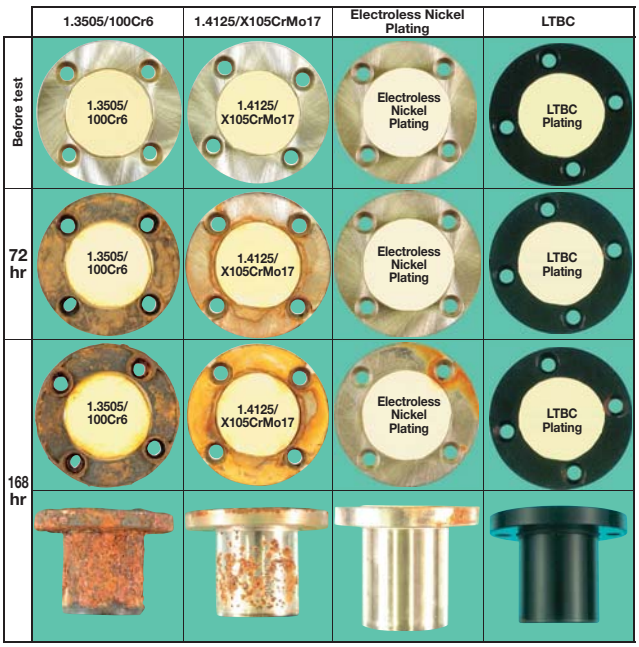
Lh: Life Hours (hr) ℓs: Stroke Length (m) L: Rated Life (km)
N1: Reciprocating cycles per Minute (cpm)

■Antirust Performance Comparison Test (Reference)

<Testing Method>
Salt water spray testing method conforms to JIS H8502.
(Spray 35°C, 5%NaCl Solution)

<Testing Sample>
Round Flanged Linear Bushings-Single Type-

Appearance of test piece 72 hr, 168 hr before test



■Various Grease Application Services

MISUMI linear bushings, except for Lubrication Unit MX type, are coated with rust protection oil, but not greased.
By selecting from the following greases, you can order pre-greased type.
Selecting **L** or **G** type enables great reduction of particle generation by grease dispersion in operation (See comparison of particle generation amount below).
Additionally, the **H** type (NSFH-1 Attestation) can be used in the situation which has the possibility of inadvertent contacts with foods.
Safety is assured even if grease contacts the foods.

Type	Product Name	Main Features
L Type	ET–100K (Made by Kyodo Yushi)	High heat resistance and oxidation stability. Also high adhesion and cohesion with limited splash or leakage.
G Type	LG2 (Made by NSK Ltd.)	Suitable for clean environment due to low particle generation grease. Highly resistant to corrosion.
H Type	FGL (Lubriplate®)	Formulated to meet increased demands of the food, beverage and pharmaceutical industries. (NSF H–1 Registration No.043534)

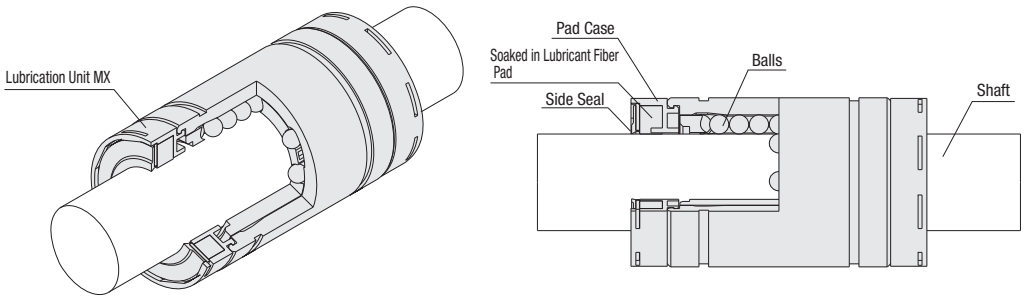
Lubrication MX Unit Series

Patent Pending

Structure of Lubrication Unit MX



Lubrication Unit MX has a fiber pad containing the lubricant. Capillary action allows appropriate supply of lubricant to contact surfaces. Therefore oil film is always formed between balls and shaft so that service intervals is extended significantly.

Features

-Extended maintenance period

Long durability of lubrication performance have resulted in significant reduction of maintenance load especially with machines and equipment environments where applying grease is not easy.

-Environmentally friendly system

Appropriate supply of lubricant to ball rolling surface at appropriate time makes the system environment-friendly.

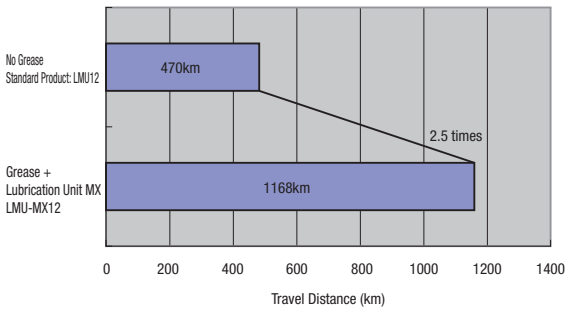
-Cost advantage

Contributes to reduction of maintenance costs and product troubles caused by failing to lubricate.

-Reduced procedural steps

No need to fill with grease prior to use because the product is already filled with Lithium soap-based grease in addition to the built-in lubrication unit.

Endurance Test Result



<Test Condition>

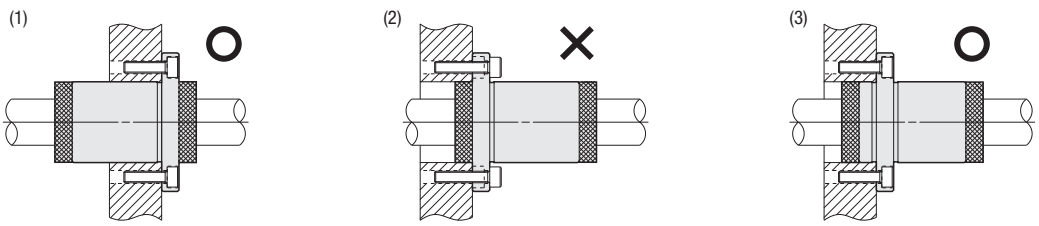
Sample	: Linear Bushings before removing rust protection oil LMU12 Linear Bushings with Lubrication Unit MX LMU-MX12
Applied Load	: 206N (50% against Basic Dynamic Load Rating 412N)
Average Speed	: 42m/min (0.7m/sec)
Stroke	: 100mm
Lubricant	: Grease, initial filling only (1.3505/100Cr6–MX12 only)
Shaft Material	: 1.3505/100Cr6 58HRC
24 hours, continuously operated	

With 50% of basic load rating applied for testing, the Lubrication Unit MX Type has shown a 2.5 times higher durability performance compared to the one without the MX lubrication unit.

*The data above are for reference only, and not a guarantee by the manufacturer.

The data was revised to the above since the 2007 catalog after the safety margin was confirmed by increased test data points.

Cautions



(Flanged Type)

(With Pilot, Flanged Type)

- When mounting flanged lubrication unit type, do not use the lubrication unit case as a pilot as shown in (2), as that may damage the case. Instead, use the Flanged Type with Pilot as shown in (3).
- Do not disassemble as that may cause failures.

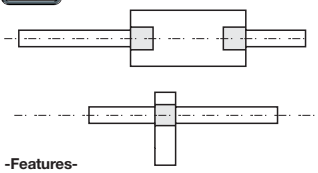
Example



-Features-

- The housing can be made more compact.
- The L dimensions are made to match MISUMI's standard plates.
- Short guiding section not suitable for applications where large moment loads apply.
- Setup to operate smoothly with hardened shafts with h5 tolerance.

■LTBC plating on linear bushings:

Type: LTBC plating with fluoropolymer layer on top
Thickness: 5µm thick. Internal running diameter remains unchanged due to tolerance control.
Corrosion protection: Excelent rust prevention for long term period
Material benefits: Chemically deposited at low temperature without any change in material structure.
Peeling: The coating is resistant to cracking from extreme and repeated bending. Even hairpin-shaped bending won't cause cracks. Plating won't be exfoliated by repeat bending (Any superficial coating particles that may come off the rolling contact surfaces are mixed in with the grease and remain its lubricity).
Optical benefits: Less reflections (suitable for places where light reflections are undesirable). Matching LTBC plated shafts.

■LTBC plating on linear shafts:

Type: LTBC plating without fluoropolymer layer.
Thickness: 1µm~2µm thick. Shaft outer diameter tolerance remains g6 after LTBC plating is applied.
Corrosion protection: Normal rust prevention effect (better than black oxide, and less than LTBC with fluoropolymer layer on top and suitable in normal environment.
Material benefits: Chemically deposited at low temperature without any change in material structure.
Peeling: The coating is resistant to cracking from extreme and repeated bending. Even hairpin-shaped bending won't cause cracks. Plating won't be exfoliated by repeat bending (Any superficial coating particles that may come off the rolling contact surfaces are mixed in with the grease and remain its lubricity).
Optical benefits: Less reflections (suitable for places where light reflections are undesirable when used in combination with LTBC plated linear bushings).
(LTBC plated shafts can be found on page, P.173~P.180, P.183~P.191)

Condition of shafts and linear bushings after sliding test

Order Example For details, refer to each page.

Days to Ship 6 Days P. 87

Sliding Test Conditions
Linear Bushings : LMUR12
Shafts : RSFJ12
50km sliding test was conducted with a 412N load on the linear bushing.
No performance degradation after the test.

■Linear bushings Applicable to LTBC

Linear Bushings Straight		Applicable Inner Diameter	Page Listed
Single	LMUR	Ø3-Ø30	P.279

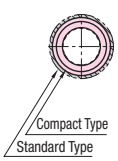
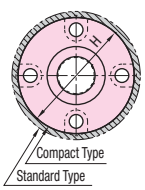
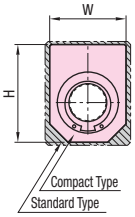
Linear Bushings Straight



Flanged Type (P.284~296)

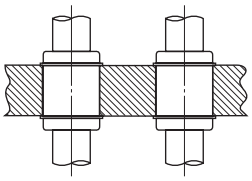


Housing Unit Type (P.297, 298)



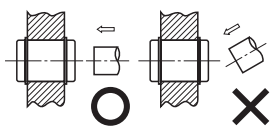
Example

For 2 linear bushings of Compact type, their mounting plate is 4mm smaller than that for Standard Type.

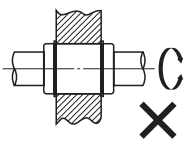


Cautions for Linear Bushing Usage

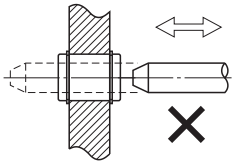
(1) When assembling with linear shafts, forcing the shaft into the bushing with angular misalignment may cause the ball retainers to deform and balls to fall out. Be sure to align the centers and insert the shaft gently.



(2) Linear bushing is structurally unsuitable for rotary motion. Forcing to rotate may cause failures.



(3) Linear Bushing is not suitable for uses that need repetitive insertion and extraction from shafts.



Linear Bushings / Flanged Linear Bushings
-Medium Type-

CAD Data

For features of medium type, see below.

Type	Outer Cylinder			Steel balls	Retainer	Operating Environment Temperature	Accessory
Linear Bushings Straight	M Material	H Hardness	S Surface Treatment	M Material	M Material

Features of Medium Type Bushings

-Body length is approximately 1.5 times of single type, and allowable moment is approximately 4.3 times. Suitable where there is no enough space for double type. (See Allowable Load Comparisons)
-B dimension (distance between retaining ring grooves) of the Straight Type is designed to match MISUMI's standard plate thickness to help reduce machining steps and costs.

Allowable Load Comparison

Type	Basic Dynamic Load Rating	Basic Static Load Rating	Allowable Static Moment
Short	0.7	0.6	Approx. 0.6
Single	1	1	1
Middle	1.4	1.3	Approx. 4.3
Double	1.6	2	Approx. 6
Medium Long	1.6	1.6	Approx. 10
Long	1.6	2	Approx. 21

Example

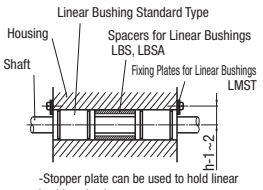
•Stopper plates enable designs free of regards to housing lengths.
-Stopper plates allow Linear Bushings and Shafts to be installed close to its end face.



-Stopper plate can be used to hold linear bushings in place.

■Features of Shaft-sliding Linear Bushings with Housing Units

-As the height is selectable, there is no need to use Height Adjusting Spacers.
-As Spacers are not required, parts count and cost can be reduced.
-Can be easily screw mounted from above, suitable for shaft-sliding mechanisms.
-Compact specifications for space saving.

Linear Bushing and Housing Unit with Dowel Holes

-Tall Block Type Single / Double / Long Bushing Length-

CAD Data

For features of dowel hole type, see below.

■Single Type

RoHS

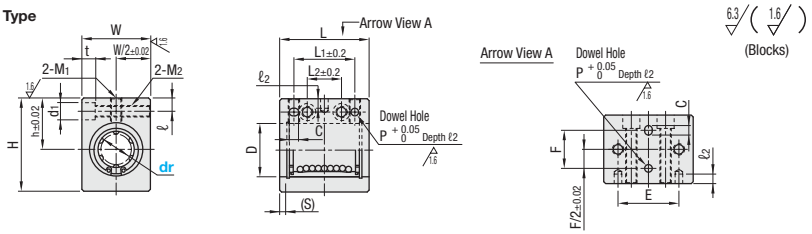
■Double Type

■Long Type

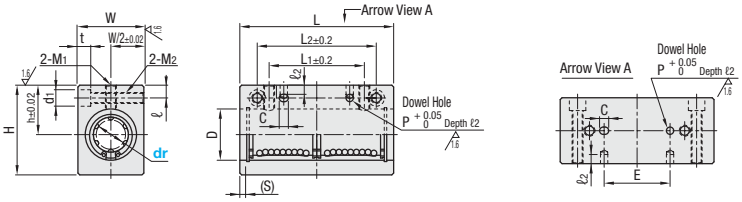
Type			Linear Bushings (☞P.279)	Housing		Ambient Operating Temp.
Single	Double	Long		M Material	S Surface Treatment	
LHSSN	LHSSWN	LHSSLN	LMU	Aluminum Alloy	Clear Anodizing	-20~80°C

- Inner surfaces of dowel holes are not anodized.
- For ball row details, see P.279
- The datum surface is located on the other side of product ID label.
- Allowable Static Moments: see P.279, P.295
- Dowel Pins MS / MSC shown P.2-243 are recommended.

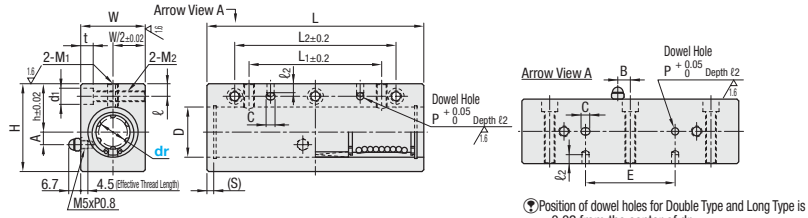
Single Type



Double Type Full length is approximately 2 times of single type and allowable moment is approximately 6 times.



Long Type Full length is approximately 2.5 times of single type and allowable moment is approximately 21 times.



Position of dowel holes for Double Type and Long Type is ± 0.02 from the center of dr.

■Features

-Motion mechanism utilizing rolling balls, capable of linear and rotary motion.
-The bearing balls and the rolling surface are in point contact relationship enabling low friction rolling motion.
-Compatible with linear bushings, and load is evenly distributed.
-O.D. tolerance g6 shafts can be used with the linear ball bushings. P.107~195
When using preloaded, O.D. tolerance h5 shafts are recommended.

■Precautions for Use

-Since the balls do not recirculate, its stroke capability is finite.

Ball Splines Overview

Guideline for Products

Max. 40% Price Reduction (compared with products of part number)

Specified in 1 mm increments, short lead time.

A wide variety of shaft end configurations

10th day shipping

9 Shapes (Alteration is available)

Structure

Ball spline is a linear motion mechanism with infinite linear motion travels of a nut on a spline shaft.
It can bear radial loads and rotational torque simultaneously due to the structure where balls within a nut roll smoothly.

Features

1 Capable of highly accurate linear motion

Applying preload makes ball splines capable of highly accurate linear motion.

2 Capable of transmission of torque

Rotary motion of balls on grooves of spline shaft makes ball spline capable of linear motion while transmitting torque.

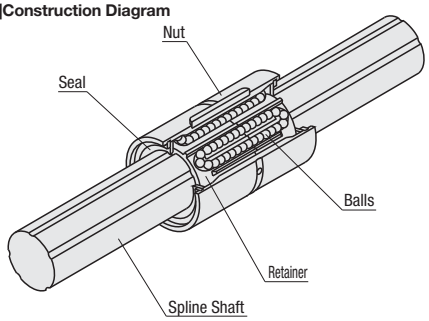
3 Capable of changing into compact design

Ability to transmit torque makes ball spline capable of guiding by single shaft.

4 High load capability and long life

High load capacity and long running life due to presence of grooves of splines on the surface where loads are applied.

■Construction Diagram



Balls do not fall out even if the spline shaft is pulled out.

Comparison of Characteristics with Other Linear Motion Mechanism

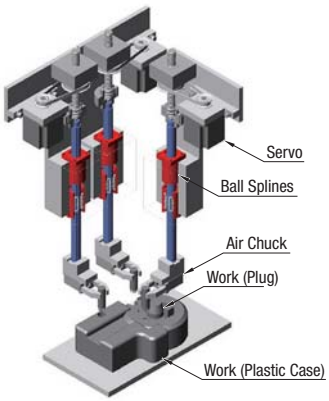
Ball splines are used in many machine applications requiring linear motion and rotary motion for space saving, cost, and weight advantages.

Linear Motion Mechanism	Ball Splines	Linear Bushings	Linear Guides
Radial Load	○	△	◎
Rotational torque	○	X	X
Cost	○	◎	△
Mass	◎	◎	△

Application Examples

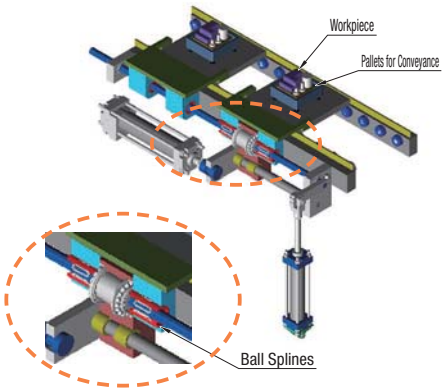
1 Pick and Place Application

For linear and rotational motions of each axis are needed in space-savings, ball splines capable of linear motion and torque transmission are effective.

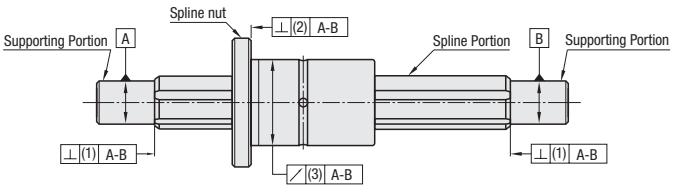


2 Work Transfer Mechanism

Space saving designs are made possible by a Ball Spline capable of torque transmitting and guiding in a single shaft package.



Accuracy



Reference: Supporting portion is the part to mount the bearing and support the spline shaft.

■Spline Shaft: Raceway Twist Tolerance (Max.)

Unit: μm

Material	Tolerance
1.3505/100Cr6	13
1.4125/X105CrMo17	33

Spline groove twist is measured at an arbitrary 100mm section of the effective shaft length.
If the length to be evaluated is longer or shorter than 100mm, proportionally add or subtract from the standard values in the table.

■Rotational Clearance Unit: μm

Spline Shaft	(3) Max. radial runout of spline nut outer surface against spline shaft supporting axis.			
Full Length	No.6 • 8	No.10	No.13 • 16	No.20 • 25 • 30
~ 200	46 (72)	36 (59)	34 (56)	32
201~ 315	89	54 (83)	45 (71)	39
316~ 400	126	68 (103)	53 (83)	44
401~ 500	163	82	62	50
501~ 630	-	102	75	57
631~ 800	-	-	-	68
801~1000	-	-	-	83
1001~1150	-	-	-	102

Values in ( ) are for 1.4125/X105CrMo17.

Calculation of Life Span

Running Life

- Radial Load

$$L=\left(\frac{ft\cdot fh\cdot fp}{fw}\cdot\frac{Cr}{F}\right)^3\cdot L_0$$

- Torque Load

$$L=\left(\frac{ft\cdot fh}{fw}\cdot\frac{Ct}{T}\right)^3\cdot L_0$$

L: Running Life	(km)
Cr: Basic Dynamic Radial Load Rating	(N)
CT: Basic Dynamic Torque	(Nm)
F: Applied Radial Load	(N)
T: Applied Torque	(Nm)
LO: Rated Life	(50km)

Life Hours

$$Lh=\frac{10^6\cdot L}{120\cdot St\cdot n}$$

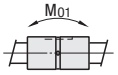
Lh: Running Time	(hr)
L: Running Life	(km)
ST: Stroke Length	(mm)
n: Reciprocating cycles per Minute	(cpm)

For values and factors, see below.

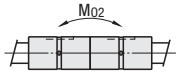
■Load Rating

No.	Basic Rated Torque Dynamic Ct Nm	Basic Rated Torque Static Cot Nm	Basic Load Rating Dynamic C kN	Basic Load Rating Static Co kN	Allowable Static Moment Mo1 Nm	Allowable Static Moment Mo2 Nm
6	3.8	7	1.2	2.1	5	36
8	4.8	8.7	1.2	2.1	5	36
10	19	34	3.8	6.9	26	181
13	28	52	4.6	8.3	36	251
16	51	93	6.2	11.1	56	386
20	85	154	8.5	15.3	83	611
25	193	348	15.4	27.7	173	1248
30	272	490	18.5	33.3	212	1581

Allowable static moment M01, M02

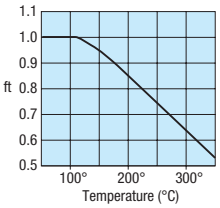


Cases of use when 1 nut is closely stuck to each other

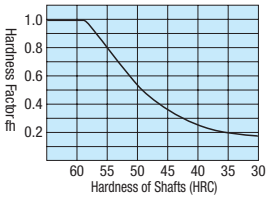


Cases of use when 2 nuts are closely stuck to each other

■Temperature Factor (ft)



■Hardness Factor (fh)



■Load Factor (fw)

Conditions of Use	Load Factor (fw)
Minimal vibrations / shocks, Low speed 15m/min. or less	1.0~1.2
Some vibrations / shocks, Medium speed 60m/min. or less	1.2~2.0
Significant vibrations / shocks, High speed over 60m/min.	2.0~3.5

Operating Environment

Lubrication

Ball splines are shipped greased.
Administer lubrication maintenance as needed.

Operating Temp.

Plastic components are used in ball spline assemblies.
Avoid usage in high temperature environments, keep below 80°C.

Installation Precautions

■Shaft Fits

An H7 tolerance is recommended for mating bores for the spline nuts.

■Dimension of Key (Included)

No.	B	Tolerance μm	h	Tolerance μm	L1	R

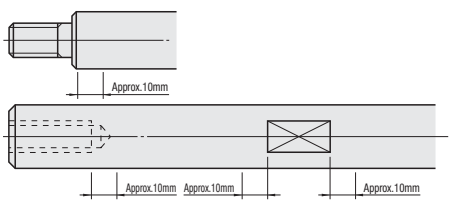
Ⓨ When selecting multiple alteration additions, more than 2mm is needed between each feature to be added.

■Reduced hardness around machined areas

Alterations will be applied after the base materials are hardened.
In the example below, annealing may result in reduced hardness of the machined area +10mm fore and aft.



Annealing may lower hardness of following parts:
-All threaded types
-All stepped types
-All tapped types
-Wrench flats, set screw flats, retaining ring grooves, tap alteration

Ball Splines

■Features of Miniature Ball Bearing Guide

Motion mechanism utilizing rolling balls, capable of linear and rotary motion.
The bearing balls and the rolling surface are in point contact relationship enabling low friction rolling motion.

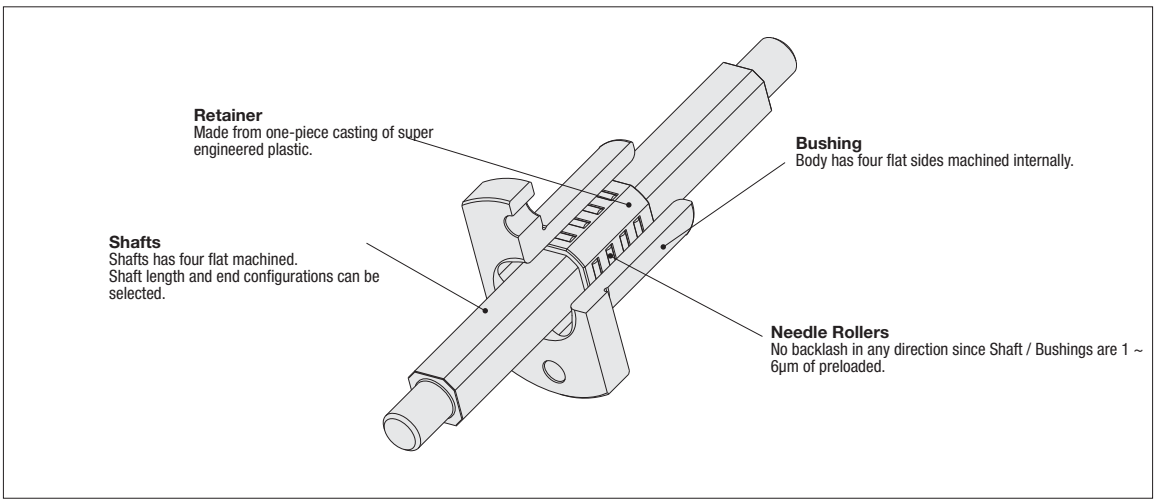
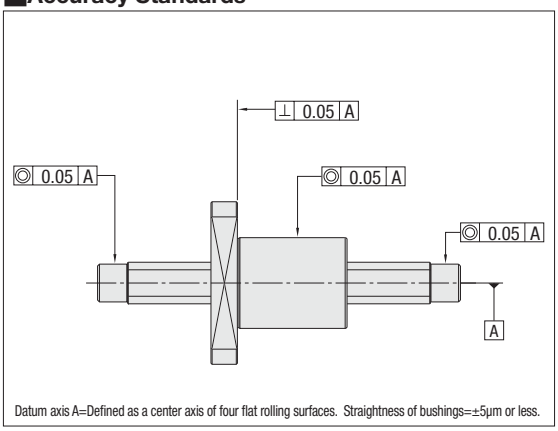
High Rigidity Needle Guide Sets
-Overview-

■Features
High accuracy needle rollers are arranged in four directions against the square shafts.
Shafts / Bushings are designed to be 1 ~ 6μm preloaded.
Widely used in parts of semiconductor, liquid crystal manufacturing equipment and inspection device, lift / slide stages, robotic systems, press machines and transfer mechanism as the guide with high rigidity, straightness and high speed.
Capable of torque loading without rotation due to square cross section with low yawing and pitching, maintaining smooth rotation and stable accuracy.



■Accuracy Standards



Datum axis A=Defined as a center axis of four flat rolling surfaces. Straightness of bushings=±5μm or less.

■Load Rating Chart

D	Basic Rated Torque		Basic Load Rating		Allowable Static Moment
	CT Dynamic (N·m)	CoT Static (N·m)	C Dynamic (kN)	Co Static (kN)	Mo (N·m)
6	12.3	21.0	3.4	5.0	10.6

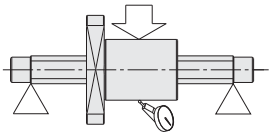
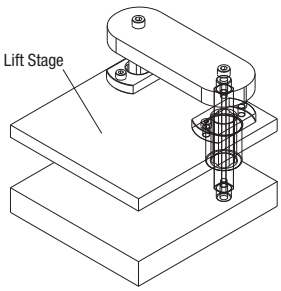
Load Point 1Kg



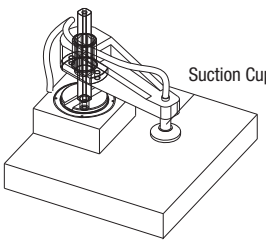
Displacement Measuring Point

D	Deflection (L is max.)
6	6μm
10	2μm
12	2μm
16	1μm

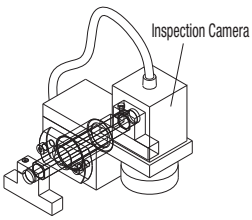
■Example of Use



Lift Stage



Swiveling Arm



Slide Stage

■Cautions
-Administer lubrication maintenance as needed.
-When designing, position the bushing where the retainer does not fall out from the bushing at stroke ends.
-As the preload is still applied when inserting retainers, assemble and fit carefully in order not to apply any off-center insertion force as that may cause the damage to the retainers as well as damages on the rolling surfaces.
-Protect it with covers if any foreign objects or dust may adhere to the rolling surfaces.
-Avoid using in high temperature environments, keep below 80°C.
-Do not cold shrink fit the bushings and shafts.
Residual austenite will transform into martensite and will expand inner / outer dimension of bushings and shafts, rendering them unusable.

Shape									
Material Properties	Porous bronze casting soaked in lubrication.	Composite products with embedded solid lubricant in high-tensile brass.		Molybdenum Disulfide is embedded spirally in EN-JL 1040/EN-GJL-250.		Composite product consisting of three layers: steel-backed metal layer, sintered bronze layer and filler added PTFE Layer.	Fluororesin is bonded on base material (A2017).	Polyacetal resin with added lubricant and special fillers evenly.	PTFE to which friction resisting filler and solid lubricant are added.

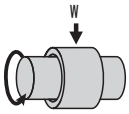
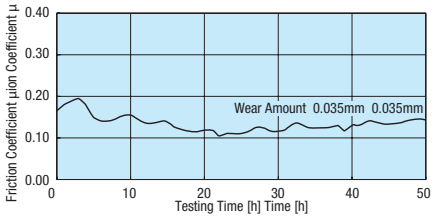
■Test Data of Bronze Type

Journal Rotation Test

<Test Conditions>
Bushing : **SHBZ30-30**
Mating Material : 1.1191/C45E HRC50
Surface Pressure : 1.47N/mm2{15kgf/cm2}
Velocity : 0.83m/S (50m/min)
Testing Time : 50h
Lubrication : Apply oil every 1 hour.

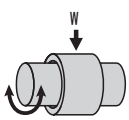


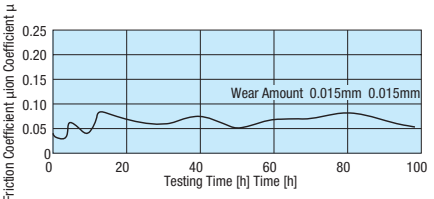


■Test Data of Copper Alloy Type

Journal Oscillation Motion Test

<Test Conditions>
Bushing : **MPBZ20-20**
Mating Material : 1.1191/C45E HRC46~48
Oscillation Angle : ±45°
Surface Pressure : 24.5N/mm2{250kgf/cm2}
Velocity : 0.5m/min{16cpm}
Lubrication : Unlubricated



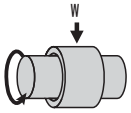


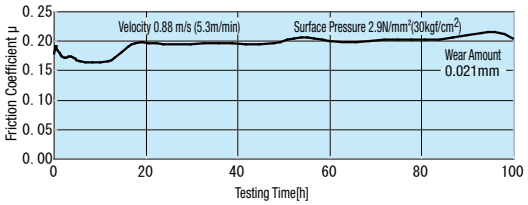
* Data below are for reference, not guaranteed.

■Test Data of Multi-Layer MD Type

Journal Rotation Test

<Test Conditions>
Bushing : **MDZB40-30**
Mating Material : 1.1191/C45E
Surface Pressure : 2.9N/mm² {30kgf/cm2}
Velocity : 0.088m/s {5.3m/min}
Lubrication : Unlubricated

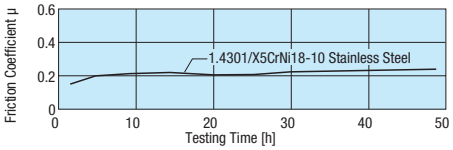




■Test Data of High Precision BFLB Bushing

Ring on Disk Test

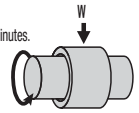
<Test Conditions>
Mating MaterialSurface : 1.4301/X5CrNi18-10
Pressure : 0.41MPa
Velocity : 1.833m/s{110m/min}
Lubrication : Unlubricated

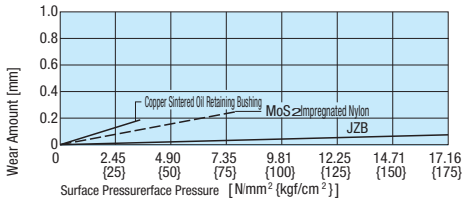


■Test Data of JZ Resin Bushing

Journal Rotation Test

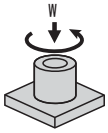
<Test Conditions>
Bushing : **JZB35-20**
Surface Pressure : 0.42N/mm2 {4.0kgf/cm2} is cumulatively loaded every 5 minutes.
Velocity : 1.133m/s{68m/min}
Lubrication : Greased at assembly

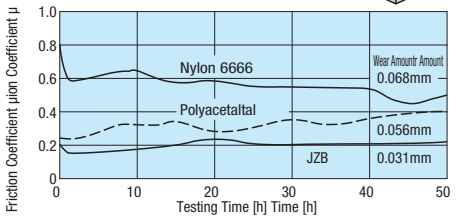




Thrust Rotation Test

<Test Conditions>
Mating Material : 1.1191/C45E (Surface Roughness 3μmRy)
Surface Pressure : 2.94N/mm2{30kgf/cm2}
Velocity : 0.167m/s{10m/min}
Testing Time : 50h
Lubrication : Unlubricated

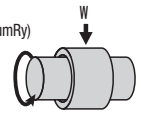


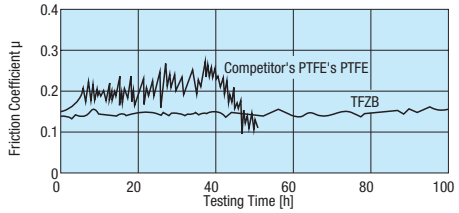


■Test Data of TF Resin Bushing

Journal Rotation Test

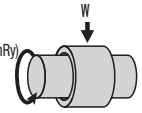
<Test Conditions>
Bushing : **TFZB10-10**
Mating Material : 1.4305/X10CrNiS18-9 (Surface Roughness 1.2μmRy)
Surface Pressure : 1.96N/mm2{20kgf/cm2}
Velocity : 0.500m/s{30m/min}
Testing Time : 100h
Lubrication : Unlubricated

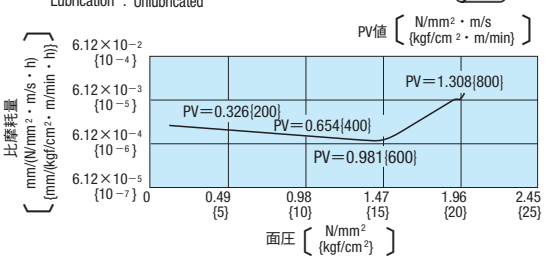




Journal Rotation Test

<Test Conditions>
Bushing : **TFZB10-10**
Mating Material : 1.4305/X10CrNiS18-9 (Surface Roughness 1.2μmRy)
Surface Pressure : 0.49~1.96N/mm2{5~20kgf/cm2}
Velocity : 0.667m/s{40m/min}
Lubrication : Unlubricated





Oil Free Bushings Guide

Oil Free Bushings Shape · Materials Selection List

Type					Type	Lubrication	Maximum Allowable Load		Maximum Allowable Speed		Maximum Allowable PV Value		Features	Page
							N/mm²	kgf/cm²	m/s	m/min	N/mm2, m/s	kgf/cm2, m/min		
Copper Alloy Type	Straight		Standard	Inner Dia. E7	MPBR	Unlubricated	29.0 *98.0	296 *1,000	0.5	30	1.65	1,010	Oil free, best suited for use in high load and low speed operations. Provides high friction resistance when oil film formation is discouraged by reciprocating motions or frequent starts and stops.	P.332
						Regular			1.00	60	3.25	1,990		
				Inner Dia. F7	MPBZ	Unlubricated	29.0 *98.0	296 *1,000	0.5	30	1.65	1,010		P.331
						Regular			1.00	60	3.25	1,990		
				Inner Dia. G6	MPBP MPBZP	Unlubricated	29.0 *98.0	296 *1,000	0.5	30	1.65	1,010	High Precision version of the above. Fine accuracy of inner diameter tolerances allow more precise sliding.	P.332
						Regular			1.00	60	3.25	1,990		
			Thin Wall	Inner Dia. E7	MPBRU	Unlubricated	29.0 *98.0	296 *1,000	0.5	30	1.65	1,010	Provided thinner to be comparable to Multi-Layer MD Bushings. Space-saving.	P.332
						Regular			1.00	60	3.25	1,990		
				Inner Dia. F7	MPBZU	Unlubricated	29.0 *98.0	296 *1,000	0.5	30	1.65	1,010		P.333
						Regular			1.00	60	3.25	1,990		
				Inner Dia. G6	MPBPU	Unlubricated	29.0 *98.0	296 *1,000	0.5	30	1.65	1,010	High Precision version of the above. Fine accuracy of inner diameter tolerances allow more precise sliding.	P.332
						Regular			1.00	60	3.25	1,990		
			With Oil Groove	Inner Dia. F7	MPBAZ	Unlubricated	29.0 *98.0	296 *1,000	0.5	30	1.65	1,010	Lubrication frequency can be reduced by gathering initial grease in oil groove.	P.333
						Regular			1.00	60	3.25	1,990		
	Shoulder		Standard	Inner Dia. E7	MPFZ	Unlubricated	29.0 *98.0	296 *1,000	0.5	30	1.65	1,010	Optimal for use in high load and low speed.	P.333
						Regular			1.00	60	3.25	1,990		
			Thin Wall	Inner Dia. E7	MPFZU	Unlubricated	29.0 *98.0	296 *1,000	0.5	30	1.65	1,010	Thin Wall Type of the above. Provided thinner to be comparable to Multi-Layer MD Bushings. Space-saving.	
						Regular			1.00	60	3.25	1,990		
	Thrust		Standard	Inner Dia. E7	MPGZ	Unlubricated	29.0 *98.0	296 *1,000	0.5	30	1.65	1,010	Blended lubricant into the flange so that one bushing can bear radial load and thrust load at the same time. 3 types are available: Standard, Flat Head Screw Hole and Low Head Screw Hole.	P.334
						Regular			1.00	60	3.25	1,990		
			Fleat-head Countersunk Screw Hole	Inner Dia. F7	MPSZ	Unlubricated	29.0 *98.0	296 *1,000	0.5	30	1.65	1,010

Multi-Layer MD Type	Straight		Standard		MDZB	Unlubricated	49.0 *137	500 *1,400	0.65	39	3.60	2,200	Thin wall, light weight and compact. Consistently-low friction coefficient and high abrasion resistance under high load and low speed conditions. With lubricating oil, high PV values can be obtained even under medium and high speed operations. Excels in chemical resistance.	P.348
	Shoulder		Standard		MDZF	Unlubricated	49.0 *137	500 *1,400	0.65	39	3.60	2,200		
	Housing Units		Tall Block	Single	MDBA MDBAC	Unlubricated	49.0 *137	500 *1,400	0.65	39	3.60	2,200	Housing Unit Type of the above. Housing Type can reduce the time of manufacturing and assembling the housing. 2 types are available: Single and Double.	P.350
				Double	MDBAW	Unlubricated	49.0 *137	500 *1,400	0.65	39	3.60	2,200		
			Wide Block	Single	MDWBA	Unlubricated	49.0 *137	500 *1,400	0.65	39	3.60	2,200		
	Flanged -Multi-Layer MD Bushing Built-in Type-		Standard	Single	MD_A	Unlubricated	49.0 *137	500 *1,400	0.65	39	3.60	2,200	Flanged Type of the above. Flanged Type can reduce the time of manufacturing and assembling the housing. 2 types are available: Single and Double.	P.349
				Double	MD_AW	Unlubricated	49.0 *137	500 *1,400	0.65	39	3.60	2,200		
High Precision Type	Straight		Standard		BFLB	Unlubricated	6	61	3.33	200	0.98	600	Oil free, thin wall, light weight and compact. Fine accuracy of inner and outer diameter tolerances allow easy mounting. Maintains high abrasion resistance and low friction coefficient under high speed condition. Mild metals such as Aluminum can be used as mating materials.	P.349
Polyacetal Resin Type	Straight		Standard		JZB	Unlubricated	17.5	179	0.85	51	2.45	1,500	Oil-free, excels in load capacities and abrasion resistance. With low static friction coefficient, provides high velocity properties. Prevents stick-slips and rasping noise. Conforms to Food Sanitation Laws.	P.351
	Shoulder		Standard		JZF	Unlubricated	17.5	179	0.85	51	2.45	1,500		
	Flanged -Built-in Polyacetal-		Standard	Single	JFMA JFRA	Unlubricated	17.5	179	0.85	51	2.45	1,500	Built-in Polyacetal bushings can reduce the time of manufacturing and assembling the housing. Compatible with Linear Bushing Standard Flanged and Housing Unit Tall Block Type.	P.352
	Housing Units -Built-in Polyacetal-		Tall Block	Single	JFBA	Unlubricated	17.5	179	0.85	51	2.45	1,500		
PTFE Resin Type	Straight		Standard		TFZB	Unlubricated	7	71	1.65	99	1	612	Oil free, low static friction coefficient on start-up and no stick slips during operation. Maintains high abrasion resistance and low friction coefficient under high speed condition. Excels in chemical resistance and conforms to Food Sanitation Laws. Mild metals such as Aluminum can be used as mating materials.	P.351
	Shoulder		Standard		TFZF	Unlubricated	7	71	1.65	99	1	612		

*Allowable static surface pressure (no sliding motion or sliding at extremely low speed)

Listed values are not standard values but reference values.

■Features of Thin Wall Type

- Provided thinner to be comparable to Multi-Layer MD Bushings.
- Applicable to both reciprocal and oscillating motions.
- Space Saving.
- Excels in abrasion resistance compared to Multi-Layer MD Bushings or Resin Bushings. Usable under high-load conditions.

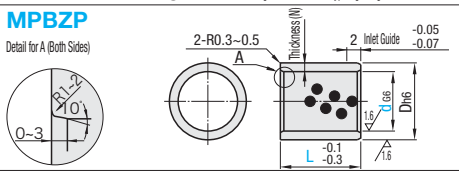
MPBZP



■How to Use

-Keep the clearance with shafts to a minimum, then use with highly precise Linear and Rotary Motion.
-Use of Loctite adhesives is highly recommended because outer diameter tolerance is h6.

Mating Shaft g6: High Precision Use

Oil Free Bushings

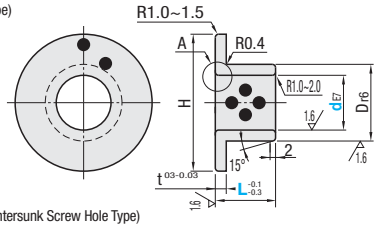
-Copper Alloy Thrust Type-

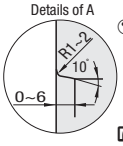
CAD data

Features: It can bear radial journal load and thrust load at the same time.

Thrust Type RoHS

MPGZ (Standard Type)



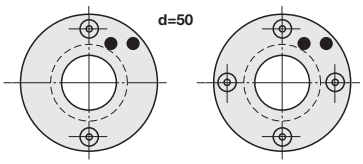


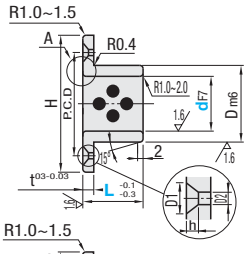
Recommended Mating Shaft
d8: General Purpose (High-Load)
e7: General Use (Light Load)
f8: High Precision Use
g6: High Precision Use (Intermittent Operation)

M Material: High Tensile Brass Alloy
Solid Lubricant Embedded

MPSZ (Flathead Countersunk Screw Hole Type)

d=6~40 d=50





MPKZ (Low Head Screw Hole Type)

d=6~12 d=15~50

Oil Free Bushings

-Bronze Straight I.D.F7 O.D.m6 · I.D.E7 O.D.r6 Type / Bronze Shoulder Type-

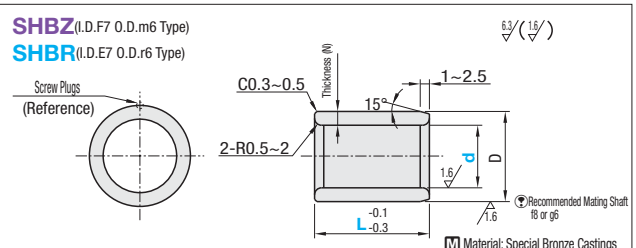
Price Reduction

CAD Data

For features, see below.

Straight Type RoHS

SHBZ(I.D.F7 O.D.m6 Type)
SHBR(I.D.E7 O.D.r6 Type)



Ensure the bushing remains well lubricated.

Material: Special Bronze Castings
Allowable Temperature: -40~150°C

Features of Bronze Type

-Suited for high speed and low load under lubricated conditions.
-Excels in friction, heat and corrosion resistance under lubricated conditions.
- Lubrication frequency can be reduced.
- Alterations on Overall Length are available.

Features Machining and assembly process to the assembling plate can be reduced by changing from the conventional tapping hole x 4 to H7 hole x 1.
Removing counterbored holes for screw mounting from the flange made the flange diameter up to 17mm smaller, resulting in space savings.
The nut was developed for this product with a compact design with opposite sides and angles are the same thickness as JIS Type 3.

■Features of Compact Type

Thinning the outer cylinder and cutting out mounting holes from the flange have made the flange diameter compact.
This compact type is up to 5mm smaller in P.C.D. and up to 9mm smaller in flange diameter than the Standard Type shown on next page.
Best suited for space-saving.

Features: with Dust Seals / with Non-Contact Seals

- Contact Seals built into With Dust Seals Type prevent small dust from Sliding Contact Surface.
- For Sliding resistance of With Dust Seals, refer to Sliding Resistance Test Data.
- Employed Dust Seals are SER series of SAKAGAMI SEISAKUSHO LTD.
- With Non-Contact Seals are provided to prevent large dust entry. Clearance between shafts and bushings (approx. 0.1mm) lower the sliding resistance than With Dust Seals.

Dust Seals Sliding Resistance Test

[Features]
- 5 to 8 mm smaller in flange diameter (H dimension) compared to conventional Flanged Oil Free Bushings. Suited for space-saving.
- Outer cylinder strength test has proven that these bushings are as capable of maintaining strength under moment load as conventional Flanged Oil Free Bushings, or better.

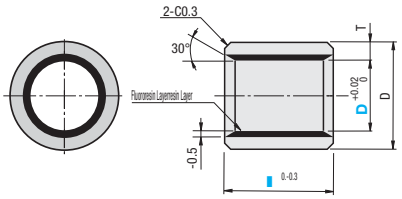
Oil Free Bushings / Flanged Oil Free Bushings

-High Precision Type-　-Built-in Multi-Layer MD Bushing Type-

CAD Data

■High Precision Type RoHS

BFLB



Applicable to Linear and Rotary Motion.
Loctite is recommended to affix bushings.

■Features

- BFLB is specifically effective if the mating material is soft such as stainless steel, aluminum, brass, etc. (Soft mating material is hardly damaged.)
- Superior in relative wear amount: 1.6 x 10 - 7mm3/Nm and abrasion resistance. (It varies depending on condition of use.)

M Material: Base Material: EN AW-2017/AlCu4MgSi
Sliding Material: Fluororesin
* Base and sliding materials are bonded.
Heat Resistant Temperature　-50~140°C

Single Axis Robot · Actuator Product List

RS Series

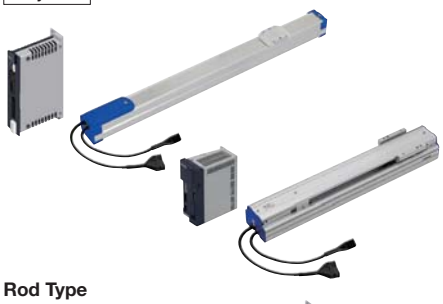
Single Axis Robots: Simple operation, Low Cost, Shortened lead time Slider and Rod Type are lined up.

RS SINGLE AXIS ROBOT

P.357~P.400

Slider Type

Newly Added



Rod Type

Features

-Slider, rod, motor and etc. integrated Robot, easy operation controller and cables are all in a set.
-No need for complex robot language programming
-Easy positioning operations by point data entry and I/O signals from a controller.
-Serial communication functions are newly added to write and read point data.

Specifications

Items	Slider Type		Rod Type
	Small · Economical Robots RS1 / 2 / 3 Series	Large-sized Heavy Load Capacity Robo RSH1 / 2 / 3 Series	Small · Economical Robots RSD1 / 2 / 3 Series
Load Capacity	Horizontal: ~ 12kg Vertical: ~ 4kg	Horizontal: ~ 80kg Vertical: ~ 16kg	Horizontal: ~ 60kg Vertical: ~ 30kg

LX Series

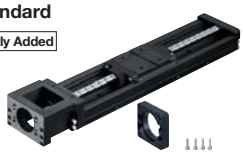
High Rigidity · High Precision · Compactness Compatible to various motors and 8rd day shipping challenging to standard lead time in the industry.

LX Linear eXcellence

P.401~P.460

Standard

Newly Added



With Motor

Features

- High rigidity steel base and rust resistant LTBC without fluoropolymer layer on top.
- Precision ground ball screws and preload enable low noise and high precision performance.
- Positioning repeatability is ±5μm. (Precision Grade ±3μm)
- Large Lead Type and Low Particulate Generation Grease compatible product variations
- Precision Certificates are enclosed with precision grade products.
- Mitsubishi Electric and Oriental Motor's motor-mounted type are lined up.

Specifications

Type	Lead (mm)	Screw Shaft Dia.	Maximum Effective Stroke (mm)
LX20	1/5	Ø6	236.5
LX26	2/5	Ø8	317
LX30	5/10	Ø10	529.5
LX45	10/20	Ø15	497.9

Days to Ship **8 Days**

* Standard L dimension type only

Price **373,00 EUR~**

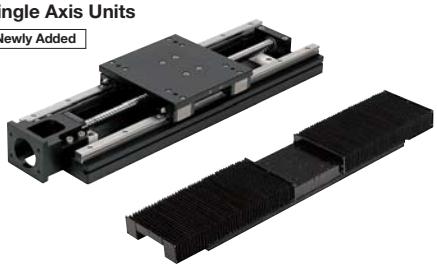
KU Series

Best for conveying heavy objects. Shipping cost is small.
Compatible with manually operated and simply electrically operated jigs

P.461 ~ P.472 · P.481 ~ P.494

Single Axis Units

Newly Added



Manually Operated Units

Newly Added

Features

- Standardized in-house built mechanism most commonly used by customers.
- Dedicated aluminum extrusion bases and Linear Guides support high loads.
- 150 and 200 mm-wide Tables support large work pieces.
- For Single Axis Units, rolled and precision ball screws are selectable.
- For manually operated units combined with trapezoidal lead screws, indicator-equipped type, elevator type and rotational stages are added to the lineup.

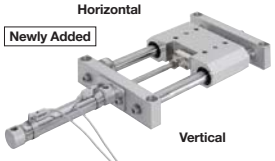
MA Series

Pneumatically driven end-point positioning for simple transfers
Cost effective - costs 20% less than the total of individual units

P.475~P.480

Horizontal

Newly Added



Vertical

Newly Added

Linear Guide Type

Features

- Air cylinder driven horizontal / vertical Integrated Motion Units
- Units combined with MISUMI Standard products save the trouble of designing and building
- With or without cylinder is selectable.

Mounting orientation
Horizontal Type:Vertical, Horizontal and Wall mounting is possible.
Parts can be mounted on top of slider.
Vertical Type:Vertical mounting
Slider components can be mounted on either of 3 surfaces.

MISUMI Single Axis Robot RS Series

RS SINGLE AXIS ROBOT

Complete Multi Point Positioning System in One Package. ····· **Simple Operation**

Robot Body+Controller+Cable ····· **EUR 498,00~**

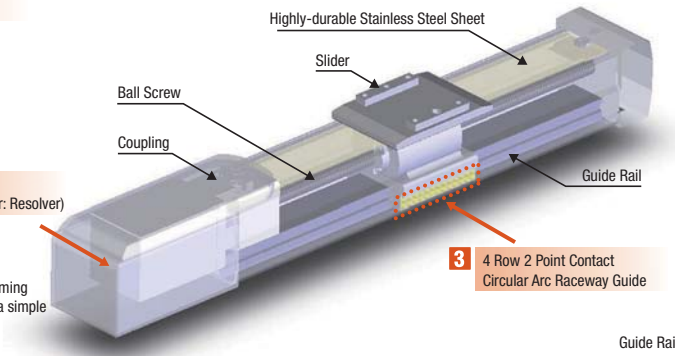
Short Lead Time for 50mm Stroke Increments ····· **10th Day Shipping**

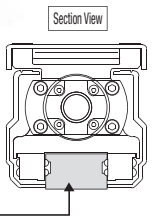
Small · Economical Robots RS1/2/3 Series

Load Capacity: ~ 12kg (horizontal) ~ 4kg (vertical)

2 Controller (Incremental Type)

1 Stepping Motor
(Position Detector: Resolver)





-No need for complex robot language programming
-Speed and acceleration can be configured in a simple process.
-Maximum positioning points: 255
*Above conditions are also applicable to RSH1/2/3 controllers.

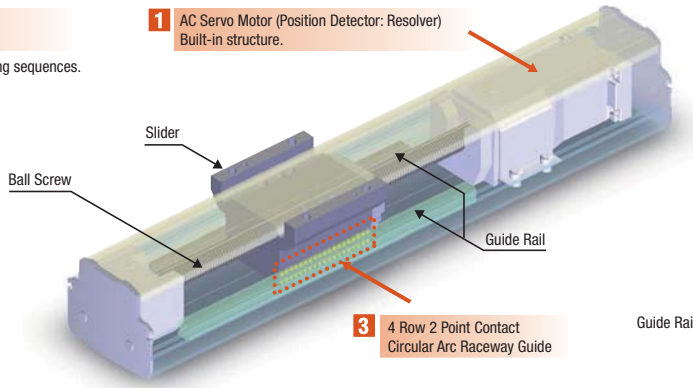
Large Heavy Load Capacity Robot RSH1/2/3 Series

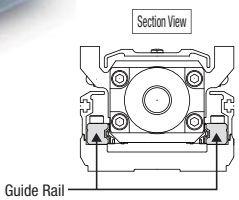
Load Capacity: ~80kg (horizontal) ~16kg (vertical)

2 Controller
(Absolute Type / Incremental Type)

* Absolute encoder requires no homing sequences.

1 AC Servo Motor (Position Detector: Resolver)
Built-in structure.



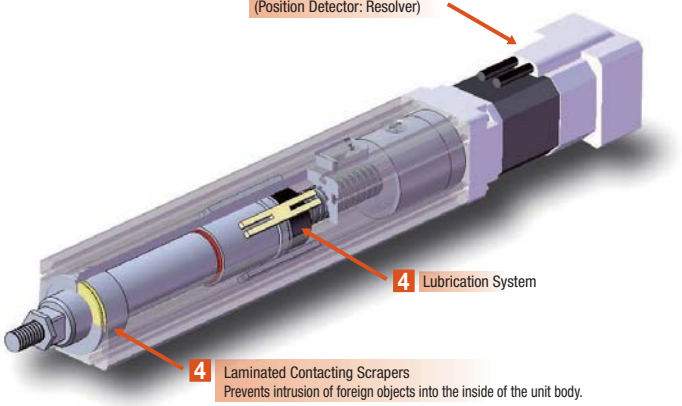


Small, Rod Type RSD,RSDG1/2/3 Series

Load Capacity: ~ 60kg (horizontal) ~ 30kg (vertical)

2 Controller
(Incremental Type)

1 Stepping Motor
(Position Detector: Resolver)



Features of RS Series

1 Resolver

Resolver is: Simple structure with no active electronics used,resistant to high and low temperatures, shock, electronic noises, dust, oil, etc. Used for applications including automotive, railways and aerospace.

Resolver for detection of motor shaft angle has realized higher reliability than the conventional optical encoders.

Resolver Optical Encoder

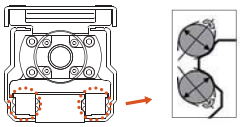
2 Control Method

Unique vector control method is used for RS1/2/3 and RSD1/2/3.
Stepping motor with high performance equal to that of AC servo motor.

Slider Type Features (RS, RSH1/2/3)

3 4 Row 2 Point Contact Circular Arc Raceway Guide

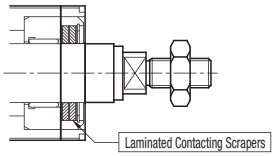
High self compensating ability leads to the smooth operation even if rigidity and accuracy on robot mounting surface is low.
Due to little differential slip, it can maintain stable performance under heavy loads.



Features of Rod Type (RSD, RSDG1/2/3)

4 Laminated Contacting Scraper and Lubrication System

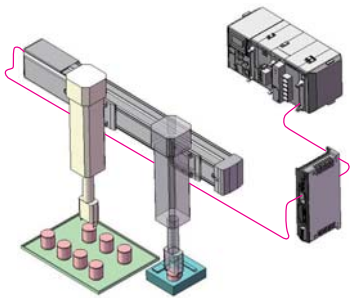
Laminated contacting structure removes foreign objects and prevents them from intruding into the inside of the unit body.
Lubrication equipment inside the unit body provides long term maintenance-free condition.

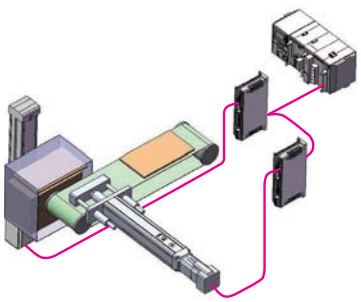


Example of Operation Pattern

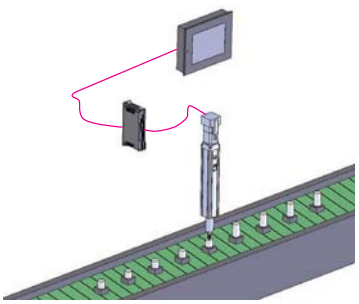
Selectable operation pattern according to the application.

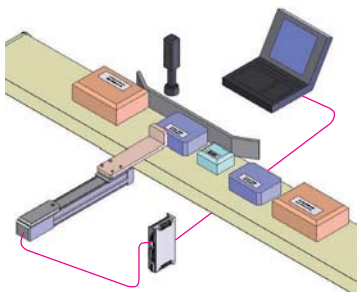
Positioning Operation

Position Commands	Pitch Commands
Parts Assembly (Slider)	**Stocker (Slider · Rod)**
Operation: Hand move and positioning Control: I/O Control	Operation: Stacker storage rack pitch feed Control: Use remote commands to control multiple axes
	




Push-and-Hold Operation

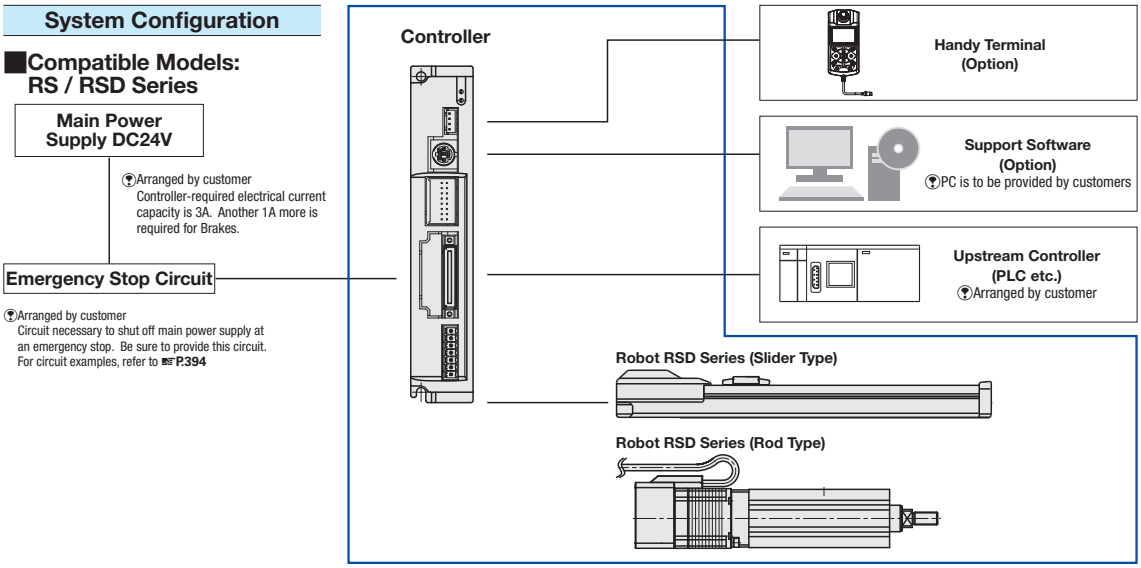
Press Fitting (Rod)	Lineup · Inspection (Slider)
Operation: Press fitting a pin in a part Control: Online Command Control	Operation: Move to a specified position and push parts against the wall to be aligned Control: Control with Support Software (RS-Manager)
	




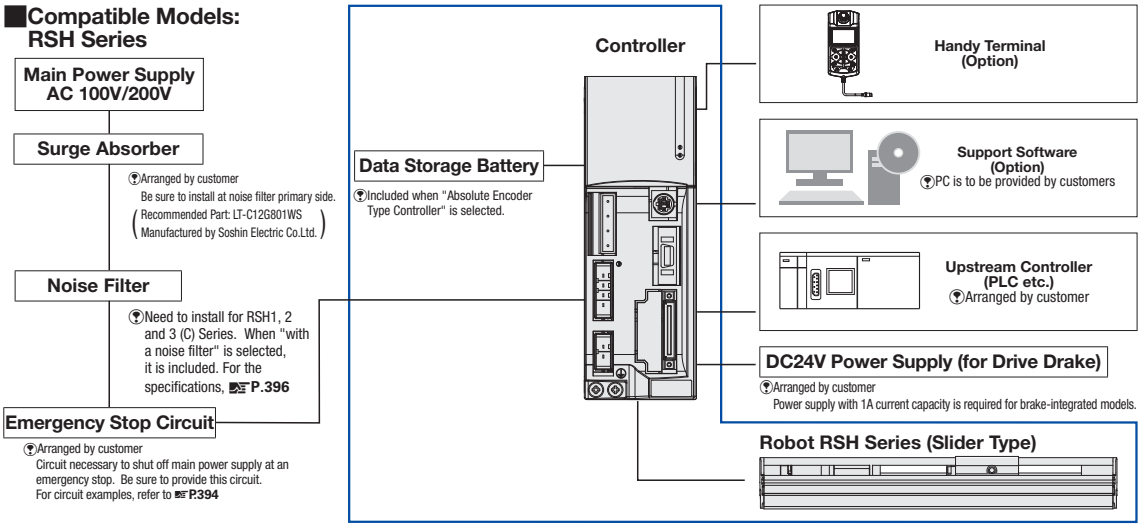
Control Functions

System Configuration

■Compatible Models: RS / RSD Series



■Compatible Models: RSH Series



Data Structure

Misumi's controller for single axis robots can store up to 255 locations.

The data consists of "point data (drive / location / velocity etc.)" and "parameter (load I/O contents etc)".
Items 1 to 11 below can be set by point data.

Data → Point Data: P1~P255

	Items	Descriptions
1	Operation Type	Configures target location / pitch and driving pattern for positioning/pushing/connection etc.
2	Position	location and pitch of movement.
3	Velocity	Maximum operating velocity
4	Acceleration	Operating acceleration
5	Deceleration	Deceleration during operation (Ratio to acceleration)
6	Pushing	Current limits for push operation
7	Zone -	Individual zone output range
8	Zone +	
9	Proximity Range	Output range of vicinity signal.
10	Branch	Branch setting when positioning completed or connection setting for joint operation
11	Flags	Setting of other bit information (binary digit) for operation.

Data → Parameters

Operational Parameters	Operation-related parameters such as return to home.
I/O Parameter	Selection of terminal assignment and input / output function.
Option Parameter	Option-related parameters such as CC-Link etc.
Control Parameter	Parameter unique to linked robots (Set at initialization)

How to Enter Data

Data can be entered from support software or handy terminal.

■Support Software

Data can be arranged using PC. Useful on initialization.
Teaching is possible while online when actuator is activated.

Input Example

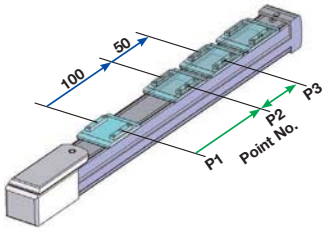
Point No.	Operation Type	Position	Velocity	Acceleration	Deceleration	Pushing	Zone -	Zone +	Proximity Range	Branch	Flags
P1	ABS	0.00	100	100	100	100	0.00	0.00	1.00	0	0
P2	ABS	100.00	100	100	100	100	0.00	0.00	1.00	0	0
P3	INC	50.00	80	40	100	100	0.00	0.00	1.00	0	0
⋮	⋮	⋮	⋮	⋮	⋮	⋮	⋮	⋮	⋮	⋮	⋮

■Handy Terminal

Data can be arranged directly without using PC.
Teaching is possible when actuator is activated.

Input Example

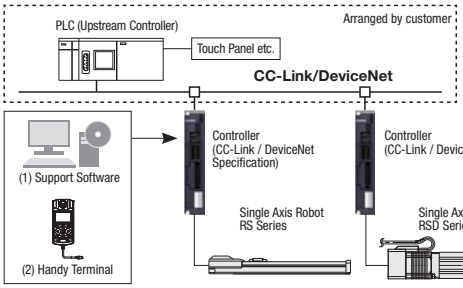
Point Arrangement			
P	1		
1.	Drive	ABS	-
2.	Position	100.00	mm
3.	Speed	100	%
4.	Acceleration	100	%
⋮	⋮	⋮	



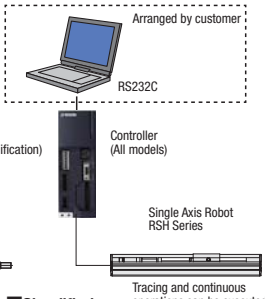
[Operations Based On Input Example]
(1)Point No.P1 (ABS Operation)
Move to 0mm
(2)Point No.P2 (ABS Operation)
Move to 100mm from 0mm
(3)Point No.P3 (INC Operation)
Move to 150mm from 100mm
(Ⓟ Expressed in an absolute position)

Operation Example

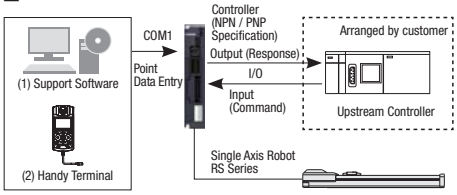
■Remote Command Control via CC-Link or DeviceNet



■RS232C Online Command Control

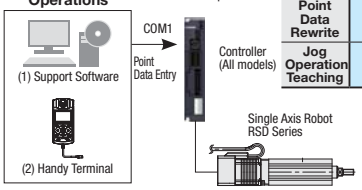


■Parallel Communication I/O Control



■Simplified Operations

Tracing and continuous operations can be executed based on entered point data.

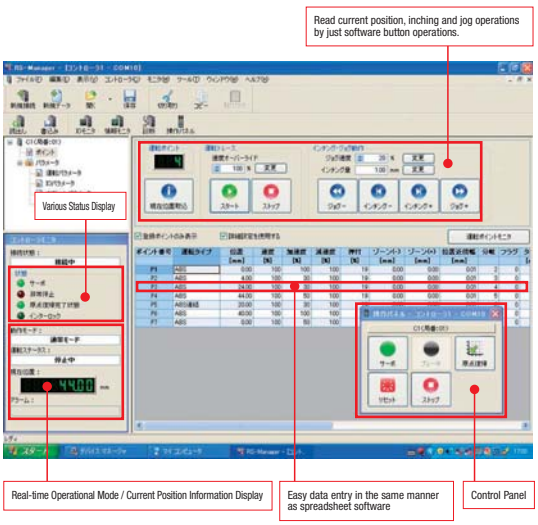


Communication Method	Remote Command Control (CC-Link / DeviceNet Specification) Communication Specifications ☞P.394	Online Command Control (RS232C Specification) Communication Specifications ☞P.394	I/O Control
Robot Linked Qty.	Maximum Number of Nodes	1	1
Upstream Controller	PLC etc.	PC Touch Panel PC	PLC etc.
Position Move	0	0	0
Speed / Acceleration Rewrite	0	0	X
Current Position Read	0	0	X
Point Data Rewrite	0	0	X
Jog Operation Teaching	0	0	0

Support Software (RS-Manager) Features

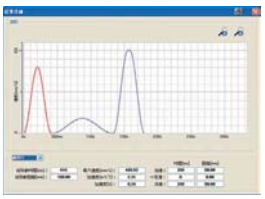
■RS-Manager Operation Screen

Easy to create and edit point data on a PC
Teaching and test run can be performed in on-line operation.



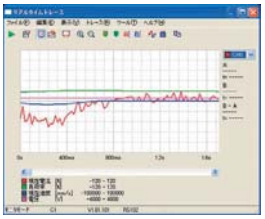
■Cycle Time Simulation Functions

Based on entered robot operational conditions and point data, simulation can be run to obtain time required for point-to-point operations. Predetermined operations allow efficient adjustments.



■Real-time Tracing Functions

Various information can be monitored in real time.
Saving each item data will assist in scheduled maintenance.
Also, helpful in unexpected troubles and analysis by comparing with data under normal conditions.



Real-time tracing items (Simultaneous monitoring on 4 items at a max.)	
- Voltage	- Current Value
- Commanded Speed	- Current Speed
- Commanded Current Value	- Internal Temp.
- I/O Status	- Present Current Value
- Word I/O Status	- Motor Load Factor

Lineup · Spec List
(Slider · Rod Type)

Selection Steps

(1) Load Capacity
Spec List
Select from "Max. Load Capacity"

(2) Stroke
Spec List
Select from "Stroke"

(3) Cycle Timeor Max Velocity
Select from "Cycle Time Graphs" or "Max. Speed"

(4) Check for Details
Spec List
Check for details on product pages

(Note 1) When "Absolute Encoder Type" is required, please select from RSH1(C), 2(C) or 3(C).
(Note 2) Select from RS_C for clean specification models.(Alteration to Low Particulate grease is possible with standard model)

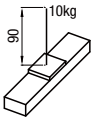
Notes on CE Marking

MISUMI Robot Series provide parts to be incorporated into customers' devices and equipment. According to EC Directive, it is declared that these are supplied in an incomplete state. Therefore, no CE marks are attached.
Please check for EC Directive compatibility with robot built-in device or equipment (finished products) by customers. For details, please see Instruction Manual.

Selection Examples
-(Slider Type)-



Positioning Operation Selection Example

[Selection Criteria] Horizontal Load Capacity 10kg, Stroke 500mm, Positioning Time less than 1.0sec, overhang dimension is 90mm to A direction in the picture. (Standard Environment)

(1)(2) Select a model with the max. load capacity of 10kg (in horizontal position) and moving stroke of 500mm from "Spec List" on left page.

<Selection Example>
· RS2 Lead 6
· RS3 Lead 6
· RSH1 Lead 20

■Slider Type For selections, please use Selection Guide on P.1905

Type	Lead	Environmental Specification	Max Load Capacity Weight (kg) Horizontal	Vertical	Max. Push Force (N)	Maximum Velocity (mm/sec) * Values in the list are the maximum velocity. Stroke (mm)	Position Detector	Controller Input Power Supply	Standards Applicable	Pages
RS1	2	Standard Specification	6	4	150	100	Resolver Incremental Method	DC24V (±10%)		P.363
	6		4	2	90	300				
	12		2	1	45	600				
RS2	6		10	2	90	300 280 250 220 190				P.365
	12		6	1	45	600 560 500 440 380				
	20		4	-	27	1000 933 833 733 633

	12		8	2	60	600 560 500 440 380				
	20		6	-	36	1000 933 833 733 633				
RSH1	6	Standard Specification	40	8	283	360 324 270 234 216 180	Resolver Absolute Method	AC Single Phase		P.369
	12		20	4	141	720 648 540 468 432 360				
	20					1200 1080 900 780 720 600				

50 100 150 200 250 300 350 400 450 500 550 600 650 700 750 800 850 900 950 1000 1050

255 225 195 180 165 150 135 120
390 360 330 300 270 240

(3) Select a model capable of positioning within 1.0 sec from "Cycle Time Graph" on P.397~400

<Example> Check RSH1 Lead 20 positioning time

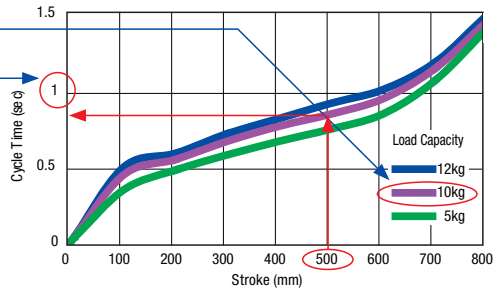
· Select 10kg for load capacity.

· The graph indicates positioning time is less than 1.0 sec.

· The table indicates positioning time is 0.83 sec.

(Note) The graph and table indicate calculated values, and these may vary depending on operating conditions.

Likewise, check the positioning time for RS2 Lead 6 and RS3 Lead 6



<Selection Example>
· RS2 Lead 6 1.78sec
· RS3 Lead 6 1.83sec
· RSH1 Lead 20 0.83sec

▶ - RSH1 Lead 20

sec

st	0	100	200	300	400	500	600	700	800
12kg	0	0.48	0.57	0.70	0.80	0.90	0.99	1.17	1.48
10kg	0	0.43	0.53	0.65	0.75	0.83	0.93	1.13	1.44
5kg	0	0.33	0.46	0.56	0.65	0.73	0.83	1.05	1.39

(4) Select a model whose gravity center of load is within allowable overhang.

<Example> Check RSH1 Lead 20 allowable overhanging loads

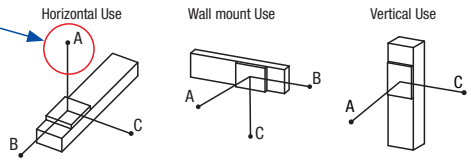
· Check the direction.

· The table indicates the overhung is 100mm.

(Note) Values are actual measurement and may vary depending on operating conditions.

Ex.: RSH1 Lead 20

■ Allowable Overhang Load



Horizontal Use (Unit [mm])

Lead	Mass	A	B	C
20	12kg	85	25	43
	10kg	100	32	54
	5kg	197	76	120

<Selection Example>
· RSH1 Lead 20 100mm

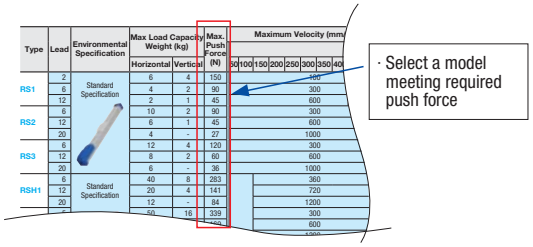
▶ - Select RSH1 Lead 20

(Note) When more than one model is suggested, please select a model with the largest load capacity. When overhang is 0, please additionally use guides and the like to support load mass.

Push Operation Selection Example

Confirm maximum compression force and allowable static moment. For selection expect push operation, refer to Selection Example of Models for Positioning Operation.

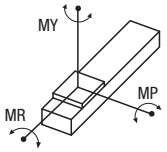
(1) Check maximum push force



· Select a model meeting required push force

(2) Check allowable static moment

Ex.: RSH1



· Check if the allowable static moment is larger than the moment generated by the compression force.

External Dimensions	30mm (W)x162mm (H)x80mm (D)	58mm (W)x162mm (H)x131mm (D)
Main Body Mass	approx. 200g	approx. 1.1kg
Input Power Supply Voltage	DC24V±10% 3A	EXRS-C21A/B : Single phase AC100 ~ 115V±10% EXRS-C22A/B : Single phase AC200 ~ 230V±10%
Power Capacity	70VA	400VA
Position Detection Method	Resolver	Resolver with multiple rotation absolute functions
Resolution	20480P/rev	16384P/rev
Control Method	Closed loop vector control method	
Dielectric Strength Voltage	DC500V 1MΩ or more	
Memory Capacity	Point (255 pts), Parameters, Alarm log (50 items)	
Protection Features	Overload, overvoltage, temp., power module and excessive position deviation errors	
Operating / Storage Temp.	0 ~ 40 °C / -10 ~ 65°C	
Operating Humidity	35 ~ 85%RH (No condensation)	
Ambience	Indoors without direct sunlight. No corrosive and flammable gases, and oil mist and dust.	
Vibration Resistance	In each X, Y and Z direction 10~57Hz Half amplitude 0.075mm 57 ~ 150Hz 9.8m/s²

Signal Feature Descriptions

Types	Signal Name	Meaning	Descriptions
Input	PIN0~7	Point No. Set 0~7	· Specify point No. for positioning operation · Specify point No. for current position teachings. (in manual operation mode)
	JOG+	Jog Move (+)	Jog moves in + direction when ON (in manual mode)
	JOG-	Jog Move (-)	Jog moves in - direction when ON (in manual mode)
	MANUAL	Manual Mode	ON: Manual Mode
	ORG	Return to Home	Start Homing
	/LOCK	Interlock	ON: Movable, OFF: Immovable, OFF while in movement: Deceleration Stop
	START	Start	Start positioning operation by specified point No.
	TEACH	Current Position Teach	Teach current position for specified point No. (in manual operation mode)
	RESET	Reset	· Reset alarm · Reset point No. output · Clear remaining travel distance in relative positioning operation
	SERVO	Servo ON	ON: Turn ON Servo, OFF: Turn OFF Servo
Output	POUT0~7	Output point No. 0~7	· Output point No. to be activated by positioning operation · Output alarm No. in the event of alarm status.
	OUT0	Control output 0	Assigned by following outputs based on parameters · Zone Output · Individual Zone Output · Manual Mode Status · Completion of Return to Home, Clamp Position, Alarm Output · Proximity Output, Moving
	OUT1	Control output 1	
	OUT2	Control output 2	
	OUT3	Control output 3	
	ZONE	Zone Output	ON output when robot moves into the zones set by parameters.
	PZONE	Individual Zone Output	ON output when moving into the zones specified by each point
	MANU-S	Manual Mode	ON in manual mode
	ORG-S	Completion of Homing	Output ON with the completion of return to home.
	TLM-S	in clamp position	ON while in push operation
	/WARN	Alarm Output	ON while in alarm status
	NEAR	Proximity Range Output	ON Output in the proximity of positioning operation completion.
	MOVE	In Motion	ON in motion
	BUSY	In Operation	ON in operation
	END	Completion of Operation	Output operation results ON at normal stop
	/ALM	Alarm	ON in normal status, OFF Output in the event of alarm status
	SRV-S	Servo Status	Output ON when servo is ON.

Items	DeviceNet		
Compatible DeviceNet Specification	Volume 1 Release2.0/Volume 2 Release2.0		
Device Type	Generic Device		
MAC ID Setting	0~63		
Communication Speed Setting	125kpbs	250kbps	500kbps
Total Extended Distance	500m	250m	100m
Monitor LED	Module, Network		

■RS232C Communication Specification

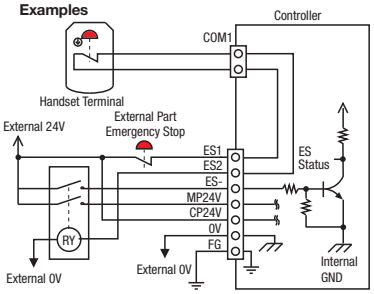
Items	Specifications
Transmission Rate	38400bps
Data Bit Length	8 bits
Stop Bit Length	1 bit
Parity	Odd
Control Method	Not provided
Transmission Method	Full-duplex Communications
Synchronizing Method	Asynchronous Type

Main Power Shutdown Circuit Examples

Examples of circuits necessary to interrupt the main power by emergency stop.

■Controller EXRS-C1 Circuit Examples

Applicable Robots: RS1 / 2 / 3 (P.363~368) RSD1 / 2 / 3 (P.375~380) RS1C / 2C / 3C (P.381~386) RSDG1 / 2 / 3 (P.375~380)

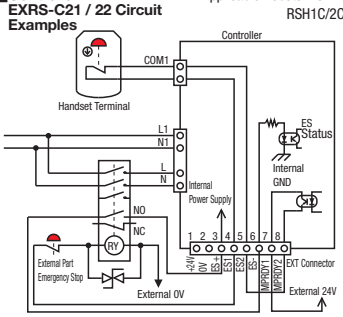


See instruction manual for examples of circuits for handy terminals with Deadman switches.

Note: Power interruption circuit is not installed in this controller to be available for various safety levels. Please be sure to provide an external power interruption circuit and form an emergency stop circuit.

■Controller EXRS-C21 / 22 Circuit Examples

Applicable Robots: RSH1 / 2 / 3 (P.369~374) RSH1C/2C/3C(P.387~392)



See instruction manual for examples of circuits for handy terminals with Deadman switches.

Terminology

■Repeatability
Variations in stop positions when positioning moves approached in one direction from one starting location are made.

■Maximum Carrying Load Capacity
Maximum load that can be placed on the carriage. A sum of the work and the tooling must not exceed this value.
Take Allowable Overhang in consideration if the work C.G. is offset from the table center.

■Maximum Push Force
Maximum thrust force the slider can generate while not moving. Do not perform push and hold actions with shock loading since that may cause failures. Additionally, do not exceed 60% of the Static Load Capacity when the push point is offset from the slider's guide center.

■Rated Force
Continuous force that can be generated. For work holding and pushing operations, keep under the Rated Force (approx. 60%)
Do not perform shock loading operations even under the Rated Force as that may cause failures.
Do not exceed 60% of the Static Load Capacity when the static push point is offset from the slider's guide center.

■Rated Running Life
Total running distance where 90% of the robots under the same operating condition will reach without failures.

■Allowable Overhang Load
Indicates offset distance of tool/work C.G. to the slider's guide center.
It depends on the work load weight and lifetime running distance of more than 10,000km is achieved when the center of gravity is within permissive overhung. The published values are calculated based on automatically configured acceleration values per given carried mass.

■Allowable Static Moment
Moment load value applicable on the slider top surface while the robot is static.
For dynamic applications, overhang value must be determined with running life in consideration.

■Lost Motion
A difference in position values when positioning moves are made to a specified coordinate from positive direction and negative direction.

■Rod Non-rotational Accuracy
Rod play in the rotational direction.

Notes on CE Marking

MISUMI Robot Series provide parts to be incorporated into customers' device and equipment. According to EC Directive, it is declared that these are supplied in an incomplete state. Therefore, no CE marks are attached.
Please check for EC Directive compatibility with robot built-in device or equipment (finished products) by customers. For details, please see Instruction Manual.
All machine directive 2006/42/EC related documents as operation manuals are available in english only!

Warranty

■Warranty Terms
Comply with "Warranty Standards" printed on "Mechanical Standard Components for Factory Automation" catalog.
■Warranty Period
One year from shipment date or within the first 2400 hours of operation whichever comes first

Single Axis Actuator LX Overview

High Accuracy · Compact · Excellent Cost vs. Performance

Single Axis Actuator

Fully Support Customers for Automation Equipment Designs

High Accuracy High Grade accuracies applied as standard. (for all standard grade products)

Manufactured by MISUMI-Suruga Seiki Co. Ltd., reputable XY Stage producer.
Positioning repeatability of ±5μ guaranteed. Precision Grade (±3μm) is selectable.

Compact Exceptional low-profile design

Low-profile achieved by the integral structure of blocks. Best for space-saving.

Excellent Cost vs. Performance High Grade specs. are offered at reasonable Standard Grade prices.

High Grade accuracy at Standard Grade prices (373,00 EUR ~). Automate equipment cost reduction accomplished..

8th day Shipping Challenging to Standard lead time In the Industry

Structures and Features

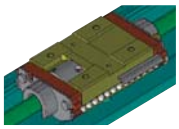
Feature 1 Base Length variations that allow flexible designs

Feature 2 Space saving low-profile stage

Feature 3 Locating dowel holes on the base

Feature 4 Locating dowel holes on blocks (Cover Type)

Standard Type

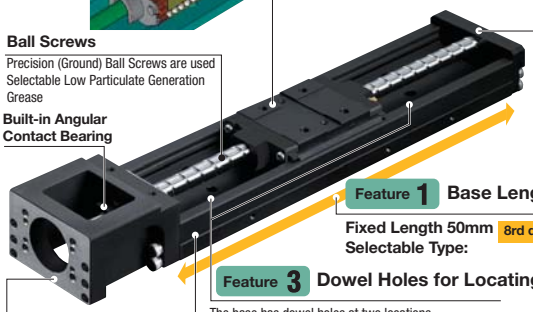


Block
Integral Structure of Ball Screw Nuts and Linear Guide Mechanism

Deep Groove

Ball Screws
Precision (Ground) Ball Screws are used
Selectable Low Particulate Generation Grease

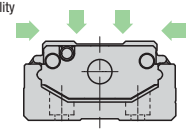
Built-in Angular Contact Bearing



Feature 1 Base Length
Fixed Length 50mm Selectable Type: 8rd day Shipping

Feature 3 Dowel Holes for Locating
The base has dowel holes at two locations.
Easy assembly · Enhanced reproducibility

Base
High-rigidity JIS STKM
The side surface has sensor mounting tapped holes.
Anti-rust surface treatment and sliding-promote LTBC plating



Motor Bracket
Applicable for each manufacturer's servo and stepping motors
The units without bracket are also provided.

Rail Shape
Double Row Gothic Arch Configuration
Compactness and high rigidity with four direction equal load capability accomplished.

Cover Type

Feature 4 Dowel Holes for Locating
Cover Block has dowel holes at two locations.
2 Dowel Holes
Easy assembly · Enhanced reproducibility

Design Patent and Utility Model Right Obtained

Feature 2 Low-profile Design
Block Integral Structure
Cover Type Blocks also achieve low-profile.

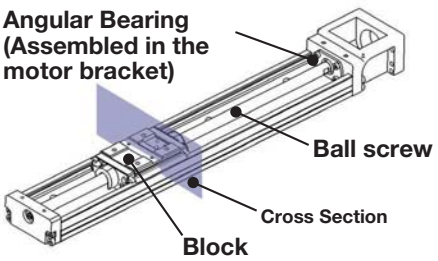
Cover Type Height		
	LX20	27mm
	LX26	33mm
	LX30	40mm
	LX45	57mm

Single Axis Actuator LX Load Ratings · Allowable Moment List

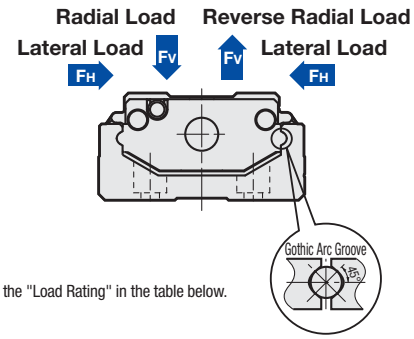
Load Directions

The Rails employ Double Row Gothic Arch Grooves, and are compact and low-profile.

Outline View



Enlarged Double Row Gothic Arch Grooves Sectional View



- Rail
  Equal basic load rating in all four directions: radial, reverse radial and lateral directions. For values refer to the "Load Rating" in the table below.

- Ball Screw
  Preload is applied to precision (ground) ball screw. Integrating structure of the block and ball screw nut allows axial loads to be applied.
  For Basic Load Rating in axial directions, please see "Load Rating" Table below.

- Bearing (fixed side)
  Angular bearings are integrated in the motor bracket allowing loads in the axial direction to be applied. For values of the basic load rating in the axial direction refer to the "Load Rating" in the table below.

Load Ratings

Values are indicated by sections.

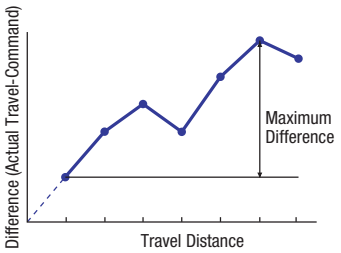
Accuracy Standards

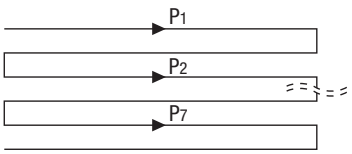
- Positioning Accuracy

Positioning is performed from a reference position incrementally in one direction, and measured.
Measurement values are the maximum difference between actual travel distance and commanded distance.
For standard values, please see "Accuracy Standards Table".



- Positioning Repeatability

Repeat positioning and measurement seven times at the same point in a specified direction.
1/2 of the maximum difference with "±" given is the measurement value.
For standard values, please see "Accuracy Standards Table".

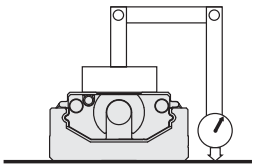


- Backlash

Loads are applied to the block from the reference position, and then released.
The difference between the reference position and returned value is the measurement value.
For standard values, please see "Accuracy Standards Table".

- Running Parallelism

A dial indicator is installed from the block to the reference surface.
Measurements are taken while travelling.
The maximum difference taken by the measurement is the measurement value.
For standard values, please see "Accuracy Standards Table".



Cautions for using Single-axis Actuator LX / Low Particle Grease

■Maintenance

- Routine Inspections:

Recommended inspection frequency is once per 3 to 6 months.
Please check for proper lubrication conditions, clean-up and grease refill.
Check on mounting screws for looseness.

- Lubrication:

The recommended lubricants are shown as below.
LX20, LX26 and LX30 Series => Showa Shell Sekiyu-made Alvania Grease S No.2
LX45 Series => Showa Shell Sekiyu-made Cartridge Grease EP2
Low Particle Generation Type => NSK LG2
Recommended greasing cycle is per 6 months or 1,000km under normal operating conditions.
* Lubrication intervals, however, depend on usage conditions and environments.

■Cautions for Operating Environments:

Ensure that it is used at an ambient temperature of 50°C or less. It is recommended to provide mechanical stoppers to prevent overrun.

- Allowable Rotational Speed

Size-specific allowable rotational speed is indicated below.

Part Number	Lead	Rail Length	Allowable Rotational Speed (min^{-1})
LX20	1	80~300	6000
	5		
LX26	2	100~400	6000
	5	100~350	6000
		400	5350
LX45	10	340~590	3300
	20	340~590	3330

Part Number	Lead	Rail Length	Allowable Rotational Speed (min^{-1})
LX30	5	150~450	4920
		500	4440
		550	3600
		600	3000
	10	150~450	4980
		500	4440
		550	3600
		600	3000

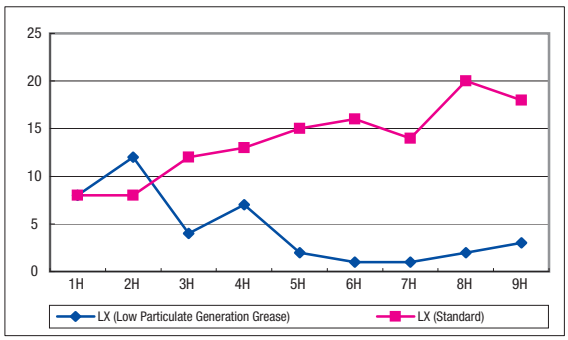
■About Single-axis Actuator LX Low Particle Grease

The products are shipped with low particle grease applied or high cleanliness environments.
LG2 (Made by NSK Ltd.) generates less particles and exhibits excellent corrosion resistance.
For part number selections, please see each product page.

■Low Particulate Generation Grease Performance Table

	Items	Conditions	Unit	Measurement Method	LG2 (Made by NSK Ltd.)
Grease Performance	Thickener	-	-	-	Lithium Type
	Base Oil	-	-	-	Mineral Oil + Synthetic Hydrocarbon Oil
	Base Oil Kinetic Viscosity	40°C	mm^2/s	JIS K2220 5.19	30
	Worked Penetration	-	-	JIS K2220 5.3	207
	Dropping Point	-	°C	JIS K2220 5.4	200
	Evaporation	99°C x 22hr	wt%	-	1.40%
	Oil Separation	100°C x 24hr	wt%	JIS K2220 514	0.80%
	Operating Temp.	In Air	°C	-	-10~80

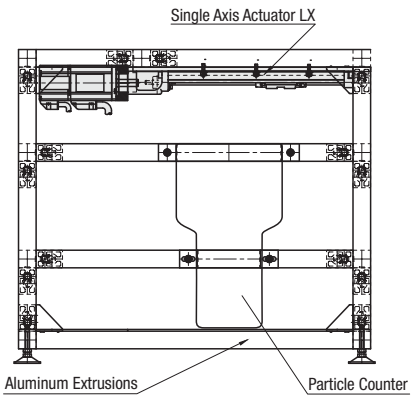
■Particulate Generation Comparison



0.3μm or larger particle count (m^3)

Measuring Time	1H	2H	3H	4H	5H	6H	7H	8H	9H
LX (Low Particulate Generation Grease)	8	12	4	7	2	1	1	2	3
LX (Standard)	8	8	12	13	15	16	14	20	18

■Particle Generation Test Evaluation Equipment Outline



<Evaluation Conditions>
Clean Room Class 100 (in a clean room)
Room Temperature 24°C±2°C Humidity 45%±5%
(Particle Counter Name)
Hand-held Particle Counter KR-12A (Rion Co., Ltd.)
Tested Actuator: LX2001-B1-A2040-200
Motor Speed: 3000rpm

Clean Room Class 100/ISO Class 5
The measurement results meet the conditions above.
(* These are not guaranteed values but reference values.
Values considerably varies depending on operating environment)

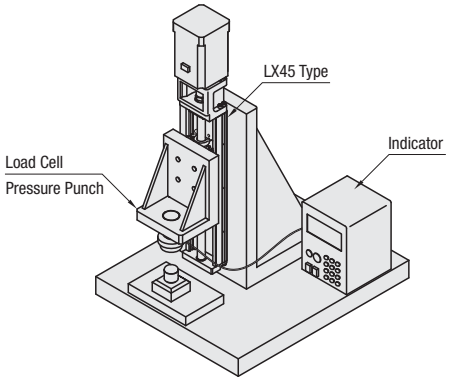
Actuator LX / Application Examples

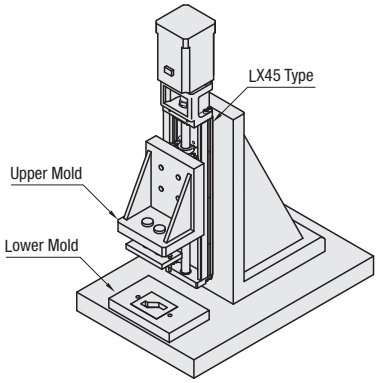
**Linear Axis Actuator LX is the actuator in which ball screw and linear guide are incorporated.
High Precision Positioning Type and High Speed & Heavy Load Capacity Type are available.
Standard lead type is for precise positioning, high lead type for high-speed operation.
Suruga Seiki Co. Ltd., reputable XY Stage producer, manufactures these actuators.**
- Please see P.401 to P.460 for product details.

■Servo Press Machine

Use as pressure axis for servo press machine.

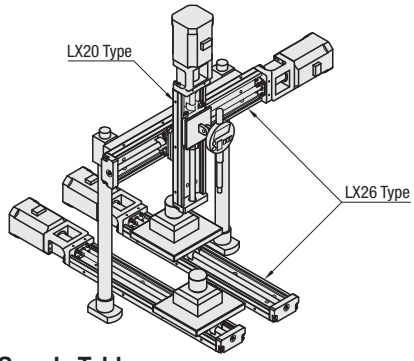
-Reliable high rigid flame
-Standardized dowel holes on case plate for operation with heavy load.
(Dowel Pins are not only for setting a position but support Shear Load.)





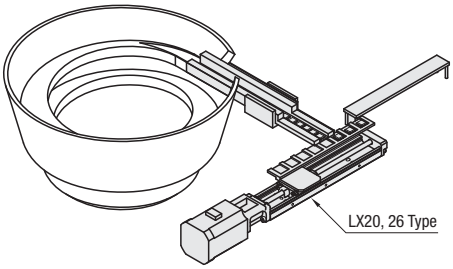
■Measurement Unit

Use in combination with Servo Motor for measuring process.
-Possible only with our high precision actuators.
-Compatible with various products due to its compactness.



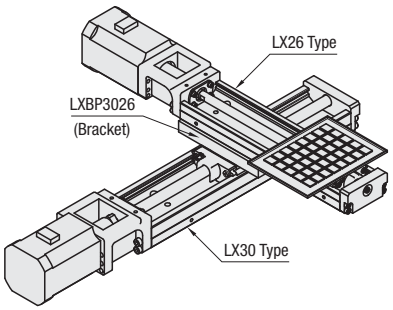
■Precision Conveyance

Best suited for high precision conveyance
-Advanced precision will guarantee operation.



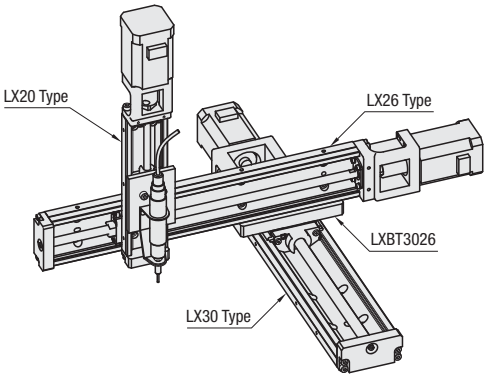
■Part Supply Table

Part supply by connecting two axes
-Mounting Bracket will be included.



■Painting Unit

Painting Unit by connecting three axes.
-Be able to design to your needs.
-Bracket is included; part design is not necessary



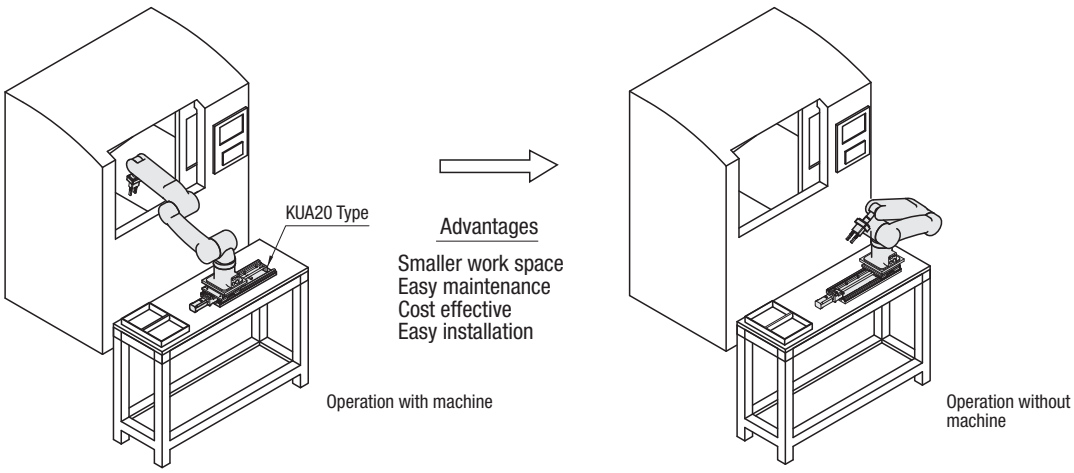
Single Axis Actuator KU / Application Examples

CAD Data

Single Axis Unit KU is the unit in which ball screw and linear guide are incorporated.
Usable for small motorized actuator or movable table of Loader as well as conveying heavy load.
Bellows type and cover type are available for better operating environment.
Suruga Seiki Co. Ltd., well established as XY Stage, manufactures unit body.
- Please see P.461 to P.474 for product details.

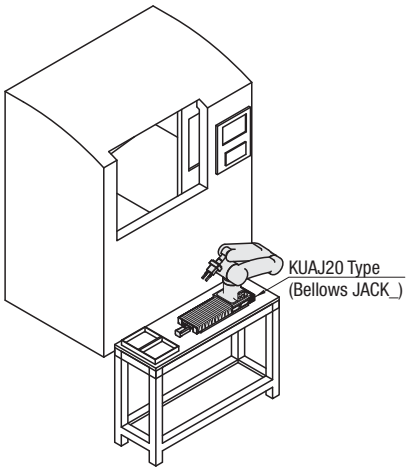
■Put in/Take off Work in Machine Tool

-Single axis actuator can be used to give space for a rationalized robot system.



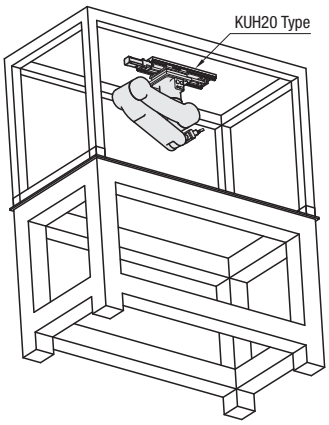
■Put in/Take off Work (Bellows · Cover Type)

-Usable where drops of water or dust exist
Bellows can be used as safety covers.



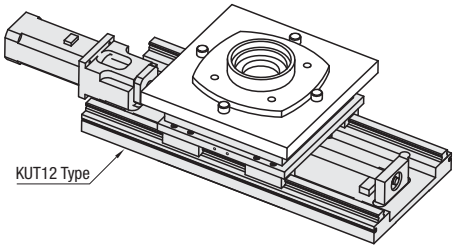
■Work Alignment

-Can be mounted on the wall or ceiling due to high rigidity.



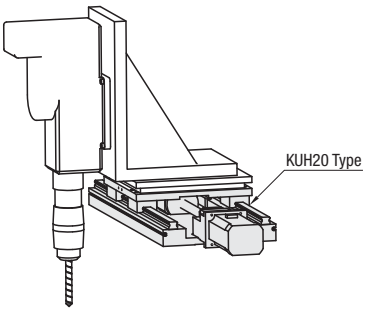
■Precision Table of Large Parts

-Bellows or covers are selectable when used where drops of water or dust exist.
-Ball screw grade is selectable according to precision.
-Precision Ball Screw (C5) is adopted for KUH·KUT.



■Drill Head

-Available for heavy industrial processing.

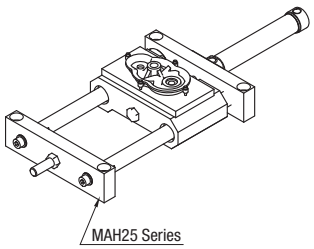


Air Modules / Application Example

Standardized air module units. Applicable for transporting and transferring tasks in vertical and horizontal applications.

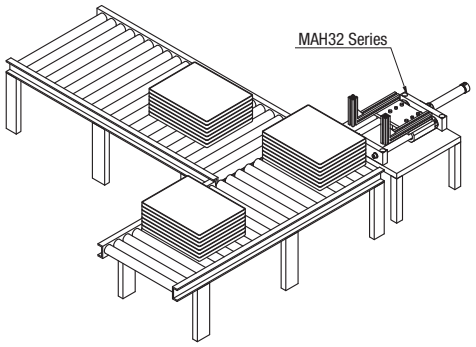
■Workpiece Transfer

· Small and lightweight parts to large and heavy parts can be transported.



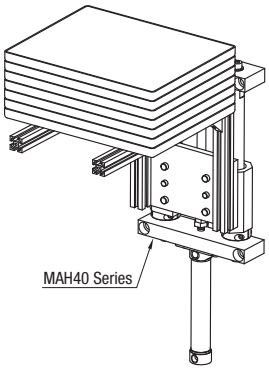
■Pallet Transfer

· Simple and convenient structure advantages of pneumatic equipment saves labor of installing add-on parts.



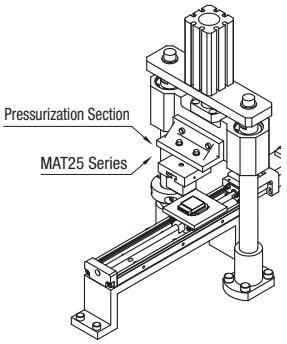
■Return Conveyor Lift

· Used for lifts in vertical installation



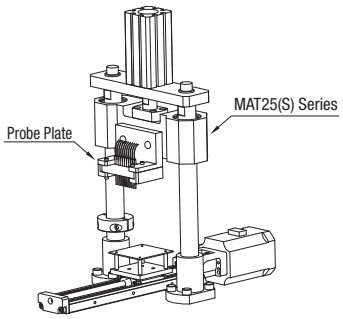
■Press Unit for Small Parts

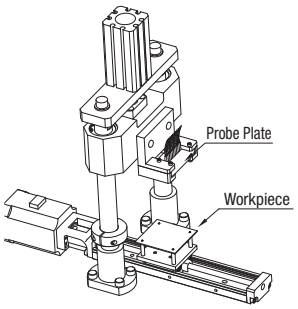
Lead frame forming and PC board presses.
Press force can be adjusted by air supply pressure.



■Probe Up/Down Unit for Electrical Inspection

Applicable for various work pieces by replacing the probe head.
There are three tooling mount surfaces.



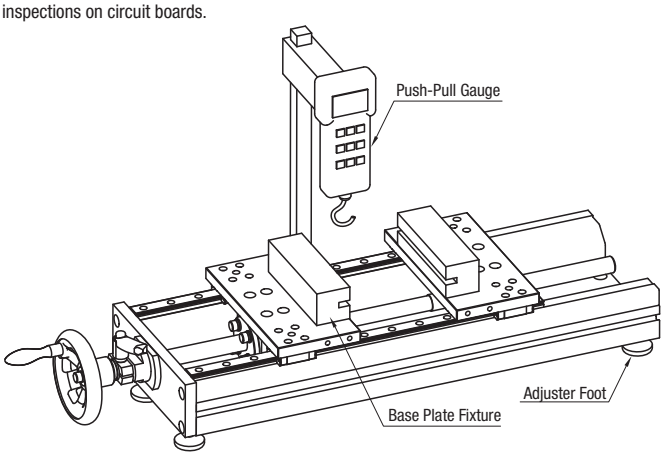


CAD Data

Simplified manually operated units and easy operating units requiring no control settings.

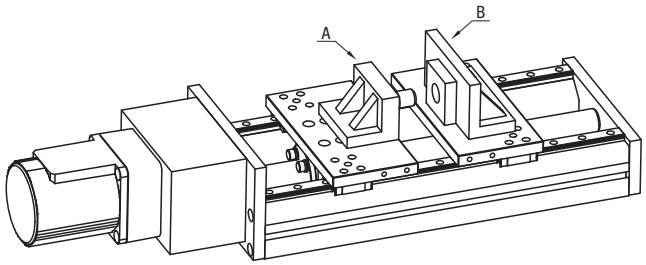
■Served as an Inspection Jig

Used as a work piece fixture outfit with inspection jig for sampling inspections on circuit boards.



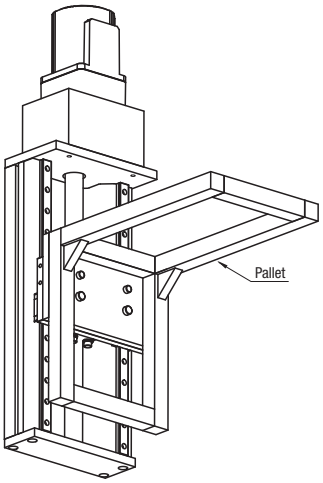
■Press-fit Fixture

Can be used for a light press fitting fixture.
Can be made to handle various work pieces by replacing the A and B blocks.
It can be used in both compression and tensioning processes as a tension adjuster for sheets, textile and wire materials and in tensioning process.



■Transfers

Used to move work pieces vertically.



■Motorized Unit Operations

Just push the desired directional button.

SUNX and Omron photo sensors are the same in outside dimensions.
Please access each sensor manufacture's website for the specifications of sensors in use.
Sensor specifications are not available on our catalogues.

■Cautions

-Sensor set is shipped with LX Actuator.
Please assemble parts by customers.
-Please check for all included parts immediately after unpacking.
Some small parts can be lost.
Please handle the products with great care.

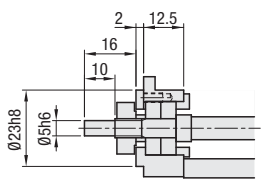
No Motor Bracket Type

* For details of the mounting parts, **P.419**



Effective stroke allows for 2.5 mm clearance on each side from mechanical limits, i.e., 5mm in total.
For Double Block Type, effective strokes are the values when two blocks in contact with each other.

For Double Block Type, double-dashed lined blocks are not connected with the ball screw

■Cautions

-Sensor set is shipped with LX Actuator.
Please assemble parts by customers.
-Please check for all included parts immediately after unpacking.
Some small parts can be lost. Please handle the products with great care.

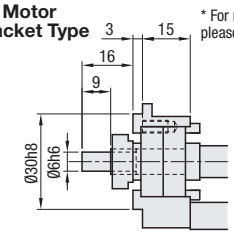
No Motor Bracket Type



* For mounting details, please see P.425.

Effective stroke allows for 2.5 mm clearance on each side from mechanical limits, i.e., 5mm in total.
For Double Block Type, effective strokes are the values when two blocks in contact with each other.

For Double Block Type, double-dashed lined blocks are not connected with the ball screw

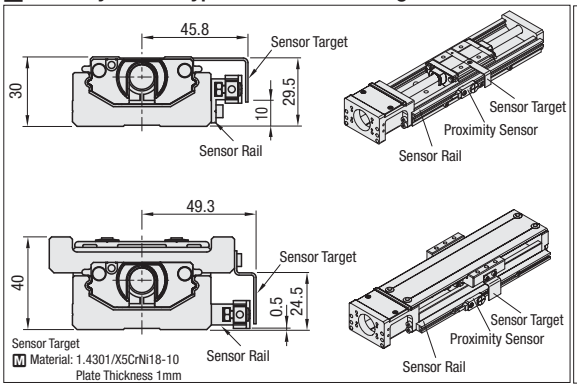
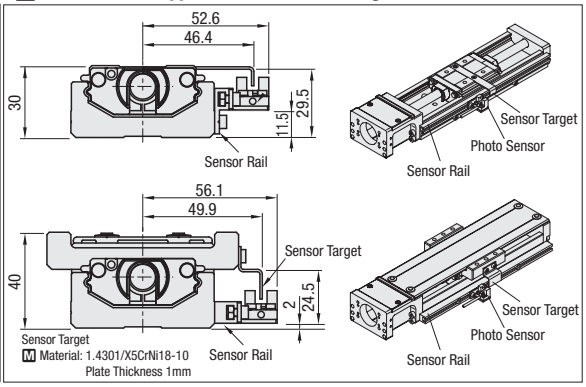
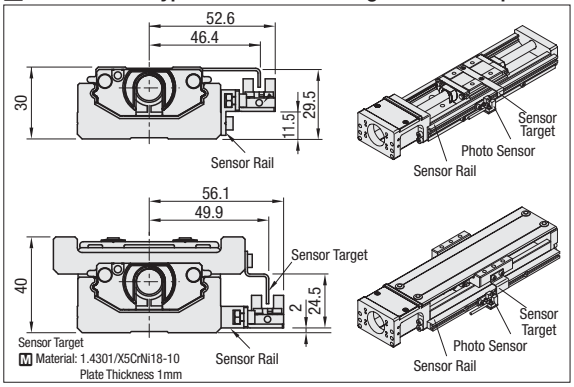
■Proximity Sensor Type Installation Drawings -SUNX Limited-



■Photo Sensor Type Installation Drawings -SUNX Limited-



■Photo Sensor Type Installation Drawings -Omron Corporation-



SUNX and Omron photo sensors are the same in outside dimensions.
Please access each sensor manufacture's website for the specifications of sensors in use.
Sensor specifications are not available on our catalogues.

■Cautions

-Sensor set is shipped with LX Actuator.
Please assemble parts by customers.
-Please check for all included parts immediately after unpacking.
Some small parts can be lost.
Please handle the products with great care.

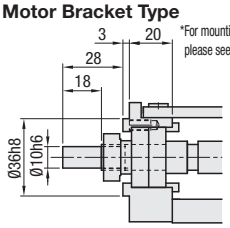
No Motor Bracket Type



*For mounting details, please see **P.431.**

Effective stroke allows for 2.5 mm clearance on each side from mechanical limits, i.e., 5mm in total.
For Double Block Type, effective strokes are the values when two blocks in contact with each other.
For Double Block Type, double-dashed lined blocks are not connected with the ball screw.

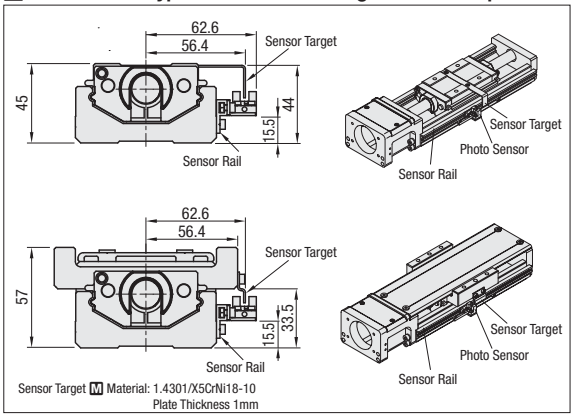
■Photo Sensor Type Installation Drawings -Omron Corporation-



Sensor Target M Material: 1.4301/X5CrNi18-10
Plate Thickness 1mm

SUNX and Omron photo sensors are the same in outside dimensions.
Please access each sensor manufacture's website for the specifications of sensors in use. Sensor specifications are not available on our catalogues.

■Cautions

-Sensor set is shipped with LX Actuator.
Please assemble parts by customers.
-Please check for all included parts immediately after unpacking.
Some small parts can be lost. Please handle the products with great care.

Motor Driven Single Axis Actuator LX - Overview

High precision single axis actuator LX with pre-assembled motor and peripheral parts

High Accuracy	**Precision grade: precision class Repeatable positioning accuracy: ±3 μm.**
Reduced Precedural Steps	**A unit consists of motor and peripheral parts. Accuracy of the unit is inspected before shipment. (Inspection Sheet attached).**
Wide Motor Variation	**Selectable from AC Servo Motor of Mitsubishi Electric Corporation and Stepping Motor of Oriental Motor. Amplifier and driver are included. Upstream controller will be provided at customer's end.**

Shortened lead time of just 8 days!

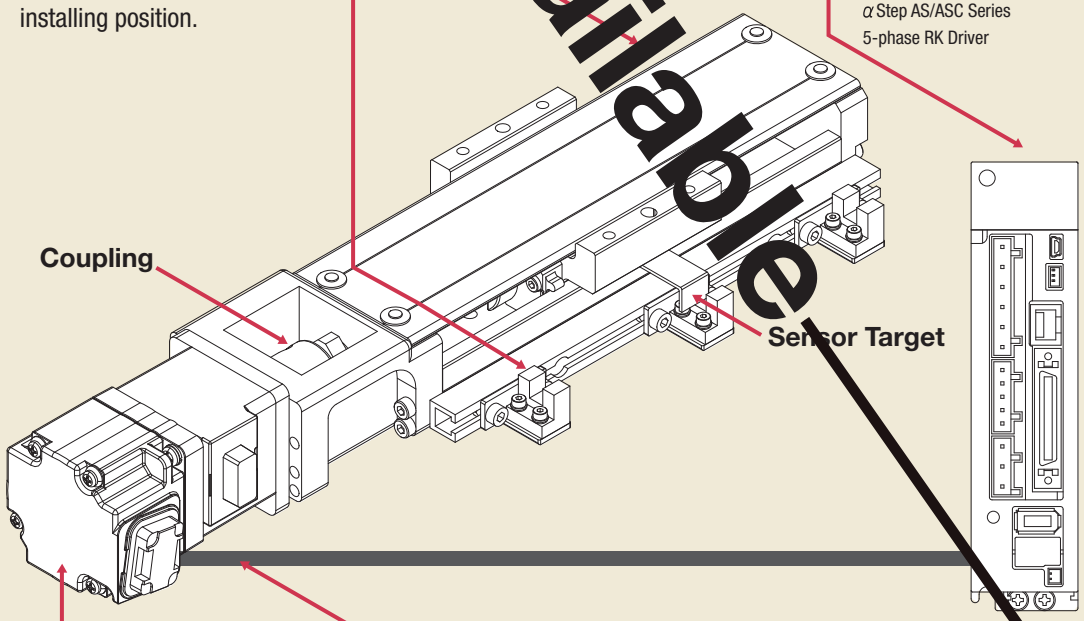
Fully support customer for reduction of assembly steps and manufacturing work loads.

Not Available

Single Axis Actuator LX Precision Grade **Selectable from Standard Type and Cover Type**

Sensor / Sensor Rail
Selectable from left/right installing position.

Amplifier · Driver
Mitsubishi Electric JC Series Servo Amplifier,Oriental Motor αStep AS/ASC Series 5-phase RK Driver



Cable
Cables compatible with each motor and driver will be included.(3m).
Terminals are finished and easy to connect. Cables other than 3m are available.

Motor
AC Servo Motor: Mitsubishi Electric 50W/100W/400W
Stepping Motor: Oriental Motor αStep AS/ASC Series 5-phase RK Series

Mitsubishi Electric AC Servo MELSERVO-J3 Series

■Amplifier Basic Specifications

Servo Amplifier Model		MR-J3-10A/MR-J3-40A
Main Circuit Power Supply	Voltage · Frequency	Three-phase / Single-phase AC200 ~ 230V / 50, 60Hz
	Allowable Voltage Fluctuations	Three-phase AC200 ~ 230V: Three-phase AC170 ~ 253V Single-phase AC200 ~ 230V: Single-phase AC170 ~ 253V
	Allowable Frequency Fluctuations	within ±5%
Control Circuit Power Supply	Voltage · Frequency	Single-phase AC200 ~ 230V / 50, 60Hz
	Allowable Voltage Fluctuations	Single phase AC170 ~ 253V
	Allowable Frequency Fluctuations	within ±5%
	Input	30W
Interface Power Supply		DC24V±10% (Required Current Capacity: 300mA)
Regenerative Resistor Allowable Dissipation Power	Amplifier Built-in Resistor	10A: None 40A: 10W
Control Method		Sine Wave PWM Control / Current Control Type
Dynamic Brake		Built-in
Protection Features		Over current Cutoff, Regenerative Overvoltage Cutoff, Overload Cutoff (Electronic Thermal Protection), Servo Motor Over Temp. Protection, Encoder Error and Regenerative Error Protections, Low Voltage / Instantaneous Power Failure, Over speed and Excessive Error Protections
Position Control Mode	Maximum Input Pulse Frequency	1Mpps (Differential Receiver), 200kpps (Open Collector)
	Position Feedback Pulse	Encoder Resolution: 262144p/rev
	Command Pulse Multiplication	Electronic Gear A/B ratio A=1 ~ 1048576, B=1 ~ 10485761/10<A/B<2000
	In-position Range Setting	0 ~ ±10000pulse (Command Pulse Unit)
	Excess Error	±3 revolutions
	Torque Limit	Parameter Setting or External Analog Input Setting (DC 0 ~ +10V/Max. Torque)
Velocity Control Mode	Velocity Control Range	Analog Velocity Commands 1:2000, Internal Speed Commands 1:5000
	Analog Speed Command Input	DC 0 ~ ±10V/Rated Rotational Velocity
	Velocity Fluctuation Rate	±0.01% or less (Load Fluctuations 0 ~ 100%) 0% (Power Supply Fluctuations ±10%) ±0.2% or less (Ambient Temperature 25°C±10°C) Only by Analog Velocity Commands
	Torque Limit	Parameter Setting or External Analog Input Setting (DC 0 ~ +10V/Max. Torque)
Torque Control Mode	Analog Torque Command Input	DC 0 ~ ±8V/Max. Torque (Input Impedance 10 ~ 12kΩ)
	Velocity Limit	Parameter Setting or External Analog Input Setting (DC 0 ~ +10V/Rated Rotational Velocity)
Structure		Self-cooling, Open (IP00)
Environment	Ambient Temperature	0 ~ 55°C (No freezing), Storage: -20 ~ 65°C (No freezing)
	Ambient Humidity	90%RH or less (No condensation), Storage: 90%RH or less (No condensation)
	Ambience	Indoors (no direct sunlight), No corrosive gas, flammable gases, oil mist and dust
	Altitude	1000m or less above sea-level
	Vibrations	5.9m/s²
Mass		10A: 0.8kg 40A:1.0kg

Amplifier / Driver Specifications

Oriental Motor 5-phase Stepping Motors RK545AA (AMA) / RK566AAE (AMAE)

■Driver Basic Specifications

Input Signal	**Input Method**	Opto-coupler input: Input resistance 220Ω, Input current 10 ~ 20 mA Opto-coupler "ON": +4.5 ~ 5V, Opto-coupler "OFF": 0 ~ +1V (Voltage between terminals)
	CW Pulse Signal (Pulse Signal)	CW direction step command signal (Step command for Step & Dir. input mode) is negative logic (low going) pulse, width 2.5µs or more, rise/fall time 2µs or less, pulse duty 50% or less. Motor will take one step when the pulse input goes from "ON" to "OFF". Max pulse frequency 200kHz (at 50% pulse duty)
	CCW Pulse Signal (Directional Signal)	CCW direction step command signal (Step & Dir. input mode: Dir. Opto-coupler ON=CW, OFF=CCW) is negative logic (low going) pulse, width 2.5µs or more, rise/fall time 2µs or less, pulse duty 50% or less. Motor will take one step when the pulse input goes from "ON" to "OFF". Max pulse frequency 200kHz (at 50% pulse duty)
	Electromagnetic Brake Release Signal*	When Opto-coupler is "ON", electromagnetic brake is released to enable motor operation. When Opto-coupler is "OFF", electromagnetic brake is applied to hold the motor shaft.
	Step Angle Switch Signal	When Opto-coupler is "OFF", DATA1 is selected, when ON, DATA2 is selected.
Output Signal	**Output Type**	Opto-coupler / Open-collector Output Interface Conditions: DC24V or less, 15mA or less
	Excitation Timing Signal	When excitation sequence is at step "0", signal is sent. (Opto-coupler is "ON") Ex.) 0.72°/step (Divide by 1): Signal output every 10 pulses 0.072°/step (Divide by 10): Signal output every 100 pulses
	Over temp. Signal	Output is turned off when the driver's internal temperature rises to approximately 80°C (176°F) or above. (Opto-coupler: OFF)
Functions		Automatic current reduction, automatic current OFF, step angle switch, pulse input method switch, electromagnetic brake function switch*, smooth drive function, power saving mode*
Display (LED)		Power input, excitation timing signal output, over temp. signal output
Cooling Method		Natural Air Cooled Method
Insulation Resistance		100MΩ or more measured at DC500V by an Insulation Resistance Meter as shown below. - Power input terminal - Protective earth terminal, Motor output terminal - Protective earth terminal, Electromagnetic brake power output terminal* - Protective earth terminal - Signal I/O terminal - Power supply input terminal, Signal I/O terminal - Motor output terminal, Signal I/O terminal - Electromagnetic brake power output terminal*
Dielectric Strength Voltage		No abnormality is observed when applied for 1 min. as follows. (AC1.5kV/1.8kV 50Hz or 60Hz) - Power input terminal - Protective earth terminal, Motor output terminal - Protective earth terminal, Electromagnetic brake power output terminal* - Protective earth terminal (1.5kV) - Signal I/O terminal - Power supply input terminal, Signal I/O terminal - Motor output terminal, Signal I/O terminal - Electromagnetic brake power output terminal* (1.8kV)
Operating Environment (In operation)	**Ambient Temperature**	0 ~ +50°C (No freezing)
	Ambient Humidity	85%RH or less (No condensation)
	Ambience	No corrosive gases or dust. No direct contact with water or oil.

* Motors with Electromagnetic Brake only

RK545AA (AMA)

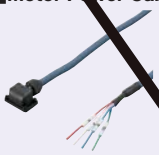
RK566AAE (AMAE)

Cables

Recommended for use with Motor Driven Single Axis Actuator LX. A 3m long cable is included as the standard accessory; if different cable length is required, please order the cable separately.
Other than listed on this page, FA Electronics Catalog lists more various items with Shield or custom alterations. For details, please see Wiring Parts and PC Parts FA Electronics Catalog 2009. **P.1045**~**1047** (Cable for Mitsubishi Electric J3 Series) **P.1101** (Cable for Oriental Motor)

Cable for Mitsubishi Electric J3 Series

■Motor Power Cable / Brake Cable



When motor w/ brake is selected, please use both cables for power supply and brake. The cable is pulled out from the load side.

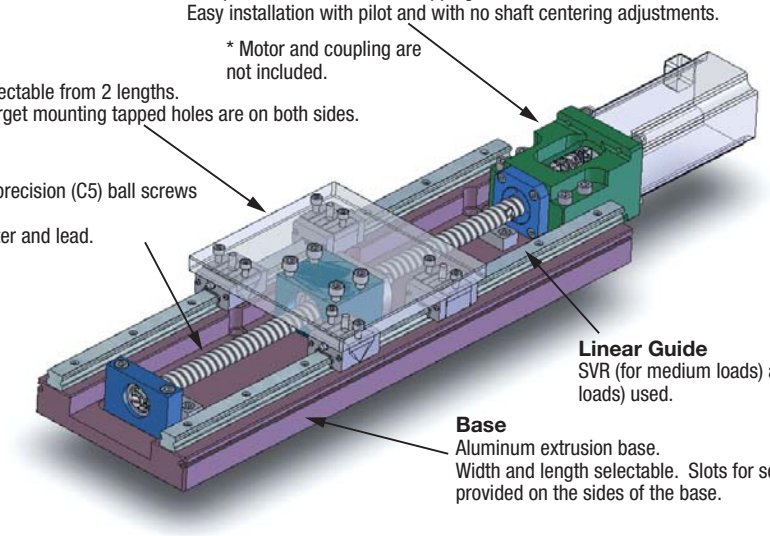
Single Axis Units - Overview

Single Axis Units best suited for high load transfer are shipped only at a part price and on the 13th day after order received!
Rolled Ball Screw, Precision Ball Screw, Bellows and Cover Type are lined up!

■Features



■Single Axis Unit List

Shape	Type	Product Name	Features	Page
	KUA KUB	Rolled Ball Screw Type	Single Axis Unit Series Basic Type Rolled Ball Screw (C10) is used, and best suited for heavy load transfer.	P.463
	KUH KUT	Precision Ball Screw Type	Precision Ball Screw (C5) is used. High Grade Type with improved precision and silent level.	P.465
	KUAJ KUBJ	Bellows Type Rolled Ball Screw Type	Bellows compatible type (Bellows are sold separately) ※ Bellows are sewn, and the body material is CR rubber. Coolants prevent intrusion of foreign objects, and response to special environments	P.467
	KUAC KUBC KUHC KUTC	Cover Type Rolled · Precision Ball Screw Type	Cover is provided as standard equipment. Measures for intrusion of foreign objects and safety. Easy maintenance.	P.469~472

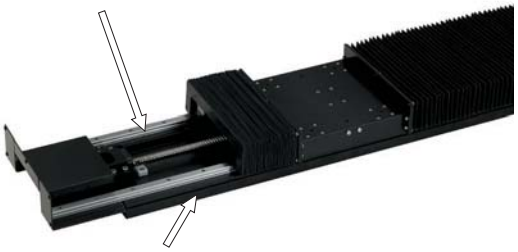
KU Series for Environmental Measures

Bellows and Cover Types are now available for safe usage of Single Axis Units, meeting customers' work environments.
Neither quotation nor delivery management are required. Maintenance fee will be considerably reduced.

■Bellows Specifications (P.467)

■Safety: Not only prevents dust and splashes but also prevents operators and clothing from being caught in the unit.
■Easy: Ordering procedure and installation are simple. Discussion over bellows specification is not required.
■Reduction: Easy to maintain. Longer operation time can be achieved with much fewer troubles.

○ Bellows keep from entry of foreign objects.
Protect unit components, and enable continuous machine operations under harsh conditions.



○ Easy Bellows installation with no complex adjustments.

○ Bellows encloses the entire driving part.
· MISUMI's bellows are quality and highly-durable sewn bellows.
· MISUMI's Bellows feature smooth movement and low noise.

○ Motor Bracket is applicable to each manufacturer's motors.
* Motor and coupling are not included.

⚠ Bellows are not included with this product. Please select bellows from P.468.

■Cover Specifications (P.469 ~ 472)

■Economical: Prevents components from falling off and dripping liquids. Protects machines economically.
■Easy: Easy procurement and installation. Easy machine cleaning and maintenance.
■Reduction: Reduced machine trouble. More advantages with less cost. Labor saving for customers.

○Cover prevents intrusion of foreign objects.
Keeps out foreign objects to roll into the unit and they are easily swept off.

○ Easy Cover installation with no tricky adjustments.

*Bellows Type is recommended for potential intrusion of foreign objects from side surfaces.

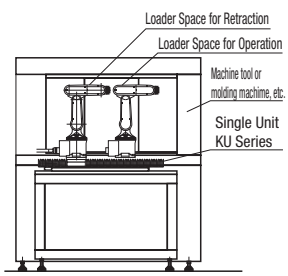
○ Motor Bracket is applicable to each manufacturer's motors.
* Motor and coupling are not included.

■Benefits from Bellows / Cover Specifications (Reference)

Cost reduction by 1620,00 EUR annually

With Bellows and Cover specifications, labor hours are reduced by 1/4
60 hrs for Routine Clean-up + 12 hrs for Scheduled Maintenance = 72 hrs
Annual Cost 1620,00 EUR (72 hrs x @30,00)=>2160,00 EUR
Adopting the specifications will reduce maintenance cost by 540,00 EUR
Note) Annually accumulated hrs are indicated. @30,00 is hourly labor cost.

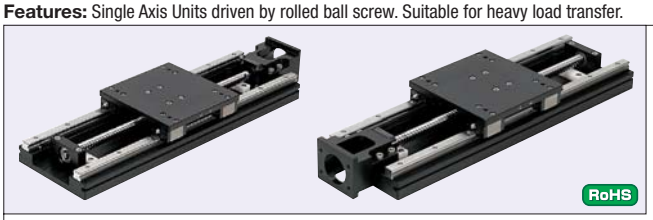
· KU Series Application Examples-



KU Series are not only used for transfers but also served as a retractor for loaders.
Using retraction units saves enough space available for machine tool change-over, clean up and operators working in manufacturing area, and dramatically improves operation efficiency.

Single Axis Units
-Rolled Ball Screw Type-

Features: Single Axis Units driven by rolled ball screw. Suitable for heavy load transfer.



Note 1) The number of Table Mounting Screws is 2 per block for SVR Linear Guides and 4 per block for SXR.
Note 2) When fixing a work piece to the table, make sure that screw lengths are not longer than plate thickness "t2".
Note 3) Only when W=150 and L1=150 or W=200 and L1=150, 200, access hole is provided.
Note 4) Stroke limit is the stroke at the point of contact with the stopper.
Note 5) Some motor brackets have D dimensions smaller than D1. When selecting couplings, please refer to "Coupling Application Examples Parts Numbers" below.

For KUB Motor installation interface drawing and dimensions, please see the right-hand page.
For moment of inertia and mass, see **P.461**

			760 0.14									
			820 0.15									

(1) Positioning Repeatability
Position and Measure moves are made to a predetermined point from one direction seven times. 1/2 of the maximum difference with "±" given is the measurement value.

(2) Parallelism
An actuator is fixed to a surface plate. Parallelism readings are taken from a carriage center mounted dial indicator (0.01 graduation) setup against the surface plate. Measurement is taken along 20~30mm from the side of the base. (See the illustration above)

(3) Maximum Velocity
Values in the table are calculated based on critical speed and DN value of ball screws. Note that these are not guaranteed data considering motor rotational speed, operating conditions, etc.

	2020L	±0.003		-	-	1167	1167	1167	1167	1167	1167	1027

(1) Positioning Repeatability
Position and Measure moves are made to a predetermined point from one direction seven times. 1/2 of the maximum difference with "±" given is the measurement value.

(2) Parallelism
An actuator is fixed to a surface plate. Parallelism readings are taken from a carriage center mounted dial indicator (0.01 graduation) setup against the surface plate. Measurement is taken along 20~30mm from the side of the base. (See the illustration above.)

(3) Maximum Velocity
Values in the table are calculated based on critical speed and DN value of ball screws.
Note that these are not guaranteed data considering motor rotational speed, operating conditions, etc.

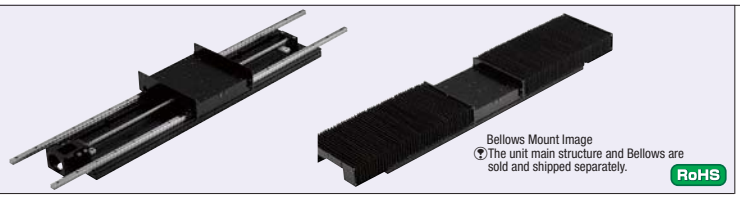
Single Axis Units / Single Axis Unit Bellows

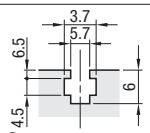
-Rolled Ball Screw Type w/Bellows-

Features: Single Axis Units, bellows mountable. ⓟBellows are not included in this product. Please select Bellows on the right page.



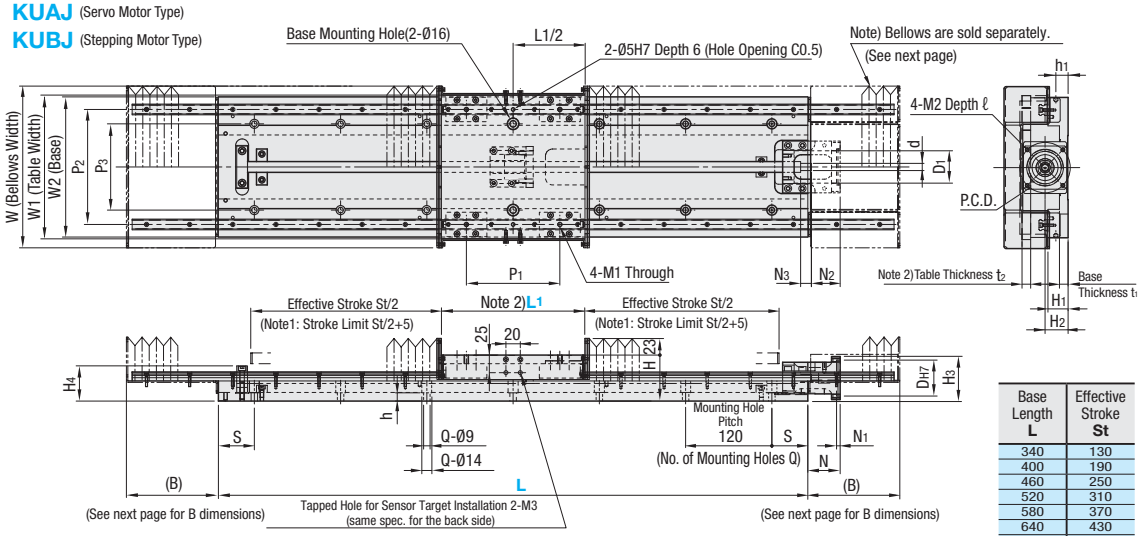
Bellows Mount Image
ⓟThe unit main structure and Bellows are sold and shipped separately.

RoHS



ⓟPlease use M3 nuts for sensor mounting.

KUAJ (Servo Motor Type)
KUBJ (Stepping Motor Type)



Base Length L	Effective Stroke St
340	130
400	190
460	250
520	310
580	370
640	430
700	490
760	550
820	610

Note 1) Stroke limit is the stroke at the point of contact with the stopper.
Note 2) Table plate should be made with L_1-2 dimension, considering that Bellows mounting screws go through the mounting bracket.
Note 3) Do not hang the unit inverted since the bellows could disengage from the unit.
Note 4) Some motor brackets have D dimensions smaller than D_1. When selecting couplings, please refer to "Coupling Application Examples Parts Numbers" below.

Selection Example - Bellows applicable for KUAJ1204-460-150 Single Axis Units are JACKA.
Bellows applicable for KUBJ1204-640-150 Single Axis Units are JACKC.

Part Number Type	No.	Bellows Collapsed Dimensions (C)	Mass (kg)	€ Unit Price 1 ~ 2 pc(s).
JACK	A	80	1.42	
	B	110	1.55	
	C	110	1.64	
	D	50	1.38	
	E	80	2.02	
	F	110	2.12	
	G	50	1.32	
	H	80	2.02	
	I	110	2.12	

Collapsed Bellows dimensions are values for bellow folds in contact.
The mass is the sum of 2 Bellows and Brackets.
For orders larger than indicated quantity, please request a quotation.

Order Example: Part Number JACKA

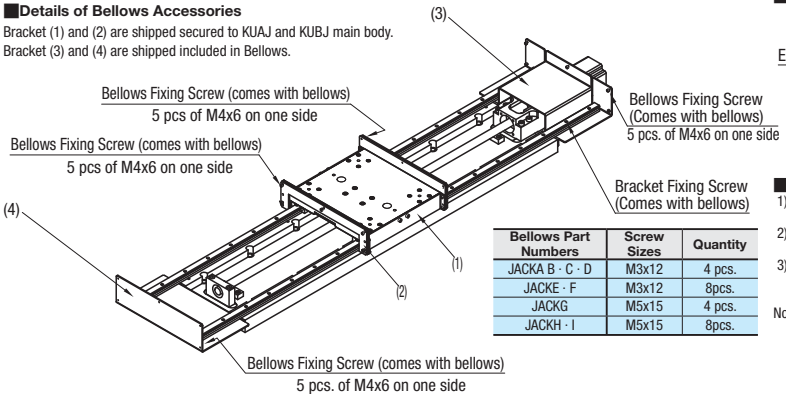
Days to Ship: 6 Days P.87

Product Features

1) MISUMI's Bellows material is CR rubber excellent in mechanical strength and weather resistance.
2) MISUMI's Bellows are sewn bellows.
Excellent in durability and long serviceability compared with molded and folded Bellows.
3) The narrowly spaced slide plates allow bellows smooth movements and low noise operations.
4) Sewn bellows exert force in contracting direction due to its structural nature. Return the carriage to the center position when the actuator is not in use to avoid loads in a certain direction.

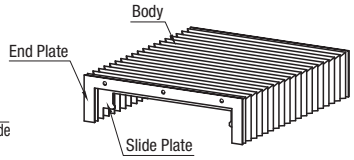
Details of Bellows Accessories

Bracket (1) and (2) are shipped secured to KUAJ and KUBJ main body.
Bracket (3) and (4) are shipped included in Bellows.



Bellows Part Numbers	Screw Sizes	Quantity
JACKA B · C · D	M3x12	4 pcs.
JACKE · F	M3x12	8pcs.
JACKG	M5x15	4 pcs.
JACKH · I	M5x15	8pcs.

Bellows Structural Drawing



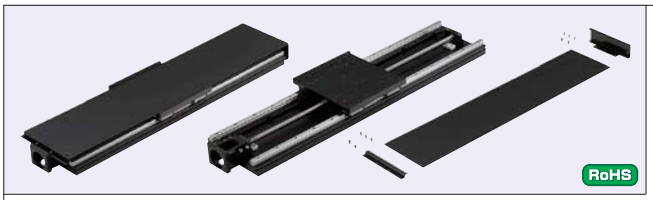
Bellows Mount Procedure

1) Align the Bellows slide plate with the groove of Single Axis Unit Linear Guide to insert.
2) Mount brackets (3) and (4) attached to the bellows to the end plate of the bellows with the enclosed screws.
3) Use included screws to secure brackets (1) (2) included with the table and (3)(4) included with Bellows to the Bellows end plate.

Note) Bellows can not be mounted after included brackets (3) and (4) are installed. Please follow the proper installation procedure above.

Single Axis Units
-Rolled Ball Screw Type w/Cover-

Features: Single Axis Units come with cover as standard equipment to prevent entry of foreign objects.



Note 1) The number of Table mounting screws is 2 per block for SVR Linear Guides and 4 per block for SXR.
Note 2) Only when W=170 and L_1=150, or W=220 and L_1=150 / 200, an access hole is provided.
Note 3) Stroke limit is the stroke at the point of contact with the stopper.
Note 4) Do not hang the unit inverted. The cover will sag large.
Note 5) Some motor brackets have D dimensions smaller than D_1.
When selecting couplings, please refer to "Coupling Application Examples Parts Numbers"below.

Order Example

Part Number	-	L	-	L_1
KUAC1204	-	340	-	150

Days to Ship 13 Days

Sensor Set can be specified as alterations. For details of alterations, see ☞ **P.473**

For ordering 3 or more identical models, Days to Ship estimate is provided. Days to Ship is to be estimated.

Cover Mounting Procedure

1) KUAC and KUBC are secured to device and table provided by customers.

2) Included brackets (1) and (2) are installed to the Single Axis Unit.

3)Lastly, secure included cover (3) to included brackets (1) and (2) installed in step 2).

Note) The graph and table indicate calculated values, and these may vary depending on operating conditions.
Brackets (1) and (2), and cover (3) and mounting screws are included in the product package. Please install bracket cover by customer.

Purposes of Use: KUAC and KUBC Series are best served as protection against dropped small parts to damage components, and for the area in which does not allow dripping of adhesive agent and oil.

580	0.10
640	0.12
700	0.13
760	0.14
820	0.15

(1) Positioning Repeatability
Position and Measure moves are made to a predetermined point from one direction seven times. 1/2 of the maximum difference with "±" given is the measurement value.

(2) Parallelism
An actuator is fixed to a surface plate. Parallelism readings are taken from a carriage center mounted dial indicator (0.01 graduation) setup against the surface plate.
Measurement is taken along 20~30mm from the side of the base (See the illustration above)

(3) Maximum Velocity
Values in the table are calculated based on critical speed and DN value of ball screws. Note that these are not guaranteed data considering motor rotational speed, operating conditions, etc.

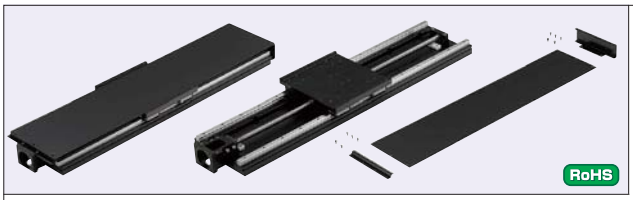
Single Axis Units
-Precision Ball Screw Type w/Cover-

Features: Single Axis Units with Cover protect from dropping of foreign objects. Precision ball screws are used, improving accuracy and sound level.



KUHC (Servo Motor Type)
KUTC (Stepping Motor Type)

Note 1) The number of Table mounting screws is 2 per block for SVR Linear Guides and 4 per block for SXR.
Note 2) Only when W=170 and L_1=150, or W=220 and L_1=150 / 200, an access hole is provided.
Note 3) Stroke limit is the stroke at the point of contact with the stopper.
Note 4) Do not hang the unit inverted. The cover will sag large.
Note 5) Some motor brackets have D dimensions smaller than D_1. When selecting couplings, please refer to "Coupling Application Examples Parts Numbers" below.

Order Example

Part Number	-	L	-	L_1
KUHC1205	-	340	-	150

Days to Ship 13 Days

(For ordering 3 or more identical models, Days to Ship estimate is provided.

Sensor Set can be specified as alterations.
For details of alterations, ☞ **P.473**

Cover Mounting Procedure

1) KUHC and KUTC are secured to a device or table provided by customers.

2) Included brackets (1) and (2) are installed to the Single Axis Unit.

3)Lastly, secure included cover (3) to included brackets (1) and (2) installed in step 2).

Note) The graph and table indicate calculated values, and these may vary depending on operating conditions.Brackets (1) and (2), and cover (3) and mounting screws are included in the product package.
Bracket cover mounted by the customers.

Purposes of Use: KUHC and KUTC Series are best served as protection against dropped small parts to damage components, and for the area in which does not allow dripping of adhesive agent and oil.

(1) Positioning Repeatability
Position and Measure moves are made to a predetermined point from one direction seven times.
1/2 of the maximum difference with "±" given is the measurement value.

(2) Parallelism
An actuator is fixed to a surface plate. Parallelism readings are taken from a carriage center mounted dial indicator (0.01 graduation) setup against the surface plate.
Measurement is taken along 20~30mm from the side of the base (See the illustration above)

(3) Maximum Velocity
Values in the table are calculated based on critical speed and DN value of ball screws.
Note that these are not guaranteed data considering motor rotational speed, operating conditions, etc.

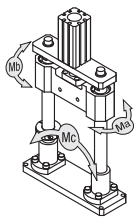
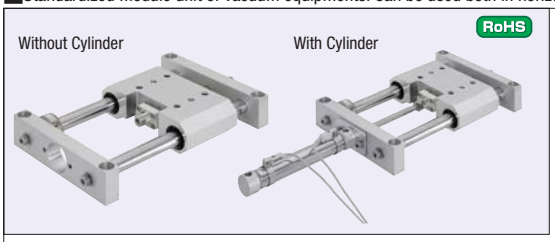
* 1) Measurement reference is Axis A.
2) Put surface "e" under load, apply 3kg mass in the position of 70mm from the shaft center, and measure.
3) Accuracy does not vary by difference in cylinder stroke.
4) Running parallelism values are for reference only.

Allowable Moment



Pneumatic Module Units (Horizontal)

■Standardized module unit of vacuum equipments. Can be used both in horizontal and vertical positions for work conveyance and transfer.



■Specifications List

Accuracy

Type	Parallelism (mm)	Stroke Tolerance (mm)
MACM (Pen-shaped)	0.15	-0.4~+1.9
MACQ (Flat Type)		-0.4~+1.4

Kinetic Energy Calculation Formula: $E=\frac{1}{2}(m+1)xV^2$

m: Load Capacity (kg)
V: Velocity (m/sec)

(Note 1)1 kg is the mass of table and joint. Use within the allowable max energy value.

* Parallelism is surface B running parallelism with respect to surface A. (See the figure below)

Moment Fig.

For ordering 3 or more identical models, Days to Ship is to be quoted in each case.

Price

Part Number Type	Part Number No.	Handwheel Type	€ Unit Price 1 ~ 2 unit(s) For no table (N), 30,00 EUR is subtracted from the prices below. H=220	H=320	H=370	H=420	H=470
KULDP	20	A					
		B					
		C					

For orders larger than indicated quantity, Days to Ship is to be estimated in each case.

Mass

Part Number Type	Part Number No.	Handwheel Type	Mass (kg) H=220	H=320	H=370	H=420	H=470
KULDP	20	A	7.2	8.2	8.7	10.6	11.2
		B	6.9	7.9	8.4	10.3	10.9
		C	6.9	7.9	8.4	10.3	10.9

Effective Stroke

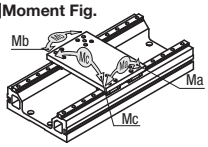
Type	Effective Stroke St (mm) H=220	H=320	H=370	H=420	H=470
KULDP	112	212	262	312	362

Allowable Load · Allowable Moment

Part Number Type	Part Number No.	Allowable Load (N) When load applied to Point A	When load applied to Point B	Allowable Moment (N·m) Ma	Mb	Mc
KULDP	20	294	270	43	43	81

*Allowable load and moment are for those with no elevator table.
*Load capacity is when load is applied to load points A and B. (Reference values)

Moment Fig.

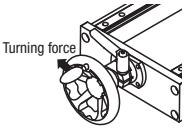


Accuracy

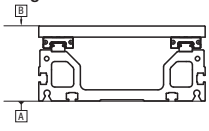
Type	Parallelism (mm)	Backlash (mm)
KULDP	0.15	0.3

*Parallelism is surface B running parallelism in respect to surface A. (See the figure below)
*Backlash is not a guaranteed value but reference value.

Turning Force Fig.



Parallelism Fig.



Required Torque · Required Turning Force

Part Number Type	Part Number No.	Required Torque (N·m)	Required Turning Force (N)
KULDP	20	1.46	56.142

*Torque and turning force required at max. load capacity.
*Turning force is the force that rotates the handwheel. (See the figure on the right)

Manually Operated Units
-Elevator Type Handwheel Orientation Configurable-

CAD Data

Features: Units suited for up-and-down movements. Approximate vertical positioning is possible.

Moment Fig.

Example

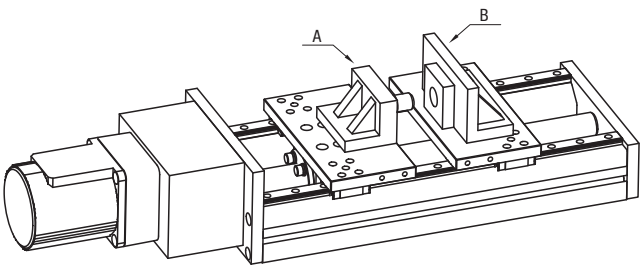
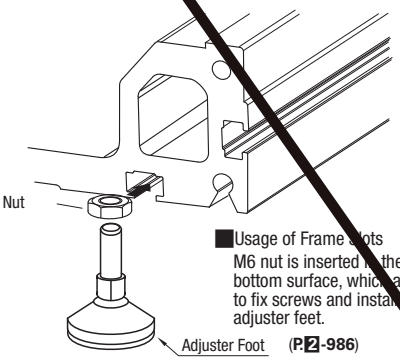
Press-fit Fixture

Can be used for a light press fitting fixture.
Can be made to handle various work pieces by replacing the A and B blocks.
It can be used in both compression and tensioning processes as a tension adjuster for sheets, textile and wire materials and in tensioning process.





Usage of Frame Slots

M6 nut is inserted in the bottom surface, which allows to fix screws and install adjuster feet.

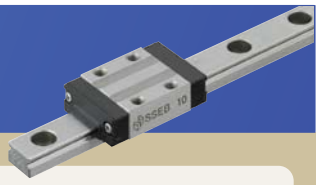
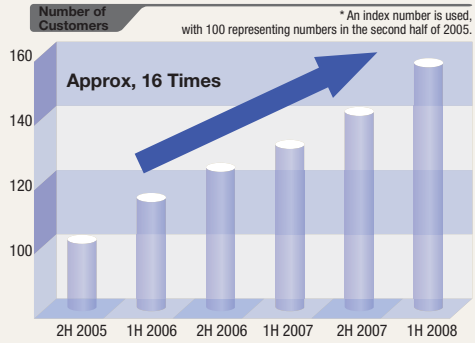
We have absolute confidence in quality of MISUMI Linear Guides!

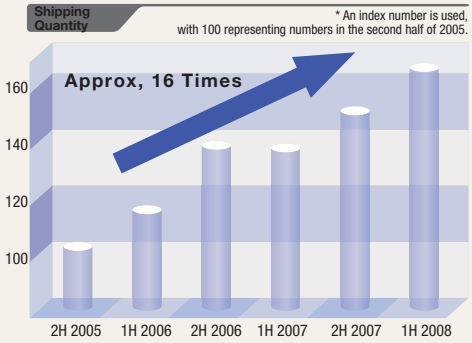


Quality

MISUMI Linear Guides are manufactured by Suruga Seiki Co.,Ltd. (Except products on **P.549** and **P.567~580**)

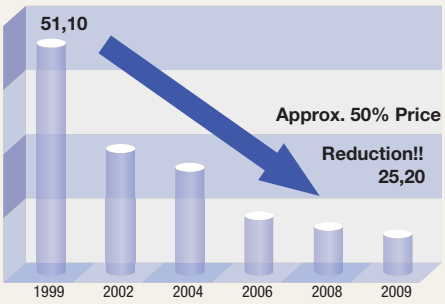
Proof of High Quality **Increased by approx. 1.6 times in both the number of customers and shipping for 3 years!**



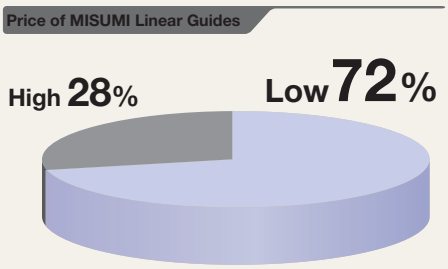


Price

Approx. 50% significant price reduction in the last 10 years!



72% of our customers said that MISUMI products are economical.



*115 customers responded to the questionnaire about the product price comparison between MISUMI and competitors.

Days to Ship

MISUMI's next day shipping service, which is the fastest in the industry, is able to meet the customers' requirements in case of a sudden change of designing.

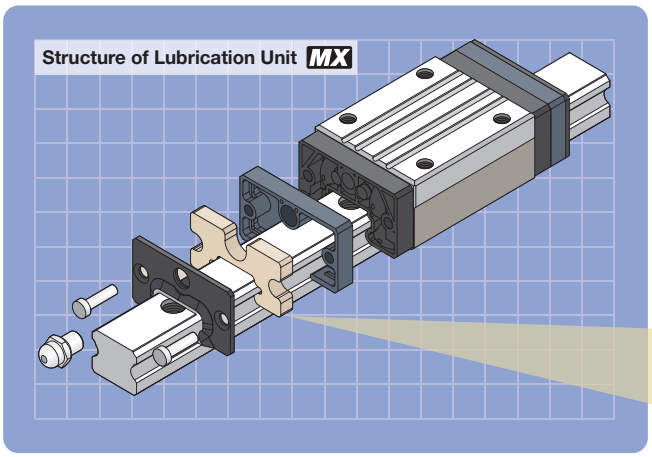
SURUGA SEIKI CO.,LTD Fast Facts

Our goal is to be one of the most creative companies with our prominent precision processing technology.

Corporate Name	SURUGA SEIKI CO., LTD
Head Office	549-1, Nanatsushinya, Shimizu-ku, Shizuoka City, Shizuoka 424-8566
Established	May 8, 1964

Suruga Seiki develops its business by making extensive use of precision processing technologies which require micron-level precision. We have been developing and manufacturing press die components including punch&die-related parts that has the top market share in Japan, optical devices, and FA (factory automation) products. We have been actively expanding our overseas business and have operations in the United States, Vietnam, Korea, China, Thailand and Poland.

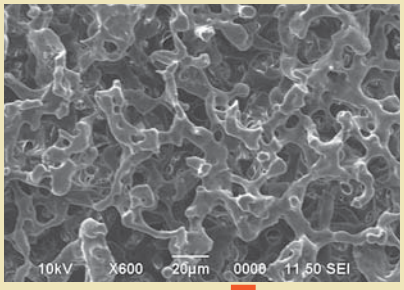
Newly available Lubrication Units MX provides long term maintenance-free condition!



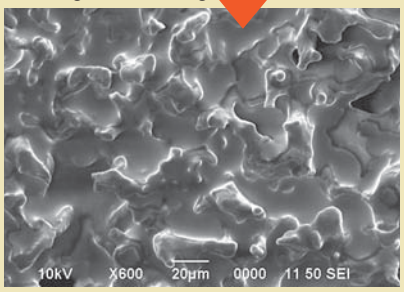
Special polyurethane has interconnected micropores and is excellent in waterholding capacity.
Enables to impregnate much grease.

Enlarged Picture of Special Polyurethane

● Before grease soaking



● After grease soaking



Features

Feature 1 Long Term Maintenance-free Condition

Special polyurethane in Lubrication Unit MX impregnates grease, and its micropore structure supplies optimal amount of grease on the track surface. Oil film is constantly formed between steel balls and the track, which enables long term maintenance-free condition.

Feature 2 Cost Advantage

Extended lubrication intervals result in reduction of maintenance cost.

Feature 3 Short Lead Time

8th day shipping same as that of standard products

Test Result

Linear guides with Lubrication Unit MX achieved 2,000km travel while linear guides with no grease stopped in a short time.

Test Conditions

Sample	SXR24Type
Load	2.87kN
Travel Speed	750mm/sec

・No grease: degreased linear guide
・No grease+MX: degreased linear guide equipped with MX only
MX is filled with Alvania Grease S2 by Showa Shell Sekiyu K.K.
Test results are for reference only, not guaranteed.

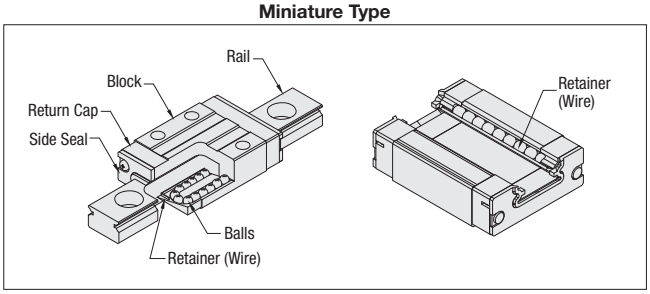
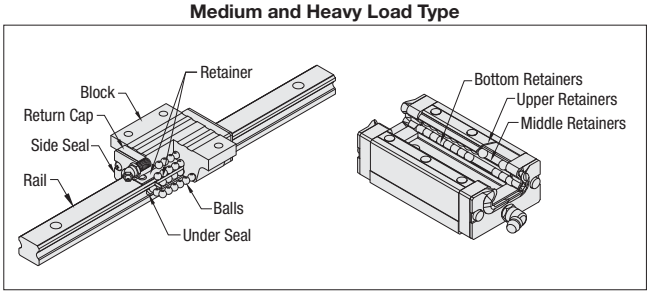
Structure and Precision of Linear Guides

■Linear Guide Structure and Features

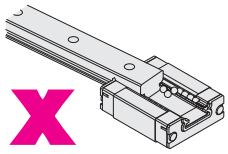
Miniature Type



Medium and Heavy Load Type



-Linear guides utilize steel balls rolling on precisely ground raceways, and the balls are recirculated by plastic return caps.
- End seals prevent foreign objects from intruding into the blocks.
-Miniature Type has two rows of contacting steel balls in a 4-point raceway contact design.
-Medium and Heavy Load Types have four rows of contacting steel balls in a 2-point raceway contact design.
-Load ratings are the same for all four directions (radial, reverse-radial, and lateral directions). Can be used in any orientation.
-Cautions
Balls do not fall out of MISUMI linear guides when removed from rails as the blocks are equipped with ball-retainers. However, the balls may fall out by rapidly removing blocks from the rail or inserting the rail into the block at a slant. Remove and install the blocks with caution.



■Precision

- Dimensional Accuracies

Unit: μm

Type	Accuracy Standards		Precision Grade	High Grade	Standard Grade
Miniature Type	Height H Tolerance		±10	±20	±20
	Height H Pair Variation		7	15	40

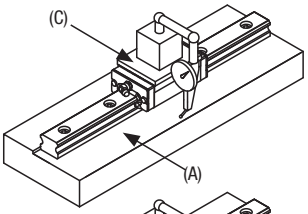
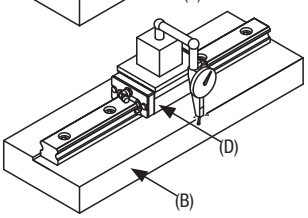
[Running Parallelism]
Measured while the rail is bolted firmly to a standard reference surface base. A relative variation of block's top surface C against the rail's bottom surface A, and a relative variation of block's datum surface D against the rail's datum surface B are measured, as the block is run from end to end on the rail.

-Running parallelism of surf. C against surf. A



-Running parallelism of surf. D against surf. B



Linear Guide Preload and Allowable Load

■Selection of Radial Clearance (Preload)

Type	Preload	Sizes (Height H Dimension)	Radial Clearance (μm)
Miniature	Light Preload	6~20	-3~0
	Interchangeable-Slight Clearance		0~15
Medium and Heavy Load	Normal Clearance	24	-4~+2
		28	-5~+2
		33	-6~+3
	Interchangeable, Light Preload	24, 28	-4~0
		30, 36, 40, 42	-5~0
		*42	-7~0

*marked size is for Extra Heavy Load and Extra Super Heavy Load.

- Clearance and preload of MISUMI Linear Guides are controlled with minute ball size adjustments.
- Increased rigidity and reduced elastic deformation will result by preloading (negative clearance).
- Generally, selecting some preloads would cause favorable effects on accuracy and life of Linear Guides.

■Friction Force (Required Thrust Force)

Linear Guide friction force (required thrust) varies depending on load, speed and lubricant property. Especially when moment load is applied, Preload Type friction force increases.
Although seal resistance varies according to seal lip press-fit allowance and lubrication conditions, it is not proportionate to load and keeps a constant value.
Friction force is obtained by the following formula.

$$F = \mu \cdot W + f$$

F : Friction (N)
μ : Dynamic Friction Coefficient
W: Applied Load
f : Seal Resistance (2N ~ 5N)

Table-1 Dynamic Friction Coefficient

Types	Dynamic Friction Coefficient (μ)
Miniature Linear Guides	0.004~0.006
Medium Load Linear Guides	0.002~0.003

■Allowable Load

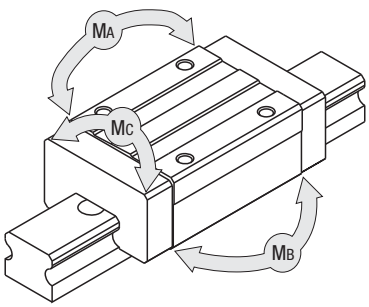
-Basic Dynamic Load Rating (C)
Basic dynamic load rating is defined as: A load applied and ran under equal condition on a group of linear guide specimen where 90% of specimen will reach 50 x 103m without experiencing any damages due to rolling fatigues.

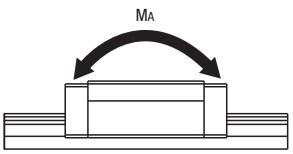
-Basic Static Load Rating (Co)
Basic static load rating is defined as: A load applied on non-moving linear guides where a sum of rolling element plastic deformation amount and rolling surface plastic deformation amount becomes equal to 0.0001 times that of the diameter of the rolling element (balls).

-Allowable Static Moment (M_A / M_B / M_C)
Allowable static moment is a critical static moment load defined by permanent deformation value similar to basic static load rating Co.

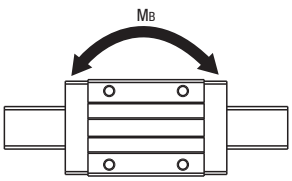
Allowable Load (N) ≤Co/fs
Allowable Moment (N・m) ≤ (MA, MB, MC)/fs

fs: Statistic Safety Factor Co: Basic Static Load Rating (N)
M_A, M_B, M_C: Static Allowable Moment (N・m)





Pitch Direction



Yaw Direction

Roll Direction

-Static Safety Factor (fs)
Basic Static Load Rating Co, in the static state or in low speed, is divided by Static Safety Factor fS in Table-2 depending on operating conditions.

Table-2 Static Safety Factor (fs lower limit)

Condition of Use	Lower Limits of fs
For normal operating condition	1~2
When smooth running performance is required	2~4
When vibrations and impacts exist	3~5

Operating Life Calculation for Linear Guides

Operating Life

When Linear Guide is loaded in linear reciprocating motion, scaly damages called flaking appear due to material fatigue as the stress works on the rolling elements and rolling contact surfaces constantly. Total travel distance until the first flaking occurs is called Life of Linear Guides.

Rated Life

Rated Life is the total travel distance that 90% of linear guides of the same type can reach, under the same conditions, with no occurrence of flaking damage. Rated Life can be obtained from the Basic Dynamic Load Rating and the actual load applied on the linear guide, as shown below.

$$L = \left(\frac{C}{P}\right)^3 \cdot 50$$

Load must be calculated before actually using Linear Guides. To obtain load during linear reciprocating motion, it is necessary to fully consider vibration and impact during motion, and also distribution status in relation to Linear Guides. So, it is not easy to obtain load by calculation. Operating temperature also critically affects life. All these conditions considered, the above-mentioned calculation formula is as follows.

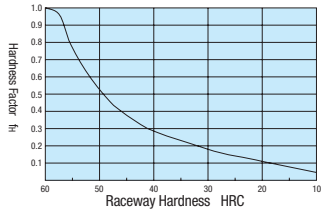
$$L = \left(\frac{f_H \cdot f_T \cdot f_C}{f_W} \cdot \frac{C}{P}\right)^3 \cdot 50$$

L : Rated Life (km)
C : Basic Dynamic Load Rating (N)
P : Applied Load (N)
f_H : Hardness Factors (See Fig. 1)
f_T : Temperature Factors (See Fig. 2)
f_C : Contact Factors (See Table 1)
f_W : Load Factors (See Table 2)

•Hardness Factor (f_H)

For Linear Guide applications, sufficient hardness is required for ball contact shafts. Inappropriate hardness causes less allowable load, resulting in shorter life. Please correct the rated life according to the temperature factors.

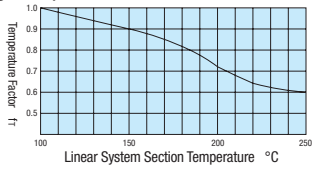
Fig. 1 Hardness Factor



•Temperature Factor (f_T)

If the Linear Guide temperature exceeds 100°C, the Linear Guide and shaft hardness decreases, resulting in less allowable load and shorter life than used at a room temperature.
Please correct the rated life according to the temperature factors.
* Please use Linear Guides under the allowable temperature shown on each product page.

Fig. 2 Temperature Factor



•Contact Factor (fc)

For actual applications, more than 2 blocks are generally used per shaft. In this case, load applied to each block varies depending on machining precision but is not uniformly distributed. As a result, per-block allowable load varies depending on per-shaft Linear Guide quantity.
Please correct the rated life according to Table 1. Temperature Factor.

Table 1. Contact Factor

Number of bearings installable on one shaft.	Contact Factor fc
1	1.00
2	0.81
3	0.72
4	0.66
5	0.61

•Load Factor (fw)

To calculate load applied to the Linear Guides, other than object weight, it requires inertia force attributed to motion velocity or moment loads. It, however, is difficult to attain accurate calculations due to potential vibration and impacts caused during reciprocating motion, other than repeated start-stop motions. Table 2. Load factor helps simplify life calculation.

Table 2. Load Factor

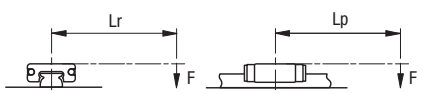
Condition of Use	fw
No shocks/vibrations, low speed: 15m/min. or less	1.0~1.5
No significant shocks/vibrations, medium speed: 60m/min. or less	1.5~2.0
With shocks/vibrations, high speed: 60m/min. or more	2.0~3.5

•Applied Load P Calculation Method

When load is applied to a block, convert moment load into applied load by the following formula.

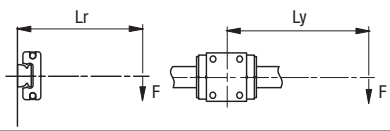
- Horizontal Installation

$$P = F + \frac{Co}{Mc} \times (F \times Lr) + \frac{Co}{MA} \times (F \times Lp)$$



- Lateral Installation

$$P = F + \frac{Co}{Mc} \times (F \times Lr) + \frac{Co}{MB} \times (F \times Ly)$$



P: Applied Load (N)
F: Downward Load (N)
Co: Static Load Rating (N)
MA: Allowable Static Moment - Pitch Direction (N • m)
MB: Allowable Static Moment - Yaw Direction (N • m)
Mc: Allowable Static Moment - Roll Direction (N • m)
Lp: Distance from block center to load center in Pitch direction (m)
Ly: Distance from block center to load center in Yaw direction (m)
Lr: Distance from block center to load center in Roll direct ion (m)

■Load Calculation

Linear Guides perform linear reciprocating motion while supporting object weight. Therefore, load applied to Linear Guides varies depending on the center of gravity of the object, thrust force applied position or changes in speed at start, stop, acceleration and deceleration. For Linear Guide selections, these conditions must be fully considered.

Table 3. Condition of Use and Load Calculation Formula.

Classification	Condition of Use and Loads
1	Horizontal Axes  $P_1=\frac{1}{4}W+\frac{X_0}{2X}W+\frac{y_0}{2Y}W$ $P_2=\frac{1}{4}W-\frac{X_0}{2X}W+\frac{y_0}{2Y}W$ $P_3=\frac{1}{4}W+\frac{X_0}{2X}W-\frac{y_0}{2Y}W$ $P_4=\frac{1}{4}W+\frac{X_0}{2X}W-\frac{y_0}{2Y}W$
2	Vertical Axes  $P_1=P_2=P_3=P_4=\frac{\ell_1}{2X}W$ $P_{1S}=P_{2S}=P_{3S}=P_{4S}=\frac{y_0}{2X}W$
3	Wall Mounted Horizontal Axes  $P_1=P_2=P_3=P_4=\frac{\ell_1}{2X}W$ $P_{1S}=P_{3S}=\frac{1}{4}W+\frac{X_0}{2X}W$ $P_{2S}=P_{4S}=\frac{1}{4}W-\frac{X_0}{2X}W$
4	At Acceleration/Deceleration  - When accelerating from a start $P_1=P_3=\frac{1}{4}W\left(1+\frac{2V_1\cdot\ell_1}{g\cdot t_1\cdot X}\right)$ $P_2=P_4=\frac{1}{4}W\left(1-\frac{2V_1\cdot\ell_1}{g\cdot t_1\cdot X}\right)$ - When decelerating to a stop $P_1=P_3=\frac{1}{4}W\left(1-\frac{2V_1\cdot\ell_1}{g\cdot t_3\cdot X}\right)$ $P_2=P_4=\frac{1}{4}W\left(1+\frac{2V_1\cdot\ell_1}{g\cdot t_3\cdot X}\right)$ - At uniform speed $P_1=P_2=P_3=P_4=\frac{1}{4}W$ g: Gravitational Acceleration $=9.8\times10^3$mm/sec^2

W : Applied Load (N) P_1, P_2, P_3 and P_4: Load applied to Linear Guides (N)
X, Y: Linear Guide Span (mm) V: Travel Speed (mm/sec) t_1: Acceleration Time (sec) t_3 : Deceleration Time (sec)

■Average of Fluctuating Loads

In general, load applied to Linear Guides varies depending on their applications. For example, there are cases at the start and stop of reciprocating motion, during constant motion or transfer with/without a work-piece. Considering these fluctuating loads, it requires average load under which the life equals to the one under the conditions.

(1) When load changes in stages according to the distance (Fig. 3)
Travel distance ℓ_1 under load P_1
Travel distance ℓ_2 under load P_2
⋮ ⋮
Travel distance ℓn under load Pn
Average load Pm is obtained by the following formula.

$$Pm=\sqrt[3]{\frac{1}{\ell}(P_1^3\ell_1+P_2^3\ell_2\cdots+P_n^3\ell_n)}$$

Pm: Fluctuating Load Average (N) ℓ : Total Travel Distance (m)

(2) When load changes almost linearly (Fig. 4)
Average load Pm is approximately obtained by the following formula.

$$Pm\approx\frac{1}{3}(Pmin+2\cdot Pmax)$$

Pmin: Minimum Fluctuating Load (N)
Pmax: Maximum Fluctuating Load (N)

(3) When load changes in a sine curve as shown on Fig. 5 (a) and (b), average load Pm is approximately obtained by the following formula.

Fig. 5 (a) Pm≈0.65Pmax
Fig. 5 (b) Pm≈0.75Pmax

Fig. 3 Staged Fluctuating Loads

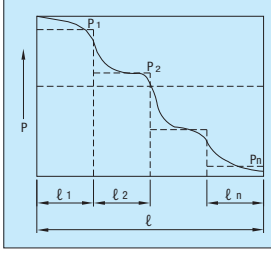


Fig. 4 Constant Fluctuating Loads

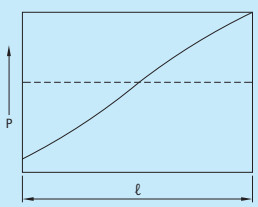

Fig. 5 Sine Curve-formed Fluctuating Loads

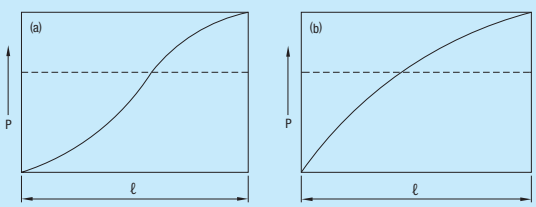
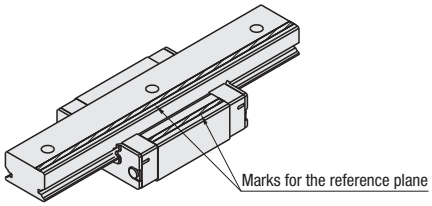


Installation and Maintenance of Linear Guides

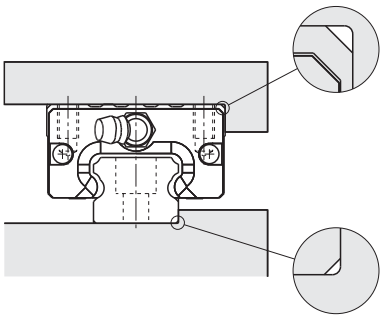
Installation Method of Linear Guides

MISUMI Linear Guides have a datum surface (a surface with a straight groove) on both the rail and block. (Refer to the right figure)
When installing Linear Guides, correctly match the datum of the guides and installation bases.



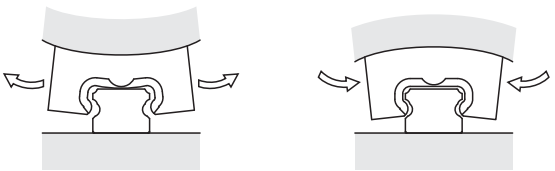
Mounting Surface Shape

Linear Guides are designed to obtain accuracies when mounted on base plates. Generally, the datum plane is placed against the shoulder on the mounting surface. In that case, corners should have reliefs or corner radius should be machined smaller than chamfering of rails and blocks. See each product page for chamfering dimensions of products.



Block Mounting Surface Flatness

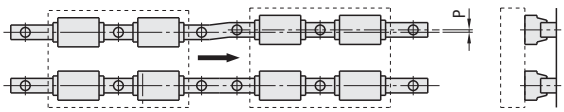
Blocks may be deformed depending on the mounting surface flatness. Block deformation may cause clearance, which might give less/more preload and cause sliding defects. Securing 5μ mounting surface flatness is recommended.



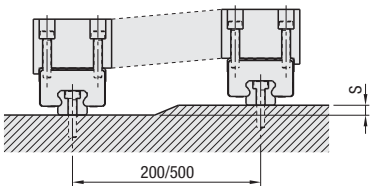
Installation Error Tolerance

•Installation Error Tolerance is the value which does not influence operating life under common usage.

Running Parallelism Error Tolerance



Height Error Tolerance



Installation Error Tolerance

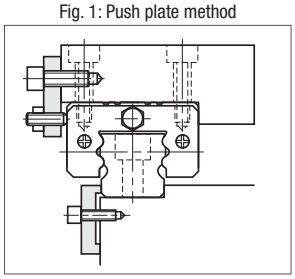
Type	Radial Clearance	Parallelism Error Tolerance of 2 Shafts (P)	Height Error Tolerance of 2 Shafts
Miniature Type	Light Preload	6μm or less	15μm or less / 200mm
	Interchangeable-Slight Clearance	10μm or less	30μm or less / 200mm
Medium and Heavy Load Type	Light Preload / Normal Clearance	20μm or less	330μm or less / 500mm

■Rail Installation

-When datum provided on installation bases

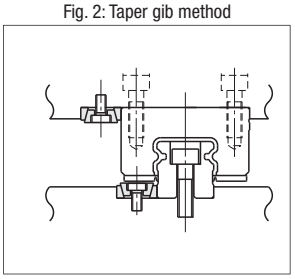
(1) Remove burrs and dusts on the mating surfaces before installation.
(2) Place a rail on the installation side of the base gently, and tighten the screws temporarily while pushing the rail against the datum shoulder.
(3) Installation methods Figure 1-3 are recommended when using linear guides where shocks, vibrations and heavy loads may exist, and high precision is required.
(4) Fully tighten the rail mounting screws to specified torque with a torque wrench. (See Table 1 for torque standards)

Fig. 1: Push plate method



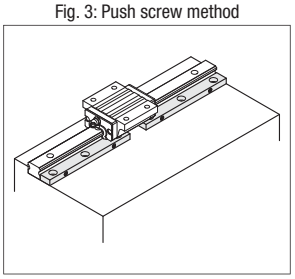
Refer to **P.588**

Fig. 2: Taper gib method



Refer to **P.588**

Fig. 3: Push screw method



Refer to **P.586**

-When datum not provided on installation bases

Straight Gauge
(1) Place a rail on the installation side of the base gently, and tighten the screws temporarily.
(2) Place a straightedge parallel to the temporarily tightened rail.
(3) Use the straightedge as a reference, snug down the screws while measuring the parallelism of the rail with a dial indicator as shown in Fig.4.
(4) Fully tighten the rail mounting screws to specified torque with a torque wrench.
(5)The secondary rail can be installed in the same straightedge method as the primary master rail, or by using the primary rail as a datum reference.
In either method, use a dial indicator to measure the parallelism while the rail is being fastened down.

Fig. 4: Straightedge method

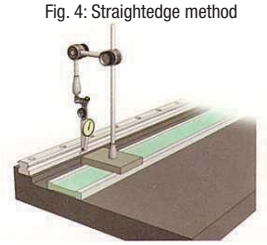


Fig. 5: Secondary rail mounting method

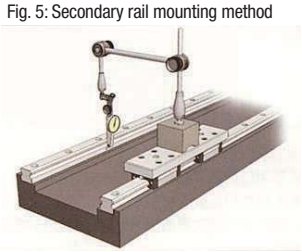

Table 1: Screw Tightening Torque (For SCM Material)

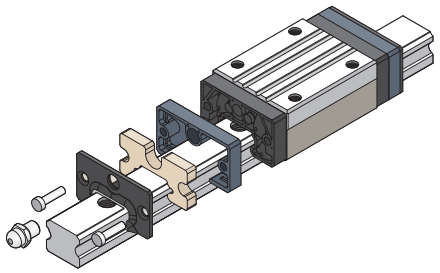
Type	Screw	Recommended Torque (N・m)
Miniature Type	M2	0.4
	M2.5	0.6
	M3	1.0
	M4	2.5
Medium and Heavy Load Type	M3	2.0
	M5	8.8
	M6	12.7
	M8	29.4

■Maintenance (Grease Application)

-Grease forms lubricating film between steel balls and rolling surface of linear guides. This reduces friction and prevents burns.
Grease loss and deterioration will cause shorter life of linear guides. Apply grease appropriately depending on your condition of use.
Grease listed below is applied to MISUMI Linear Guides before shipping, and the products can be used out of box.
- Miniature Type: Filled with Lithium soap based grease (Multemp Grease PS2 by Kyodo Yushi Co., Ltd.).
- Medium / Heavy Load type: Lithium soap based grease (Alvania Grease S2 by Showa Shell Sekiyu K.K.)
- Recommended Lubrication Intervals:Every 6 months
Every 3 months when travel distance is extensive, or every 1000km.
※Recommended above is the grease application interval based on travel distance. If grease deterioration and contamination is severe in your operating condition, grease application intervals should be shortened.
- Lubrication Unit **MX** significantly extends lubrication intervals.
For details, refer to **P.498**



Special Greases / Details of Rail Length (L dimension) Configurable Type

About Special Greases

The standard grease used in the linear guides can be changed to the following types.

Part Number	Product Name	Main Features
L Type	ET-100K (Made by Kyodo Yushi)	Excels in heat resistance, oxidation stability, adhesion and adhesive power. In addition, splash / leakage is little.
G Type	LG2 (Made by NSK Ltd.)	Special grease for linear guides, ball screws and etc. for clean-room use.

Product Name	Page	Grease Selectable	€ Unit Price Added to price of standard type	
Miniature Linear Guides (Not applicable to Heat Resisting Type or lubrication unit type.)	P.509~P.546	L G	(1 Block)	(2 Blocks)
Medium and Heavy Load Linear Guides (Not applicable to Plastic Retainer Type.)	P.553~P.566	L G	(1 Block)	(2 Blocks)

Add the unit price in the above table to the unit price of applicable standard product.

<Price Calculation Example> SEBL10L~270 (Standard Preload Type)

(Standard Type € Unit Price) +	(Additional € Unit Price from above)	=	(Total)
60,30 EUR +	15,00 EUR	=	75,30 EUR

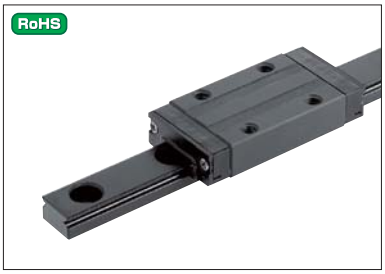
Linear Guides with LTBC



LTBC plating on linear guides:

Type: LTBC plating with fluoropolymer layer on top
Tchickness: 5μm thick.
Corrosion protection: Excelent rust prevention for long term period
Material benefits: Chemically deposited at low temperature without any change in material structure.
Peeling: The coating is resistant to cracking from extreme and repeated bending. Even hairpin-shaped bending won't cause cracks. Plating won't be exfoliated by repeat bending (Any superficial coating particles that may come off the rolling contact surfaces are mixed in with the grease and remain its lubricity).
Optical benefits: Less reflections (suitable for places where light reflections are undesirable).
(Note) Surface treatment will not be applied to mounting holes of rails and blocks of LTBC plated linear guide.

Explanation of LTBC Plated Model Types

For LTBC plated products, change the first letter of part numbers "S" to "R".

	[Standard]		[LTBC Plated Products]
(Ex.)	SSEB10-115	→	RSEB10-115

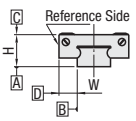
H dimension 24 is available up to 1,000mm of L dimension.
For H28, L is available up to 1240mm.
For H33, L is available up to 1240mm.

Precision



Miniature Type

(μm)

- Standard Preload Type	High Grade
Height H Tolerance	+30 -20
Height H Pair Variation	15
Dimension Tolerance of Width W	±25
Pair Variation of Width W	20

Precisions of LTBC plated miniature linear guides have been revised as above. Precision of Medium and Heavy Load Type is the same as that of Standard Type.
The sliding resistance is higher than that of regular type. Approx. 1.2N or less.

Order Example

Miniature Linear Guides

-Short Blocks · Light Preload, Interchangeable-Slight Clearance-

■Features: Short block type of industry-standard spec. 20% more compact than standard blocks.

RoHS

Ⓨ Blocks and rails are not sold as separate items. Light Preload Type has guaranteed radial clearances and accuracies as sets of blocks and rails.

Ⓜ Material Ⓗ Hardness	Type: Light Preload / High Grade / Sets	Type: Interchangeable-Slight Clearance / Standard Grade / Sets	Type: Interchangeable-Slight Clearance / Standard Grade / Blocks	L Dimension	Blocks Quantity

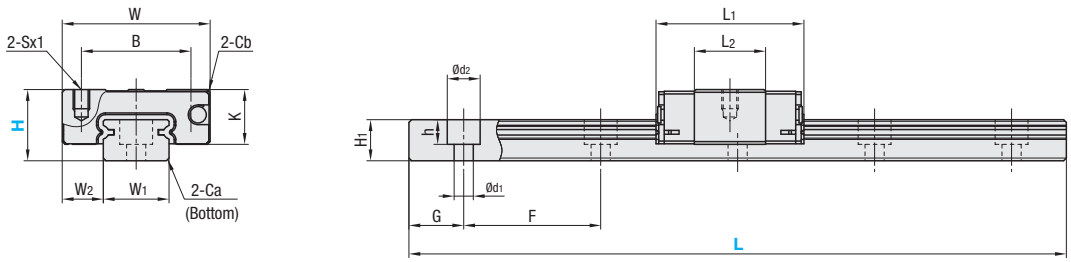
	SSE2BS	SSE2BSZ			2
	SSEBSL	SSEBSLZ		Specified	1
	SSE2BSL	SSE2BSLZ			2

Heat Resistant Temperature: -20~80°C



■Precautions for Use

Ⓨ Blocks are equipped with retainers (wire) to prevent balls from falling out. Refer to ☞P.501
Ⓨ Radial clearances and accuracies are not guaranteed if the blocks and rails in the Light Preload Type are interchanged from the original set combinations.
Ⓨ Blocks and rails can be used interchangeably with Interchangeable-Slight Clearance Type.
Ⓨ Straight grooves are provided on datum planes. Be sure to match the datum lines when using.
Ⓨ Rails cannot be connected to be extended.
Ⓨ Running parallelism is the value measured after the rail is mounted.

■Accessories

- H8 comes with cap screws (M2x6).

■Others

- For G dimensions of L Dimension Configurable Type, refer to ☞P.507
- Lithium soap based grease (Multemp Grease PS2 by Kyodo Yushi Co., Ltd.) is filled.

Miniature Linear Guides
-Standard Block · Light Preload-

■Features: The most basic type among all industry standard specifications. Select the block from standard types.

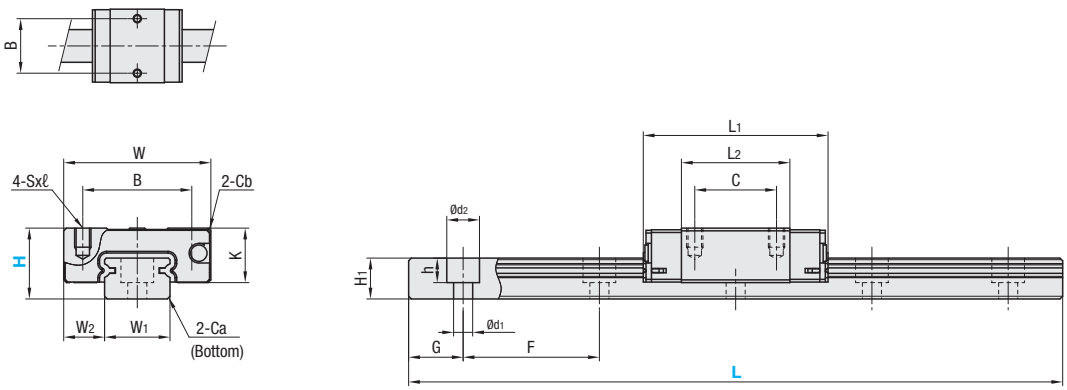
(No Side Seal Type)

Blocks and rails are not sold as separate items. Light Preload Type has guaranteed radial clearances and accuracies as sets of blocks and rails.

Material / Hardness	Type: Precision Grade – Side Seals	Type: High Grade – Side Seals	Type: High Grade – No Side Seal	L Dimension	Blocks Quantity
JIS STKM (Alloy Steel including JIS SCM) 58HRC~	SEBV	SEB	SEB-N	Selectable	1
	SE2BV	SE2B	SE2B-N		2
	SEBLV	SEBL	SEBL-N	Specified	1
	SE2BLV	SE2BL	SE2BL-N		2
Stainless Steel (1.4125/X105CrMo17 Material) 56HRC~	SSEBV	SSEB	SSEB-N	Selectable	1
	SSE2BV	SSE2B	SSE2B-N		2
	SSEBLV	SSEBL	SSEBL-N	Specified	1
	SSE2BLV	SSE2BL	SSE2BL-N		2

Heat Resistant Temperature: -20~80°C

H6 Type



■Precautions for Use
- Blocks are equipped with retainers (wire) to prevent balls from falling out. Refer to P.501
- Radial clearances and accuracies are not guaranteed if the blocks and rails in the Light Preload Type are interchanged from the original set combinations.
- No Side Seal Type is not equipped with side seals to prevent foreign object intrusions, thus the product cannot be used in airborne particle contaminated environments.
