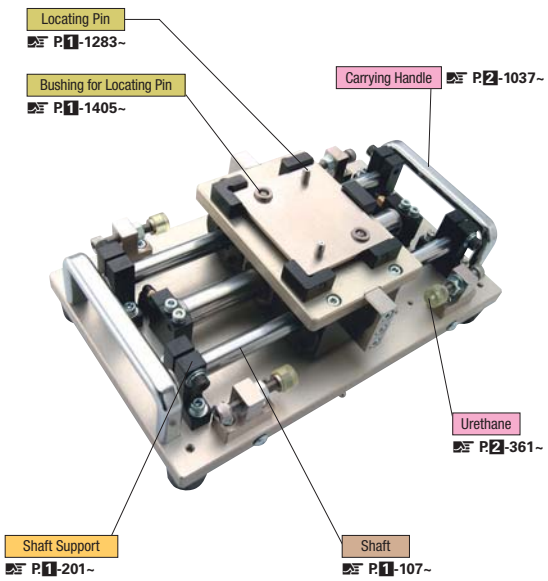
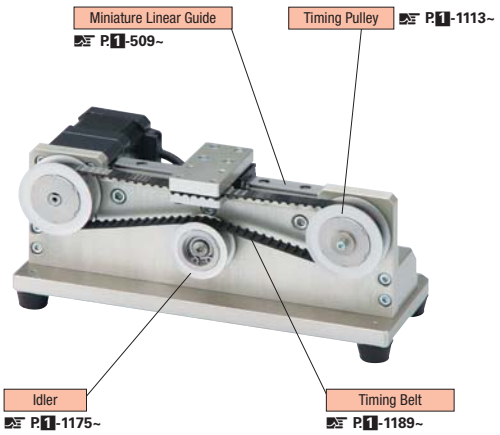
Chain Power Transmission Mechanism Design	1913~1920	Iron Rubber® Belt Selection	1943
Double Speed Chain / Top Chain Selections	1921	Technical Data -Synchronous Pulley- -Machine Keys and Keyway-	1947~1968
Flat Belt Selection	1922		
Power Transmission -Synchronous Belt Selection	1923~1939	Metal Table EN - JIS	1969
Conveyance Synchronous Belt Selection	1940	Metal Table JIS - EN	1974
Synchronous Belt Reference Information	1941	Plastic Table	1979
Synchronous Belt Replacement Signs	1942	Surface Treatments	1983

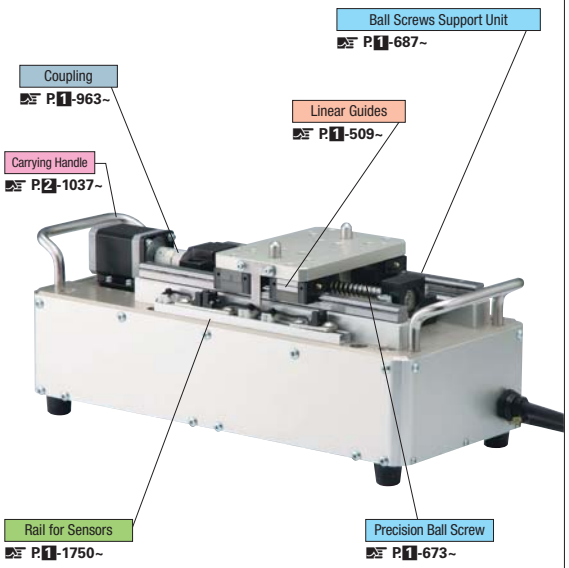
Example of Use 1: Standard Components



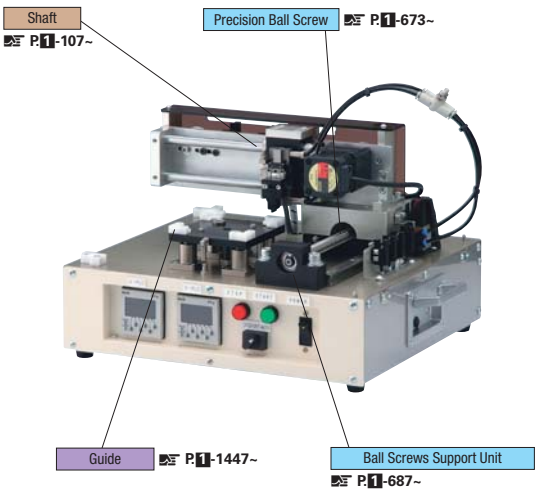
Oil Free Bushing Sliding Unit



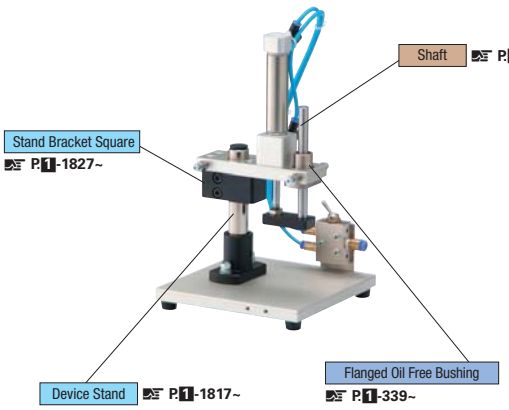
Dispense Unit



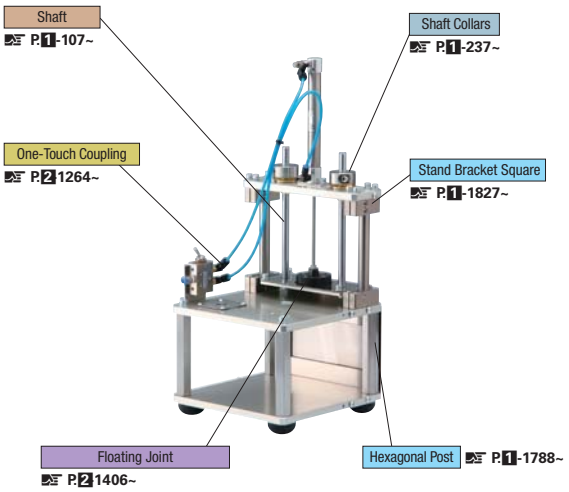
Cylinder-Driven Stage



Belt-Driven Shuttle Unit

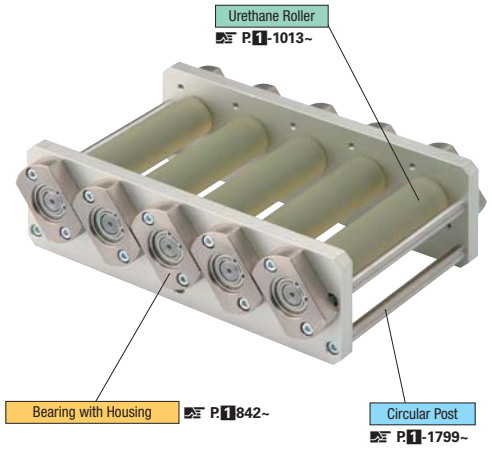


Ball Screw Linear Motion Unit

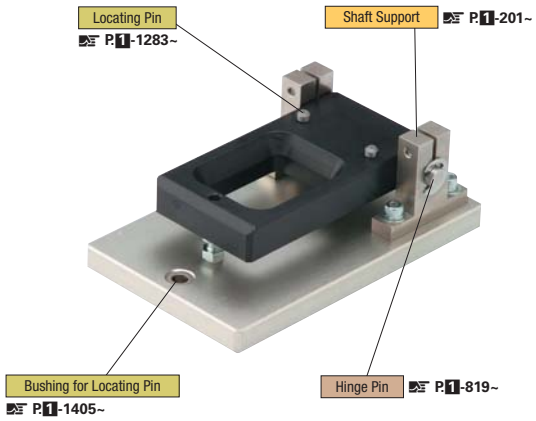


IC Chip Transfer Equipment

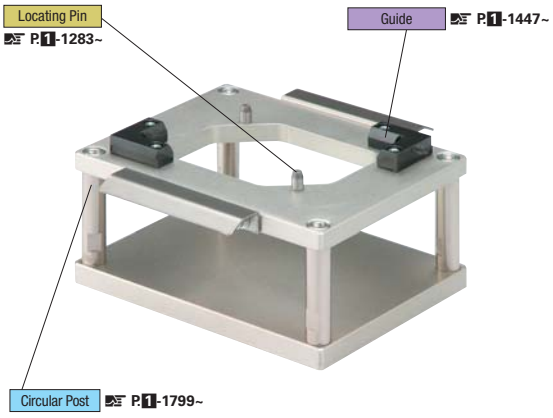
Vertical Movement Unit



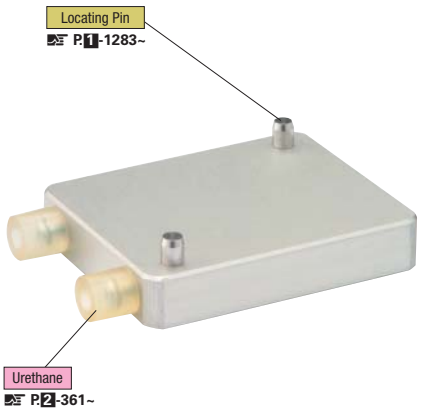
Shutter



Example of Use 2: Standard Components



Urethane Roller Conveyor

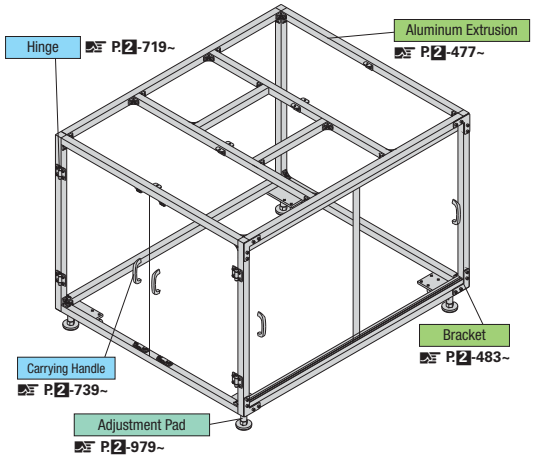


Assembly Jig

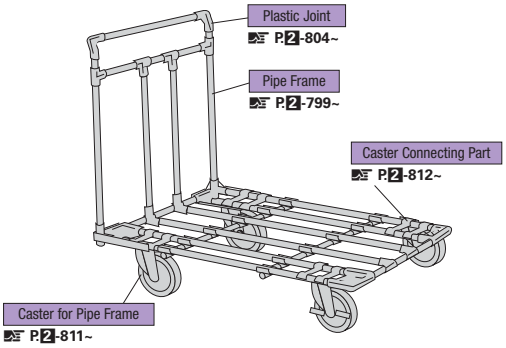
Positioning Jig

Pallet

Aluminum Extrusions



Pipe Frames



Factory Frames

Frame-relevant Components

■ **Aluminum Extrusions Standard Design Support Software** P.2-783~

Designing, load calculation, DXF data, component list and order form can be created easily on your PC. Available for free.

■ **3D Structure Conformational Analysis Software**

Warpage of the structure composed of aluminum extrusions can be analyzed. BMP · CSV and DXF Export compliant. (Paid software)

■ **Pipe Frames Standard Design Support Software**

DWG data and the order form can be created by simply selecting the shape, dimensions and components on your PC. Available for free.

How to Use Catalog

Product Name

Part Number

Product Photograph

Material

- Our products are manufactured from materials according to the Japanese Industry Standard (JIS) For better understanding,the materials are given in the catalog according to EN or DIN. Comparison table.

Specifications

Drawing

Specification Table

- The Product Number is made up of variable sizes (blue or green letters on white background).
  It is composed in steps from the Catalog Number and its selected size, from left to right.
- All the dimensions are therefore contained in the catalog number.
  Sizes from blue highlighted tables are fixed sizes and are not used in the catalog numbers.

Price

- Prices are set and shown based on quantity 1.
- Volume discount rates are available for most products.

  <Calculation Example>
  The unit price for ordering 20 pieces of linear shafts
  SFJ12−300
  6,80×0.85=5,78 Euro per pc.
- Volume discount rate does not apply to alteration fees.

Alterations — Part Number SFJ30 - L - 250 - (LKC / SC...etc.) LKC

10 Days (RSFJ is to be shipped on the 8th day after order)

DKC alterations was discontinued in June 2010. Please specify new part numbers; SFU, SSFU, PSFU and PSSFG on the left page to place orders.

Alteration Details P.105

Alterations	Code	Spec.	Price Adder
LKC	LKC	L Dimension Tolerance Changes (Precision) Order number LKC When using LKC, L dimensions can be specified in 0.1 increments. ℗ L<200 ···▸L±0.03; 200≤L<500 ···▸L±0.05; L≥500 ···▸L±0.1	4,00
SC	SC	Adds a set of wrench flats. Order number SC5 Application Notes Applicable to D = 6 and over SC=1mm Increment ℗ SC+ℓ₁≤L ℗ SC=0 or SC≥1 ⊗ can not be used with WSC	4,00
WSC	WSC	Add wrench flats at two locations Order number WSC12-X8 Application Notes Applicable to D = 6 and over Specify WSC/X in 1mm increments ℗ WSC+X+ℓ₁x2<L ℗ WSC (X)=0 or WSC (X)≥1 ⊗ Cannot be machined on the same plane. Can not be used with SC.	8,00
FC	FC	Add Set Screw Flat at one location Order number FC10-A8 Specify FC and A in 1mm increments. ℗ FC≤3xD ℗ When 1.5xD<FC, FC≤L/2 ℗ A=0 or A ≥ 2 ⊗ Can not be used with WFC	2,00

How to Use Catalog
–Guide of Marks–

Symbol	Meaning	Description Example
	NEW PRODUCTS	New products added from previous catalog.
	ADDITIONAL SPECIFICATION	Additional specifications are shown in red characters.
	DELIVERY TIME, IMPROVED	Production Time has been shortened from previous catalog.
	Part Number AND SPECIFICATION CHANGED	Part Number and specification shown in purple characters have been changed.
	MATERIAL	M 1.3505/100Cr6
	HARDNESS	H 58~60HRC
	SURFACE TREATMENT	S Black Oxide
	ACCESSORIES	A NETW2
	TOLERANCE	T $^{+0.005}_{0}$
	NOTE: WARNING	WFC≤3D
	NOT AVAILABLE	Indicates that specific sizes or items are not available. ⊗ D3~8(Not available for D3~8)
	REFER TO CATALOG PAGE	P.234
	IF A, ···› B	L $^{+0.02}_{0}$ (L>200 ···› L $^{+0.05}_{0}$) The standard tolerance of length L $^{+0.02}_{0}$ changes to ($^{+0.05}_{0}$) when L is over 200.

Symbol	Meaning	Description Example
(1) (2) (3)	UNIT No.	Number applied to each part of a unit product
	EXAMPLE PART NUMBER	Order Example Part Number – L MS 6 – 50
	DELIVERY TIME	Days to Ship 6 Days
	DELIVERY TIME	2 Days: Delivery Time is 2 workdays 5 Days: Delivery Time is 5 workdays 6 Days: Delivery Time is 6 workdays 15 Days: Delivery Time is 15 workdays
	EXPRESS SERVICE	Express Delivery Services are available, to shorten required production time.
	PRICE (Euro)	Price
	UNIT PRICE	**Unit Price**
	EXAMPLE	Example
	ALTERATION	Alteration which can be ordered without drawings.

MISUMI's Environmental Awareness and RoHS Compliancy

■Green Procurement

MISUMI has formulated Green Procurement Guidelines to observe the legal restrictions, and other requirements concerning environmental chemicals, and to help build up a recycling society. By preparing Green Procurement Guidelines and continuously striving to improve our environmental preservation and environmental chemicals management activities, we seek to eliminate environmental chemicals from our products. We ask our customers and business partners for their cooperation with these efforts.

Please refer to our website for details regarding the MISUMI Green Procurement Guidelines.
http://www.misumi.co.jp/about_e/environment/green/index.html

■What is RoHS?

Official Name : Restriction of the Use of Certain Hazardous Substances in Electrical and Electronic Equipment
RoHS is the directive to speculate and restrict the use of certain hazardous substances in electrical and electronic equipments.
It aims to minimize the hazards on environment and health through the life cycles of products from production to disposal.

■RoHS Restricted Substances (Compliant with EU Directive came into force on 1 July 2006)

Substances			Subject Items and Application	Threshold value *	
1	Cadmium (Cd) and Its Compounds		Cadimum contained in alloys with zinc content (brass, zinc, diecast, lead-free solder, etc.), plating, plastic, rubber, oating, etc.	100 ppm or less	For packing materials, less than 100 ppm combined of cadmium, lead, mercury and hexavalent chromium
		Exemption	Cadmium and its compounds in electrical contacts and cadmium plating except for the uses prohibited under 91/338/EEC which is a revision of the EU directive 76/769/EEC	–	
2	Lead (Pb) and Its Compounds		Lead contained in all types of alloys, solder, all items other than the following exemptions	1,000 ppm or less	
		Exemption	Lead which is alloyed with steel	3,500 ppm or less	
			Lead which is alloyed with aluminum	4,000 ppm or less	
			Lead which is alloyed with copper	40,000 ppm or less	
			Lead used in solder which contains more than or equal to 85% of lead	–	
3	Mercury (Hg) and Its Compounds		Mercury contained in all items aside from small fluorescent light bulbs and straighttube fluorescent light bulbs	1,000 ppm or less	
4	Hexavalent chromium (Cr6+) and Its Compounds		All Hexavalent chromium in chromate treatment, plating, coating, etc.. Chromium metal and chrome in metal alloys are exempted.	1,000 ppm or less	
5	Polybrominated Biphenyls (PBBs)		Flame retardant	1,000 ppm or less	
6	Polybrominated Diphenylethers (PBDEs)		Flame retardant	1,000 ppm or less	

*Threshold value is, whether consciously or not, the maximum concentration value set for each homogeneous material which cannot be mechanically disjointed into different materials.

General ordering information

1 How to Order

For customers from Europe & Africa:
Customers can contact our Customer Service directly under +49 (0) 61 96 / 77 46 – 0
or by using our website www.misumi-europe.com under „Services“.
Existing Customers may send their order, including item name, item number and quantity directly by
fax to +49 (0) 61 96 / 77 46 – 3 60, by E-Mail to sales@misumi-europe.com or use our „online service“ at www.misumi-europe.com under “eCatalog/WOS”.

2 Quantity

No minimum order quantity! Misumi accepts 1-piece orders without surcharge.

3 Delivery Times

The respective delivery time in working days for each product can be seen by the delivery times symbol.
Please notice that items which are marked as stock items are available for quick delivery.
For deliveries outside of Germany the delivery time can be slightly extended due to the respective customs clearance.
Orders which are made Mon. to Thurs. before 4:00 pm and Fri. before 3:00 pm are processed the same day.

4 Express Deliveries

To shorten delivery time we offer an express delivery service.
For more information please contact our customer service.

5 Terms of Delivery

Deviating from our general terms of delivery (see T&C):
Other shipment modes can be used depending on size, weight and dimensions of the shipment .
For truck deliveries the customer is responsible for ensuring that a Fork Lift Truck or Pallet
Truck is available.

6 Changes or Cancellation of an Order

Orders may be changed or cancelled on the same day as initiated.
For changes or cancellation of an order on the next day, please contact our customer service.

7 Returning Items

Items which are on stock may be returned after contact with us.
We cannot accept returns of items which were not on stock, unless they were delivered with defects.
For individual cases please contact our customer service.

8 Claims

We make every attempt to guarantee the quality of our products irrespective of the quantity ordered by our customers.
If you believe that the delivered items do not fulfill the expected quality requirements, have the wrong dimensions or are of incorrect quantity, please contact our customer service.
We will find a solution for YOU.

Delivery times, Express Orders

3 Delivery Times

What is the „Delivery Time“?

Delivery Time 

means the number of workdays needed until delivery.

(from the first workday after your order is received).

Symbols for Delivery Time

Delivery Time is 2 workdays ···›  Delivery time **2 Days**

Delivery Time is 5 workdays ···›  Delivery time **5 Days**

Delivery Time is 6 workdays ···›  Delivery time **6 Days**

≀

Delivery Time is 15 workdays ···›  Delivery time **15 Days**

If „on inquiry“ is indicated in the quantity table, the offer also has a delivery date. In certain cases the delivery date can change with the quantity ordered, even if „on inquiry“ is not indicated.

Volume Discount P.87

No. pieces	1~3	4~7	8~10	11~29	50~
Discount	Price List	5%	10%	15%	on inquiry

4 Express Deliveries

Express Service

For your urgent orders we are offering an express service for many products.
Our express service is avaible for products, wich are marked by one of the following symbols.

2 Days

8 Days Express **A**

10 Days Express **B**

13 Days Express **C**

The avaibility of this service depends on the dimensions and the specification of the article and on the country of origin of the customer.
Different receipt date of orders, in some cases have a small effect on delivery schedule.
For detailed information please ask our customer service.

Delivery time reductions of 1-3 days are typical.

Expresscharge

8 Days

Express **A** 2,00 EUR/piece

A flat charge of 5,40 EUR for 3 or more identical pieces
The term flat charge designates the maximum amount, wich has to be paid independently of the number of items for a supply by express.

Example:
1 pieces = 2,00 euro surcharge
2 pieces = 4,00 euro surcharge
3 pieces = 5,40 euro surcharge
10 pieces = 5,40 euro surcharge

Remaining delivery terms (carriage free within Germany) remains unaffected.

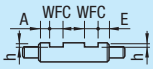
Alterations

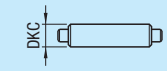
Options and special models

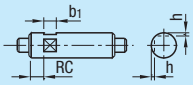
Options can be ordered without drawings

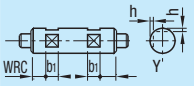
With the aid of our Alterations service you can select additional product characteristics and tolerances.
To order an alteration simply add the desired alteration code to the catalog number as illustrated.
You do not need to create a drawing for us.



There is no discount applicable for alterations.







An example of the Option Service (Steel shafts for linear movements)

MISUMI 24/7 e-Commerce
-How does it work?-

Step 1:
Product search

You can search for MISUMI products by product name or part number under the product search tab. You can search the entire site by key phrase under the website tab.

Step 2:
Configure / check prices

You can automatically generate a part number by selecting parameters with our configurator. Check price & delivery date on the spot.

Step 3:
2D / 3D CAD data download

You can download FREE 2D/3D CAD data.
We have more than 30 different data formats.

Step 4:
Quote / Order

You can quote/order MISUMI products online and check the results immediately.

With MISUMI 24/7 e-Commerce quickly to target: How to solve your design problems

Register

The registration occurs online (**www.misumi-europe.com**) by using the respective form. After completing all required information, you will receive a PDF document which you need to print out, sign and send back to MISUMI Europa GmbH. Subsequently, we will activate your account. The registration might require up to two working days.

In order to register successfully, please agree to the MISUMI privacy policy as well as our terms and conditions . If you are already registered as standard-user you can get a free upgrade to premium-user without having to fill in the customer registration form again. This upgrade is possible at any time. Please contact our customer service team by phone at +49 (0) 6196 7746 0 or mail at:sales@misumi-europe.com“.

MISUMI Tutorial videos

Why MISUMI?

- ···› Easily realisable solutions
- ···› Configurable components in 1mm increments
- ···› All in one catalogue
- ···› more components than you could ever imagine

Are you also struck by the 3.000 pages of the catalogue and do you have difficulties finding the required components quickly? MISUMI now provides you with a helpful tool.

Video tutorial "How to use the paper catalog'

Our **video tutorial** will show you how to use our paper catalog. The video is approx. 6 minutes long.

Adobe PDF

"Manual eCatalog/WOS" as PDF file or brochure

Here you can find a guide for the use of our eCatalog/ WOS system as **PDF file**. If you prefer the brochure as a **hardcopy**, you can write us an e-Mail via sales@ misumi-europe.com or order it by phone at +49 (0) 6196 7746 0.

Are you interested in using MISUMI 24/7 e-Commerce and are you looking for more details?

MISUMI provides a comprehensive tutorial video: **www.misumi-europe.com**

Tutorial videos are available
or download helpful PDF-documents.

MISUMI Catalogue One for All

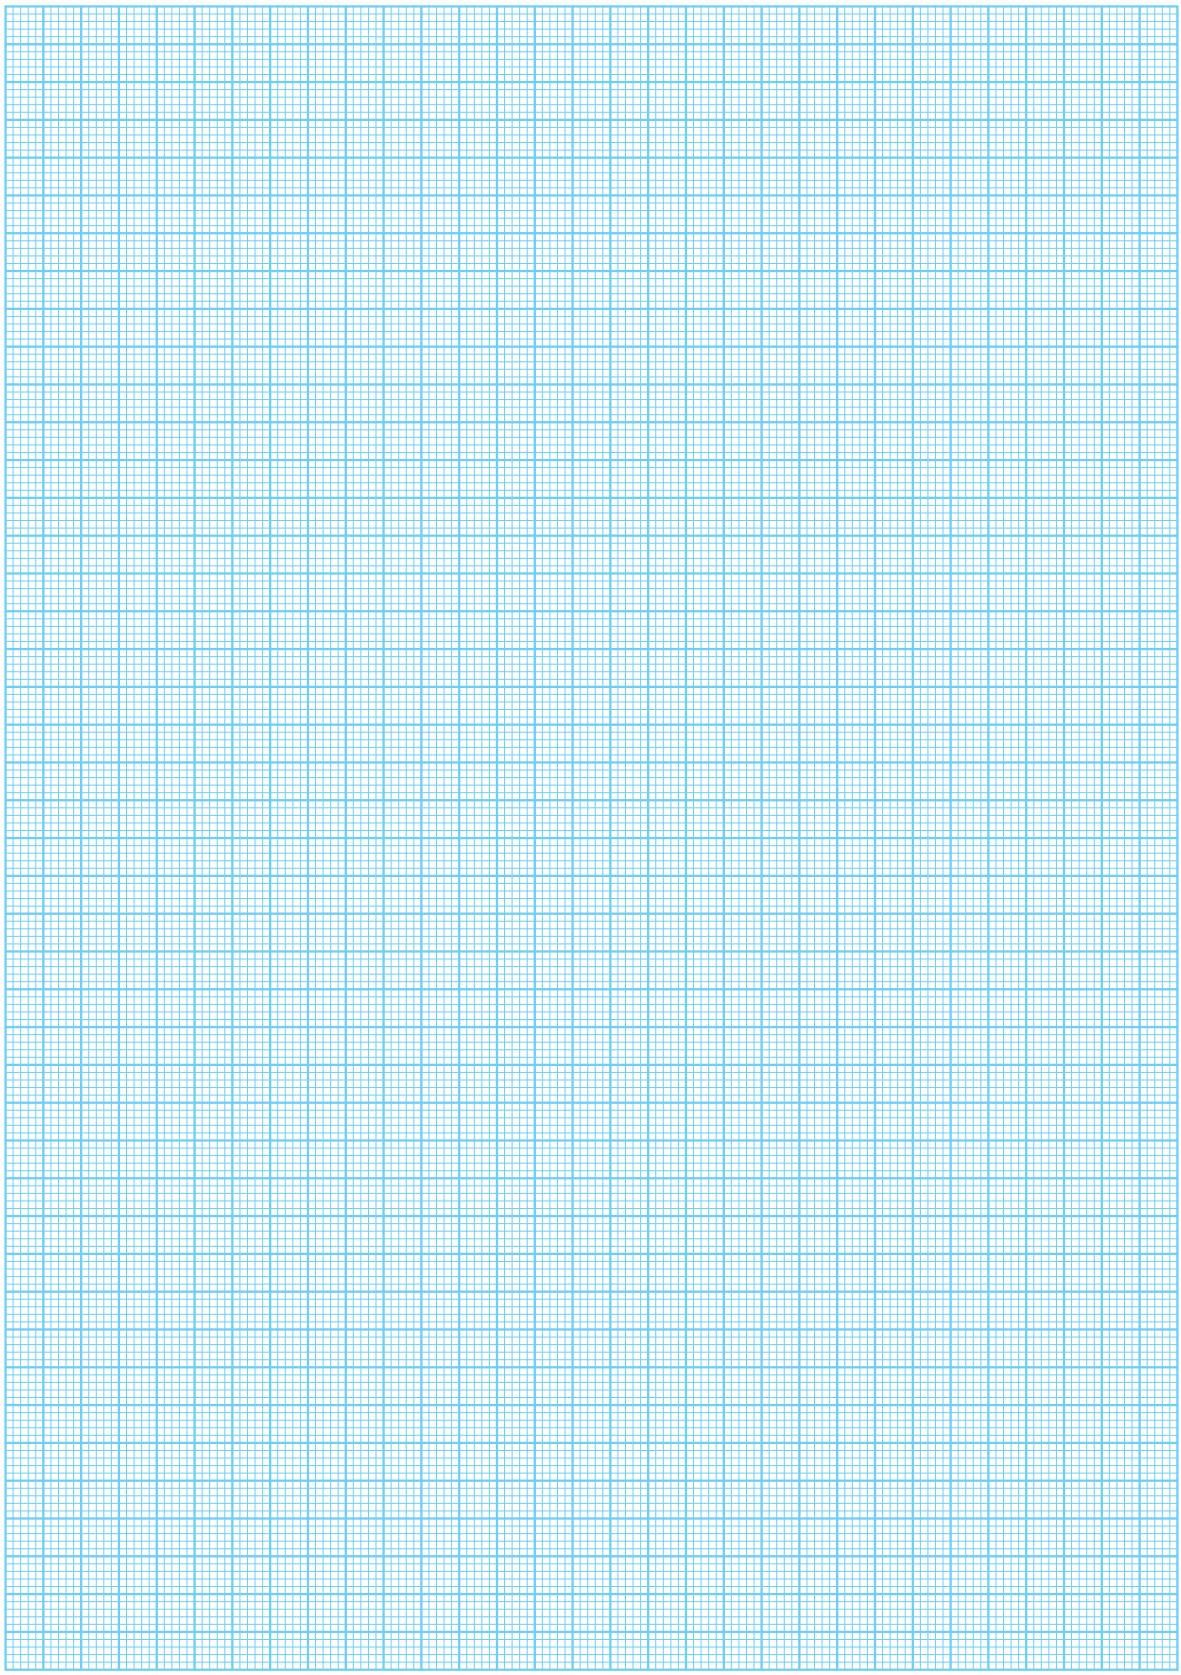
Our main catalogue provides all technical and commercial component information at a glance!

- ···› Details on tolerances, materials and coatings
- ···› All information regarding dimensions and configuration including options
- ···› Component drawings and sample applications
- ···› Delivery times and prices with bulk discounts, surcharges for additional optional extras or express delivery
- ···› To request a catalogue (DE/EN/IT/FR/CZ), please go to **www.misumi-europe.com**

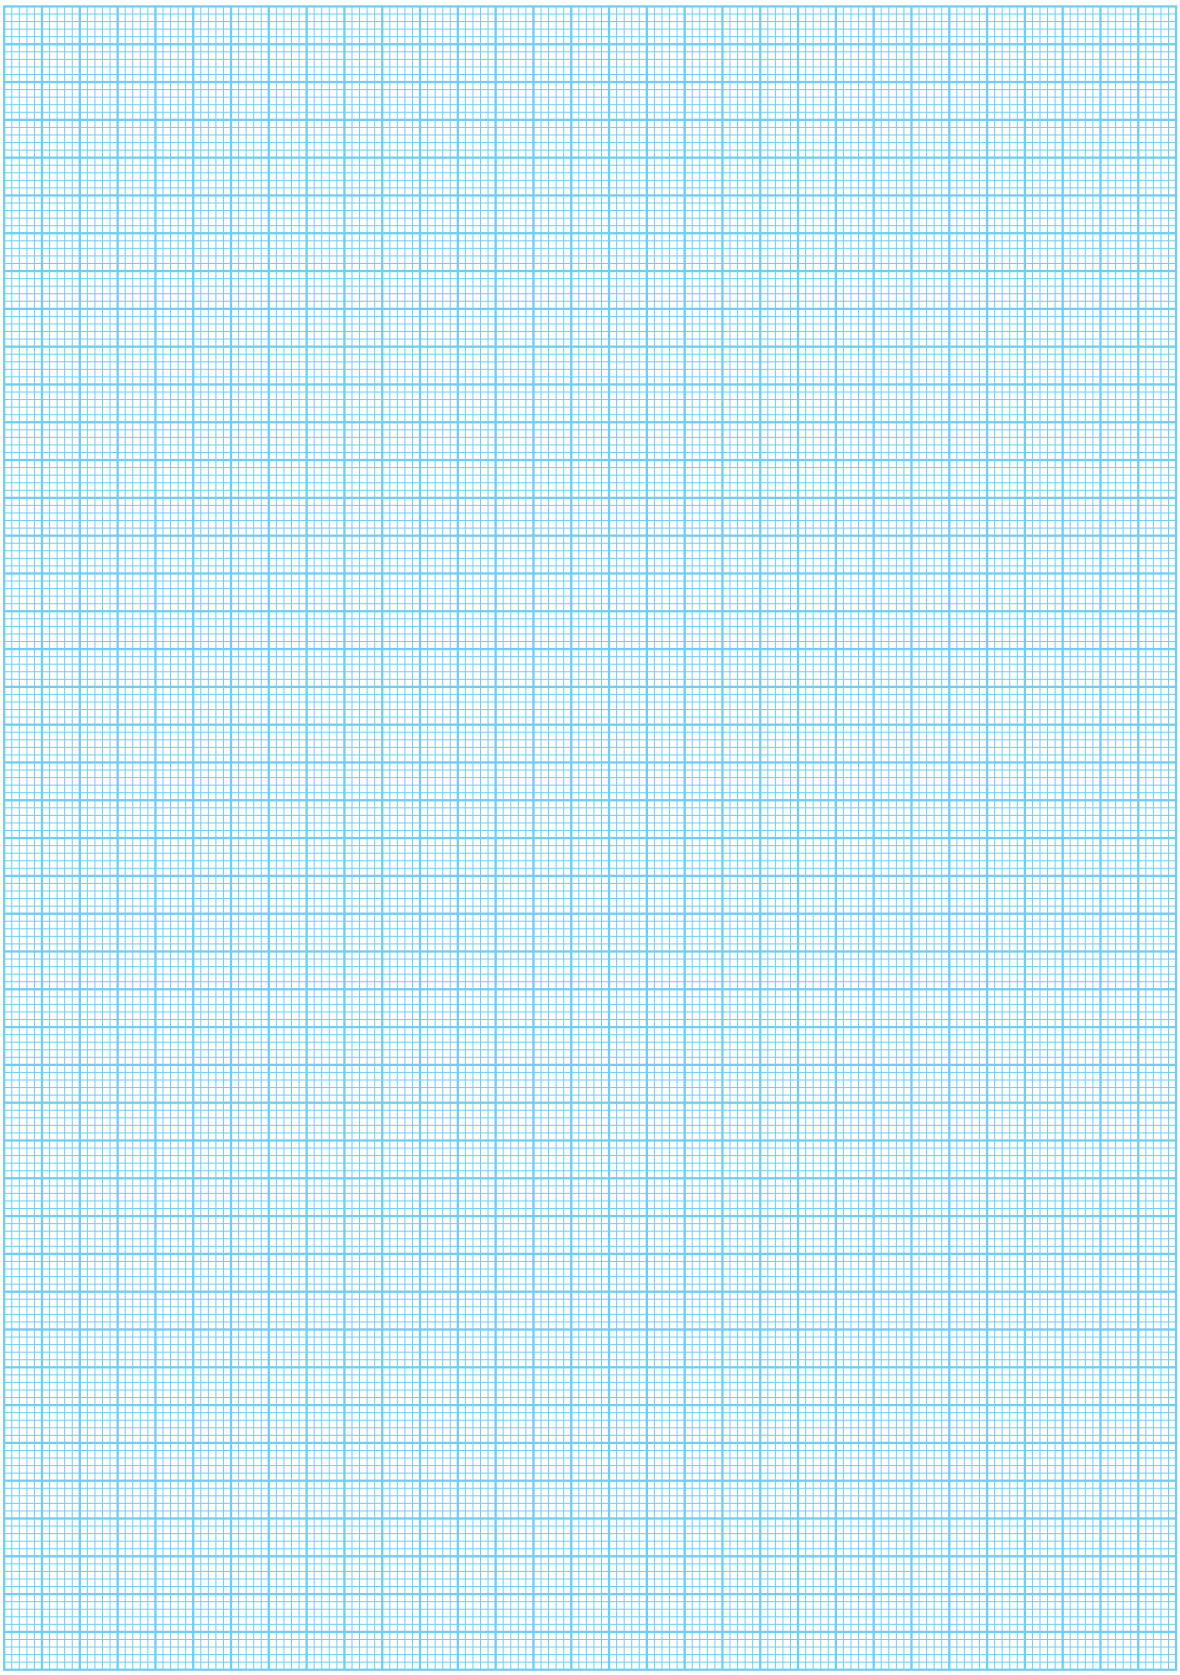
MISUMI Info DVD

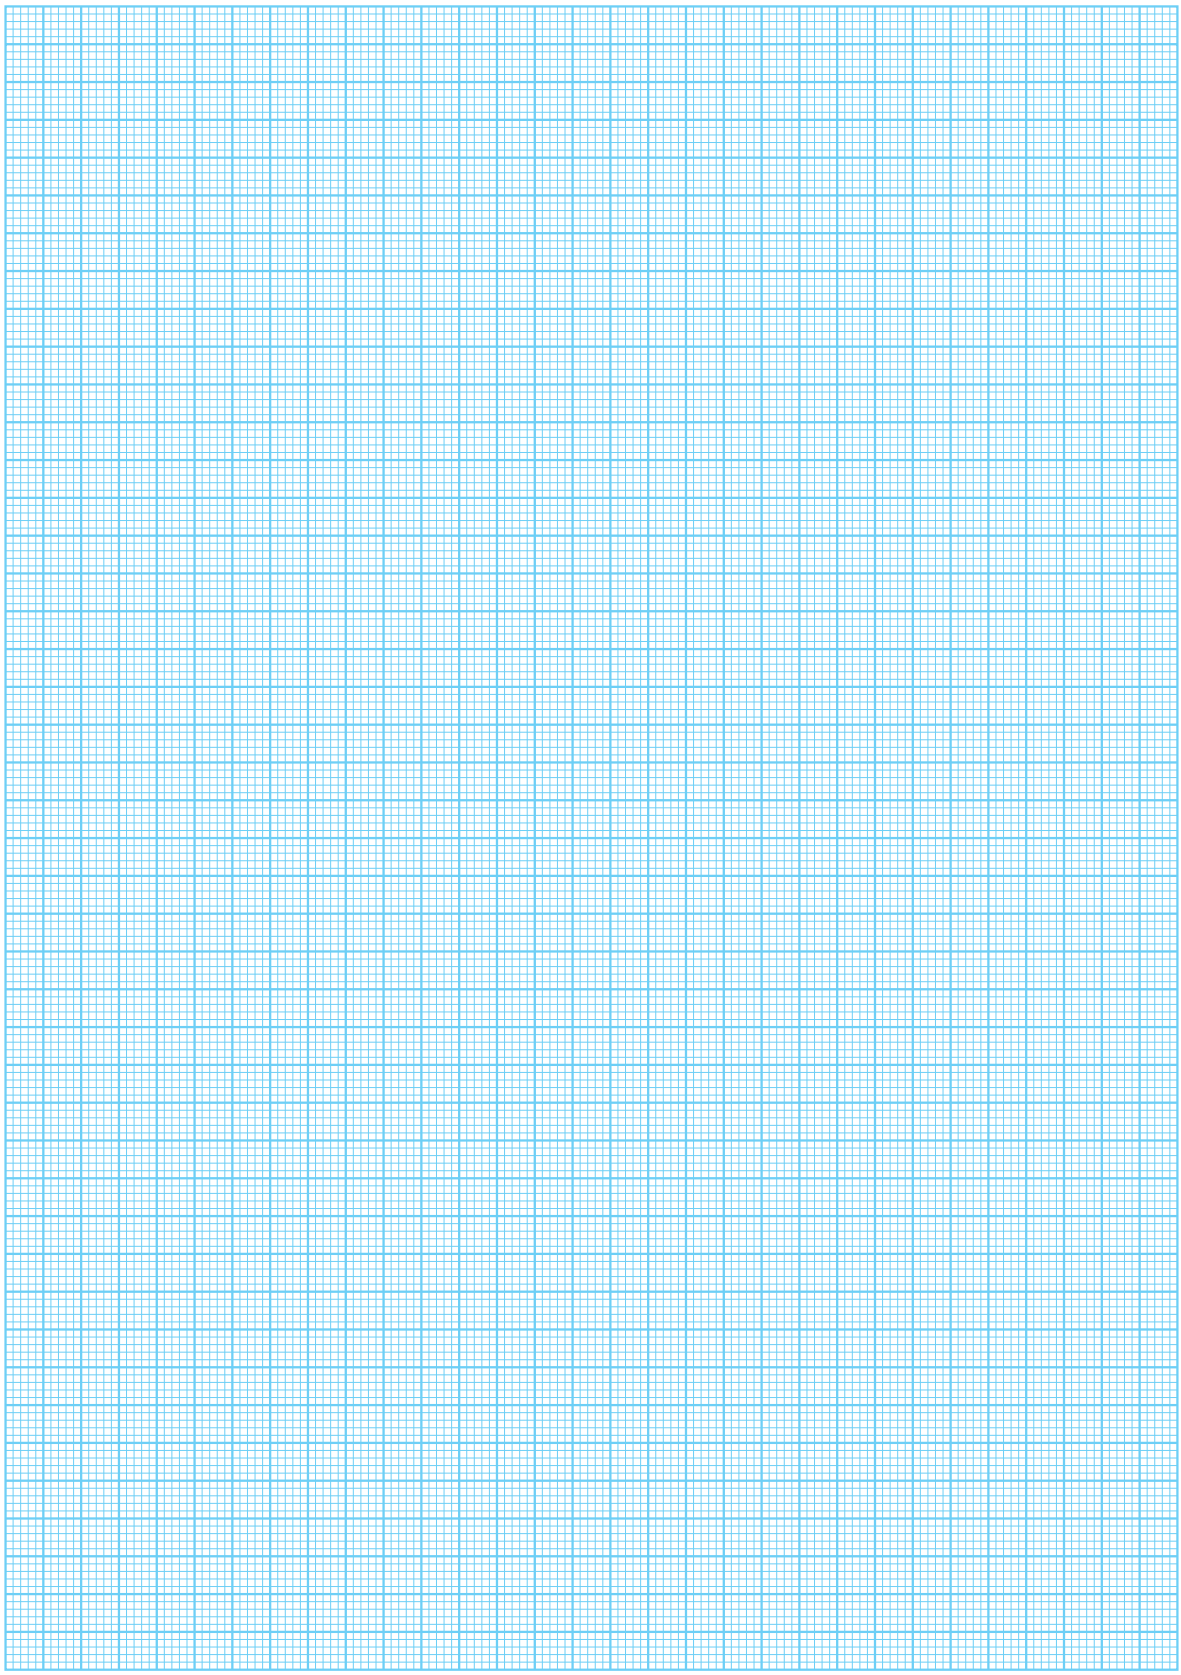
This DVD contains comprehensive information about MISUMI. The DVD contains:

- ···› Catalogue “Mechanical Components for Assembly Automation” (DE/EN/IT/FR/CZ) (PDF)
- ···› Catalogue “Standard Components for Plastic Mold & Diecast” (EN) (PDF)
- ···› Catalogue “Standard Components for Press Dies” (EN) (PDF)
- ···› Company presentation (DE/EN/IT/FR/CZ) (Powerpoint)
- ···› Video tutorials (DE/EN/IT/FR/CZ)

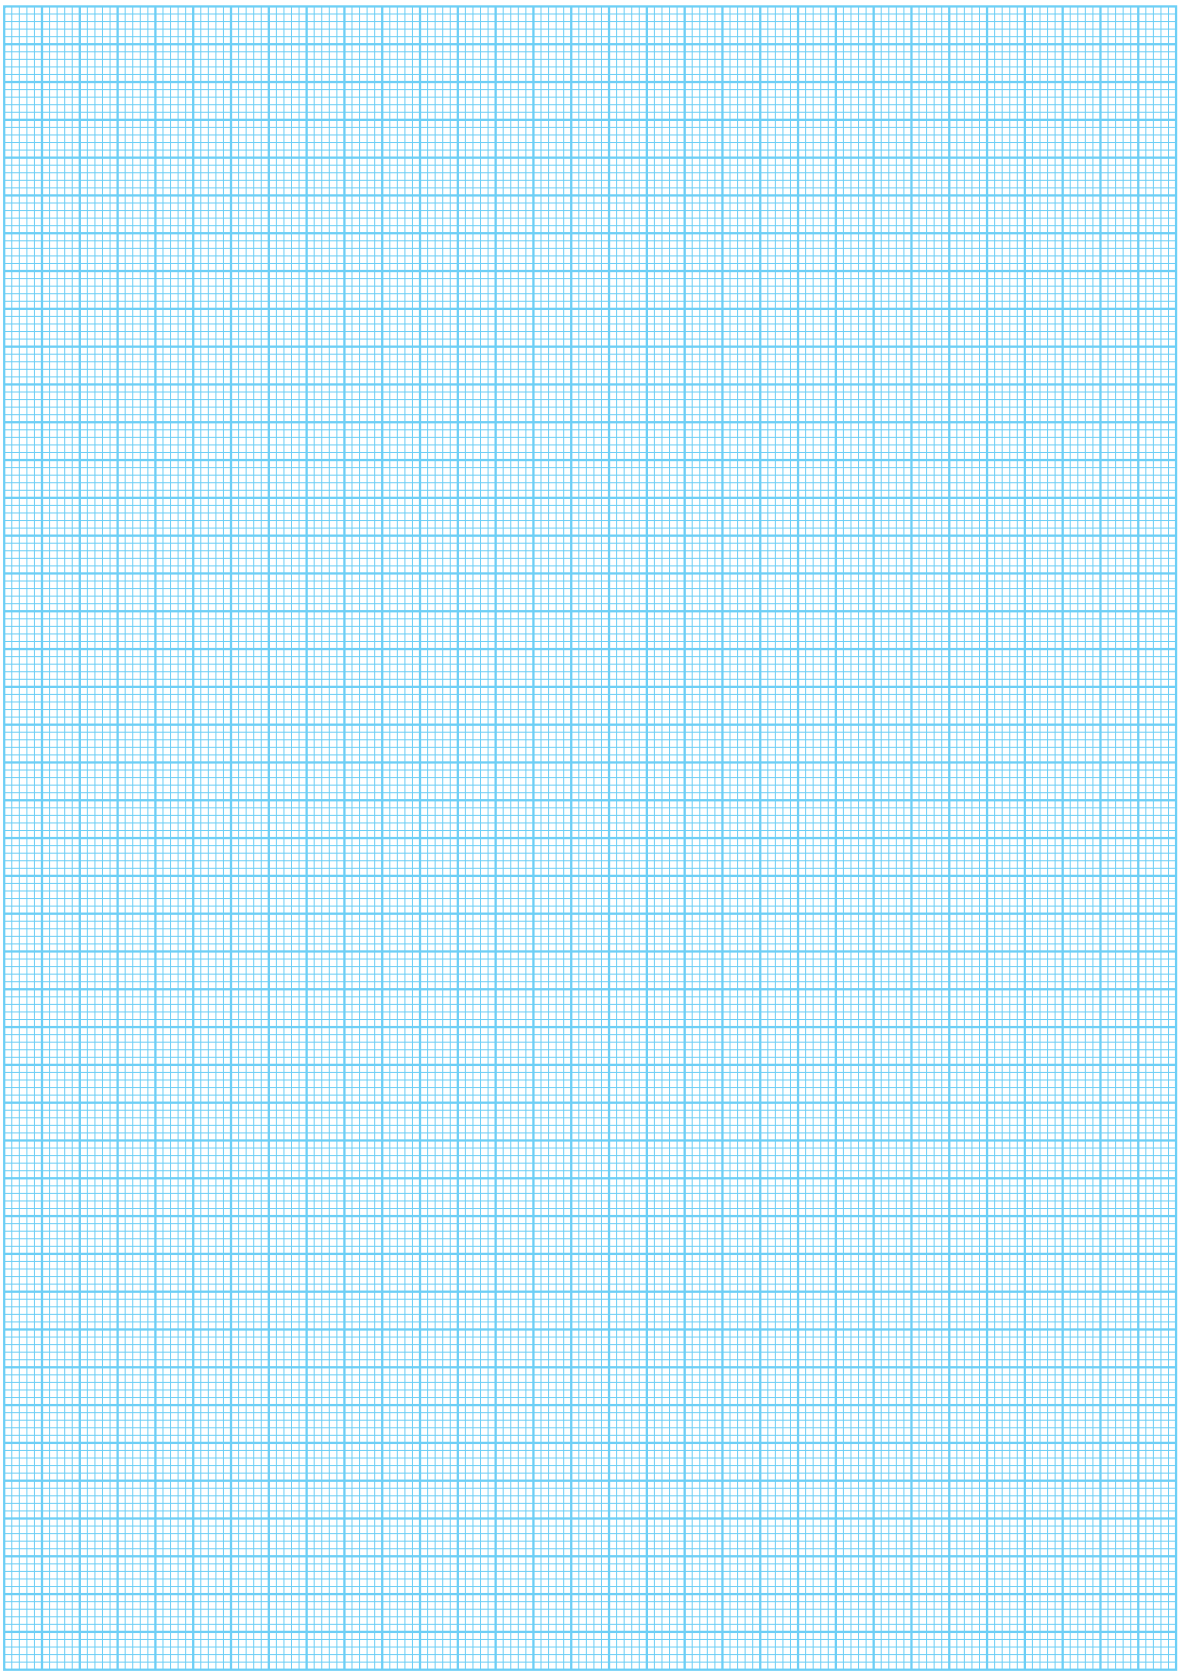


Product Brochures





Product Brochures can be downloaded as PDF files. Some of the brochures are also available as printed versions. Send an informal e-mail to **insales@misumi-europe.com**



We have gathered information on some selected products of our extensive product portfolio. Here you can find brochures with detailed information on these selected parts which can be downloaded as PDF files. Some of the brochures are also available as printed versions. For example: Linear units LX/KUA, linear unit RS, Toggle clamps, XY stages, G-Manifold, Aluminum frame etc.

For orders larger than indicated quantity, please request a quotation.

Example

For the Pilot Type (WLHM · WLHS), drill a hole on Angle Plate or Base Plate, etc. to insert the pilot part (with D1) prior to use (see the right figure). The slotted hole allows fine-tuning of K dimension.

(?)* In compliance with Food Sanitation Laws (MC Nylon, Standard: After boiling for 1.5hrs; Conductive Grade: After boiling for 2hrs.) Listed values are for reference, not guaranteed.
(?)Do not store resin materials for prolonged duration to avoid dimensional deformation due to water absorption. (Material with a higher moisture absorption rate will be deformed more.)
(?)Property values of Polycarbonate are obtained by JIS test (for reference).
(?)Bakelite may be discolored over time, but the properties do not change.
(?)For properties of Polyslider ®, refer to **P.141**

FCLJP	-	VM10	-	D35	-	L60	-	CC2.5

⊗Not available for Bakelite, Epoxy Glass and Fluoro Resin. ▼Alterations except VKC and LKC are available from D10.

Alterations	Code	Spec.	Price Adder
	VKC	Changes the inner diameter tolerance to $^{+0.1}_{0}$ ▼This is only applicable to CLJJ, CLJM, FCLJJ and FCLJM. Ordering Code VKC ▼L≤50 ▼If D≤50, D-V≥6 ▼If D≤80, D-V≥10 ▼If D≤100, D-V≥16	1,00
	LKC	Changes the overall length tolerance to ±0.05. ▼This is only applicable to CLJJ, CLJM, FCLJJ and FCLJM. Ordering Code LKC ▼L≤50 ▼If D≤50, D-V≥6 ▼If D≤80, D-V≥10 ▼If D≤100, D-V≥16	1,00
	CC WCC	Chamfers C plane. Ordering Code CC1.5 WCC2.5 ▼CC / WCC=0.5mm Increment ▼CC / WCC<(D−V)/2	CC 1,00 WCC 2,00
	AC WAC	Adds a taper. Ordering Code AC3.5-Q60 WAC5.0-Q30 ▼AC, WAC=0.5mm Increment ▼Q=Selection from 15, 20, 30 and 60 ▼AC≤L−5 ▼(D-V)/2-AC, WAC tan Q≥1 Ref.:tan15°=0.268 tan20°=0.364 tan30°=0.577 tan60°=1.732	AC 2,00 WAC 4,00

Alterations	Code	Spec.	Price Adder
▼Applicable only to Dimension Configurable Type. 	VM (Coarse) VMA (Fine)	Adds a tapped hole (Through). Ordering Code Specify VM4 V instead of VM / VMA. Ex.: FCLJJ-VMA4-D10-L18 ▼For machining limits of tap diameter and full length (L), please see the table on the right. Tap diameter ≤ D/2	Female Thread Hole Diameter VM/VMA: 4 · 5 · 6 · 8 → 2,00; 10 · 12 · 16 · 18 · 20 → 3,00
	MC WMC	Adds a tapped hole (coarse thread) at D part. Ordering Code MC3 WMC5 ▼Condition of thickness (D−V)/2: as table below. ▼L ≥ MC / WMCx3 ▼MC / WMC=Select from table below.	Female Thread Hole Diameter: 3 · 4 · 5 · 6 → MC 1,00, WMC 1,50; 8 · 10 · 12 → MC 2,00, WMC 2,00
▼Combination with other alteration is not available. 	SLC	Adds a slit. Ordering Code SLC ▼Condition of thickness (D−V)/2: as table below. ▼Slit width is fixed. ▼Inner and outer tolerances are the values before alteration. The tolerances may change after alterations depending on the materials.	1,50

MC / WMC	(D-V)/2

Days to Ship: 6 Days P.87

About Direction of Material Lamination

Laminated directions of washers and collars are different (Figure below).
Therefore, mechanical strength varies depending on direction of the lamination.

- Washers are laminated in the vertical direction.

- Collars and Collars with Flange are laminated in the radial direction. Please note that the mechanical strength is less than washers'.

The above are reference images. Actual products slightly differ from the images.

8x1.25	13	8	6
10x1.5	16	10	8
12x1.75	18	12	10

* The strength class signifies the screw's tensile strength.

(Ex.) 12.9
- This indicates that the minimum value for yielding point or proof stress is 90% of tensile strength.
- This indicates that the minimum value of tensile strength is 1220N/mm².

(Ex.) 10.9
- This indicates that the minimum value for yielding point or proof stress is 90% of tensile strength.
- This indicates that the minimum value of tensile strength is 1040N/mm².

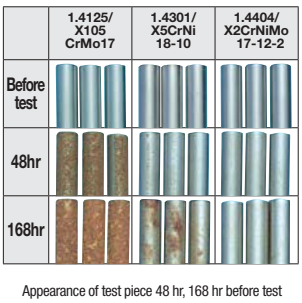
Properties of 1.4404/X2CrNiMo17-12-2

- 1.4404/X2CrNiMo17-12-2 is composed of 1.4301/X5CrNi18-10 with Molybdenum added, having high corrosion resistance.



<Reference: Corrosion Resistance of Stainless Steel>

Testing Method

Conforms to the JIS H 8502 Cycle Test Method for a complex corrosion test.

Test Conditions

(1) Salt Water Spray Test (5%NaCl. 35°C) 2hr
(2) Dry (60°C) 4hr
(3) Wet (95%RH. 35°C) 2hr
One cycle takes 8hr.

Appearance of test piece 48 hr, 168 hr before test

Comparison by metals

Item	Unit	Titanium	Aluminum	Steel
Specific Gravity	g/cm³	4.5	2.7	7.9
Tensile Strength	N/mm²	377	78	315
Thermal Conductivity	cal/cm, sec, °C	0.041	0.487	0.145
Young's Modulus	kN/mm²	106	69	205

Mechanical Characteristics of Hexagon Socket Cap Screws (Reference)

	Tensile Breaking Load N		Torsional Breaking Torque N·m	
	Titanium	Aluminum	Titanium	Aluminum
M3	3210	1650	2.4	1.0
M4	5610	2890	4.7	2.5
M5	9080	4680	9.8	6.7
M6	12800	6630	11.3	11.0
M8	23400	12000	22.8	30.0
M10	37100	23560	61.5	48.0

- Shown above are reference values and not guaranteed values.
- Recommended tightening torque is torsional breaking torque x50%.
- Use a torque driver or a torque wrench for tightening.
- The values of black aluminum anodized products are approx. 80% of the above values.

Characteristics of Titanium (JIS H4650 3.7035/Ti99.5 (Ti2))

- Titanium compares with low carbon steel in strength, and its specific gravity is approx. 60% of iron.
- It can be used at low and high temperatures.
- It has chemical resistance better than that of stainless steel.

Typical Physical Properties of Titanium

Item	Unit	Data
Purity	%	99.5 or more
Tensile Strength	N/mm²	340~510
Yield Stress	N/mm²	215 or more
Operating Temp.	°C	-200~350

Chemical Resistance of Titanium

Chemical Solution	Concentration (%)	Temperature (°C)	Titanium	1.4401/ X5CrNiMo17-12-2
Hydrochloric Acid	10	30	◎	X
Sulfuric Acid	20	30	○	X
Sodium Hydroxide	50	120	◎	○

◎: Corrosion resistant enough for use.
○: Corrosive but usable depending on conditions.
X : Unusable due to insufficient corrosion resistance.

Changes in Mechanical Characteristics of Titanium by Temperature

Item	Unit	Data		
		−200°C	Ambient Temperature	350°C
Tensile Strength	N/mm²	994	421	167
Elongation	%	25.7	46	54

- RENY--Glassfiber Reinforced Polyamide MXD6
RENY is based on polyamide MXD6, and crystalline engineered plastic reinforced with 50% fiber glass. It has the highest strength and elasticity among engineered plastics, and excels in oil and heat resistance, thus can be used as an alternative to metal.
- PPS--Polyphenylenesulfide
PPS is a crystalline super engineered plastic. It has excellent heat resistance, and does not deteriorate in physical properties even when it is used for long durations in high temperature atmosphere. In addition, it excels in chemical resistance, mechanical characteristics, electrical properties and dimensional stability.

- PEEK--Polyetheretherketone
PEEK is semicrystalline super engineered plastic with the highest performance. Has the highest chemical resistance among all engineered plastics. The only generally used chemical that dissolves PEEK is concentrated sulfuric acid. It also excels in heat resistance, abrasion resistance, flame resistance, and hydrolysis resistance.

Characteristic Value of Plastics P.215

Hex Wrenches

RoHS

IBKPL

M Material: Tool Steel Alloy
H Hardness: 43~53HRC
S Surface Treatment: Trivalent Chromate Plating

Part Number		Applicable Screws	L	ℓ	d	B	€ Unit Price	Volume Discount
Type	No.						1~9 pcs.	10 pcs. or more
IBKPL	3	M3	52	16	1.2	2		
	4	M4	58.5	20.5	1.3	2.5		
	5	M5	66	23	1.5	3		
	6	M6	74	29	1.8	4		
	8	M8	85	33	2.3	5		

Features

The hexagonal socket in the head has a protruding pin at the center, making it impossible to use a standard hex key wrench to assemble / disassemble. Troubles due to unintended or unauthorized disassembly can be prevented.

Order Example — Part Number: IBNP3-6, IBKPL3, CRKW3-6

■Features and Precautions for Use

- Long threaded screws can be tightened quickly.
- Use under the reference tightening torque, avoid over tightening.
- Move the nut to the tightening position after inserting screw into the straight hole. Then rotate the knob perpendicular to the screw and tighten.
- Tightening strength will not be adequate if the thread length of the screw (*) is shorter than the nut's H dimension. Design the thread length of the screw (*) to be larger than the H dimension.

When the friction ring makes a contact with the thread as shown in the figure below, spring action generates a reaction force P. A friction torque (prevailing torque) that prevents the nut from rotating is then generated by the nut due to another reaction force P'.

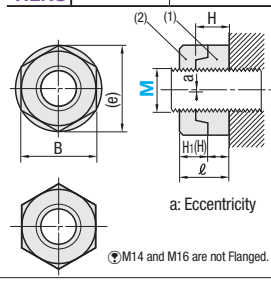
■Features of U-Nuts®

- Capable of stable anti-loosening effect. Prevents screws from falling off despite decline in axial tension.
- Being a solid metal product, the nuts are highly resistive to heat and cold.
- Simplified fastening task makes work management easier.
- Easy parts management prevents inappropriate installation.
- Reusable.

⚠Cautions



- Make 2 pitches or more of the thread protrude from the friction ring.
1. When tightening the nut refer to the Tightening Torque Chart.
2. Use chamfered tipped screws of JIS6g (Grade 2) in thread precision.
3. Use appropriate lubricant if seizure or scuffing occurs when screwing or unscrewing the nut onto threads.
4. Cannot be screwed in from the friction ring side.
5. Discontinue the use if abnormal deformation occurs in the friction ring or the clamp.

■Structure and Function of Hard Lock Nut®

Hard Lock Nuts® is a registered trademark of Hard Lock Industry Co., Ltd.

⚠Cautions

Screws or shafts should be made to JIS6g (Grade 2) in thread precision, or Hard Lock Nuts may not fit well. Although outer diameter of the upper nut and the lower nut may become eccentric or clearance may occur during assembling caused by its structure, it does not affect the operation.

* Fig-1: When upper nut is tightened, stress is automatically applied in P1 arrow direction. Horizontal stress continues to increase with tightening until upper nut closely contacts lower nut as shown in Fig.-2. The nuts are fully locked by the wedge effect.

*Fig.-2: After nuts are tightened, internal stress remains distributed as composite stress of P1+P2+P3 to resist external impact.

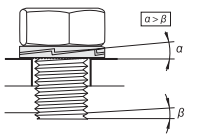
This product is to be used in pairs.



Order Example — Part Number: NLDF3

Days to Ship: 6 Days P.87

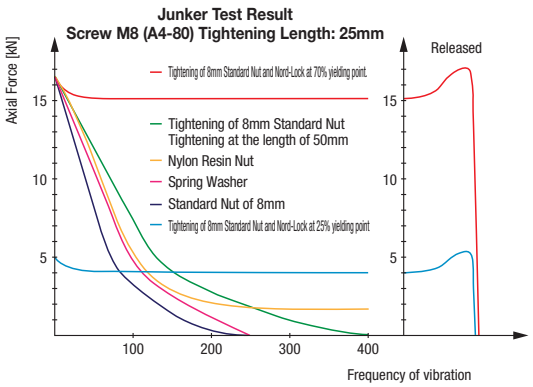
Example

Counterbore dia. does not need to be larger than the screw head.

Principle of Self-locking Washers

A pair of washers with wedge cams on one side and radial ribs on the other side each to compose a self-locking arrangement.
Cam angle (α) is set to be larger than the thread lead angle (β)
When the screw attempts to rotate loose, a force is generated by a cam member to push up and separate from the opposite cam member. The rotation is blocked by the wedge effect and the cams will not be separated by more than one thread pitch.

Proper Installation



The washers come pre-assembled in pairs (glued).
Upon reusing, please confirm the cams are not worn or cracked, and follow the installation instruction on the right. Do not use together with other washers.

Cautions on Repeated Use

NLDF can be used repeatedly. Use lubricant for repeated use.

Allowable Temperature

Temperature limit for NLDF is 500°C.
Do not use in an environment when it exceeds the temperature limit.

About mating materials

On the surface of mating materials, there will be impression marks made by the radial teeth of the washers. The hardness of the mating surfaces should not exceed the hardness of the Nord-Lock washers.

Recommended Tightening Torque and Tightening Force

Please refer to the values listed below as guidelines when securing a screw with a Nord-Lock. There is no self-locking effect when the values are far below recommended values. If the tightened torque exceeds the recommended figures, loosening the screws may become impossible or Nord-Lock may be broken.

Screw tightening torque and recommended tightening force when Self-locking Washer is used.

Express A 3,00 EUR / Piece P.88

A Express Charge of 8,10 EUR for 3 or more identical pieces.

How to Use

1.Insert the hexagon socket head cap screw (CB) into the holder cap.
2.Attach (2) holder cap to the tip of main body.
3. Attach screw tip onto the dowel pin by turning the knurled portion of shaft.
4. Slide the hammer to remove dowel pin.

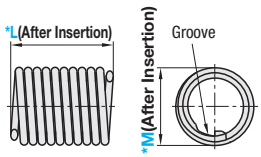
How to Handle Thread Inserts

(Fig. 1) (Fig. 2) (Fig. 3) (Fig. 4)

1. Drill a pilot hole in the work within the appropriate limit of tap pilot hole diameters shown in the above table.
   (Hole Depth > Length after Insertion+2.5xP)
2. Tap with "Taps for Inserts" (Coarse, Medium, Finish Tapping in that order), and completely remove metal chips.
3. Insert Thread Inserts to tip of sleeve of the Insert Tool (with tang on the tip side), and clip on the tang at the mandrel slot (Fig. 1). Turn the handle and insert Thread Insert into the guide of thread part on the tool tip. Set it so that the insert does not protrude more than the sleeve tip (leaving 1 or 2 pitches).
4. Turn the handle to install Thread Inserts by positioning the insert tool perpendicular to the work (Fig. 2). Check the insertion condition from the opening of the sleeve tip. Remove the tool from the work when insertion is complete.
   * Inserting while pressing the handle hard in the insertion direction causes damages such as skipped threads. Always turn the handle lightly in the horizontal direction. Do not reverse the rotation during the insertion as that will cause damages.
5. After the insertion is complete, insert the tang break-off tool, and break off the tang from the notch by striking the head sharply with a hammer (Fig. 3).
6. When removing Thread Inserts, press an Insert Removal Tool onto the insert, and slowly turn counterclockwise to remove it (Fig. 4). When reinserting the Insert into the removed hole, use special tap again before inserting.

Tangless Inserts / Self-Tapping Inserts
-Slotted-



Cost-saving box package is available when large quantity is required. ☞P.172

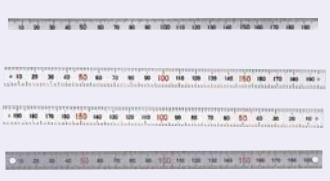
■Features of Self-Tapping Inserts
- Slotted tap inserts with both external and internal threads
This fastener components reinforce relatively-low mechanical thread strength and allow skipping of the pre-tapping.

■Machining Procedure and Precautions for Use
1. Drill a pilot hole in the work within the appropriate limit of tap pilot hole diameters shown in the above table. When the tapped material has high hardness, drill a pilot hole of slightly larger diameter within the range.
2. With the slot facing down, fit the self-tapping insert all the way onto the tip of the hand tool (Fig. 1). Put the insert vertically into the pilot hole by turning the tool handle. (Fig 2)
   * If the pilot hole diameter is too small, it may cause a lag in pitch or looseness, and can damage tools.
   * At the start of tapping (1 to 2 pitches), check to see if the tools are aligned straight with the pilot hole.
   If the insert is going in slanted,, stop turning the tool and re-align. Realignment after inserting almost halfway (1/3 to 1/2) is too late. Do not turn the handle in reverse during the insertion as that will cause defects
3. When the insert has arrived at a predetermined depth, tighten the hexagon part of the tool with a wrench, and then turn the handle counterclockwise to separate the tool from the work. (Fig. 3)
   * Further turning a tool when already in contact with the work can damage the self-tapping part of the insert and result in a loose fit.
4. Before the first use, please select a proper pilot hole dia. through trials.

(Fig. 1) (Fig. 2) (Fig. 3)

■How to use a bolt and a nut
Use a hexagon nut and a Self-Tapping Insert in a double-nut arrangement as shown below. Do not obstruct the first thread or the 3-holes with the bolt. After the insertion is complete, loosen the hex nut while holding the bolt head.



Scale Plates and Pointer Plates

* Use as measuring tools for slide adjustment of machines and equipment.

Properties of Magnets

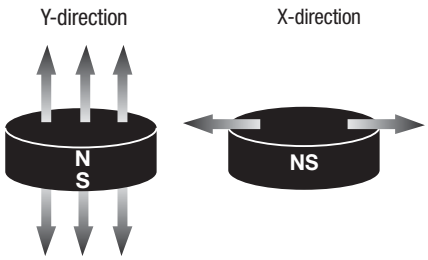
Features

Neodymium Magnet	Capable of highest magnetic force of all materials currently available. High forces can be obtained from small volume. One of the disadvantages is tendency to rust easily. Called "Rare Earth Magnets" along with the cobalt magnets.
Samarium-Cobalt Magnet	Full name is Samarium-Cobalt Magnet, and is second in strength following the Neodymium Iron Boron magnets. Advantages are: resistance to rusting and high temperatures. Brittle and mechanically low in strength, requiring careful handling.
Ferrite Magnet	This material has low magnetic force but has relatively high coercive force, thus suffers little demagnetization. Mechanical strength is low and brittle, and caution is required for handling.
Alnico Magnet	It has superior property against temperature and mechanical strength. Disadvantage is its likeliness to demagnetize.

Cautions

- Since these materials are very fragile, no alteration is available.
- Magnet is susceptible to impact. Be careful during installation.
- Magnetic fields may cause negative effects on items listed below.
  Electronic devices such as cellular phones, PCs and watches
  Medical electronics such as pacemakers
- The magnetic force may deteriorate when used at above maximum operating temperature.
- Strong impact or alteration on magnets may cause magnetic force losses.
- To prevent direct impacts on magnets, keep 0.1~0.3mm distance from the body.

Characteristic Values



Item	Increment	Neodymium Magnet	Heat-resistant Neodymium Magnets	Samarium-Cobalt Magnet	Ferrite Magnet	Alnico Magnet
Residual Flux Density	T	1.26 or More	1.23 or More	1.03 or More	0.385 or More	1.25 or More

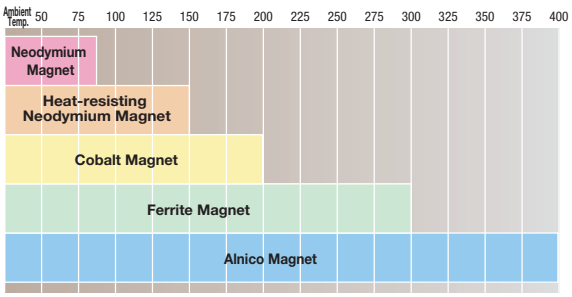
Density	g/cm³	7.3~7.5	7.3~7.5	8.3	4.8~5.0	7.3~7.4
Curie Temperature	°C	310	340~400	710	450~460	850
Vickers Hardness	HV	500~600	500~600	600	480~580	650
* Max. Operating Temp.	°C	80	150	200	300	400

Listed values are for reference, not guaranteed.

* When L/D=0.7

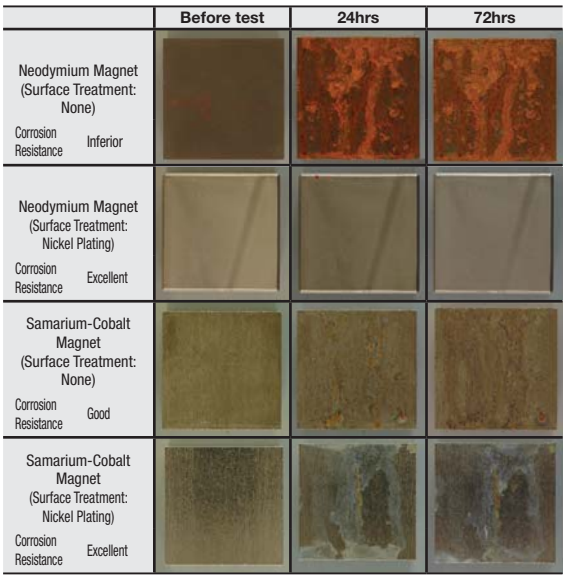


Magnetization Direction:

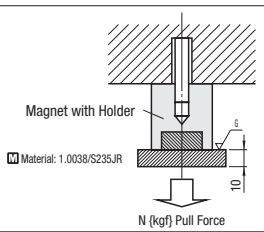
Property Order

Item	Reference Characteristic Values	Weak ← → Strong			
Magnetic force	Residual Flux Density, Maximum Energy Product	Ferrite	Alnico	Cobalt	Neodymium Heat-resisting Neodymium
Repeat Absorption	Coercive Force	Alnico	Ferrite	Cobalt	Neodymium Heat-resisting Neodymium
Mechanical Strength	-	Cobalt	Ferrite	Neodymium Heat-resisting Neodymium	Alnico
Corrosion Resistance	-	Neodymium Heat-resisting Neodymium	Alnico	Cobalt	Ferrite
High Temperature Stability	Curie Temperature Max. Operating Temperature	Neodymium Heat-resisting Neodymium	Cobalt	Ferrite	Alnico

Comparison of Heat Resistance Temperature



* When L/D=0.7



* Maximum operating temperature for magnets alone.

Comparison on Corrosion Resistance

In compliance with humidity cabinet test JIS K 5400 9.2.2. Experiment temperature is 70°C, while standard temperature is 50°C.
The spot pattern seen on cobalt magnets is of water drops.

Features of Magnets
Load {kgf} = Load Nx0.101972
Don't apply alteration on magnets to avoid possible damage.
Strong impact on magnets may cause damages.
Magnets with Holders have 0.1~0.3mm steps to protect the magnet surface from impacts.
The magnet and holder are fixed by adhesive.
* "Attraction Force" indicates the power of lifting the material 1.0038/S235JR (polished surface of 10mm thick plate).

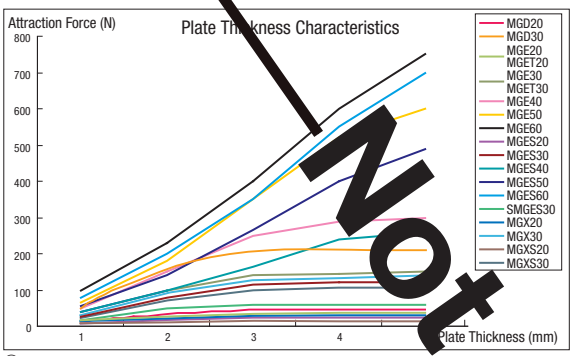
Example ■Countermeasure for residual magnetism
Spring Plungers NPJS (P.-1477 1).

Spring force separates objects from the magnet stuck by residual magnetism.

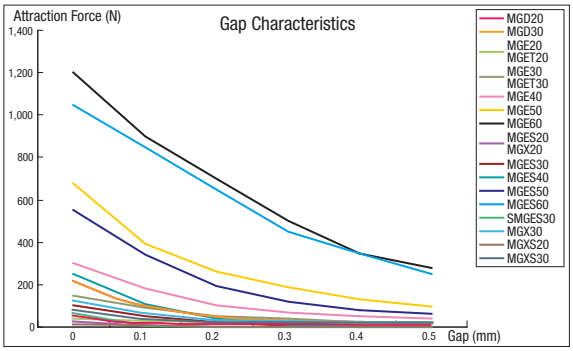
■More Options
Example of installation of a Screw with nose FCBBG (P.2[illegible]7)

Can magnetize Screw with nose and pickup objects with the end.

See the page on the right for features, use conditions and cautions on Electromagnet Holders.



Not Available

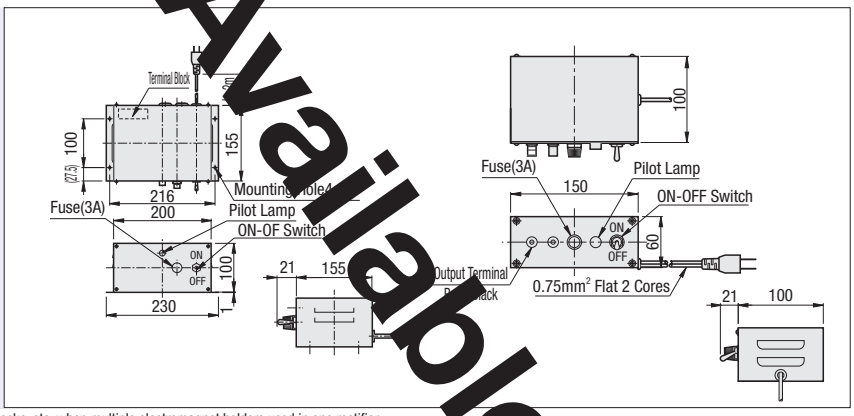


Features, Operating Conditions and Precautions for Use for Electromagnet Holders

■Features
- Electromagnet holder with a coil wound around the attraction body (polarity revrsible).
- Can be used on end effectors of robos to carry small work pieces.
- Electrical control can be utilized for turning ON / OFF and remote controlling of the magnet.
- For power supply, a rectifier is necessary. Select a rectifier for relevant voltage.
  (Applicable rectifier: MGEC)

■Condition of Use
- Installation Location: Indoor (Ambient temperature: -10~40°C)
- Applicable metal subect surface: Flat (No protrusions, holes, etc.)
  * Use entire holder surface for attraction.
- Duty Ratio: Continuous (100%ED)

■Precautions for Use
- Attraction force of electromagnetic holder may decrease considerably depending on condition of use.
  (1) Plate Thickness : Attraction force decreases as plate thickness decreases.
  (2) Gap : Attraction force decreases as gap increases between the attraction side of magnet and the object.
  (3) Material : Attraction force shown is based on 1.0038/S235JR.
  (4) Surface of attracted object: Attraction force decreases if the object surface is rough.
  (5) Coil Heating : Attraction force decreases as the excited electromagnet coil temperature rises. Decrease rate is 10 to 20% (approx.).
- Maximum attraction force shown is for subject material of 1.0038/S235JR (1018) STKM (polished surface, 50mm thick plate).
- There will be some residual magnetism after the power is turned OFF.



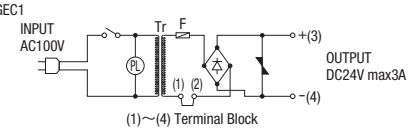
Reference graph indicating attraction force saturation. Usable up to "Maximum Attraction Force (N)".
"Plate Thickness Characteristics" graph shows the relationship of attraction force vs. subject metal thickness (polished 1.0038/S235JR), and "Gap Characteristics" graph shows the gap distance of attraction surface vs. subject metal.

■Rectifiers for Electromagnetic Holders

RoHS

Work in parallel connections using with terminal blocks, etc. when multiple electromagnet holders used in one rectifier.
Max. allowable electromagnet holders for one rectifier = Max. allowable current of the rectifier (3A) / Operating current of electromagnet holders
(Electromagnet holders operating current may vary with models and sizes. Refer to "Current (A)" in the table on the left page.)

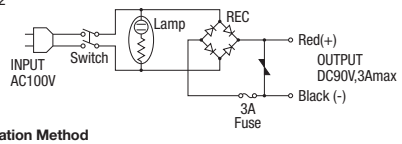
Part Number Type	Part Number No.	Input Voltage	Output Voltage DC (V)	Max. Allowable Current (A)	Weight (kg)	€ Unit Price
	1	Single Phase AC100V	24	3	3.5	
	2		90		1	



Order Example — Part Number

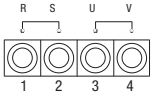
Days to Ship — 10 Days

■Features
- Rectifies input AC source into DC. Used as a power supply for the electromagnet holder.



■Circuit

●MGEC1



(1)~(4) Terminal Block

•MGEC2

■Interconnection

•MGEC1

Single phase 24V
R, S — Jumper Wire (Removed for external control)
U, V — Electromagnet Holder Connection

1: Before wiring, remove the rear cover.
2: Connect leads from electromagnet holder to terminals 3 and 4 of the rectifier unit.
For remote ON/OFF operations, remove the jumper wire from terminals 1 and 2 and replace with signal input leads.
3: Pull out each wire from filmed grommet, and tighten the cover with screws.

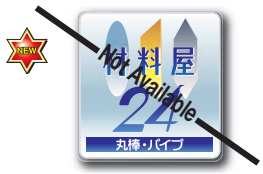
●MGEC2

Single phase 90V
U, V — Electromagnet Holder Connection

1: Connect leads of electromagnetic holder to red and black terminals located on the front terminal block.

Provide proper GFCI devices to avoid fire and smoke that may be caused by short circuited electromagnet holders.
Electromagnet will not operate properly unless correctly wired.

■Operation Method
1: ON/OFF operated with the switch on the front side of the rectifier unit.
- Pilot lamp turns on-off
- Electromagnet holder will be excited, and the work will be attracted / released.



2-1: Turn the ON/OFF switch to ON when operating it remotely.
(Pilot lamp is always on.)

2-2: ON/OFF is operated remotely.
[ON Operation]
- Terminal 1 and 2 on terminal block are closed. (Electromagnet holder will be excited, and the work will be attracted.)

[OFF Operation]
- Terminal 1 and 2 on terminal block are opened. (Excitation of an electromagnetic holder stops, and the work will be released.)

"Material Shop 24 Round Bars and Hollows Website" Information

■"Material Shop 24 Round Bars and Hollows Website" Overview

[Website Details]

MISUMI part numbers, lead times and prices are automatically generated after selecting the specifications, and the order can be placed directly from the web site.

(?)Products with the symbol shown on the left are available on the "Material Shop 24 Round Bars and Hollows Website".

"Material Shop 24 Round Bars and Hollows Website"

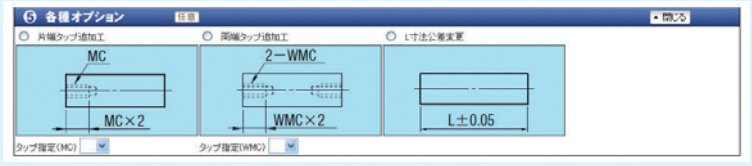
(?)"Material Shop 24 Round Bars and Hollows Website" is scheduled to open in June of 2010.

MISUMI part numbers, lead time and prices are all displayed only in 6 sec.

[Details of Material Shop 24 Round Bars and Hollows]

Metallic: 43 different material round bars, hex rods and pipes are all lined up!

Resin: Selectable from 17 different material round bars and pipes!



Urethane: Selectable from 15 different varieties (material and hardness) of round bars and pipes!

Not Available

[Selection Steps]

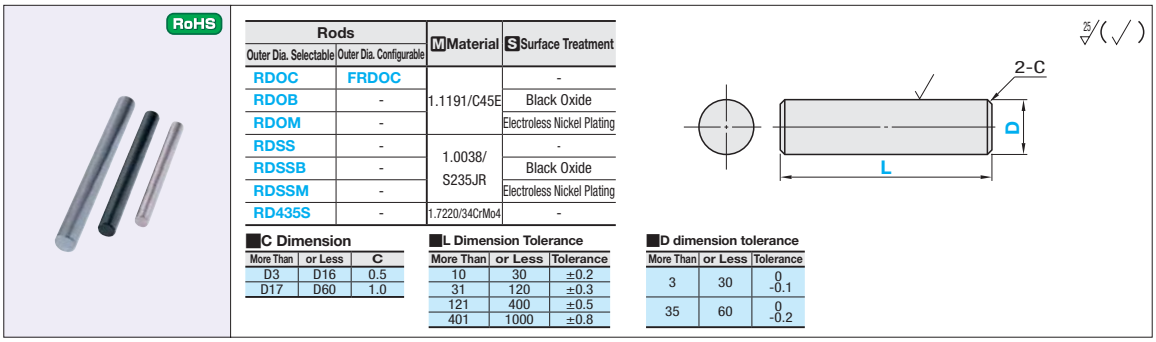
1 Select type.
Selectable from five shapes of round bars and pipes.

2 Select material.
43 material types in all!
A wide variety of product lineup meets various purposes.

3 Select manufacturing and finishing methods.

4 Input Dimensions
Length (L) is configurable up to 2000mm in 1mm increment.
Reducing stocks and saving time for cutting work pieces.

5 Various Options
Various options such as One End Female Thread and Both Ends Female Thread can be selected.
###
*Applicable only to products with selectable options.



6 Input Quantity / Estimate

7 Auto Product Extraction
MISUMI part numbers, lead times and prices are all automatically generated.

8 How To Order
(There are following three ordering methods to choose from.)
-Ordering Through WOS
(For WOS, please see**P.95###**
-Print FAX Ordering Sheet
-Download CSV data

Springs
-Overview-

* The heat resistance temperatures shown in the tables are for the spring wire material.
The data are obtained in room temperature. Allowable load and durability may decrease depending on the various conditions under higher temperature.

* The load range shown is for material JIS SWP-A.
* Values for the Tension Springs Configurable Types are for coil length = 50.

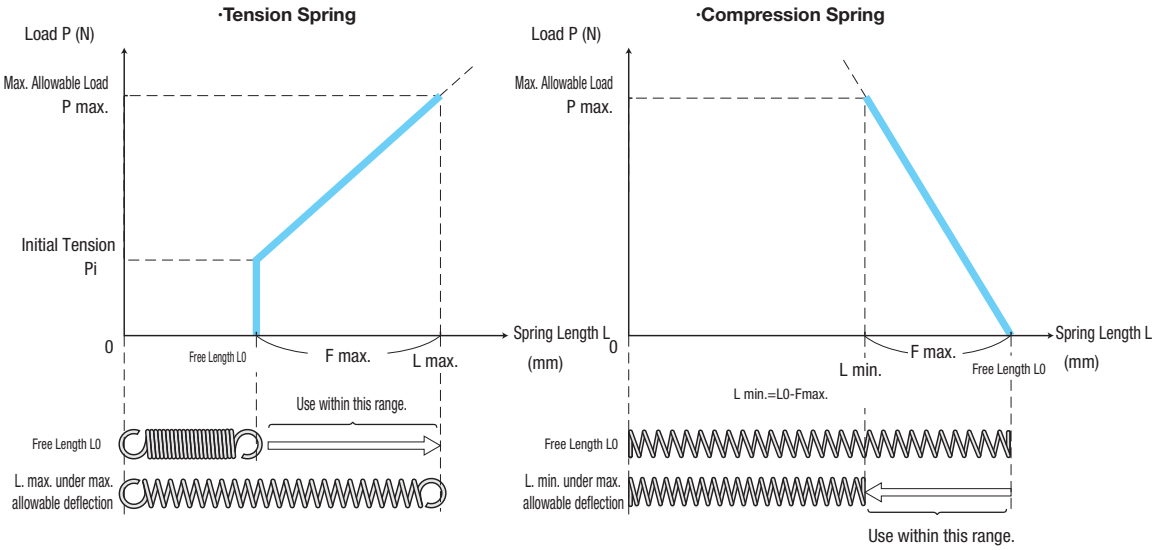
■Tension Springs

Load P[N] = Initial Tension Pi[N]+(Spring Constant k[N/mm]x Deflection F[mm])

- MISUMI tension springs (except for Specified Types) are standardized to maintain the maximum load constantly to the same diameter. Produced based on the maximum load value, the initial tension and spring constant are reference values.
- Use the springs within the range of the allowable deflection F max.(mm). Using at more than the allowable deflection may cause deformation or failure after a few uses. Also, do not extend tension springs more than its allowable deflection during the installation.
- It is recommended to use the tension springs (AW_ · BW_ · AWFM · WFSP · LWS · LWSH) under ambient temperature (at 40° C or less). Load value attenuates when tension springs are used in temperature higher than 40°C, although it depends on other conditions.



■Round Wire Coil Springs / Irregular Shaped Wire Coil Springs *

Load P[N] = (Spring Constant k[N/mm]x Deflection F[mm])

- MISUMI round wire compression springs are standardized to maintain the spring constant constantly to the same diameter. The tolerance of spring constant is ±10%.
- Use the springs within the range of the allowable deflection F max.(mm). Using at higher than the allowable deflection values may cause deformation or failure.
- The values of solid length are for reference only. Using it compressed to the solid length may cause deformation or break after a few uses.
- The round coil springs are manufactured based on the following diametral tolerance priorities given. Inner Diameter Referenced Type: Inner diametral tolerance prioritized, Outer Diameter Referenced Type: Outer diametral tolerance prioritized.
- Round wire coil springs (W_, NW_, FW_, U_ and FU_) are recommended to be used under room temperature (40°C or less). When used under higher temperature than 40°C, the load values may decrease depending on the conditions. (Heat Resistant springs are listed on "Standard Components for Plastic Mold".)

* Irregular shaped wire coil springs are listed on "Standard Components for Press Dies" and "Standard Components for Plastic Mold".

- Reference maximum elongation and standard spring constant are the values when S Dimension is 50. For other dimensions, use the formula below for calculation.

- Max. Elongation

$$\text{Max. Elongation (mm)} = \frac{\text{Configurable S Dim.}}{\text{50 (Reference S Dim.)}} \times \text{Reference Max. Elongation}$$

- Spring Constant

$$\text{Spring Constant (N/mm)} = \frac{\text{50 (Reference S Dim.)}}{\text{Configurable S Dim.}} \times \text{Standard Spring Constant}$$

Accuracy Standards

- D Dimension Tolerance

D/d*1	Tolerance
8 or less	±1.5% of D dimension (Min. ±0.2mm)
8~20	±2% of D dimension (Min. ±0.3mm)

*1D/d = Spring Index

- S Dimension Tolerance

When d≤0.5, ±2 x Wire Dia.
(Ex: When d=0.3, ±0.6)
When d≥0.6, ± Wire Dia.
(Ex: When d=1.0, ±1.0)

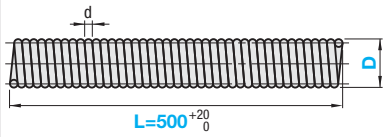
For orders larger than indicated quantity, please request a quotation.

■Features

Being separate from the spring body, the hook can move flexibly as desired. In addition, direct contact between the spring and the hook does not generate bending stress in the hook, which is not possible with conventional tension springs.

Tension Springs / Hooks



-Long, Medium Load · Hook Insertion-

	18	15.7		2.9	4.6			25		2.9	5.2		

Please choose the same number as D Dimension of LWS or LUS.

■How to Use

Springs can be cut to desired lengths.
Use the hook HBFKN by inserting the springs in its five holes.
Do not exceed 50% of the max. deflection for full length L1 when cutting.

Spring Constant should be L/L1 times.

Order Example — Part Number: LWS10-500 HBFKN10

Days to Ship: 6 Days / 2 Days P.88

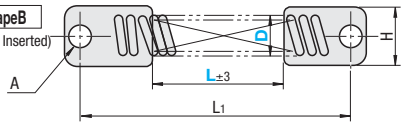
■Tension Springs -Hook Insertion-



Type	Material Springs	Material Hooks	Surface Treatment Hooks
LWSH	JIS SWP-A	1.0330/DC01	Black Oxide
LUSH	1.4301-WPB	1.4301/X5CrNi18-10	-

- JIS SWP-A comes with the 1.0330/DC01 hook, and 1.4301/X5CrNi18-10-WPB comes with the 1.4301/X5CrNi18-10 hook.
- Load Formula — Load = Spring Constant x Deflection mm + Initial Tension
- The springs for LWSH and LUSH are different from that for LWS and LUS.

ShapeA (One End Inserted)

ShapeB (Both Ends Inserted)

Part Number Type	Shape	D	L 10 mm Increment	Wire Dia. dmm	A	H	Max. Deflection %	L1	Initial Tension (N) LWSH	Initial Tension (N) LUSH	Standard Spring Constant (N/mm) LWSH	Standard Spring Constant (N/mm) LUSH

		18		2.3		25			18.7	26.18	0.850	0.753

Standard Spring Constant
Standard spring constant is the value when the L Dimension is 200 on shape B.
For other dimensions, use the formula below for calculation.

$$\text{Spring Constant (N/mm)} = \frac{200\ (\text{Reference L Dimension})}{\text{Configurable L Dimension}} \times \text{Standard Spring Constant}$$

Ex. LWSHB-8-400
0.0725(N/mm)= $\frac{200}{400}$ x0.145
kgf=Nx0.101972

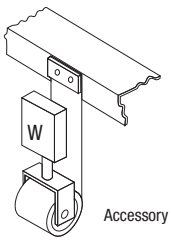
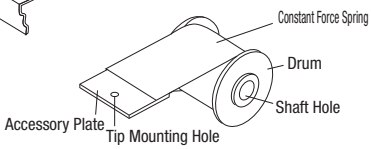
Constant Force Springs
-Overview-

Constant Force Spring:
- A long strip of material that is wound into a role. When the strip is extended the inherent stress resists the loading force at a constant rate.

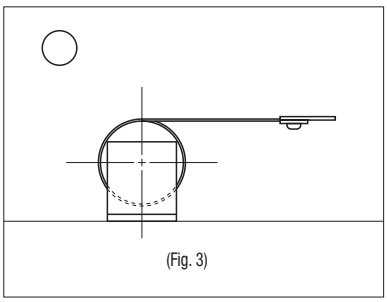


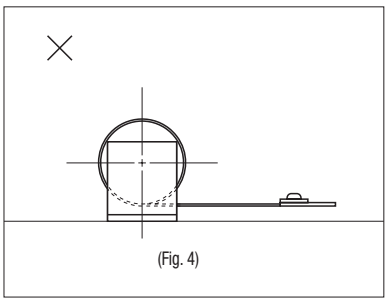
Features
- Once it reaches the maximum load the resistance is constant regardless of the stroke. (The drums reach the max.loads only after a half rotation.)
- Constant Force Springs are extremely compact compared to conventional wire springs because long stroke can be held in small drums.



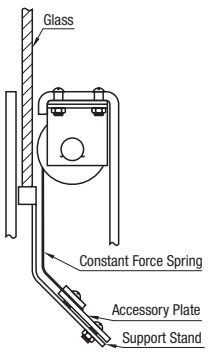
How to Use
1. Constant force spring is mounted to a drum and an accessory plate is attached to the end. The side on which a shaft goes through the drum is regarded as one end and the accessory plate side as the other end.
2. Mount with screws using mounting holes of the accessory plate.
3. Can be used in either way of fixing the body and pulling out the accessory plate (Fig.1) or fixing the accessory plate and pulling out the body (Fig.2).
4. Use more than one when the output isn't enough.

(Fig. 1)





(Fig. 2)



Cautions on Use
1. Springs are coiled around a drum without a stopper inside. Do not pull out the stroke beyond the specified length: the spring may come off of the drum.
2. If a suitable load constant force spring can not be found select a value one step higher and adjust using a counterweight on the mating load.
3. Although the strokes available are only three types 500mm 1000mm and 1500mm they can be used even with extra length if it's within the stroke range.
4. Durability is as shown in specification table. A set of extension and contraction is counted as one cycle. If durability expectancy is exceeded load capacity may decrease and cracks may appear partly on the spring surface.
   Continuous use under such condition is dangerous. If used in pairs both will reach the end of their service life at the same time. Please replace both of them at the same time.

Cautions on Installation
1. Make sure the spring doesn't contact other structures.
2. Spring draw direction should be perpendicular to the shaft axis.
3. Make sure a spring doesn't contact the accessory plate when retracting.
4. Set the spring so that it can be pulled out horizontally at any time in order to avoid deflection (bending).
5. If drum and shaft do not rotate smoothly the spring will deteriorate due to excessive force.
6. When using brackets orient in the position as shown in Fig. 3. Orienting in the position as shown in Fig. 4 may cause the spring to contact the brackets and allow foreign objects such as dust inside. This will deteriorate the spring.

(Fig. 3)

(Fig. 4)

- Load Calculation Method: Load = Spring Constant x Deflection
(Int'l Unit)N=N/mmxFmm
kgf=kgf/mmxFmm
(kgf=Nx0.101972)

(?)Both ends of WY Type springs are not ground.
(?)The values of solid length are for reference only.
There may be some variations depending on the lot.
(?)Operation frequency: One million times
(?)Product Overview P.307
(?)How to use coil springs and precautions P.308

WR: Fmax. (Allowable Deflection) = L x 60%

- Load Calculation Method: Load = Spring Constant x Deflection
(Int'l Unit)N=N/mmxFmm
kgf=kgf/mmxFmm
(kgf=Nx0.101972)

Both ends of * marked WL Type springs are not ground.
The values of solid length are for reference only.
There may be some variations depending on the lot.
Operation frequency: One million times
Product Overview P.307
How to use coil springs and precautions P.308

Round Wire Springs

-WT · WM Outer Diameter Referenced-

- Load Calculation Method: Load = Spring Constant x Deflection
  (Int'l Unit)N=N/mmxFmm
  kgf=kgf/mmxFmm
  (kgf=Nx0.101972)

The values of solid length are for reference only.
There may be some variations depending on the lot.

Operation frequency: One million times

Product Overview P.307

How to use coil springs and precautions P.308

Allowable Deflection of (L) Size

WH5-30Fmax.= L x 25%
WH5-35Fmax.= L x 25%
WH5-40Fmax.= L x 22%
WH6-45Fmax.= L x 25%
WH6-50Fmax.= L x 20%
WH6-55Fmax.= L x 26%
WH6-60Fmax.= L x 23%
WH6-65Fmax.= L x 21%
WH6-70Fmax.= L x 21%
WH8-65Fmax.= L x 26%
WH8-70Fmax.= L x 27%
WH18 -90Fmax.= L x 29%
WH18 - 100Fmax.= L x 24%
WH22 -90Fmax.= L x 29%
WH22 - 100Fmax.= L x 26%

Both ends of * marked WH Type springs are not ground.

WH
WB

Spring Constant ±10%
Outer Diameter D Ø10 or less $^{0}_{-0.5}$mm
Ø12 or more $^{0}_{-0.8}$mm
Free length L 50 or less ±1.5mm
55 or more±2mm

RoHS

M Material: JIS SWP-A

Spring Constant

D12 and 14 for WY Type and D12,14 and 20 for WT Type are not available.

- Load Calculation Method: Load = Spring Constant x Deflection
(Int'l Unit)N=N/mmxFmm
kgf=kgf/mmxFmm
(kgf=Nx0.101972)

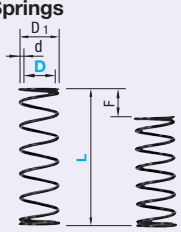
Both ends of * marked WB Type springs are not ground.
The values of solid length are for reference only.
There may be some variations depending on the lot.
Operation frequency: One million times
Product Overview P.307
How to use coil springs and precautions P.308

Round Wire Springs
-Inner Diameter Referenced-

CAD Data

For WP (Long Type), refer to Standard Components for Press Molds.

Round Wire Springs



NWL NWM

Material: Spring Steel (JIS SWP-A)

VUR

Material: 1.4301/X5CrNi18-10-WPB

RoHS

Spring Constant ±10%

Inner Dia. D
- NWL · NWM
  - Ø8.5 or less ±0.3
  - Ø10.6 or more ±0.4mm
- VUR
  - Ø8 or less $^{+0.6}_{+0.1}$
  - Ø10 or more $^{+0.8}_{+0.1}$

Free length L: 50 or less ±1; 60 or more ±2

Order Example: Part Number NWL6.5-50

	Price List	5%	10%

Features: For round wire springs, inner diameter is used as a base to keep load constant.
- Load Calculation Method: Load = Spring Constant x Deflection
  - (Int'l Unit) N = N/mmxFmm
  - kgf=kgf/mmxFmm
  - (kgf=Nx0.101972)

The values of solid length are for reference only. There may be some variations depending on the lot.

Operation frequency: One million times

NWL : Fmax. (Allowable Deflection) = L x 40%

FUT	F=Lx40%	

(1) Use within the range of allowable deflection %.
(2) No grinding on both ends for d less than 0.9.
(3) P is for reference only.

<How to Calculate Spring Constant>

$$\text{Spring Constant} = \frac{\text{Max.Load (N(kgf))}}{\text{Lx Allowable Deflection (\%)}}$$

D Tolerance	Ø5~14	±0.3
	Ø16~20	±0.4

Shock Absorbers -Oil Type-

-Overview-

■Shock Absorbers -Oil Type-

For this system, oil is mainly utilized. Compared with other cushioning materials (rubber, spring, air etc.), they are compact and capable of repeatedly absorbing large impact energy softly without rebound.
Internal structure and basic principle of oil type shock absorbers are shown as follows.
When an object collides with a piston rod, the oil in the pressure chamber is compressed by a piston.
The clearance between inner tube and piston is so small that compressed oil is forced out of the orifices.
At this point, the impact energy is converted into heat energy by dynamic resistance.

The piston rod sinks into the shock absorber body so that the oil equal in volume to the piston moves into the accumulator.
This mechanism provides an ideal shock absorbing action.
Various absorption characteristics can be obtained depending on the number and size of orifices. (Refer to classification according to absorption characteristics structures **P.342**.)
Please note that when the wrong collision speed is selected, some abnormal reaction may occur during collision or the impact energy may not be absorbed in an ideal manner.

■Procedure of Selection

(1) Calculation of Inertial Energy (E1)

According to examples of calculation for selection, calculate inertial energy based on collision mass (m), collision velocity (V), moment of inertia (I) and collision angular velocity (ω).

(2) Temporary Decision of Absorber Stroke

Obtain the temporary stroke (S') based on Fig. 1.

(3) Calculation of Additional Energy (E2')

Confirm whether there is propulsion (F) or not and calculate the additional energy according to examples of calculation for selection.

(4) Calculation of Total Energy

Calculate the total energy from the sum of inertial energy (E1) and additional energy (E2').

(5) Check Mass

According to examples of calculation for selection, calculate the equivalent mass and confirm whether it is less than the max. equivalent mass in the catalog (me').

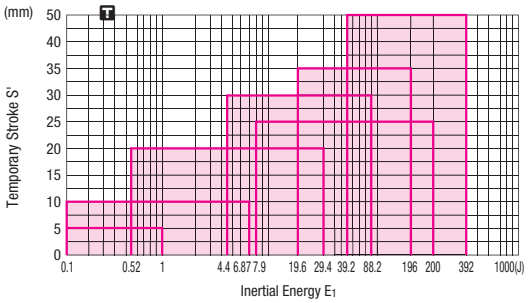
(6) Select Absorption Characteristics Structures from Energy Ratio

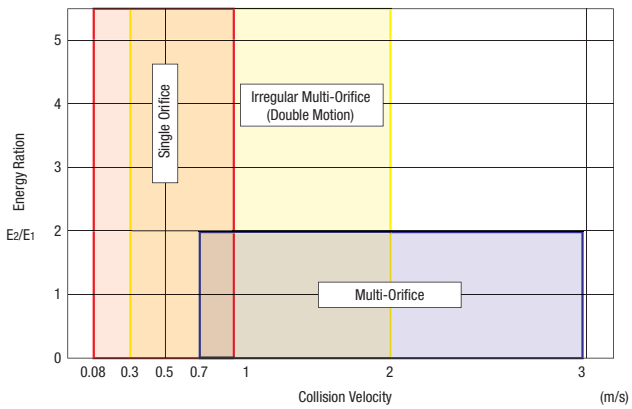
Select an orifice type from Fig 2 temporarily.

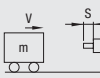
(7) Check Max. Absorbed Energy per Minute

Calculate the energy (ET) corresponding to one minute from the operating cycle (time/min) and total energy, and confirm whether or not the value is within the operating range.

Fig.1 Calculate the temporary stroke S' with the Inertial Energy E1.
(Adjustable · Fixed Type)







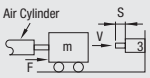


Fig. 2 Select the orifice type from energy ratio (additional energy E2 · inertial energy E1)

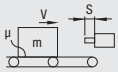
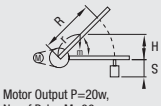
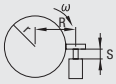
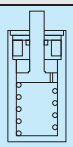


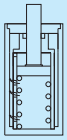


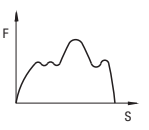


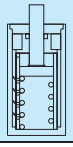
For Single, Irregular Multi, Multi Orifice Types, these are the values of The Adjustable and The Fixed Types.

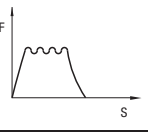
* If both Single Orifice and Multi-Orifice are applicable, select irregular Multi-Orifice.
* If both Irregular Multi-Orifice and Multi-Orifice are applicable, select Multi-Orifice.
* For Speed S Type, the collision velocity is 0.08~0.5m/s.











Examples of Calculation for Selection

	Ex.: Pure Inertial Collision (Horizontal Collision without Thrust Force)	Ex.: Horizontal Collision with Air Cylinder Thrust Force	Ex.: Soft Stop in the Cylinder Falling
Example of Use and Collision Conditions	 <Collision Conditions> m=25kg V=0.6m/s F=0N N=30 times/min	 <Collision Conditions> m=30kg V=0.6m/s N=20 times/min Air Cylinder Inner Dia. Ø40 Operating Pressure 0.5MPa	 <Collision Conditions> m=15kg V=0.2m/s N=10 times/min Air Cylinder Inner Dia. Ø25 Operating Pressure 0.5MPa
Collision Velocity V[m/s]	V=0.6m/s	V=0.6m/s	V=0.2m/s * Collision velocity V is actual measurements or 1.5~2 times the average speed.
Absorbed Energy — **Inertial Energy [J] E_1**	$E_1=\frac{mV^2}{2}=\frac{25x0.6^2}{2}=4.5J$	$E_1=\frac{mV^2}{2}=\frac{30x0.6^2}{2}=5.4J$	$E_1=\frac{mV^2}{2}=\frac{15x0.2^2}{2}=0.3J$
Absorbed Energy — **Temporary Stroke S'[mm]**	From Fig.1, S'=20mm (Select Adjustable type)	From Fig.1, S'=15mm (Select Adjustable type)	From Fig.1, S'=10mm (Select Adjustable type)
Absorbed Energy — **Additional Energy [J] E_2'**	$E_2'=0J$	Thrust of the cylinder is F=628.4N $E_2'=FxS'=628.4x0.015=9.4J$	Thrust of the cylinder is F=245.4N $E_2'=(F+mg)xS'=(245.4+15x9.8)x0.01=3.92J$
Absorbed Energy — **Total Energy E'[J]**	$E'=E_1+E_2'=4.5+0=4.5J$	$E=E1+E2'=5.4+9.4=14.8J$	$E'=E1+E2'=0.3+3.92=4.22J$
Mass [kg] me'	$me'=\frac{2xE'}{V^2}=\frac{2x4.5}{0.6^2}=25kg$	$me'=\frac{2xE}{V^2}=\frac{2x14.8}{0.6^2}=82.2kg$	$me'=\frac{2xE'}{V^2}=\frac{2x4.22}{0.2^2}=211kg$
Temporary selection	Select Adjustable type Select L from the collision velocity. Select MAC1612 from E and me'. (Stroke S=12mm)	Select Adjustable type Select Medium Speed M from the collision velocity. Select MAC2016M from E' and me'. (Stroke S=16mm)	Select Adjustable type Select Ultra Low Speed S from Fig. 2. Select MAC1612S from E' and me'. (Stroke S=12mm)
Recalculation	$E_2=0J$ $E=E_1+E_2=4.5J$ $me=\frac{2xE}{V^2}=25kg$	$E_2=FxS=10.1J$ $E=E_1+E_2=15.5J$ $me=\frac{2xE}{V^2}=86.1kg$	$E_2=(F+mg)xS=4.71J$ $E=E_1+E_2=0.3+4.71=5.01J$ $me=\frac{2xE}{V^2}=250kg$
Energy per Minute E_T	$E_T=ExN=4.5x30=135J/min$	$E_T=ExN=15.5Jx20=310J/min$	$E_T=ExN=5.01x10=50.1J/min$
Confirmation	E, me, N and E_T are OK. Select MAC1612L	E, me, N and E_T are OK. Select MAC2016M	E, me, N and E_T are OK. Select MAC1612S

* For horizontal collision without thrust force, select the orifice type only by collision velocity.

	Ex.: Horizontal Collision with Belt Conveyor Thrust Force	Ex.: Collision with synchronous motor driven load	Ex.: Horizontal Collision with Belt Conveyor Thrust Force
Example of Use and Collision Conditions	 <Collision Conditions> m=5kg V=0.5m/s N=20 times/min Dynamic Friction Coefficient μ=0.4	 <Collision Conditions> m=1kg R=0.4m r=0.3m Ø=20° N=10 times/min $I=\frac{3}{10}mr^2$ $3mr^2=0.12kgm2$ ω=5.6rad/s F=59.3N Motor Output P=20w, No. of Poles M=36 Power Supply Frequency f=50Hz, Deceleration Ratio K=20	 <Collision Conditions> $I=125.5kgm^2$ ω=1.8rad/s R=1.25m N=6 times/min T=68.6Nm

■Shock Absorbers (P.343~348) Classification according to Absorption Characteristics Structures

Structure	Adjustable *	Fixed		
Single Orifice	**S Type A Type B Type L Type**		Single orifice structure has the same resistance properties as forms of a dashed pot structure with a space between the piston and cylinder tube, a single tube structure with an orifice in the piston, and a double tube single orifice structure. Ex. Description of a single tube structure. A piston with a single orifice slides into an oil-filled cylinder tube. Because the office area is constant over the entire stroke, as the shock absorption characteristics shown in the right graph, the resistance is the largest immediately after a collision but gradually reduces speed as the stroke continues.	
Irregular Multi Orifice	**Medium Speed M Type**		In this double-tube structure, the piston slides in the inner tube. This inner tube has several orifices along the direction of strokes, and not only constant energy but energy depending on various purposes can be absorbed. It is designed to absorb kinetic energy during the first half of stroke and control speed during the second half. Therefore, it is well suited to absorb energy against air cylinder thrust.	
Multi Orifice	**High Speed H Type**		In this double-tube structure, the piston slides in the inner tube. This inner tube has several orifices along the direction of strokes. Because the orifice area becomes small gradually as the stroke speed slows down, drag remains largely constant, though the drag fluctuates like a ripple.	

* Adjustable Type No.0806M is single orifice structure and No.3625L type is multi-orifice structure.

How to Use Note the following points when using the eccentric angle adapter (For Adjustable and Fixed Type).

- It cannot be used for Cap Type shock absorbers (MAC, MAKC). Please use it for No Cap Types MAS, MAKS.
- When installing an eccentric angle adapter on a shock absorber, screw the shock absorber to the eccentric angle adapter cap and tighten it with the standard nut for shock absorbers.

Usable Max. Eccentric Angle	±10°
Replacement Interval (cycle)	1,000,000

How to Use Note the following points when using the stopper nuts (For Adjustable and Fixed Type).

- How to Attach Stopper Nuts
  For The No Cap Type, put the stopper nut out forward 0.1mm~1mm from the shock absorber body (cylinder) to the direction of the piston rod.
  For The Cap Type, put the stopper nut out forward the cap length 0.5mm~1mm from the shock absorber body (cylinder) to the direction of the piston rod.
- After installing the stopper nuts, tighten it with a Standard Nut for Shock Absorbers.

STNC and STNS cannot be used for EMACN.

A Express Charge of 5,40 EUR for 3 or more identical pieces.

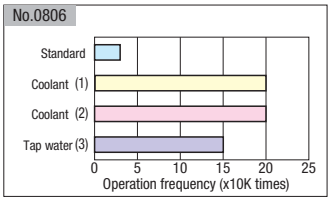
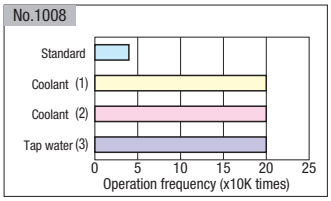
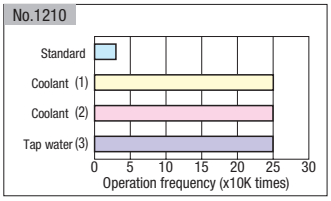
Features of Coolant-Resistant Type

-Having a structure of Protection Seals for fluid intrusions makes usable in wet conditions.
This is best suited for machine tools and related applications.
-Replacement is possible with Standard type since Mounting Outer Dia. Screw size is the same.
-Suitable for water-soluble cutting oil A1 [JIS K2241-2000], but also available for water-insoluble cutting oil or under wet conditions.
(In case of using water instead of water-soluble cutting oil, the durability may be inferior.)

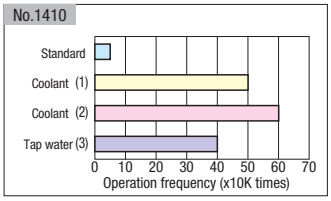


Inner Structure

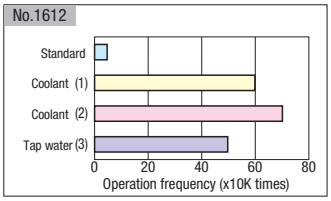




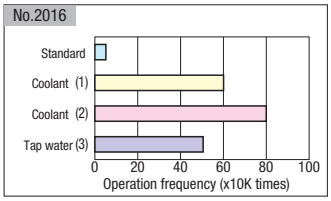
Durability Test Data (Ref.)

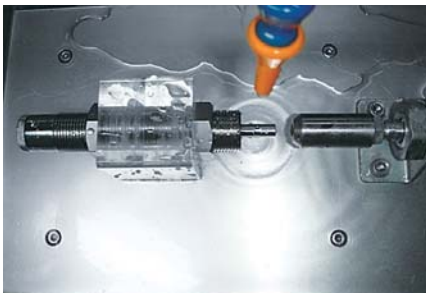


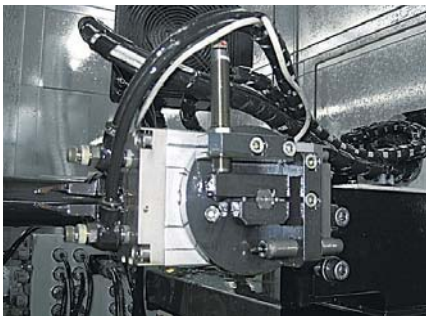
Test Condition



- Coolant (1): JIS A1 emulsion Water-soluble cutting oil
(Yushiro Chemical Industry Co., Ltd. Yushiroken FGE330 Dilution 20 times)
- Coolant (2): JIS N1 Water-Insoluble Cutting Oil
(Yushiro Chemical Industry Co., Ltd. Yushiro Oil CG8)
- (3): Tap water
- Load: Ø40 Air Cylinder (Cylinder propulsion only)
- Collision Cycle 30/min. - Dripping 4cc / min.



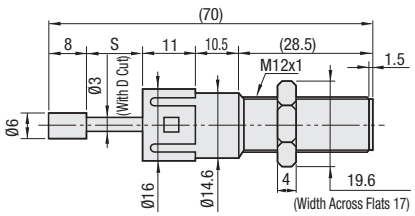




Test Scene

Example

Rotating Table Stopper [Dedicated machining equipment]



Durability results may vary depending on each test condition. Testing fluid or volume may affect the results.
Prior tests are recommended to obtain appropriate results.
If used in environments where the piston rods are kept from fluid contacts, the internal oil may be lost by premature leakage.

Gas Springs
-Overview-

Gas Springs

- High pressure gas (Nitrogen gas: non-combustible) is sealed in a cylinder, and the gas reaction force is used as spring. Because this small gas spring receive small spring constant from large initial load in spite of its size, it can be used for wide range of applications including machines, furniture, cars, office automation equipments, etc.

Features

In spite of its size and weight, large spring (reaction) force can be obtained.

Spring (reaction) force is almost constant throughout its stroke.

Can be designed as required for wide applications.

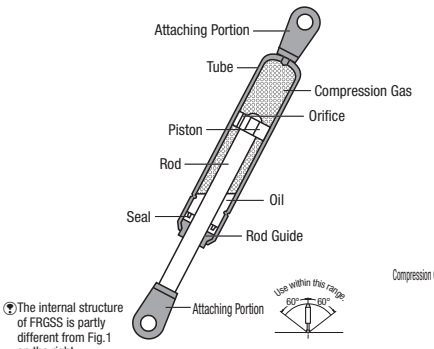

Fig.1 Gas Springs (FGS · GSS · HFGSS · FRGSS)

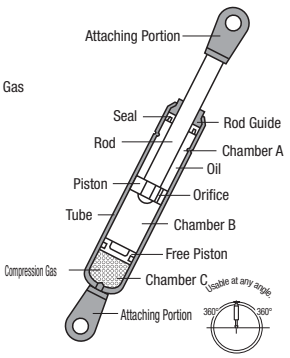

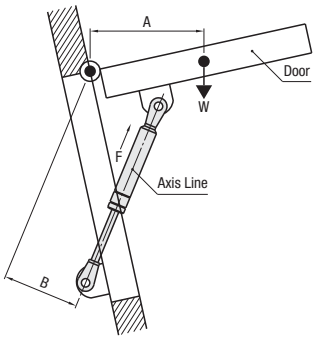

Fig.2 Gas Spring – Mounting Orientation Free Type (FGSS)

About Initial Selection

1. Calculate the necessary reaction force (F) through the following formula, then find out possible model types.

$$F = \frac{WxA}{B}$$

F : Necessary reaction force (at max. length)
W : Weight of doors, etc.
A : Horizontal distance between fulcrum (door hinge, etc.) and the center of gravity
B : Vertical distance between fulcrum (door hinge, etc.) and the axis of gas spring

2. Select Fx1.1 or more for the gas spring reaction force. Gas reaction forces may vary within about ±10%.
3. If required reaction force (Fx1.1) is larger than the reaction force at the max. length of gas spring - ( ) mm, use 2 or more springs.
4. Reaction forces are designed at 20°C. Reaction forces increases or decreases as the temperature changes.

Gas reaction force at the max. length-10 (5) mm and the max. length- mm are listed in this catalog. Since gas reaction force generally changes proportionately, if the gas reaction force on a certain stroke is required, connect the 2 points as shown in Fig3 with a straight line and read and conjecture the value on the stroke.

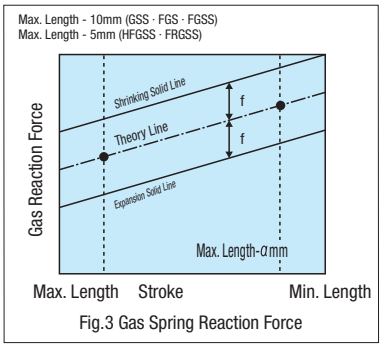

Fig.3 Gas Spring Reaction Force

f=Internal Sliding Resistance (Theoretical Value x 0.1)

About Final Selection

- Load may vary depending on door angles or gas spring mounting positions. Calculate the reaction force moment based on the subject design drawing.

Precautions for Use (for FGS, GSS, FGSS, HFGSS and FRGSS)

- Pay attention to temperature of gas springs during use. Do not store for prolonged duration. It will cause premature seal deterioration and reaction force decline. (Product temperature range: GSS, FGSS: -20°C~60°C / HFGSS: -20°C~80°C / FRGSS: -30°C~80°C)
- Gas reaction forces are slightly different among individual products and may change depending on the temperature.
- Reaction force may decrease depending on the operating condition and times of use. Please replace it when it cannot reach the necessary reaction force.
- Do not store or use in the environments where the rod rusts or in chemical atmosphere. Furthermore, do not paint the gas spring.
- Do not damage the cylinders and rods. Furthermore, do not apply forces like bending load and torsion etc.
- Do not extend gas springs beyond its max. length. Even in the max. stroke (during compression), it must remain about 10 mm away from the stroke end. Moreover, do not extend and compress at high speed (with 1m/s or more).
- Use FGS and GSS with the cylinder side up and the rod side down, so that internal oil protects the rubber seal. For FGS, GSS and FRGSS, do not tilt more than 60 degrees. When storing temporarily with no choice, also do not tilt more than 60 degrees.
- Although there is no restriction in the use angle for the FGSS and HFGSS, rod downward is recommended.

Features: Mounting Orientation Free Gas Springs (FGSS)

- Gas Springs of Free Attachable

1. Nitrogen gas (non-combustible) is sealed in the gas chamber C with a free moving piston intervening, and gas reaction force is used as a spring.
2. Gas chamber C has a constant reaction force in extending direction since it pressurizes oil chamber AB. Therefore the size of reaction force depends on the inner pressure of gas chamber C.
3. When rod moves from the predetermined position, oil in chamber AB moves through orifice hole of the piston.
4. The rod volume change in the cylinder is adjusted by the change of gas chamber C.

Alterations ■ Dust Boots Mounting P.352

Gas Springs / Mounting Brackets for Gas Springs / Dust Boots

-Mounting Orientation Limited Type-

FGS

Operation Temperature: -20~60°C
For No.15049, operating temperature should be 0~60°C.

M Material:
Cylinders: 1.0034/S205G2T
(JIS STKM Hollows for Machine Structural Use)
Rod :1.1151/C22E
Bushings : Polyacetal Resin (White)
Gas : Nitrogen Gas (N2)

S Surface Treatment:
Cylinders : Baking Finish (Black Matt)
Rod : Hard Chrome Plating

Material Shop 24 Urethane, Rubbers, Sponge Sheets Site

[Contents]
When materials are selected, product numbers, Delivery Time and Price are displayed at the same time.
Orders can be placed on the same page.

[Selection Steps]

Website for both Sheets & Round Bars / Hollows selection will open in June 2010!

Not Available

STEP 1 Select materials.

Urethane 6 materials, 15 types (hardness)
Rubbers 22 materials, 29 types (hardness)
Sponges 10 materials, 12 types (hardness, color)
Wide varieties are available from general-purpose materials to high-performance materials!!

Easy selection with a simple guidance!

STEP 2 Select adhesives and hole machining

Oil-resistant adhesives are available as an alternative!
Through Hole and Counterbore Hole are selectable!

Wide selections in accordance with the mounting method or the intended use!

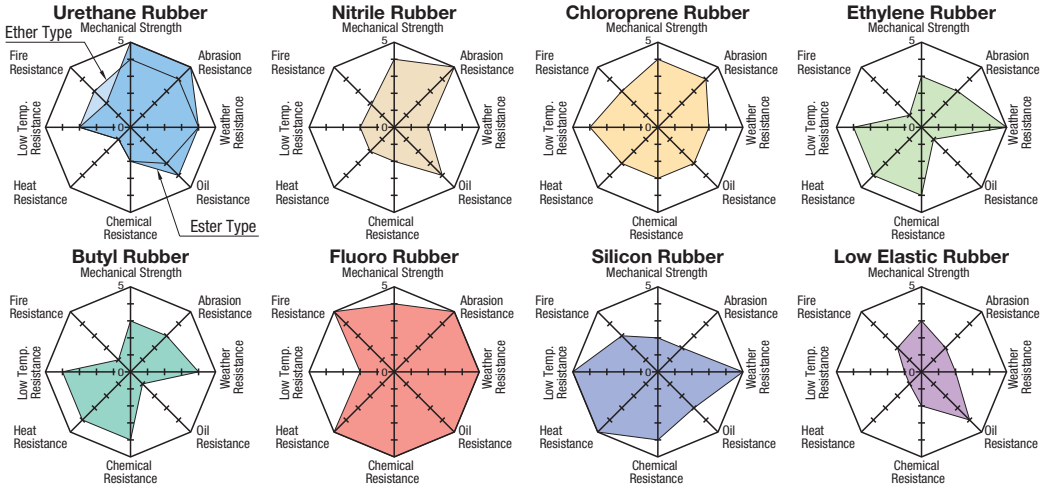
STEP 3 Input sizes and quantities

Various width or length such as 1000mm long size are available, which are not covered in Mechanical Standard Components for Factory Automation Catalog!!

Urethane is selectable up to 80mm thickness, which was up to 30mm previously!

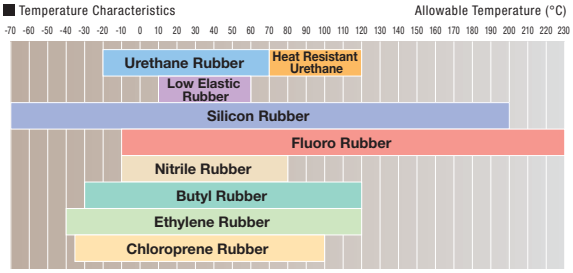
Quotation / Product number Created

Rubber Properties



Features

Urethane	Excels in mechanical strength. Weak in heat and chemical resistance. Wide range of hardness variations.
Nitrile (NBR)	Excels in abrasion resistance and oil resistance, and economical. Inferior in weather resistance. Avoid using in areas where it may be exposed to direct sunlight or around ozone-generating electrical devices.
Chloroprene (CR)	Well-balanced in properties and economical.
Ethylene (EPDM Synthetic Rubber)	Excels in weather resistance and economical. Inferior in oil resistance and fire resistance.
Butyl (IIR)	Excels in weather resistance and airtightness. Suited for inner tube of air tire. Inferior in oil resistance and fire resistance.
Fluorine (FPM)	Excels in most properties.
Silicon (SI)	Excels in heat resistance. Inferior in mechanical strength.
Low Elastic (Hanenaito®)	Excels in shock absorption and oil resistance. Inferior in heat resistance and low temperature resistance.



Property Order

Item	Weak → Strong

Hard

Soft

-Margin of error: ±5

Indication of Hardness

Three hardness categories are used for MISUMI's Urethane / Rubbers / Sponges.

(1) Shore A

Used for Urethane and Rubbers.

"Shore A 70" means a hardness measured by using type-A Durometer in accordance with New JIS Standard K6253.

(2) ASKER C

Used to describe the hardness of Sponges.

"Asker C 25" means a hardness measured by using a spring type hardness tester Asker C in accordance with SRIS 0101 (Standard by the Society of Rubber Industry, Japan).

For those two above, larger value indicates harder material.

(3) Penetration

Used to describe the hardness of gel materials.

Penetration is standardized by JIS K2207. It indicates hardness by the penetrated length that a pin of specified weight penetrates in a sample perpendicularly.

The value is one penetration for 1/10mm length. (Larger value indicates softer material.)

Properties of Urethane and High Performance Urethane

Urethane Properties

Item	Unit	Urethane Rubber					Low Rebound Urethane	Super Low Hardness Urethane	Vulkollan®		High Abrasion Resistant Urethane		Heat Resistant Urethane
Hardness	Shore A	95	90	70	50	30	70	15	92	68	90	70	90
Specific Gravity	-	1.13		1.20	1.15	1.20	1.03	1.02	1.26		44.6	31.3	44.6
Tensile Strength	Mpa	44.1	44.6	31.3	27.4	18.5	11.8	0.6	46.5	60.0	44.6	31.3	44.6
Elongation	%	400	530	650	690	600	250	445	690	650	530	650	530
Heat	°C	70					70	80	80 (120 for short time)		70		120
Low Temp. Resistance	°C	-40	-20				-20	-40	-20		-20		-20

The characteristic values of tensile strength and elongation are tested based on the JIS standard K6251.

Discoloration of Urethane

Urethane may experience discoloration and yellowing with age.
Discoloration is distinct especially with antistatic urethane (gray), but physical property or characteristics remain unchanged.

- Aging Discoloration

* Time to turn to yellow and level of yellowing differ greatly depending on operating environment etc.

White rubber may experience yellowing as well, which please note.

Super Abrasion Resistant Urethane: Vulkollan®

Vulkollan® is a super abrasion resistant urethane which is far superior to conventional urethanes in abrasion resistance and load bearing.
It is six times higher in abrasion resistance and half as much again in material strength. (MISUMI's internal test)
Vulkollan® withstands up to 80°C in long-time uses, and up to 120°C in short-time uses about for 15-20 mins.

Discoloration of Vulkollan®
Discoloration of Vulkollan® has poorer color stability against ultraviolet rays than general urethanes due to its unique composition.
Pictures below show the process of change in colors of a sample exposed to outdoor sunlight.

* No change in physical property or characteristics due to discoloration.

Abrasion Resistant Urethane

Unique composition realized abrasion resistance 2.5 times higher than general urethane at low cost. Color is dark brown.

-Vulkollan®, Abrasion Resistant Urethane Taber Abrasion Test Results

Test \ Material	General Urethane	High Abrasion Resistant Urethane	Super Abrasion Resistant Vulkollan®
Abrasion Test (Taber Method) Abraded Volume (mm^3)	197.3	73.8	33.9

Testing Method
JIS K 7204: 1999 "Plastics–Determination of resistance to wear by abrasive wheels

Abrasive Wheel:	H - 22
Load:	9.8N
No. of Strokes:	1,000
Test Parameter:	1

Abrasive wheels are applied to the sample using a fixed weight for a specified number of cycles.
From the weight loss of the sample it is possible to measure the abrasion resistance of a material.
The above values are not guaranteed but an experiment log.

Advantages
High abrasion resistance and material strength provide longer product life and replacement interval.

Heat Resistant Urethane

This urethane has greater heat resistance up to 120°C (general urethane withstands up to 70°C).
Suitable for use in applications where high material strength in high-temperature range is required, such as work receiver for hot air dryer.
Product color is brown.

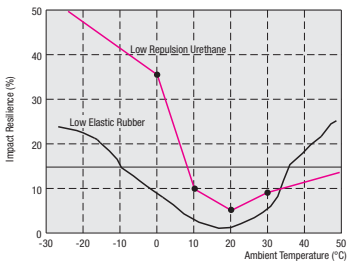
The characteristic values of tensile strength and elongation are tested based on the JIS standard K6251.

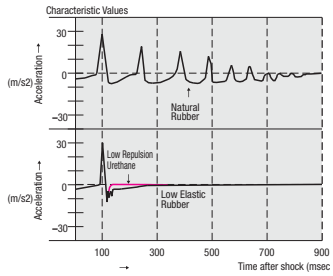
Features of Low Rebound Urethane / Low Elasticity Rubber (Hanenaito®)

Hanenaito® is a registered trademark of Naigai Rubber Industry Co., Ltd.



- Low Rebound Urethane
  It has the same properties as urethane, and excels in shock absorption. With more resistance to compression than normal urethane, it is hard to deform. Not suitable for the absorption of large impact energy because its tensile strength and elongation are weaker than that of urethane of the same hardness.
- Low Elasticity Rubber (Hanenaito®)
  It is used as cushioning material pallet damper, conveyor machine, precision instrument etc, because of its good elongation and shock absorption. Also it is used as vibration absorption materials of various precision instruments because of its excellent vibration absorption.

Reference: Compression set of low-rebound urethane



Low Rebound Urethane	1%
Urethane (Shore A70)	25%

* The above data is measured at room temperature 23°C.
* 70°Cx24H 25% Compression

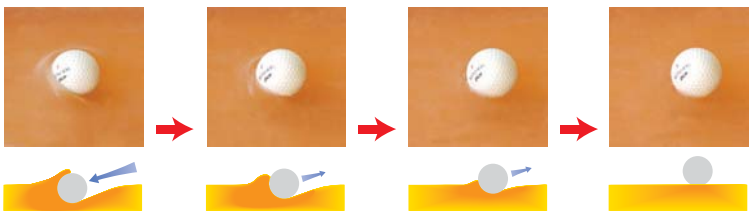
Hardness of Shock Absorbing Materials

-Types of durometers and objects of measurement



There are various types of durometer, instrument to measure the hardness of a material, depending on the property of the measured material. For urethane and rubber, Type A (Asker Durometer Type A) is most commonly used. Hardness of materials softer than urethane and rubber is measured by Asker Type C or Type E. Shock-absorbing gel is soft and super flexible material whose hardness is measured by Asker Type F.

-Correlation of hardness and rebound force of shock absorbing materials

		Hardness	
		Extra Low (F Hardness)	High (A Hardness)
Rebound	Low	Shock Absorbing Gel	Low Rebound Urethane Low Elasticity Rubber
	Large		General Purpose Urethane General purpose rubber

Shock Absorbing Gel

Shock absorbing gel is extremely soft gel which has an Asker F hardness. Being an urethane-based synthetic rubber, it has high material strength. A major characteristic is the three-dimensional slow recovery, the function to recover after compression slowly and in multiple directions.
* The material slowly recovers its shape in 1 - 2 seconds, after pressed with a golf ball.
(Hardness of the product material is enhanced further and the actual reaction differs to those in the pictures)

For the shock absorbing capability of the bumpers made of this material, please see gravitational acceleration comparison test data on **P.379**.

- Properties of Shock Absorbing Gel

Item	Unit	Shock Absorbing Gel

Abrasion Resistant Urethane Washers / Heat Resistant Urethane Washers

CAD Data

■Vulkollan® has 6 times more, Abrasion Resistant Urethane has 2.5 times more resistance to abrasion than the standard urethane. For property details, refer to P.359
■Heat-Resistant Urethane is more sustainable under high temperature up to 120 °C than the standard urethane.

■Characteristic Values of Antistatic Urethane

Specific Volume Resistivity	$2.1 \times 10^8 \Omega$cm
Surface Resistivity	$4.0 \times 10^9 \Omega$

(Conditions: Temperature 30°C Humidity 60%)
All other properties are equal to that of urethane of the same hardness.

■Compression Set of Low rebound urethane

Low Rebound Urethane	1%
Urethane (Shore A70)	25%

* The above data is measured at room temperature 23°C.
* 70°Cx24H 25% Compression

■Low Rebound Urethane

It has the same properties as urethane, and excels in shock absorption. Also less plastic deformation by compression than normal urethane. However, this is not suitable for absorbing large impact energy as its tensile strength or elongation is weaker compared to the urethane with same level of hardness.

Price Reduction
Up to 5%

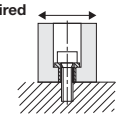
Example

■Product Feature

Before Bumper · Bolt · Collar 3 pcs.



Male Thread Urethane Bumper 1 pc.

- Reduced number of parts → reduced assembly time
- Increased tightening force
- Space saving

With M8 Bolt

Space for 25mm outer dia. is required

Before

Installable in a space for a bumper with 20mm outer dia.

Space saving approx. 20%

■Features of Extra Low Hardness Urethane

- High physical strength that cannot be obtained from conventional soft materials.
- It is MISUMI original material that suppresses self-adhesion, which is the problem of soft material.
- This material has highly resistant against impact, and compress little.
- It has the same properties as ether polyurethane.

■Comparison of Characteristics

■Precaution for Use
- Do not stick or cut with sharpened objects.
- Do not tear or twist.
- Insert it only from the vertical direction.
- Keep away from fire.
- Do not use detergents for cleaning.
- Replace it when broken.

■Variation of Impact Acceleration Comparison Test

	Max. Impact Acceleration (m/s²)	Convergence Time (µs)
Shock Absorbing Gel	400	550
Urethane 70°	1200	850
Urethane 50°	836	1273
Extra Low Hardness Urethane 15°	450	1660
Low Rebound Urethane	1750	450
Nitrile Rubber	1050	670
Low Rebound Rubber	1580	400

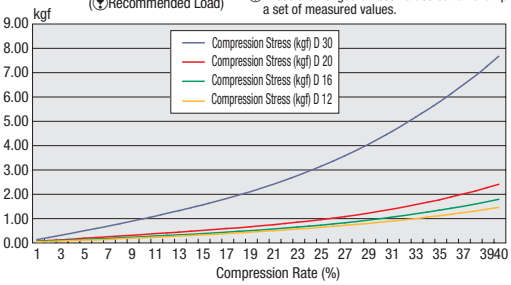
* "Convergence Time" is defined as the time until acceleration falls below 10m/s2.

- From Test Results
Peak acceleration of shock absorbing gel is lower at around 30% of other materials and convergence speed is higher.
(Extra low hardness urethane has a low peak value as well, but takes three times longer to converge.)
This is because the material transmits energy dispersing in multiple directions, while absorbing impact force.
From these characteristics, effects such as impact absorption and noise reduction can be expected.
(Effects differ depending on operation environment.)

- Test Conditions
Measuring method: Measured with accelerometer secured on the hammer dropped on the test materials
Size of test material: ø30, Height 20mm
Measuring instruments:
Hammer: Weight 958g, drop height 255mm
Length from fulcrum to barycenter: 255mm

Equipments:
Acceleration pickup (Bruel & Kjaer Type 4507B001)
Data logger (Keyence NR-500, NR-HA08)
PC, Sensor amplifier (Ono Sokki SR-2200)
Measurement condition: Temperature 18°C, Humidity 40%

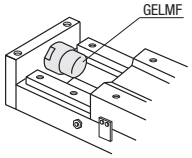
■Elasticity of Shock Absorbing Gel
•Shock Absorbing Gel **•Urethane Shore A50**



A major characteristic is the three-dimensional slow recovery, the function to recover after compression slowly and in multiple directions.
Pressed as thin as in the picture and recovers to the original shape gradually after being released from pressure. * The double-layer structure of the gel part reduces stickiness.

■Compressive Load Test (40%) Results

D	12	16	20	30
40% Compression Load Average (kgf)	1.4	1.8	2.4	7.7



(Recommended Load)

- Test Conditions
Compressed material pieces with static pressure and measured the load at which the pieces were 60% of the original in thickness. Above are the mean values of three measurement results.
These are not guaranteed values but an example of a set of measured values.

Ethylene Rubber Sheets / Butyl Rubber Sheets / Amber Color Rubber Sheets

■Ethylene rubber excels in alkali, ketone and ozone resistance, especially in weather resistance.
■Butyl Rubber excels in weather, chemical and gas permeability resistance. Inferior in oil and flame resistance.
■Amber Color Rubber excels in mechanical strength and abrasion resistance. Its elasticity and tensility help to fit well with work shapes. Can be used as a floor plate in a place requiring air tightness.

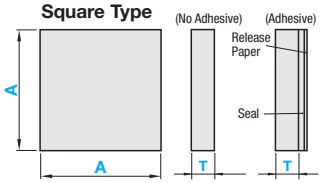
Silicon Rubber Sheets / High Strength Silicon Rubber Sheets



■Silicon rubber excels in heat, low temperature and weather resistance. Compliant with Food Sanitation Act, Ordinance of the Ministry of Health and Welfare No. 85.
■High Strength Silicon Rubber has 3~5 times more tear strength than the ordinary silicon rubber which is inferior in mechanical strength. ☞For Rubber Gaskets, refer to ☞P.425 For Rubber Blocks, refer to ☞P.404

A · B Dimension Configurable Type

The price of this product is found by multiplying the unit price shown in the table by the material rate.

(Ex.) Part Number - A - B
UNSETA 1 - 200 - 200

(€ Unit Price) x (Material Rate) = Standard Type € Unit Price
16,50 X 1.1 = 18,15 ➡ 18,10 EUR

The price of Hole Type is found by adding the standard type unit price to the hole machining charge.

Fluorine 80°	780	540	80	220
Urethane 90°	40	6860	720	360

■Features of TPE

TPO (Thermo Plastic Olefin): A soft segment EPDM is finely-dispersed in a hard segment PP (Polypropylene).
Low-density (1 or less) and weight-saving Thermoplastic Elastomer.
Excels in electrical properties (more than thousandfold of specific volume resistivity compared to NBR rubbers) which is a feature of Olefin Type.
Excels in chemical resistance to acids or alkalis.
High fluidity excels molding works, low particle and low outgas properties are effective for recycling.

Metal-Plated Urethane Sheets

■Metal-Plated Urethane Sheets are available with short lead time.

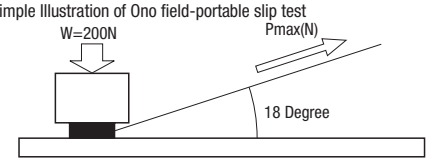
Hyper V®Features

Its ability of slip prevention especially on oily surface. Rubber sheet which is used for shoe sole has been developed for industrial use.

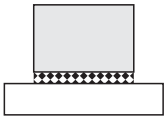


■Measurement of Coefficient of Slip Resistance (Ono Field-Portable Slip Test)

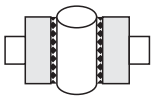
Condition	Coefficient of Slip Resistance (C. S. R')	
	Hyper V Sheet V11 Type	Rubber Plain Sheet
Dry	0.98	0.76
Wet (Water)	0.84	0.42
Wet (Glycerin)	0.44	0.03

The above values are not guaranteed values but a measured values.

- Measurement of Coefficient of Slip Resistance (Ono Field-Portable Slip Test)
Measure Max. tensile load (N) = Pmax by pulling a test specimen of 5mm thickness with applying 200N load on a stainless sheet of 50mm x 60mm.
A test result is shown as C.S.R' = Pmax/W.
Recommended as a rubber mat or a chucking material for workpiece that is slippery by cutting oil.



Simple Illustration of Ono field-portable slip test



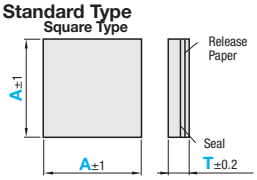
The test result shows that V11 Type begins moving by the force of 88N, and Plain Sheet begins moving by 6N with glycerin coating. It proves that Hyper V has an excellent slip resistance property.

Example

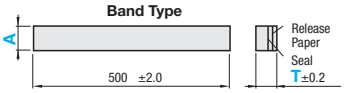
As a rubber mat

Grip an oil adherent work piece which does not easily chuck.

Nonskid Rubber Sheets / Silicon Gel Sheets



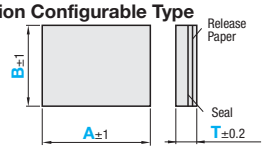
■Nonskid rubber sheets with embossed surface that have same function as adhesive discs.

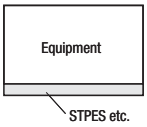


■Nonskid Rubber Sheets RoHS

■A Dimension Standard Type

STPES





Example

t can be used as nonskid stopper pasted on the backside of equipments.

■A · B Dimension Configurable Type

Silicone is an artificial compound made from silicon.

It can be cut with adhesive side up with a utility knife, etc.

Gel surface has an antistick treatment applied.

Reference: Adhesive Strength (180 Degree Peeling Strength) 14.5N/25mm Width (When affixed to 1.4301/X5CrNi18-10)

As pressure sensitive adhesive is used, be sure to apply sufficient pressure so that the joint sections may firmly adhere to each other.

75μm PET film is used as base material.

Oil may ooze out to the backing paper.

■Features of Fluorine - Ultra High-Molecular-Weight Polyethylene

- Fluorine Resin

Low friction coefficient, and excellent chemical resistance and heat resistance.

- Ultra High-Molecular-Weight Polyethylene

Although its friction coefficient and heat resistance is inferior to that of fluororesin, the price is relatively cheap. And it is excellent in durability.

■Comparison of Dynamic Friction Coefficient

■Features

■Low Elasticity Rubber Sponge (Hanenaito® Sponge)

- It is Low Elasticity rubber (Hanenaito®) foam.
- It excels in shock absorption.
- Lightweight with specific gravity at 0.3.

■Antistatic Low Rebound Sponge

- It is bridge foam of styrene-type elastomer.
- Excels in shock absorption and antistatic.
  (Specific Volume Resistivity: $4x10^{10}$)

■Low Strain Sponge (Silicone Foam)

- It is a silicone foam.
- The material resists crushing, even after repetitive impact absorption.
- Usable in a very wide temperature range –40°C~150°C.

※Peel off the protective film on the surface before use.

※For Adhesive Type, the adhesion strength decreases under high temperature (at approx. 80°C or more).
※The temperature of continuous use is the temperature at which long-term use does not cause a sharp decline in quality.
※Compression Set JIS K6262
※Values in the table to the right are for reference and not guaranteed.

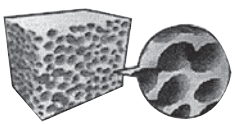
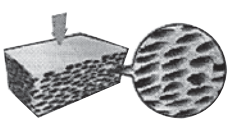
■**Features of EPA · EPAN**



This product is made of a semi–closed cell foam, available for compression in the condition of low stress. After compression, it can be made into independent air bubble.
This product is a high performance sealer that has the capability of filling gaps to shut out heat, water and sound.

■**Characteristic Values**



※Testing method conforms to JIS K 6767.

Characteristics of Felt

1. Excellent in weather resistance.
   (Affected by alkaline solution)
2. Excellent in oil absorbability.
   It has the property of soaking up oil by capillary action.
3. Excellent in oil retention capacity.
   It can absorb up to approx. 80% of its total volume.
4. Has good polishing characteristics.
   Provides high polishing characteristics as it precipitates foreign materials within its tissue.

■Characteristics of Materials

Material	Details of Material	Application Example
Polyester Felt (Sheet)	Felt made of 100% polyester Soft with Density of 0.18~0.2. General-purpose Product	Applicable to general purpose use as oil · water absorption, cushion, etc.
Polyester Felt (With Binder)	PET : PET binder (bonding material) = 9 : 1 Fibers bonded together by the binder provides high morphological stability.	Protection material and bumper for portions exposed to high impact.
Polyamide Felt	Felt made of 100% polyamide Excellent Heat / Flame Resistances UL Std. Test V–0	Heat-resistant · flame retardant bumpers
Sheep Wool Felt (Rayon/PET)	A blend of 60 % sheep wool and 40% PET. JIS–R25W2 Standard product, excellent in oil/water retention ability	Cushion material · Liquid application (oiling) · Spacer
Sheep Wool Felt	Felt made of 100% sheep wool Gives less damage to mating materials.	For buffing
Polyester Felt (Bumper type)	Density may vary depending on L dimensions.	Oil application to work piece

Not Available

- HPRIS Surface Temperature at 20°C Room Temperature

Figures shown above are all calculated value and not guaranteed value.

- Sound Insulation Property of HPRIS (Normal incident sound absorption coefficient)

Compliant to JIS A1405-2
Frequency: 100~5000Hz
Test material density: 4.14kg/m³

■General Characteristics
- Made of polyimide foam, best in heat resistance as engineering plastic.
- Excels in heat, fire, environment resistance and low outgas. Provides high performance as a thermal insulator and soundproof material under high temperature.
- Polyimide sheets and washers are made by using heat insulation sponge compressed to 2mm.

■Main Features
- High heat resistance with glass transition temperature of 400°C.
- Excels in heat insulation. (Avoid using sheets as heat insulators as they are made by compressed sponge.)
- Flexible workability: easily cut by utility knives.
- Self-extinguishable and flame-resistant
- Extremely low gas discharge
- Possesses superior quality of aromatic polyimide, such as resistance to radiation and ultraviolet, electrical isolation and chemical resistance.

■Cautions
- As a characteristic of polyimide, reaction to compression is weak. Avoid as much as possible use in compressed state to maintain heat resistance quality.
- Allowable temperature limit for adhesive is 200°C. In higher operating temperature, use adhesive as temporary joint.
  (Apply supplementary attachment method such as nipping)
- Export Permit from your governmental organization may be required for exporting Polyimide products.

Example

Can be used between heat sinks, internal parts of computers (CPU, boards and etc.) or heat-generating sources such as power supply parts and heat sinks or enclosures.

■Features

-With excellent flexibility and adhesiveness, it can closely adhere to concave or convex surface without trapping air.
-Excels in electric insulation and flame resistance.
-With low temperature dependency, it is suitable for use in wide temperature range –40°C~200°C (–40° C~150°C for HTRE).

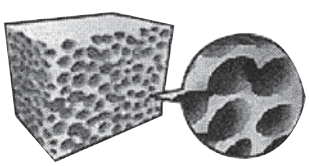
■Features of EPATA

This product is made of a semi–closed cell foam, available for compression in the condition of low stress. After compression, it can be made into independent air bubble. This product is a high performance sealer that has the capability of filling gaps to shut out heat, water and sound.

■Characteristic Values



Testing method conforms to JIS K 6767.

Measurement Item		Unit	EPATA
Specific Gravity		-	0.095

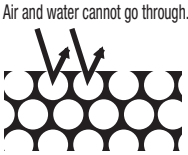
O: No leakage of water after 30mins.
Δ: Leakage of water is seen within 30mins.
X: Leakage of water is seen within 10mins.

-Semi–closed Cell Structure (EPATA)

Before Compression



After Compression

■Features of Open Cell Type (SGNPTA · SGNATA)

Bubbles are separated from each other, so air and water cannot pass through the material. It also excels in shock absorption.

Air and water cannot go through.

Viscoelastic Elastomer

Viscoelastic elastomer is an extremely soft gel which has an Asker F hardness.
Superior in mechanical strength and excellent in durability.
A major characteristic is the three-dimensional slow recovery, the function to recover after compression slowly and in multiple directions. It is adaptable to a variety of use, including gaskets for sealing.

Elasticity of Viscoelastic Elastomer

A very soft and elastic material, as shown in the picture (Elongation Rate: more than 2,000%).
Due to its excellent shape flexibility, it easily conforms to complex shapes. Cutting surface has self-adhesion.

Comparison of Characteristic Values

Item	Viscoelastic Elastomer	Nitrile Rubber	Silicon Rubber

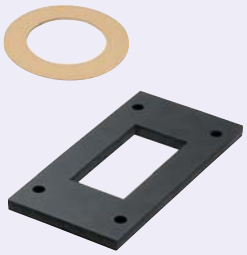
Material Properties

- Ether Polyurethane
  Excels in mechanical strength. Low heat resistance and chemical resistance. Highly resistant to water and suitable for outdoor use. Has high impact resilience.

- Ester Polyurethane
  Excels in mechanical strength. Low heat resistance and chemical resistance. Superior in oil resistance with mechanical strength 30% - 100% greater than Ether Polyurethane. Has low impact resilience.



- Heat Resisting Urethane
  This product has overcome the weakness of conventional urethanes, poor endurance against heat. Withstands use in high temperature up to 120°C, while general urethane can withstand up to only 70°C.

	Water Resistance	Oil	Chemical	Heat
Ether Polyurethane	○		X	X 70°C
Ester Polyurethane		○	X	X 70°C
Heat Resistant Urethane	○		X	0 120°C

Antivibration Materials Selection Method

-Vibration Transmissibility Data-

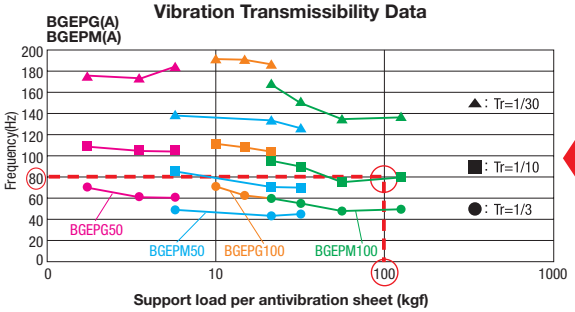
■Antivibration Material Selection Chart

*1 Vary depending on volume and nominal. Refer to load information of each product.
*2 Vary depending on volume, nominal and load weight. Refer to vibration transmissibility data for each product.

■Vibration Control Material

Antivibration Gel Sheet · Antivibration Pads (P.437 · 439 · 440) Antivibration Gel · Antivibration Rubber (P.435~436 · 431~434) Selection Methods

Select the anti-vibration material by referring to the table above, and then determine the nominal by referring vibration transmissibility data of each product.



■Vibration Transmissibility Data

Antivibration effects of antivibration material (Tr=vibration transmissibility) depend on load and characteristic frequency of supported object (natural frequency). Graphs on each page have been generated by calculating the expected antivibration effects from the support load per vibration control material and the frequency of the supported object.
Select the optimal vibration control materials according to the following instruction.

1. Find out the support load for each vibration control material=_____(kgf).
   Evaluate the frequency=_____(Hz) of the subject of antivibration
(Frequency=Number of Vibration per Second
When motor speed is 4800rpm, 4800(rpm)/60(s)=80(Hz))

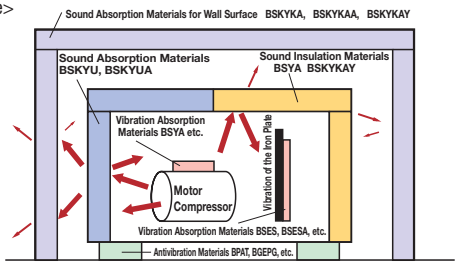
2. By plotting the value 1 on the graph, useable antivibration material type and vibration transmissibility can be found.

Ex. Support Load for Each Vibration Control Material=100(kgf)
Frequency of Antivibration Object = 80(Hz)
When BGEPM is selected, the vibration transfer rate will approximately be $\frac{1}{10}$

More antivibration effects can be expected from smaller Tr (vibration transmissibility) values

Tr=1/30 means to suppress the vibration to 1/30
Tr=1/3 means to suppress the vibration to 1/3

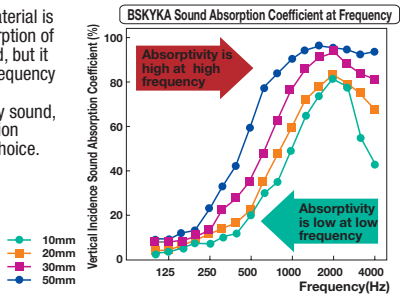
Features of Sound Proofing Materials · Vibration Absorption Materials



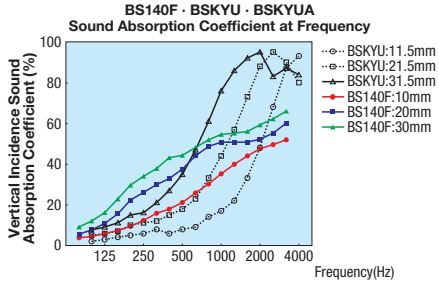
General Information

Sound proofing parts and vibration absorption parts are roughly divided to the following 3 types.

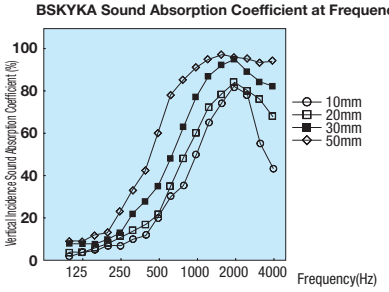
Sound Insulation Material	Reflects the sound. Changes the vibration frequency to decrease the sound generation.	BSYA (**P.444**)	BSKYKAY (**P.444**)	FBSYA (**P.442**)
Sound Absorption Material	Absorbs sounds. Internal friction converts "sound energy" into "thermal energy".	BS140F (**P.444**) BSKYU (**P.444**) BSKYKAA (**P.444**) FBSKYKA (**P.442**)	BS4F (**P.444**) BSKYUA (**P.444**) BSKYKAY (**P.444**) FBSKYKAA (**P.442**)	BS2F (**P.444**) BSKYKA (**P.444**) FBSKYU (**P.442**) FBSKYKAY (**P.442**)
Vibration Absorption Material	Reduces sound levels by converting "vibration energy" into "thermal energy"	BSES_(**P.444**) BSKYKAA (**P.444**)	BSESA_(**P.444**) BSKYKAY (**P.444**)	BSYA (**P.444**) FBSES (**P.442**)

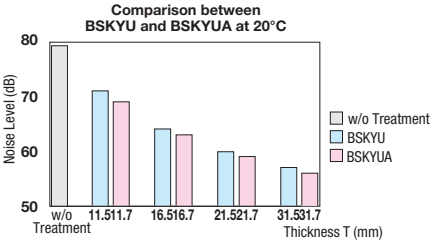


Sound Proofing Materials

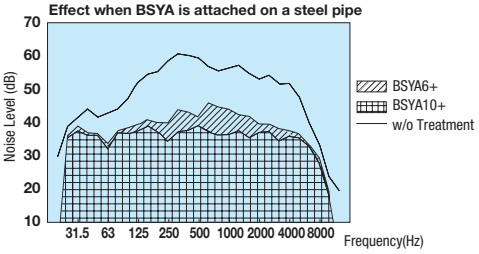


<Example>

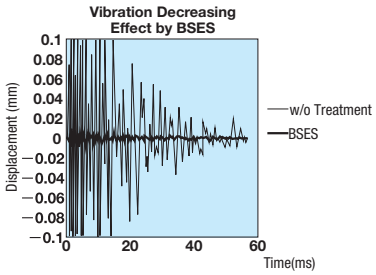


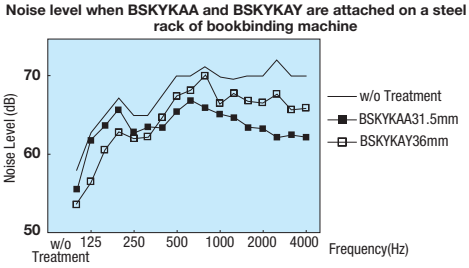


Selection Example BSKYKA P.444



Sound absorption material is suitable for the absorption of high frequency sound, but it cannot absorb low frequency sound.
For the low frequency sound, the vibration absorption material is a better choice.





Excitation when struck with 20g iron ball against the iron plate (12.5x250x1.5mm) covered with BSES (12.5x225x1.5mm).

Antivibration Rubber Mounts -Stainless Steel Studs (Conductive Rubber · Neoprene Rubber)-

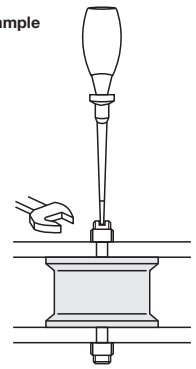
■Features

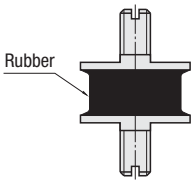


[DBGOMA · DBGOMP · DBGONA · DBGONP]
· The problem of antivibration rubber, susceptibility to insulation has been solved by the high electroconductive rubber with volume resistivity value of $10^3\Omega$ • cm.
[1.4301/X5CrNi18-10 · EBGOMP · EBGONA · EBGONP]
· High quality product made of chloroprene rubber with high quality.
[Common]
· Mounting studs are made of 1.4301/X5CrNiMo18-10, and the tips are slotted. Mounting holes on flanges are also slotted for ease of mounting.

■Vibration Transmissibility Data

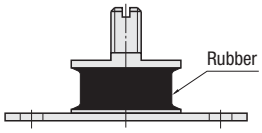
Values in the graph are nominal for each type. The above values are not guaranteed values but an example of measured values.

Example



Tightening is possible by holding the threaded tip.

■Electroconductive Rubber Characteristics



Item	Unit	Value
Specific Gravity	-	1.31
Hardness	Shore A	60
Elongation	%	545
Tensile Strength	MPa	11.8
Specific Volume Resistivity	Ω • cm	$8x10^3$

Measuring Method: JIS K 6301
The above values are not guaranteed values but an example of measured values.

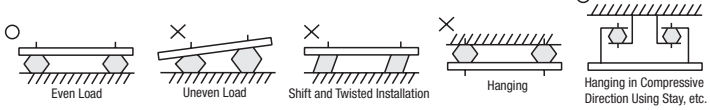
Vibration Transmissibility Graph

Comparison of Antivibration Properties

Load 26kgf/4 points, Excitation force: 0.2G



Ⓨ Resonance frequency is set relatively low and possible to dampen lower frequency vibrations.

■Features of Antivibration Gel Bushings and Antivibration Gels

- It is effective in vibration absorption of small vibrations of light load, which can't be controlled with vibration insulation rubber mounts.
- Excels in durability.
- There is no secondary or tertiary resonance that interferes with antivibration effects.

■How to Mount

- Attach so that load is applied evenly.
- Antivibration Gels can be used only on perpendicular loads.
- Shifted or twisted installation drastically lowers performance and durability.
- Do not use in tension.

■Properties

Material	Weather Resistance	Water Resistance	Oil Resistance	Ozone Resistance	Operating Temp. Range
Silicone	◯	◯	△	◯	–40~200°C
Natural Rubber	△	△	X	X	–30~ 60°C
Chloroprene Rubber	◯	△	◯	◯	–20~ 70°C

◎=Excellent ◯=Good △=Acceptable X=Poor
Ⓨ Silicone is an artificial compound made from Silicon.

■Cautions

- The height becomes lower due to being compressed when loaded.
- Do not remove the rubber burrs around the studs as the burrs prevent separations of studs and antivibration materials.
- Antivibration Gel/Rubber are designed to be used in compression.

■Vibration Transmissibility Data

GELB

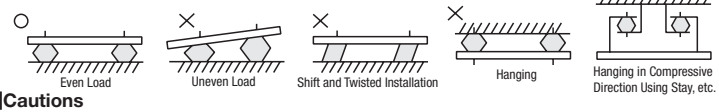
(?)Values in the graph are nominal for each type.
(?)The above values are not guaranteed values but an example of measured values.

Example

■Features of Antivibration Gel Bushings and Antivibration Gels

-Effective for light loads and minute vibrations that are difficult for antivibration rubbers to absorb.
-Excels in durability.
-There are no secondary and tertiary resonances that hinder the antivibration effects.



■Properties

Material	Weather Resistance	Water Resistance	Oil Resistance	Ozone Resistance	Operating Temp. Range
Silicone	◯	◯	△	◯	–40~200°C
Natural Rubber	△	△	X	X	–30~ 60°C
Chloroprene Rubber	◯	△	◯	◯	–20~ 70°C

◎=Excellent ◯=Good △=Acceptable X=Poor
(?)Silicone is an artificial compound made from Silicon.

■How to Mount

-Attach so that load is applied evenly.
-Antivibration Gel products are to be used for vertically oriented loads only. Install BGELP and BGELA bushings with the small diameter ends facing up.
-Shifted or twisted installation drastically lowers performance and durability
-Do not use in tension.

■Cautions

- When loaded, gel sheet is compressed to be lower than catalog height.
- Do not remove the rubber burrs around the studs as the burrs prevent separations of studs and antivibration materials.
- Antivibration Gel/Rubber are designed to be used in compression.

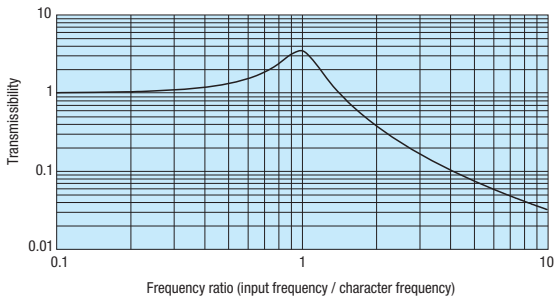
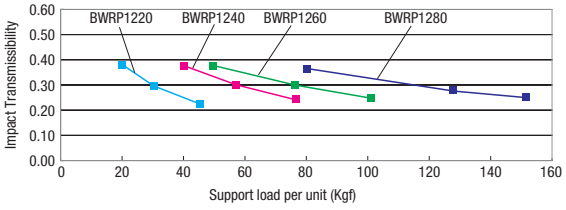
■Features of Wire Rope Isolators



· Vibration/shock absorber that converts vibration into heat energy using friction and deflection of wire ropes.
· Made of all metal components, it is more resistant to corrosion, environment and chemicals than other anti-vibration parts (gel, rubber) and usable in a broader operating temperature (–100°C~260°C).
· Vibration insulation effect is expected from low frequency as low as 12Hz, to which it is difficult for rubber to respond to.
· Excellent in vibration reduction, with resonance magnification low at 3.5 (see vibration characteristic chart).
· Superior in impact resistance, which does not belong to other anti-vibration parts. Best for use for protection of transportable equipments (see vibration transmissibility chart).

■Vibration Transmissibility Data

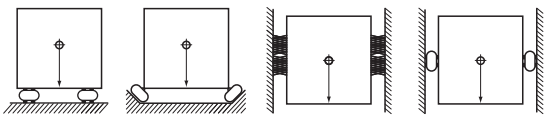


The above values are not guaranteed values but an example of measured values.

■Vibration Characteristics

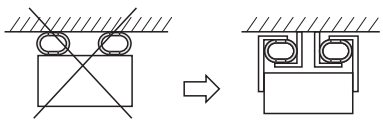
The above values are not guaranteed values but an example of measured values.

■Impact Transmissibility



The above values are not guaranteed values but an example of measured values.

[Shock Parameters]
·The figure shows the impact transmissibility under a half-sine with a peak acceleration of 150m/S² and a pulse duration of 11ms.
·Under above condition, 60-75% of impact is expected to be absorbed.



■Mounting Orientation

● In Compression ● 45° Inclined ● In Shear ● In Roll

■Hanging Mount

·This product is not suitable for hanging mount. Please mount in compression.

Example

As vibration isolator for electronic cabinets.

Recommended for vibration countermeasures for precision parts hand trucks.

Antivibration Pads

Antivibration Pad RUBLOC®

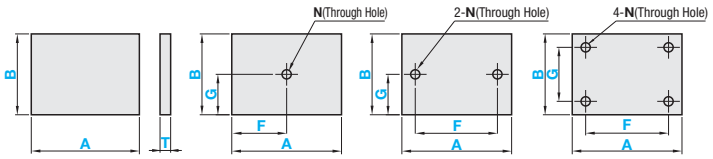
RoHS

A · B Standard

RUBLOC

A · B Standard	A · B Configurable	M Material	H Hardness
RUBLOC	RUBLOCF	Chloroprene Rubber (CR)	Shore A40

Features

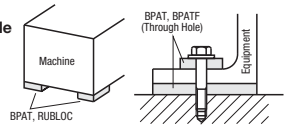


Four types of protrusions with different diameters and heights, the protrusion types are staggered.
·As vibration passes diagonally through the pad, high antivibration effect is achieved.

A, B Configurable

Standard Type
RUBLOCF

Hole Type (Through Hole) G · F Dimension Tolerance: ±1



-One Hole- 1H -Two Holes- 2H -Four Holes- 4H

A · B Standard

Part Number Type	T	A	B	Applicable Load N {kgf}	Deflection Property N/mm {kgf/mm}	€ Unit Price
RUBLOC	18	60	60	250~1000{25~102}	120{12}	
		120	120	1000~4000{102~408}	250{25}	
		180	180	2500~8800{255~897}	900{92}	
		240	240	4100~16000{418~1632}	1500{153}	

Example

A · B Configurable

–Standard Type–

Part Number Type	T	60mm Increment (A≥B) A	B
RUBLOCF	18	60~240	60~240

–Hole Type–

Part Number Type	Nominal	T	60mm Increment (A≥B) A	B	1mm Increment F	G	Hole Dia. 1mm Increment N
RUBLOCF	1H 2H 4H	18	60~240	60~240	5~235	5~235	5~20

Type	Allowable Load N {kgf}/cm²	Deflection Property N/mm {kgf/mm}/cm²
RUBLOCF	10 {1}	4 {0.4}

Dimension F Specification Range: For 1H, N/2+2.5≤F≤A–N/2–2.5, for 2H and 4H, N+5≤F≤A–N–5.
Dimension G Specification Range: For 1H and 2H, N/2+2.5≤G≤B–N/2–2.5; for 4H, N+5≤G≤B–N–5.
The price of Hole Type is found by adding the Standard Type € Unit Price to the Hole Machining Charge.

(Ex.) Part Number - A - B - F - G - N
RUBLOCF2H18 - 240 - 60 - F100 - G30 - N5

(Standard Type € Unit Price) + (Hole Selection Price) = (Hole Type € Unit Price)
60,80 + 2,00 = 62,80 EUR

Example

· Vibration control is effective when used in narrow spaces or affixed on the back of vibrating trays.
· Can be used on the back of a vibrating case that comes in contact with moving parts.

· Vibration control is effective when pasted directly on the vibrating pipe and compressor.
· It can be attached on a curved surface.

Antistatic Sponge Sheets (LBA,LBRA)	$1.0x10^4$
Antistatic Low Repulsion Sponge (SPTA)	$4.0x10^{10}$

■Specific Volume Resistivity and Conductivity of Antistatic Urethane · Rubber and Sponge

"Specific Volume Resistivity" is a property that represents an electrical resistance value per unit.
The larger the value, the higher the resistance, and vise versa.
Small specific volume resistively indicates excellent electric conductivity.

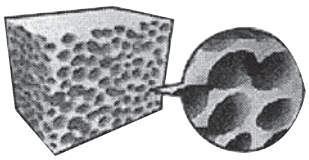
EPATA Characteristics

This product is of semi-closed foam and can be compressed with little resistance. The foam becomes of closed-cell after being compressed. It is a highly functional sealant for gap filling and insulating from heat, water, and sounds.

Characteristic Values



Test method conforms to JIS K 6767.

Measurement Item		Unit	EPATA

■Conductive Sponge Characteristics

-LBNU (LBNUA)
Made of polyurethane, it excels in shock-absorbing properties. Moreover, compression residual distortion is small.
- LBNC (LBNCA)
Similar with chloroprene rubber sponge, this material has well-balanced properties such as oil resistance and weather resistance. It excels in general physical properties, and is suitable for a wide range of general industrial applications.

A≥B

Only T20 or less for Adhesive Type.

- LBA (LBAA)
LBA has high conductivity using special conductive carbon black and it is made up of uniform and tiny open cells. Carbon is completely compounded with polyethylene so that it neither crumble nor bonds, can be extensively used for wrapping materials of various IC products.
- LBRA (LBRAA)
LBRA is more flexible than LBA and suited for use as wrapping or cushioning material for products that require static protection. As its foaming agent is nitrogen gas, LBRA does not have any harmful effect on precision products by gas contamination.

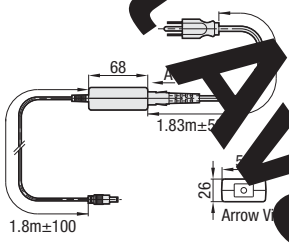
■Ionizer-Medium Size DC Fan Type Specifications

Ionizing Method	DC Corona Discharge
Discharge Electrode Pin	Tungsten
Fan Speed	Non-step Variable
Maximum Air Volume	3.68m³/min
Wind Velocity	1.3~4.6m/Sec (Measured Distance 300mm)
Alarm Display	Cleaning, Fan Error, Fan Guard Open, Shutdown by High Pressure
Terminal Block	DC24V Input, DC24V Output (Connectable in series up to 5 units)
	Cleaning indicator (includes high pressure alarm), Buzzer Output (DC24V)
	Error indicator (includes fan guard open alarm), Earth
Ozone Generation Amount	0.02ppm or Less
Environment	0~40°C, 80% RH or less (However with no dew condensation)
Power Input	DC24V (Dedicated AC Adaptor or Terminal Block)
Consumption Current	550mA
Mass	Approx. 900g



M Material: Body Case : ABS
Stand : 1.4301/X5CrNi18-10
Fan Guards : 1.4301/X5CrNi18-10

AC adaptors are not included. Please purchase optional .

■Fan Type Dedicated AC Adapter

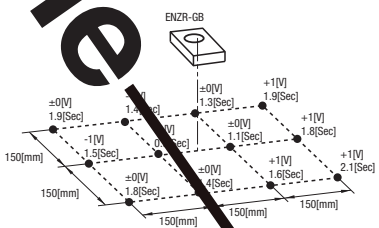
Example

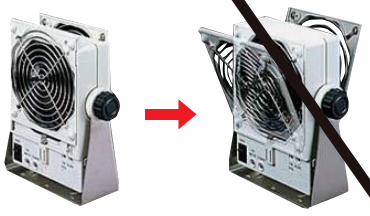
■Super High Speed Neutralization

0.6 second of super high speed neutralization is realized by 8 electrode pins and large air volume. (On conditions below)



■Ion Balance/Neutralization Property

Conditions: Charge Plate Monitor Use
(150mmx150mm, 20pF)
Top Ion Balance
Bottom ±1000V~±100V
Air Volume Max.



■Wide Range of Neutralization Area

Covers the area equivalent to 3 pieces of IC tray when installed as below.

■Reduced Maintenance

Fan guard can be removed by one-touch sliding.
Easy access to the electrode pin reduces maintenance processes.

■Applicable to ultra-small electric devices.

Maximizing the range of wind velocity realized slight wind and high speed neutralization.

Neutralization Property Data by Wind Velocity

Wind Velocity	Neutralization Time
Max. 4.6m/sec	0.6 sec
Min. 1.3m/sec	1.8 sec

Measured Distance 300mm

■Display Panel

Confirms the operating condition easily.
Informs the content of the abnormal status instantly.

Normal State | Fan Error | Abnormal High Pressure | Cleaning Indicator: On | Fan Guard Removed

Quantities larger than shown on the price list are separately quoted.

■Features
· Prevents reverse charge
Single high voltage transformer generates both positive and negative high voltages. Concerns for reverse charging possibility associated with a failed transformer with the conventional ionizers are eliminated.
· Ion balance is stabilized and electrical field shielding by the grounded fan guard assure safe neutralization for electronic components applications.
A cleaning lamp that indicates the proper time for cleaning is equipped.

■Ionizer Free Consignment Sample Service

MISUMI provides a free sample consignment service catered for various customer needs.

Features: Selectable Consignment Types
Rental Plan A: Rent a new unit, purchase the unit after testing. → A new unit is consigned.

Consignment Order → Test → OK → Invoiced for the purchase.
Test → NG → Product Returnable

A process of "Install the test unit" → Test → Remove → Purchase new → Install again" is eliminated by this system.
Product can be returned if adequate results could not be confirmed due to the installation conditions, etc.
If the consigned new product is returned in unreasonably soiled conditions, we may ask the consignee to purchase the unit.

Consignment Ordering Method: Add -N after the product name.

Order Example | Part Number | Days to Ship 6 Days P.88

Rental Plan B: Rent a "Rental Only" unit, return after testing and purchase a new unit. → A "Rental Only" unit is consigned.
This is a rental plan designed for consignees who want to test first in applications that can possibly scratch or soil the product.
Consignment Ordering Method: Add -R after the product name.

Order Example | Part Number | Days to Ship 6 Days

Orders are accepted till 17:00. Shipped the next business day. (Excludes Sat./Sun./Holidays)

Days to Ship 6 Days

Features: Static Charge Sensor consignment (Ordering Model:)
Consignment of Static Charge Sensor capable of measuring the neutralization results. The results can be quantitatively evaluated.
These are for Rental only. Please see the details on our web page.
Orders are accepted till 17:00. Shipped the next business day. (Excludes Sat./Sun./Holidays)

* 10 day rental period. MISUMI staff will FAX an inquiry to the customer regarding the intent to buy or return on the 10th rental day.
* The return shipping charge to be paid by the customer. (Retain a copy of shipping bill of lading)

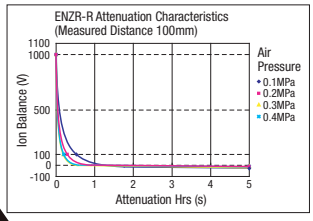
Example

■Terminal Block Connection

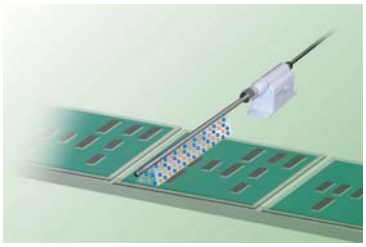


Number	Name	Note
1	Power Input	DC24V±10% Connect the switching power or AC adapter. For AC adapter, connect the white-black line.
2	Neutralization ON/OFF	Stop terminal number (2) and shortened (3) and neutralization.
3	Ground Terminal	Always connect to ground. For AC adapter, connect the black line.
4	Alarm Output	Photo Coupler Open Collector Output Max. ratings for photo coupler 100mA, 24V (10mA, 24V is recommended) Neutralization Halted, Dirty Electrode, Strain Relief Removed, Abnormal Discharge: Alarm is output.

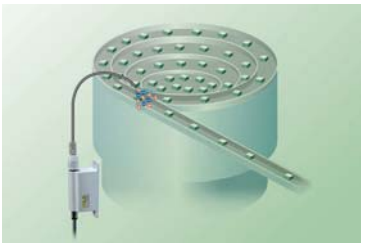
■Ion Balance Neutralization Property

Cautions: Measured values are not guaranteed va… but an example of measured values.

Conditions: Charge Plate Monitor Use
(150mmx150mm, 20pF)
Top Ion Balance
Bottom ±1000V~±100V
Air Pressure 0.2MPa



Conditions: Charge Plate Monitor Use
(150mmx150mm, 20pF)



■Features

- When the operating lamp is red, it indicates electrode pin stain or high voltage circuit abnormality, so external output is possible.
- With High Frequency AC Type, high speed neutralization is possible.
- For its compact design, it can be installed in narrow places inside various kinds of equipment.
- Air consumption is little and the running cost is low.

Nozzle Attachments Bar Type

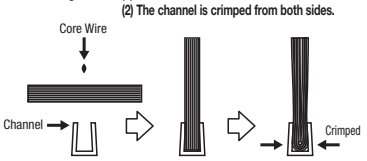
Brush
-Overview-



■General Information

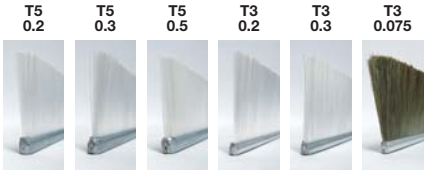
The soft and resilient filament characteristics are well suited for various industrial uses such as parts leveling, dusting, and washing.
General purpose bar type Channel Brush and Roll Brush are offered.
Additionally, MISUMI original attachment bracket are provided.

■Features of Channel Brush

The Channel Brush has filaments arranged on a straight line, unlike a tooth brush where the filaments are planted. Mfg. method is shown on the right.
More economical than planted filament brush.

Mfg. Method (1) Filaments are held within the channel with a core wire.
(2) The channel is crimped from both sides.

■About the filament materials

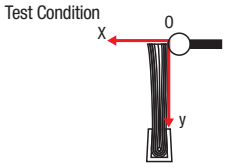


6 Nylon

General purpose material. Good anti-wear, fatigue resistance, and resiliency characteristics suitable for long term operation. Also usable in food processing.
Maximum temp limit for the filaments is 100°C. Care should be taken since 6 Nylon dissolves in strong hydrochloric acid, sulfuric acid, formic acid, and phenolic acid.

Thunderon ®:

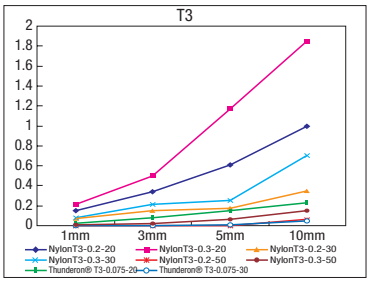
Thunderon ® is an organic conductive fiber made by copper sulfide chemically bonded to acrylic fiber, more flexible than thin wire and carbon fiber materials and has excellent wear resistant characteristics. Use for anti-static measures. The conductive fiber has static neutralizing functionality.

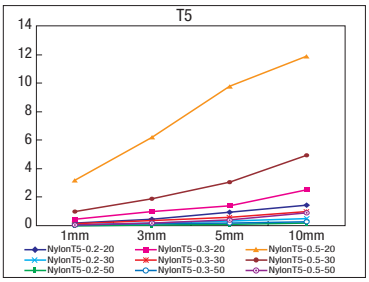


■Filament Diameter of Channel Brush (For 30mm H)

Part Number (Filament Material)	Filament Diameter (No)	Features
BRUSN (6 Nylon)	0.2	Feel of Tooth Brush (Normal)
	0.3	Harder than Tooth Brush (Hard)
	0.5	Feel of Deck Brush
BRUSE (Thundron®)	0.075	Diameter of average human hair.

■Elasticity Test of Channel Brush





Loads are measured while the filament tip (y0~1mm) is pushed in X direction to cause the leaning of 1 · 3 · 5 and 10mm.
Actual measurements are for reference only. Not a guarantee.

See the test condition on the left

Brush Test Samples				Load(N) in X _ mm Direction

		0.075	30	-	-	0.01	0.05

(R)Values are for reference only, not guaranteed.

■Notes on use

(1) Brush service life will vary depending on usage conditions and frequency. The filaments may break or fall out depending on usage condition. Do not unduly tug on the filaments.
(2) Maximum temp limit for the filaments is 100°C. The filaments will melt and fall off at above 100°C.
(3) 6 Nylon dissolves in strong hydrochloric acid, sulfuric acid, formic acid, and phenolic acid.
(4) Brush press contact length should be 2mm or less. Do not press further than necessary.
(5) Do not disassemble the brush.
(6) Do not bend the Channel Brush
(7) The Channel Brush has ±2mm bow/bend per L100mm.
(8) Use the brush at less than 1000RPM.

■Use and storage cautions

(1) For storage, care should be taken that the filaments are plastically deformed. If the brush is left in contact with work/fixture while in storage, the filaments may be deformed permanently.
Additionally, avoid filament tips from contacts when storing the brush by itself.
(2) Dry before storage.
(3) Remove any foreign objects from the brush.
(4) Do not use in high temp. environment or near fire.

P.783

Aluminum Extrusion Design Steps

Design Support Software listed on P.783 can simplify and expedite the design process.

1. Determine the extrusion type used by intended equipment.

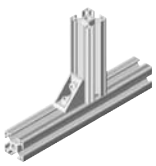
Selection of Aluminum Extrusion Frame Units based on applications and extrusions used

	(A) When extrusion is used as support unit	(B) As an equipment covering enclosure
		
Selection Method of Extrusions	**Choose a type that can withstand the load from the Load Capacity Table on P.673.**	**As a reference, select a type based on the maximum length of a side.** **1,000mm or Less →HFS5 20 SQ. - HFS6 30SQ.** **2,000mm or Less →HFS6 30 SQ. - HFS8 40SQ.** **2000mm~ →HFS8 40 SQ. - HFS8-45 45SQ.**
Notes on Selecting the Extrusions	**Table on P.673 stipulates that loads are applied at the center of extrusion frames.** **When placing a plate on the extrusion, refer to the uniform load value in the table since the load is spread evenly.** **In the example from this table, the size of the box is 1 sq m.** **When the extrusion size is larger, insert extra supports in the middle.**  Plate	**Thickness 3mm or 5mm resin panels for HFS5 Series, and thickness 5mm resin panels for HFS6 Series are taken in consideration for the basis of various accessories design.** **(The above description may not apply depending on installation methods.)**

2-A: For an equipment base...

(2-A-1) Determining Outer Perimeter Configuration

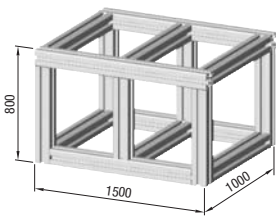
Standard Unit configurations on **P.775** are referenced, and W, D, and H dimensions are decided.



Shape and Size

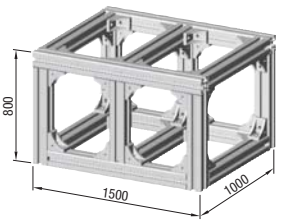
(2-A-2) Selection of Connection Methods

Bracket connections and Blind Joint connections are the most frequently utilized methods.



Bracket connection is used since there is no interference problem.

Bracket Connection		**The standard and economical connection method.** **Cover plates can be mounted by adding taps on the brackets.**
Blind Joint Connection		**A connection method that produces clean corners. Suitable for sections where equipment is loaded and unloaded or doors are to be mounted. Provides strength equal to the brackets. However, there are limitation on Blind Joint compatible extrusions. Check for the compatible extrusions on P.627~P.640**

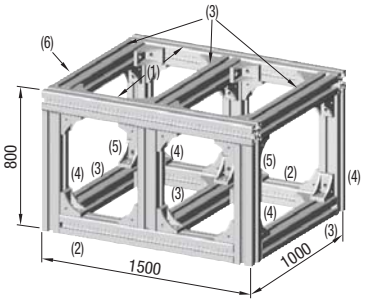


(2-A-3) Creation of a Unit Drawing

(Ex.) Width: 1500 Depth: 1000 Height: 800mm Extrusion: HFS8-4040 Connection: Bracket Connection

Draw Extrusion Width and Overlapping

Draw the Bracket (at all the corners) 4x11=44pcs.

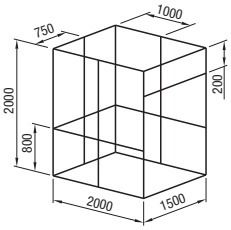


(2-A-4) Components Expanded

	Extrusions	Length	Qty.
(1)	**HFS8-4040-1500**		2
(2)	**HFS8-4040-1420**		2
(3)	**HFS8-4040-920**		6
(4)	**HFS8-4040-760**		4
(5)	**HFS8-4040-720**		2

	Brackets	Qty.
(6)	**HBLFSN8-SET**	44

(SET-applicable bolts and nuts are included.)

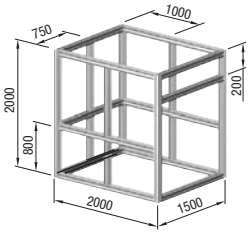


2-B: For an equipment covering enclosure...

(2-B-1) Determining Outer Perimeter Configuration

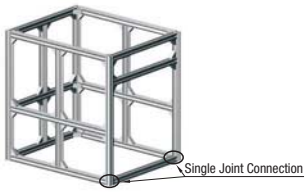
Width, depth, and height determined based on the equipment to be mounted.

Shape and Size



(2-B-2) Selection of Connection Methods

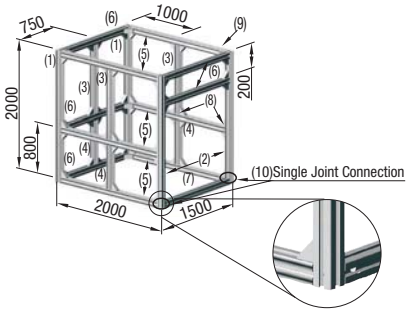
See (2-A-2) on left page for the connection methods.
Bracket connections for the panels, and Single Joint connections are selected for this example.



(2-B-3) Creation of a Unit Drawing

(Ex.) Width: 2000 Depth: 1500 Height: 2000mm Extrusion: HFS6-3030

Draw Extrusion Width and Overlapping



Determine the connection method

(2-B-4) Components Expanded

	Extrusions	Length	Qty.
(1)	**HFS6-3030-2000**		2
(2)	**See HFS6-3030-2000-LCH (P.649)**		2
(3)	**HFS6-3030-1170**		3
(4)	**HFS6-3030-740**		3
(5)	**HFS6-3030-1940**		6
(6)	**HFS6-3030-1440**		5
(7)	**See HFS6-3030-1440-RDH-LDH (P.654)**		1

	Brackets, Bolts, Nuts	Qty.
(8)	**HBLFSN6-C-SET**	4x13=52
(9)	**HBLFSN6-SET**	10
(10)	**HSJ6**	2

(Explanation)

(2) Add a wrench access hole on one end for Single Joint connection.
(7) A D Hole added to each end for Joint Nuts.
(8) Add tapped holes on brackets for panels. Also include the screw/nut sets. In this example, a panel is mounted to the side shown in the figure below. (Surfaces except front right and bottom)
(9) Top, bottom, and middle section brackets, include screw/nut sets.
(10) Single Joint Kits need with the extrusions on (7) and (2).

Complete with cover plates (provided separately) mounted.

Aluminum Extrusion Parts Selection

Selection of Related Parts

Numbers of applicable related parts are decided at the time of selecting aluminum extrusions.
When selecting related parts, see No. as reference.

(Ex.) When assembling with HFS6-3030 aluminum extrusions of HFS6 series

Brackets
HBLFSN6
HBLTS6 or other

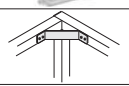
Blind Brackets, Blind Joints
HBLBS6
HSJ6 or other

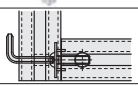
Nuts
HNTT6-Female Thread Hole Diameter
HNTAT6-Female Thread Hole Diameter or Other

Extrusion End Caps and Covers
HFC6-3030-Color
HSCA6-Color or Other

Casters and Adjuster Pads
HAJPS6
HCFT6-60 or Other

Door Parts
HHPSN6
HMGN6 or Other





Other Accessories
HFCC6
LCSA6-Shaft Hole Diameter or Other

Many products can be used for both HFS8 series and HFS8 and 45 series.
Pre-Assembly Insertion Nut HNTT8-8
→ It can be used with HFS8 series.
→ It can be used with HFS8-45 series.

- Various related parts can be installed to the structure that uses the aluminum extrusion according to the usage.

Aluminum Frames Connection Method

There are two major methods of aluminum frames connection.
1. Bracket Attachment: Connects the frames with brackets. They may interfere with products or panels.
2. Blind Joint Attachment: The corner is streamlined.
However, usable extrusions are limited. Refer to every page for the product details.

Mounting Method	Name	Extrusion Applicability HFS5 (x 20)	HFS6 (x 30)	HFS8 (x 40)	HFS8 (40, 50, 60 sq.)	Price Low:◎⇒○⇒△: High (*1)	Screw Fastening Locations (*2)	Extrusions Alteration	Materials	Example	How to Mount Listed Page
Brackets	Brackets	Applicable	Applicable	Applicable	Applicable	◎	Two	Not Provided	EN AC-46100/G-AlSi12Cu		P.483 Others

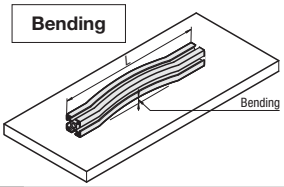
	Pre-Assembly Insertion Double Joints					△	Two		1.4401/X5CrNiMo17-12-2 1.4301/X5CrNi18-10		P.637
	Parallel Joints	Applicable			-	△	One		1.4308/G-X6CrNi18-9 1.7220/34CrMo4		P.639

*1 The price is a sum of bracket (blind joint) +bolt+pre-assembly insertion nut+alteration.
*2 The number of bolt tightening are compared on basis of each bracket (blind joint) under the connection of HFS6-3030 parts.

Aluminum Extrusion Tolerance Data



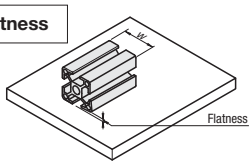
■Aluminum Extruded Shape of JIS Standard

•Bend Tolerance (Special Class)

Unit: mm

Diameter of Circumcircle	Minimum Thickness	Per Arbitrary Section of 300mm Length	Per full length (L) mm
38 or Less	2.4 or Less	1.3 or Less	1.3x $\frac{L}{300}$ or Less
	Over 2.4	0.3x or Less	0.3x $\frac{L}{300}$ or Less
38 to 300	-	0.3x or Less	0.3x $\frac{L}{300}$ or Less
Over 300	-	0.5 or Less	0.5x $\frac{L}{300}$ or Less

Bending



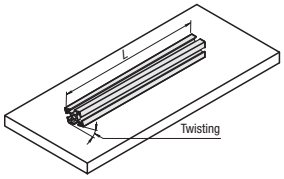
Note
- Given values are for extrusions placed on flat surfaces with minimized bends by own wight.
- When the overall length is not an integral multiple of 300mm, determine the tolerance by rounding up the remainder length to 300mm.

•Flatness Tolerance

Unit: mm

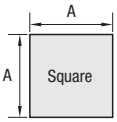
Shape Type / Minimum Thickness of Measurement Point / Width	General Shape	Hollow Shape	
	-	4.7 or Less	Over 4.7
25 or Less	0.10 or Less	0.15 or Less	0.10 or Less
Over 25	0.4%xW or Less	0.6%xW or Less	0.4%xW or Less
Per Arbitrary Section of 25mm Width	0.10 or Less	0.15 or Less	0.10 or Less

Flatness



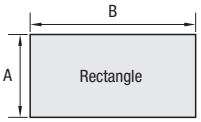
Note
Not Applicable to the plane including open section.

•Twist Tolerance



Unit: Degrees

Diameter of Circumcircle mm	Length	
	Per Arbitrary Section of 300mm Length	Per full length (L) mm
38 or Less	1 or Less	1 x $\frac{L}{300}$ or Less However Max. Value 7
Over 38 to 76	1/2 or Less	$\frac{1}{2}$ X $\frac{L}{300}$ or Less However Max. Value 5
Over 76	1/4 or Less	$\frac{1}{4}$ X $\frac{L}{300}$ or Less However Max. Value 3



Twisting

■Reference: Tolerance of Outer Dimension (JIS)

P.483 ~ P.496	P.499 ~ P.506	P.627 ~ P.640	P.509	P.645 ~ P.658

CAD Data

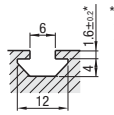
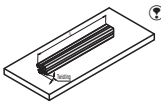
Features: Milled on upper and lower surfaces. Usable for Linear Guides, etc.

RoHS



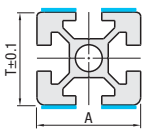
HFSP



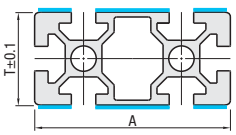
Milled and cut end surfaces are not anodized.

M Material:EN AC-51400/AlMgSi0,7-T5
S Surface Treatment: Anodize

Detailed view of slot on milled surface



*Due to the extrusion tolerance, the thickness tolerance of the slot on the milled surface becomes as shown above, while T dimension tolerance is ±0.1.



Being extruded sections, products can twist. It is recommended to support overall length of extrusion when using. See tolerance data on aluminum extrusions on **P.476**.

For detailed dimensions and shapes EXCEPT the slots on the milled surface, A and T dimensions, please refer to the drawing of the product of the below Part Number Without "P". (For HFS5 series, refer to P.477) (Ex.) HFSP5-2020 → Fig. HFS5-2020 (P.477)

CAD Data

Features: Bending is applied to HFS5-2020. Combination use with Curved Panel is possible. (Refer to **P.886**)

RoHS

HFSMG

For R=140, the frame slot may be deformed and becomes narrower in width at the spot where the frame is bent. Therefore, slot nut cannot be used.

(For dedicated Curved Panels, refer to **P.886**)

Bending is applied after anodizing; therefore, bent section may slightly discolor and becomes white.

A and B dimensions not indicated in the price list are not available.

Example

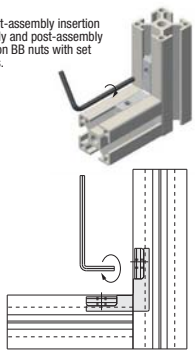
How to Use Post-Assembly Insertion Blind Brackets

(1) Fit the post-assembly insertion BB body in the slot of extrusions.



Side view

(2) Tilt two pieces of post-assembly insertion nuts and fit them in both ends of post-assembly insertion BB body.

(3) Fix post-assembly insertion BB body and post-assembly insertion BB nuts with set screws.

Features: Extrusions can be connected at any arbitrary angle.

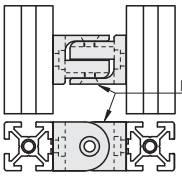
Example

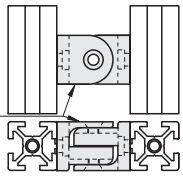
(1) Connection of Two End Sections



The method of connecting two end sections of extrusions is to add taps to the extrusions.
Either HBLTBA20 or HBLTBBN20 can be used for connection.

(2) Connection of Two Extrusion Side Faces (HBLTBA20 Connection)

Anti-spin protrusion is shown in the right figure. Connect two extrusions side to side with HBLTBA20, screws and nuts.



(3) Connection of Two Extrusions Side Faces (HBLTBBN20 Connection)

Anti-spin protrusion is shown in the right figure.Connect two extrusions side to side with HBLTBBN20, screws and nuts.

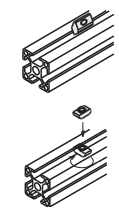
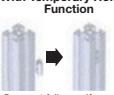
Nuts for Aluminum Frames Guide





Pre-Assembly Insertion Nuts Slide the nuts into slots from the ends before assembly. Less play in the slot makes it easy to tighten the screws.

Other features

*1 Thread Locking Adhesive Type: Nuts with thread locker applied on the inside of tap. Anaerobic adhesive is used. The property decrease after once loosened.
*2 Thread Locking Resin Coating Type: Nuts with thread locking resin coated on the inside of tap. The effect lasts even after repeated tightening and loosening many times.
*3 Price of Stopper Integrated Nut: More economical than the total price of Pre-Assembly Insertion Nut HNTT and Resin Stopper HNST.
*4 Price of Pre-Assembly Insertion Spring Nut: to the total price of Pre-Assembly Insertion Nut HNTT and Resin Stopper HNST.
*5 Pre-Assembly Insertion Lock Nut: The nut can be fixed in place by tightening the included set screw.
Convenient when fixing the nuts in position by themselves for sensor mounting and removing panels repeatedly.
*6 Pre-Assembly Insertion Short Nut: The length of slot is shorter for space-saving than Pre-Assembly Insertion Nut HNTT.
*7 Pre-Assembly Insertion Offset Nuts: Hole position is offset. When connecting the extrusions at corners with Pre-Assembly Insertion Double Joint (refer to **P.637**), the nut does not protrude from the extrusion.

Post-Assembly Insertion Nuts Since the nuts can be inserted into slots at any arbitrary positions, adding is possible even after assembly.

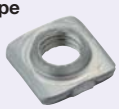
■Thread Locking Type

Anti-loose agent applied inside of the tap

It is a Nut with Thread locker applied on the inside of tap. Reduce loosening caused by vibration at transportation or operation of equipment.
Thread Locking Adhesive is ··· A microencapsulated anaerobic adhesive prevents thread loosening. Note that it requires a hardening time (72 hours at room temperature 25°C). The adhesive property is lost once loosened.
Resin Coating ··· Resin is coated along the threads. Although the thread locking effect may be less than adhesive type, it can be used repeatedly without hardening time required.



■Effect of Thread Locker (Reference)

Loosening torque values are for reference. Difference may occur depending on the clearances between bolts and nuts.

	Features	Loosening torque after tightening (1st time)	Remarks
Without Thread Locker	-	5.2N · m	-
Thread Locking Adhesive Type	· Prevents loosening effectively. · Thread locking properties are lost once loosened. · Requires a hardening time for adhesives (72 hours at room temperature 25°C) after tightening.	7.6N · m	Test ConditionsMeasured value (HNTTV5-5) when a bolt is loosened after drying for 72 hours at room temperature (25 °C), after tightened at 6.8N · m.
Thread Locking Resin Coating Type	· Can be used repeatedly. (Thread locking effect decreases after repeated use.) · Thread locking effect is immediately seen right after tightening.	6.5N · m	Thread locking effect decreases after repeated use. 5th loosening torque: 6.2N · m Measurement at HNTTZ5-5

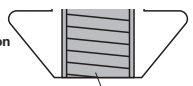
Bulk-packages are cost effective for in-house stock and large qty. uses. (P508)



Example

- Does not fall even if a extrusion is placed vertically.

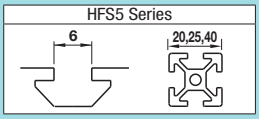
The built-in spring prevents slips. Moves easily in the slot when pressed slightly by hand.

■Thread Locking Type

Anti-loose agent applied inside of the tap

It is a Nut with Thread locker applied on the inside of tap. Reduce loosening caused by vibration at transportation or operation of equipment.

Thread Locking Adhesive is ---A microencapsulated anaerobic adhesive prevents thread loosening.
Note that it requires a hardening time (72 hours at room temperature 25°C).
The adhesive property is lost once loosened.



Resin CoatingResin is coated along the threads. Although the thread locking effect may be less than adhesive type, it can be used repeatedly without hardening time required.

■Effect of Thread Locker (Reference) Loosening torque values are for reference. Difference may occur depending on the clearances between bolts and nuts.

	Features	Loosening torque after tightening (1st time)	Remarks
Without Thread Locker	-	5.2N·m	-
Thread Locking Adhesive Type	- Prevents loosening effectively. - Thread locking properties are lost once loosened. - Requires a hardening time for adhesives (72 hours at room temperature 25°C) after tightening.	7.6N·m	Test ConditionsMeasured value (HNTTV5-5) when a bolt is loosened after drying for 72 hours at room temperature (25 °C), after tightened at 6.8N·m.
Thread Locking Resin Coating Type	- Can be used repeatedly. (Thread locking effect decreases after repeated use.) - Thread locking effect is immediately seen right after tightening.	6.5N·m	Thread locking effect decreases after repeated use. 5th loosening torque: 6.2N·m Measurement at HNTTZ5-5

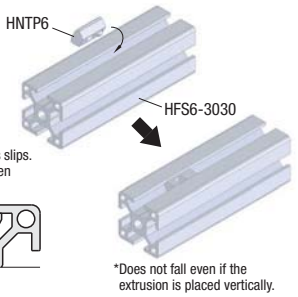
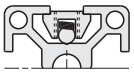
Post-Assembly Insertion Spring Nuts · Pack (100pcs. per package)



RoHS



Type	Material: Body	Ball	Springs	Surface Treatment
PACK-HNTP	1.0301/ C10	1.4301/ X5CrNi18-10	JIS SWP-A	Trivalent Chromate

Example

The built-in spring prevents slips.
Moves easily in the slot when pressed slightly by hand.

*Does not fall even if the extrusion is placed vertically.

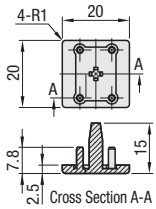
Extrusion End Caps
-HFS5 Series-

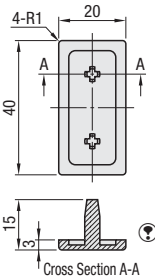
HFS5 Series

Features: Standard caps for protecting frame end faces. Alterations are not required. When the cap is hard to insert, tap with a wooden or plastic hammer.

RoHS



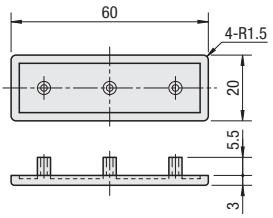
Type	Material
HFC	Polyamide
HFCL	Low Density Polyethylene



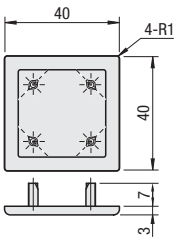
※Some products are not required to specify colors, since there was no color configuration in the former catalogs. In that case, color is black.

※The pin's shape and numbers of extrusion end caps may be changed to prevent caps from easily falling off.

HFC5-2020 / HFCL5-2020



HFC5-2040 / HFCL5-2040



※The shapes are changed to be less likely to fall off.
HFC: A tool is required to remove.
HFCL: Removable by hand.

Features of Extrusions

Cross Section Shape	EFS Extrusions	New shape with the same or higher rigidity as conventional HFS series. Weight saving and price reduction realized. Migration from HFS Series extrusions realizes cost savings.
	HFS Extrusions	Standard cross section shape.
	HFSL Extrusions	Although having thin walls lowers the allowable load, excels in cost savings offered.
	GFS Extrusions	Suitable for heavier devices due to the thick walls.
Surface Treatment	Clear Anodize	Common surface treatment.
	Black Anodize	Effective in where light reflection is not desirable.
	Clear Coating	More luster and better appearance than anodizing.
	Baked-on Finish · Yellow	Can be used on doors or hazardous areas as a warning color. The color is D22 -80V (Munsell Value Reference 2.5YR6/14) by Japan Paint Manufacturers Association.

When L is less than 300
Unit prices are indicated in the table regardless of the length.
ex: HFS6-3060-180=4,20 EUR
When L is 300 or more
Prices are calculated as follows:
€ Unit Price/m x Specified Full Length = Price
ex:HFS6-3060-800
14,30x0.8m=4,20 EUR
(Round down to ten Cent.)

Days to Ship

Configurable Length Extrusions
6 Days

Up to 79 pcs.
Shipping of 2nd business day is available for orders of 80~160 pcs.

Alterations

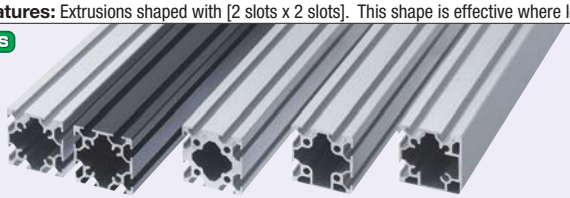
Alterations are available for Configurable Length Extrusions. For details, refer to **P.645**

Fixed Length Extrusions (Effective Length 4000mm)
7 Days

For orders of 20 or more identical pieces, please request a quotation.

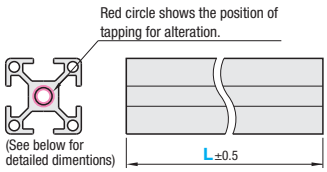
Aluminum Frames with 4000mm or more



Applicable to 6000mm depending on products.
Refer to Information of Special Orders (**P.97**), and contact the person in charge of Special Orders at MISUMI QCT Center.
Some extrusions are not applicable.

HFS6 Series Aluminum Frames 30 · 60 mm Square
-2 Slots-

Price Reduction
Up to 5.9%



Features: Extrusions shaped with [2 slots x 2 slots]. This shape is effective where loads apply.

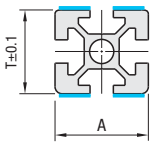
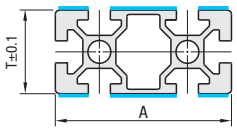
Detailed view of slot on milled surface



Ⓥ Being extruded sections, products can twist. It is recommended to support overall length of extrusion when using. See tolerance data on aluminum extrusions on **P.476**.

* Due to the extrusion outer dimentional tolerance, the thickness tolerance of the slot on the milled surface is shown above, while T dimension tolerance is ±0.1.



Ⓥ For detailed dimensions and shapes EXCEPT the slots on the milled surface, A and T dimensions, please refer to the drawing of the product of the below Part Number Without "P".(Ex.) HFSP6-3030→Ref. fig. HFS6-3030 (Refer to P.511.)

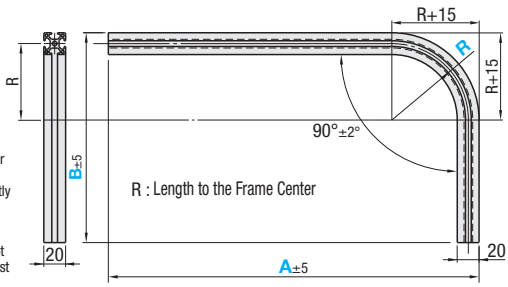
HFSP6 - 3030 - 800 - LTP

*1 When the cross section is rectangle (vertical), counterboring is not available for extrusions exceeding 60mm in the longitudinal direction.
*2 When the cross section is L-shaped, counterboring is only applicable to the lower section of extrusions exceeding 60mm in length direction.



Features: Bending is applied to HFS6-3030.

Curved Aluminum Frames

RoHS

HFSMG6

Bending is applied after anodizing; therefore, bent section may slightly discolor and becomes white.

A and B dimensions not indicated in the price list are not available.

For R=140, the frame slot may be deformed and becomes narrower in width at the spot where the frame is bent. Therefore, slot nut cannot be used.
(For dedicated Curved Panels, refer to **P.886**)

Example

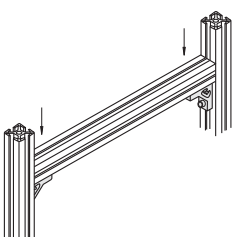
Features of HBLSP (Slot Stainless Steel Brackets with tabs)

Tab fits into the groove.
*There are tabs for putting slot.
(Depth: 0.9mm)



Order Example — Part Number: HBLSS6

Days to Ship — 6 Days / 2 Days P.87

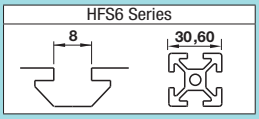
Alterations — Part Number: HBLSS6 - (SET · SST · SEU · SSU · SEP · SSP): SET

Allowable Load of Bracket

- Allowable load of one bracket is calculated with assumption that extrusion (between two extrusions) is on both ends supported with brackets.

Alterations	Code	Spec.	Applicable Brackets	Price Adder SET	SST	SEU	SSU	SEP	SSP
Applicable Screws and Nuts come as a set.	SET (Stainless Steel) SEU (Pre-assy. Insertion Spring Nuts SSU (Pre-Assy. Insertion Spring Nuts Stainless Steel) SEP (Post-Assy. Insertion) SSP (Post-Assy. Insertion Spring Nuts Stainless Steel(	Supplies a set of applicable screws and nuts for fixing the bracket to a extrusion. (Adds to the bracket price) (Ex.) When HBLSS6 is specified,	HBLSP6	0,82	0,60	1,08	1,46	1,08	1,00
			HBLSS6						
			HBLSSB6	1,06	-	1,32	-	1,32	-
			HBLSD6	1,64	1,20	2,16	2,92	2,16	2,00
			HBLSDB6	2,12	-	2,64	-	2,64	-
			HBLST6	2,25	1,80	3,03	4,38	3,03	3,00
			HBLSD6-50	1,76	1,76	2,28	3,48	2,28	2,56
			HBLSP6	0,82	0,60	1,08	1,46	1,08	1,00

Code	Screws	Nuts
SET	CBM6-12	HNTT6-6
SST	SCB6-12	HNTTSN6-6
SEU	CBM6-12	HNTU6-6
SSU	SCB6-12	SHNTU6-6
SEP	CBM6-12	HNTP6-6
SSP	SCB6-12	SHNTP6-6



When specifying other than HBLSS6, check for the applicable screws and nuts.

When -SET, -SEU or -SEP is specified, it is not RoHS compliant.

Screws for black anodized parts are HCBMTB (Trivalent Chromate Black). **P.641**

Brackets -Block Brackets · Brackets for Reinforcement-

-Slot Type: HFS6 Series (Aluminum Frames 30 · 60 Square)-

CAD Data

Features: The brackets do not protrude from extrusion widths when used to cross connect extrusions. Can be used in smaller spaces compared to the Tabbed Reversal Brackets.
