- Straight grooves are provided on datum planes. Be sure to match the datum lines when using.
- Rails cannot be connected to be extended.
- Running parallelism is the value measured after the rail is mounted.

■Accessories
- H6 comes with No. 0, Class 1 Phillips button head screws (M2x6).
- H8 comes with cap screws (M2x6).

■Others
- For G dimensions of L Dimension Configurable Type, refer to P.507
- Lithium soap based grease (Multemp Grease PS2 by Kyodo Yushi Co., Ltd.) is filled.

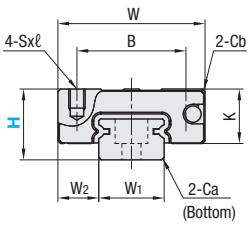
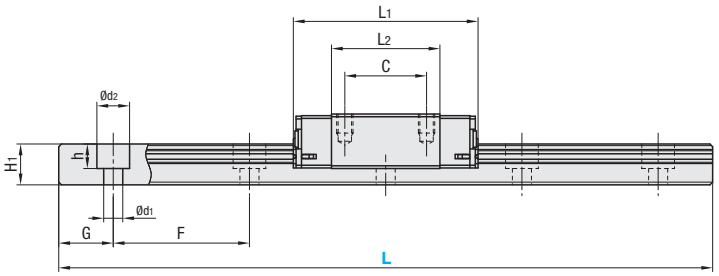
Heat Resistant Temperature: -20~80°C





■Precautions for Use

Ⓣ Blocks are equipped with retainers (wire) to prevent balls from falling out. Refer to ☞P.501
Ⓣ Straight grooves are provided on datum planes. Be sure to match the datum lines when using.
Ⓣ No Side Seal Type is not equipped with side seals to prevent foreign object intrusions, thus the product cannot be used in airborne particle contaminated environments.
Ⓣ Rails cannot be connected to be extended.
Ⓣ Running parallelism is the value measured after the rail is mounted.

■Accessories

- H8 comes with cap screws (M2x6).

■Others

- For G dimensions of L Dimension Configurable Type, refer to ☞P.507
- Lithium soap based grease (Multemp Grease PS2 by Kyodo Yushi Co., Ltd.) is filled.

Miniature Linear Guides

-Standard Blocks with Dowel Holes · Light Preload, Interchangeable-Slight Clearance-

Features: MISUMI original specifications with dowel holes. Requires less time to assemble and has better repeatability.

RoHS

Blocks and rails are not sold as separate items. Light Preload Type has guaranteed radial clearances and accuracies as sets of blocks and rails.

Material / Hardness	Type: Light Preload – High Grade – Sets	Type: Interchangeable-Slight Clearance – Standard Grade – Sets	Type: Interchangeable-Slight Clearance – Standard Grade – Blocks	L Dim.	Blocks Qty.

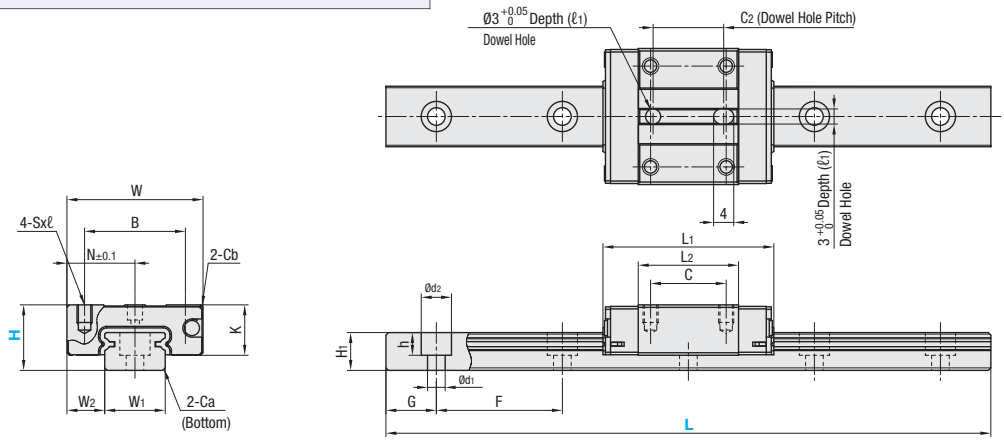
Heat Resistant Temperature: -20~80°C



Precautions for Use

- Blocks are equipped with retainers (wire) to prevent balls from falling out. Refer to P. 501
- Radial clearances and accuracies are not guaranteed if the blocks and rails in the Light Preload Type are interchanged from the original set combinations.
- Blocks and rails can be used interchangeably with Interchangeable-Slight Clearance Type.
- Straight grooves are provided on datum planes. Be sure to match the datum lines when using.
- Rails cannot be connected to be extended.
- Running parallelism is the value measured after the rail is mounted.

Accessories

- H8 comes with cap screws (M2x6).

Others

- For G dimensions of L Dimension Configurable Type, refer to P. 507
- Lithium soap based grease (Multemp Grease PS2 by Kyodo Yushi Co., Ltd.) is filled.

Miniature Linear Guides

-Wide Standard Blocks · Light Preload, Interchangeable-Slight Clearance-

■Features: Wide Block Type of MISUMI original specifications. Larger screw size has enhanced fastening strength compared to standard products.

RoHS

※Blocks and rails are not sold as separate items. Light Preload Type has guaranteed radial clearances and accuracies as sets of blocks and rails.

Material / Hardness	Type: Light Preload, High Grade, Sets	Type: Interchangeable-Slight Clearance, Standard Grade, Sets	Type: Interchangeable-Slight Clearance, Standard Grade, Blocks	L Dimension	Blocks Quantity

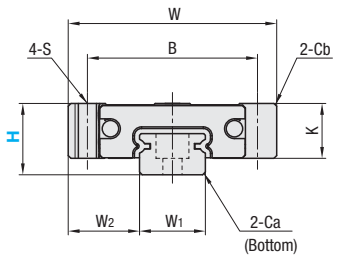
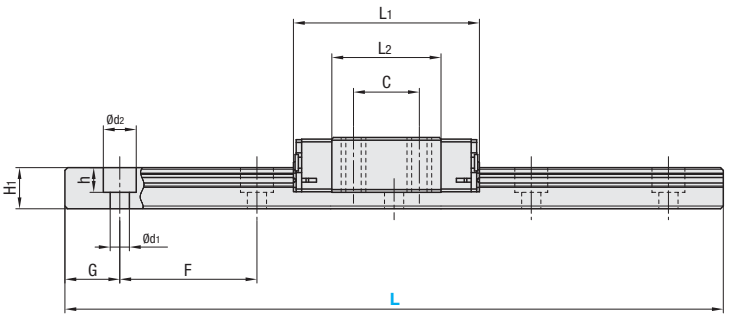
	SSE2BM	SSE2BMZ			2
	SSEBML	SSEBMLZ		Specified	1
	SSE2BML	SSE2BMLZ			2

Heat Resistant Temperature: -20~80°C





■Precautions for Use

- ※Blocks are equipped with retainers (wire) to prevent balls from falling out. Refer to P501
- ※Radial clearances and accuracies are not guaranteed if the blocks and rails in the Light Preload Type are interchanged from the original set combinations.
- ※Blocks and rails can be used interchangeably with Interchangeable-Slight Clearance Type.
- ※Straight grooves are provided on datum planes. Be sure to match the datum lines when using.
- ※Rails cannot be connected to be extended.
- ※Running parallelism is the value measured after the rail is mounted.

■Accessories

- H8 comes with cap screws (M2x6).

■Others

- For G dimensions of L Dimension Configurable Type, refer to P507
- Lithium soap based grease (Multemp Grease PS2 by Kyodo Yushi Co., Ltd.) is filled.

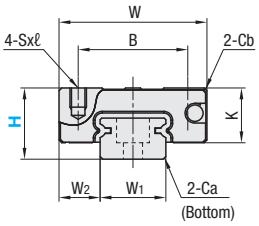
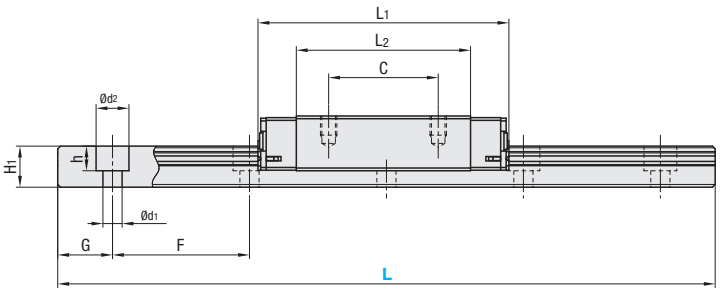
	SSEL2BZ			2
	SSELBLZ		Specified	1
	SSEL2BLZ			2

Heat Resistant Temperature: -20~80°C





■Precautions for Use
- Ⓥ Blocks are equipped with retainers (wire) to prevent balls from falling out. Refer to ☞P.501
- Ⓥ Straight grooves are provided on datum planes. Be sure to match the datum lines when using.
- Ⓥ Rails cannot be connected to be extended.
- Ⓥ Running parallelism is the value measured after the rail is mounted.

■Accessories
- H8 comes with cap screws (M2x6).

■Others
- For G dimensions of L Dimension Configurable Type, refer to ☞P.507
- Lithium soap based grease (Multemp Grease PS2 by Kyodo Yushi Co., Ltd.) is filled.

Miniature Linear Guides

-Extra Long Blocks, Light Preload, Interchangeable, Slight Clearance-

■**Features:** MISUMI original specifications with dowel holes. Requires less time to assemble and has better repeatability. Extra Long Block Type of MISUMI original specifications. Higher load ratings and allowable moments than Long Block Type.

RoHS

Ⓨ Blocks and rails are not sold as separate items. Light Preload Type has guaranteed radial clearances and accuracies as sets of blocks and rails.

Ⓜ Material Ⓗ Hardness	Type				L Dimension	Blocks Quantity
	Light Preload		Interchangeable-Slight Clearance

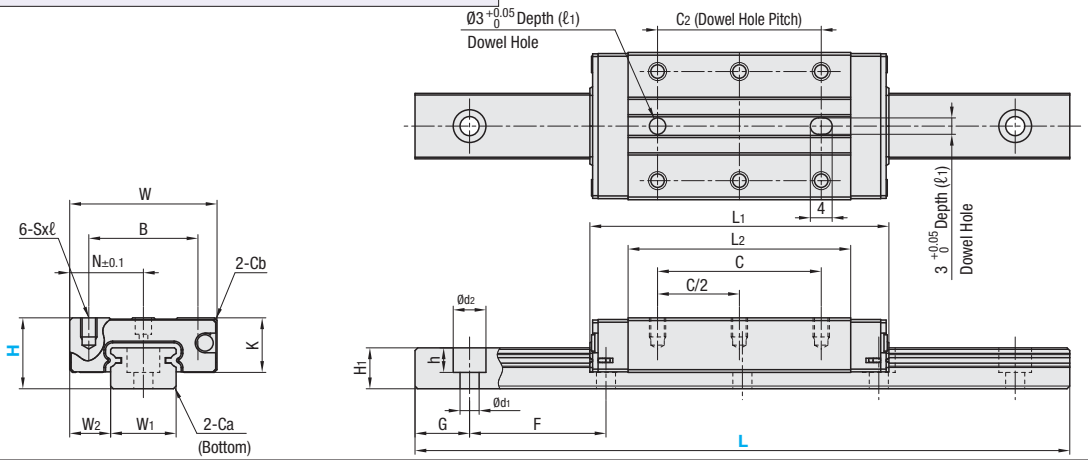
	SSECBL	SSECBNL	SSECBLZ		Specified	

Heat Resistant Temperature: -20~80°C

With Dowel Holes



■**Precautions for Use**

Ⓨ Blocks are equipped with retainers (wire) to prevent balls from falling out. Refer to ☞P.501

Ⓨ Radial clearances and accuracies are not guaranteed if the blocks and rails in the Light Preload Type are interchanged from the original set combinations.

Ⓨ Blocks and rails can be used interchangeably with Interchangeable-Slight Clearance Type.

Ⓨ Straight grooves are provided on datum planes. Be sure to match the datum lines when using.

Ⓨ Rails cannot be connected to be extended.

Ⓨ Running parallelism is the value measured after the rail is mounted.

■**Accessories**

- H8 comes with cap screws (M2x6).

■**Others**

- For G dimensions of L Dimension Configurable Type, refer to ☞P.507
- Lithium soap based grease (Multemp Grease PS2 by Kyodo Yushi Co., Ltd.) is filled.

Miniature Linear Guides -Wide Rails-

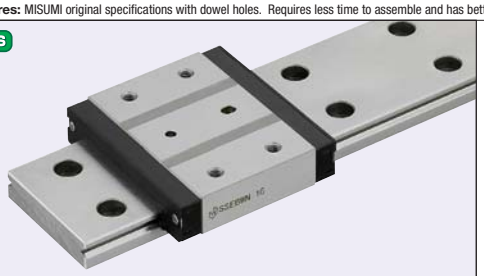
-Standard Blocks with Dowel Holes · Light Preload-

■**Features:** MISUMI original specifications with dowel holes. Requires less time to assemble and has better repeatability.



Ⓨ Blocks and rails are not sold as separate items. Light Preload Type has guaranteed radial clearances and accuracies as sets of blocks and rails.

Ⓜ Material Ⓗ Hardness	Type Light Preload High Grade Sets	L Dimensions	Blocks Quantity

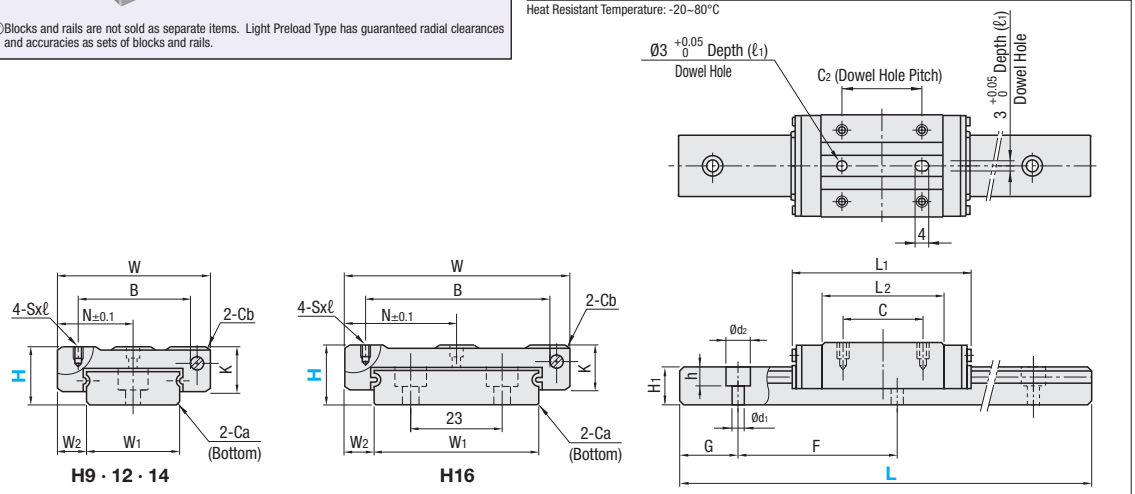
	SSE2BWN		2
	SSEBWNL	Specified	1
	SSE2BWNL		2

Heat Resistant Temperature: -20~80°C



■**Precautions for Use**

Ⓨ Blocks are equipped with retainers (wire) to prevent balls from falling out. Refer to ☞P.501

Ⓨ Radial clearances and accuracies are not guaranteed if the blocks and rails in the Light Preload Type are interchanged from the original set combinations.

Ⓨ Straight grooves are provided on datum planes. Be sure to match the datum lines when using.

Ⓨ Rails cannot be connected to be extended.

Ⓨ Running parallelism is the value measured after the rail is mounted.

■**Others**

- For G dimensions of L Dimension Configurable Type, refer to ☞P.507
- Lithium soap based grease (Multemp Grease PS2 by Kyodo Yushi Co., Ltd.) is filled.
- For life calculations, use our free calculation software from http://download.misumi.jp/mol/fa_soft.html. Refer to P.503.

- Blocks are equipped with retainers (wire) to prevent balls from falling out. Refer to P.501
- Radial clearances and accuracies are not guaranteed if the blocks and rails in the Light Preload Type are interchanged from the original set combinations.
- Straight grooves are provided on datum planes. Be sure to match the datum lines when using.
- Rails cannot be connected to be extended.
- Running parallelism is the value measured after the rail is mounted.

Others

- For G dimensions of L Dimension Configurable Type, refer to P.507
- Lithium soap based grease (Multemp Grease PS2 by Kyodo Yushi Co., Ltd.) is filled.

Miniature Linear Guides-Heat Resistant-

-Short, Standard, Long Blocks · Light Preload-

■**Features:** Usable at up to 150°C of operating temperature since heat-resisting parts and grease are employed.

RoHS

Ⓨ Blocks and rails are not sold as separate items. Light Preload Type has guaranteed radial clearances and accuracies as sets of blocks and rails.

Ⓜ Material Ⓗ Hardness	Type			L Dimension	Blocks Quantity
	Short Blocks	Standard Block	Long Blocks		
Stainless Steel (1.4125/ X105CrMo17 Material) 56HRC~	SSEBST	SSEBT	SSELBT	Selectable	1

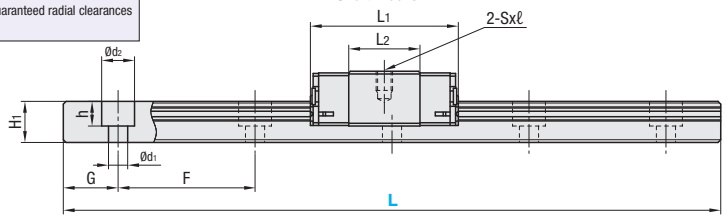
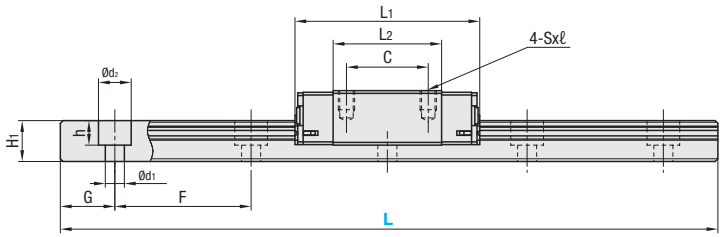
	SSEBSLT	SSEBLT	SSELBLT	Specified	1
	SSE2BSLT	SSE2BLT	SSEL2BLT		2

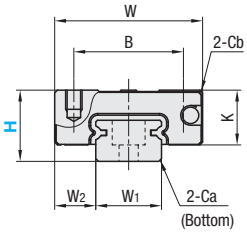
Heat Resistant Temperature: -20~150°C

Short Blocks



Standard, Long Blocks





■Precautions for Use
Ⓨ Blocks are equipped with retainers (wire) to prevent balls from falling out. Refer to ☞P.501
Ⓨ Radial clearances and accuracies are not guaranteed if the blocks and rails in the Light Preload Type are interchanged from the original set combinations.
Ⓨ Straight grooves are provided on datum planes. Be sure to match the datum lines when using.
Ⓨ Rails cannot be connected to be extended.
Ⓨ Running parallelism is the value measured after the rail is mounted.

■Accessories
- H8 comes with cap screws (M2x6).

■Others
- For G dimensions of L Dimension Configurable Type, refer to ☞P.507
- Filled with heat resistant grease (Du Pont KRYTOX GPL225).
- Stainless Steel and Fluoro-Rubber are used for Return Caps and Seals respectively.

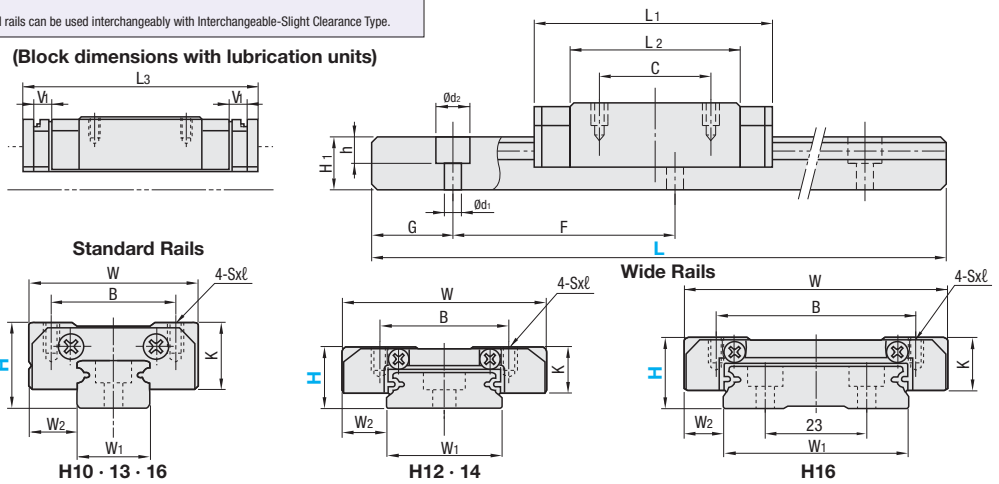
		SAWSL	SAW	SAWLF	Specified	-
		SAWPSL	SAWP			With Lubrication Unit

Heat Resistant Temperature: -20~80°C

(Block dimensions with lubrication units)



■Precautions for Use

※Blocks are equipped with retainers (wire) to prevent balls from falling out. Refer to ☞P501

※Straight grooves are provided on datum planes. Be sure to match the datum lines when using.

※Rails cannot be connected to be extended.

※Running parallelism is the value measured after the rail is mounted.

■Others

The lubrication unit supplies fresh lubrication oil to the track surfaces continuously from porous plastic material containing a high proportion of lubricant, providing long term maintenance-free condition.

- For G dimensions of L Dimension Configurable Type, refer to ☞P507

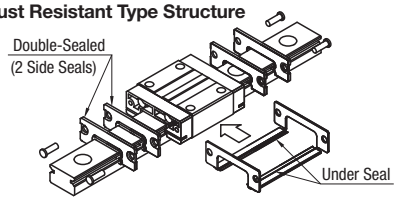
	SE2BD	SE2BWD		2
	SEBDL	SEBWDL	Specified	1
	SE2BDL	SE2BWDL		2

Heat Resistant Temperature: -20~80°C

Dust Resistant Type Structure



- Intrusion of foreign substances into the blocks can be prevented by enhanced sealing effects with two-ply side seal and under seals.
- Can be used where dust and machining chips exist.
- Do not use in areas with high temperature dusts such as weld spatter.

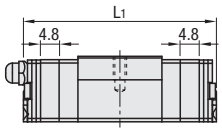
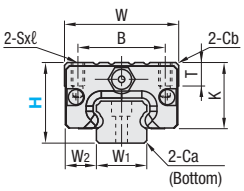
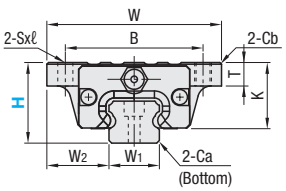
Dimension Diagram of Blocks with MX (Lubrication Nnits)

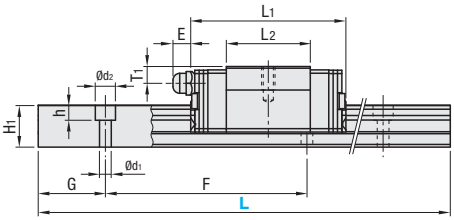




Standard Block



Wide Block



Precautions for Use

- Blocks are equipped with retainers to prevent balls from derailing. Refer to P.501
- Radial clearances and accuracies are not guaranteed if the blocks and rails are interchanged from the original set combinations.
- Straight grooves are provided on datum planes. Be sure to match the datum lines when using.
- Rails cannot be connected to be extended.
- Running parallelism is the value measured after the rail is mounted.

Others

- For G dimensions of L Dimension Configurable Type, refer to P.507
- Filled with Lithium soap based grease (Alvania Grease S2 by Showa Shell Sekiyu K.K). Grease Fittings: Straight type for H24 and angled type for H28 and H33.

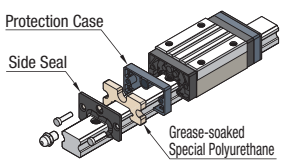
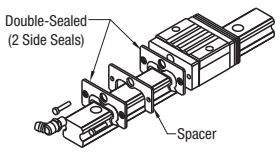
Lubrication Units MX



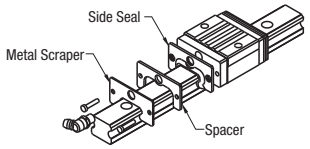
-Advantages of Lubrication Unit MX
Provides long term maintenance-free condition.
Reduces maintenance fee.
Most suitable where the design does not allow lubrication.
For details, refer to P.498

Double-Sealed



-The double seal scheme with two layers of side seals enhances the sealing effect and prevents intrusion of foreign substances into the block.
-Can be used where dust and machining chips exist.
Sliding resistance is higher than the standard type.

W/Metal Scrapers



-Larger foreign substances adhered to the rail can be removed by attaching metal scrapers on the external side of the side seals.
-Can be used in areas with high temperature dusts such as weld spatter.

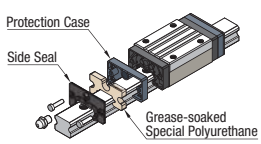
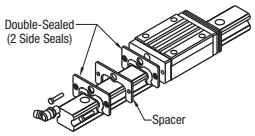
Lubrication Units MX



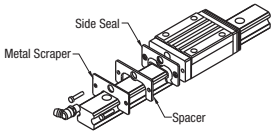
- Advantages of Lubrication Unit MX Provides long term maintenance-free condition. Reduces maintenance fee. Most suitable where the design does not allow lubrication. For details, refer to P.498

Double-Sealed



- The double seal scheme with two layers of side seals enhances the sealing effect + prevents intrusion of foreign substances into the block.
- Can be used where dust and machining chips exist.
- Sliding resistance is higher than the standard type.

W/Metal Scrapers



- Larger foreign substances adhered to the rail can be removed by attaching metal scrapers on the external side of the side seals.
- Can be used in areas with high temperature dusts such as weld spatter.

Linear Guides for Medium and Heavy Load -Stainless Steel-
-Normal Clearance-

Lubrication Units MX New
Provides long term maintenance-free condition.

Features: Linear Guides for Medium and Heavy Load excellent in corrosion resistance.

Blocks and rails are not sold as separate items. Normal Clearance Type has guaranteed radial clearances and accuracies as sets of blocks and rails.

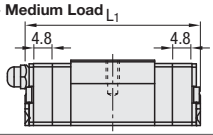
- Medium Load



- Heavy Load

Precautions for Use
- Blocks are equipped with retainers to prevent balls from derailing. Refer to P.501
- Radial clearances and accuracies are not guaranteed if the blocks and rails are interchanged from the original set combinations.
- Straight grooves are provided on datum planes. Be sure to match the datum lines when using.
- Rails cannot be connected to be extended.
- Running parallelism is the value measured after the rail is mounted.

Others
- For G dimensions of L Dimension Configurable Type, refer to P.507
- Filled with Lithium soap based grease (Alvania Grease S2 by Showa Shell Sekiyu K.K). Grease Fittings: Straight type for H24 and angled type for H28 and H33.

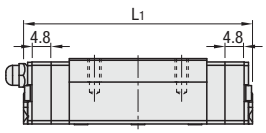
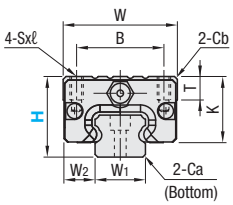
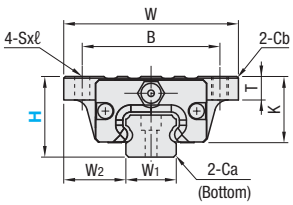
Dimension Diagram of Blocks with MX (Lubrication Units)

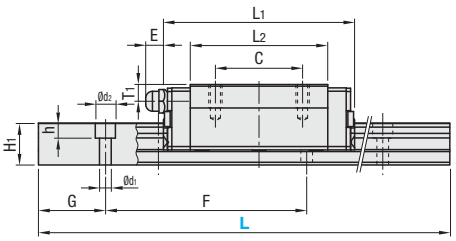




Standard Block



Wide Block



Precautions for Use

- Blocks are equipped with retainers to prevent balls from derailing. Refer to P.501
- Radial clearances and accuracies are not guaranteed if the blocks and rails are interchanged from the original set combinations.
- Straight grooves are provided on datum planes. Be sure to match the datum lines when using.
- Rails cannot be connected to be extended.
- Running parallelism is the value measured after the rail is mounted.

Others

- For G dimensions of L Dimension Configurable Type, refer to P.507
- Filled with Lithium soap based grease (Alvania Grease S2 by Showa Shell Sekiyu K.K.). Grease Fittings: Straight type for H24 and angled type for H28 and H33.

Linear Guides -Heavy Load-

-With Dowel Hole / Normal Clearance-

Lubrication Units MX New
Provides long term maintenance-free condition.

■**Features:** MISUMI original specifications with dowel holes. Requires less time to assemble and has better repeatability.

RoHS

※Blocks and rails are not sold as separate items. Normal Clearance Type has guaranteed radial clearances and accuracies as sets of blocks and rails.

	Type / Standard Grade	MX (Lubrication Units)	L Dimension	Blocks Quantity	M Material H Hardness

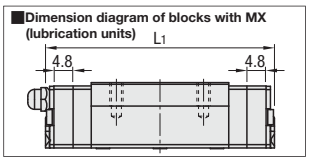
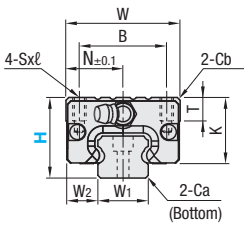
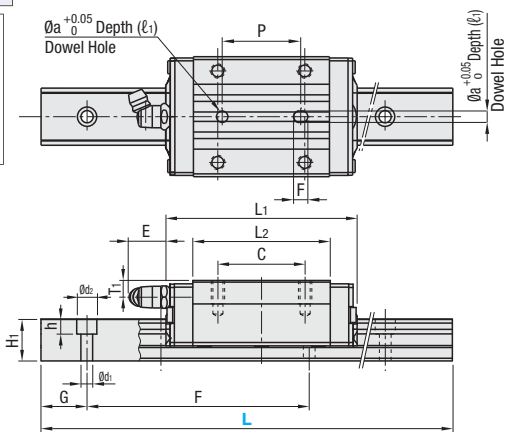
Heat Resistant Temperature: -20~80°C

■**Dimension diagram of blocks with MX (lubrication units)**







■**Precautions for Use**

※Blocks are equipped with retainers to prevent balls from derailing. Refer to P.501
※Radial clearances and accuracies are not guaranteed if the blocks and rails are interchanged from the original set combinations.
※Straight grooves are provided on datum planes. Be sure to match the datum lines when using.
※Rails cannot be connected to be extended.
※Running parallelism is the value measured after the rail is mounted.

■**Others**

- For G dimensions of L Dimension Configurable Type, refer to P.507
- Filled with Lithium soap based grease (Alvania Grease S2 by Showa Shell Sekiyu K.K). Grease Fittings: Straight type for H24 and angled type for H28 and H33.

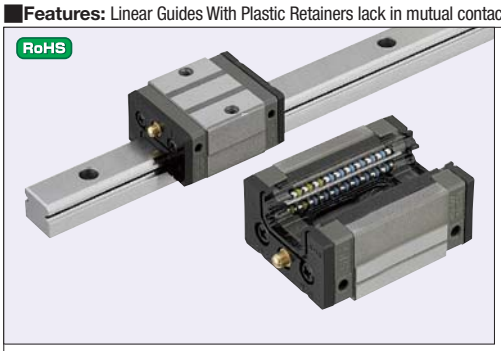
Linear Guides for Medium Load -Stainless Steel-

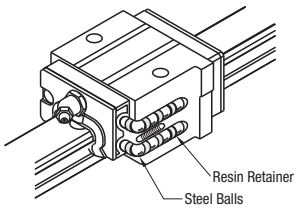
-With Plastic Retainers / Interchangeable, Light Preload-

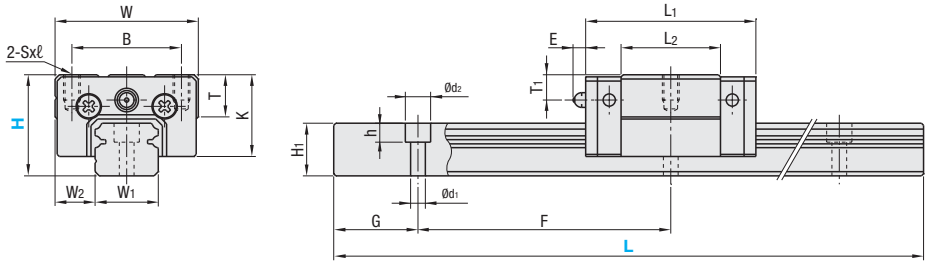
■Features: Linear Guides With Plastic Retainers lack in mutual contact between balls and result in low noise levels under high-speed operation.



Material / Hardness	Type		Blocks	Rails	L Dimensions
	1 Block	2 Blocks			
Stainless Steel (1.4125/X105CrMo17) 57HRC~	SSVRZ	SSV2RZ	SSVRB	SSRZL	Selectable
	SSVRLZ	SSV2RLZ		SSRZLF	Specified

Heat Resistant Temperature: 0~50°C





■Precautions for Use

- Blocks are equipped with retainers to prevent balls from derailing. Refer to P.501
- For Interchangeable, Minute Preload Type, rails and blocks can be interchanged.
- Straight grooves are provided on datum planes. Be sure to match the datum lines when using.
- Rails cannot be connected to be extended.
- Running parallelism is the value measured after the rail is mounted.

■Others

- For G dimensions of L Dimension Configurable Type, refer to P.507
- Filled with Lithium soap based grease (Alvania Grease S2 by Showa Shell Sekiyu K.K).
- Grease Fittings: Straight type for H24 and angled type for H28, H33 and H42.

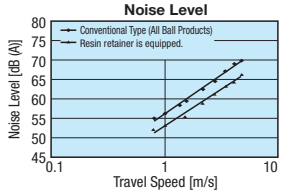
Width W2 Pair Variation	25
Running Parallelism of surf. C against surf. A	Refer to P.501
Running Parallelism of surf. D against surf. B	

■Features of Plastic Retainers: Low noise levels and improved sound quality



- Lack of mutual contact between balls results in low noise levels and improved sound quality.
- Since there is no mutual contact abrasion between the balls, particle generation is less than those of conventional products.

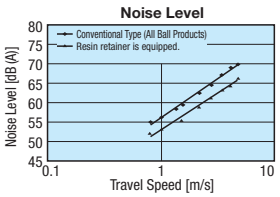
Running Parallelism of surf. C against surf. A	Refer to P.501
Running Parallelism of surf. D against surf. B	

Features of Plastic Retainers: Low noise levels and improved sound quality



- Lack of mutual contact between balls results in low noise levels and improved sound quality.
- Since there is no mutual contact abrasion between the balls, particle generation is less than those of conventional products.

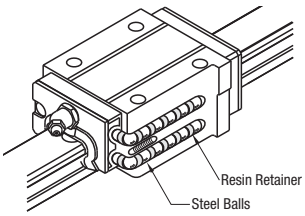
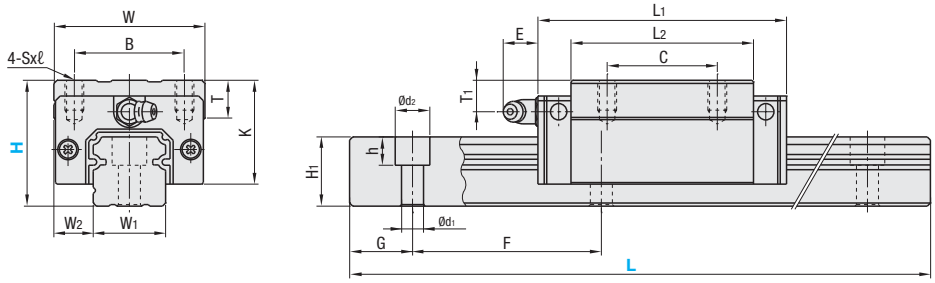
Heat Resistant Temperature: 0~50°C





■Precautions for Use
- Blocks are equipped with retainers to prevent balls from derailing. Refer to ☞P501
- For Interchangeable, Minute Preload Type, rails and blocks can be interchanged.
- Straight grooves are provided on datum planes. Be sure to match the datum lines when using.
- Rails cannot be connected to be extended.
- Running parallelism is the value measured after the rail is mounted.

■Others
- For G dimensions of L Dimension Configurable Type, refer to ☞P507
- Filled with Lithium soap based grease (Alvania Grease S2 by Showa Shell Sekiyu K.K).
- Angled Grease Fitting Type

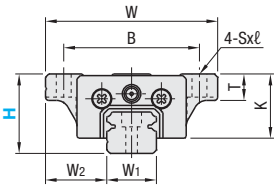
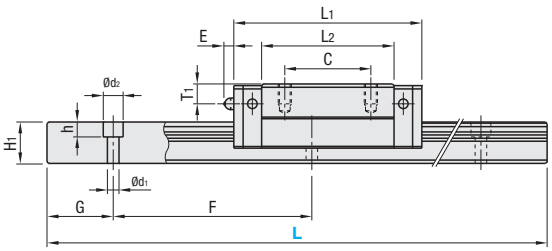
Standard Block



Wide Block



Precautions for Use

- Blocks are equipped with retainers to prevent balls from derailing. Refer to P501
- For Interchangeable, Minute Preload Type, rails and blocks can be interchanged.
- Straight grooves are provided on datum planes. Be sure to match the datum lines when using.
- Rails cannot be connected to be extended.
- Running parallelism is the value measured after the rail is mounted.

Others

- For G dimensions of L Dimension Configurable Type, refer to P507
- Filled with Lithium soap based grease (Alvania Grease S2 by Showa Shell Sekiyu K.K).
- Grease Fittings: Straight type for H24 and angled type for H28, H33 and H42.

Precautions for Use

- Blocks are equipped with retainers to prevent balls from derailing. Refer to P.501
- For Interchangeable, Minute Preload Type, rails and blocks can be interchanged.
- Straight grooves are provided on datum planes. Be sure to match the datum lines when using.
- Rails cannot be connected to be extended.
- Running parallelism is the value measured after the rail is mounted.

Others

- For G dimensions of L Dimension Configurable Type, refer to P.507
- Filled with Lithium soap based grease (Alvania Grease S2 by Showa Shell Sekiyu K.K).
- Angled Grease Fitting Type

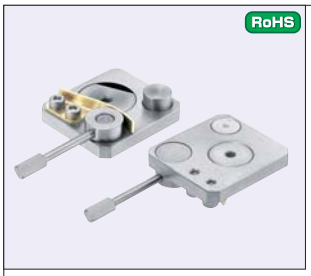
Linear Guide Clamps
-Miniature Linear Guides-

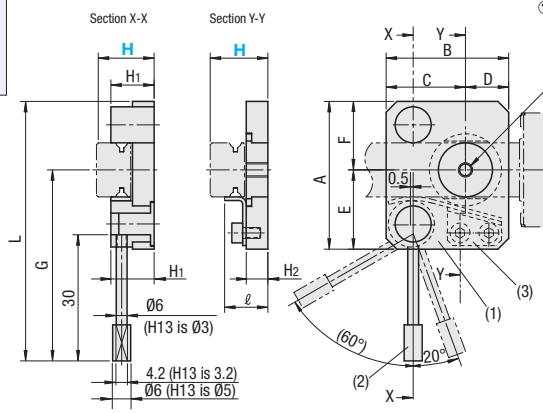
Retaining Force (Reference): 70N~105N

CAD Data



Type		Part	Material
SECK SECWK	(1)	Main Body	1.4301/X5CrNi18-10
	(2)	Lever	1.4301/X5CrNi18-10
	(3)	Contacts	CW505L/CuZn30

■Lever Tightening Force (Reference)
40N or more (Lever End)



- Release at 20° to the right. Clamp within 60° range to the left.
- Linear guide clamp must be mounted to a connecting plate with miniature linear guide first, then attach to the rail.
- Connecting plate is to be supplied by user.
- Mounting point rotates. Tighten the screw by holding the back side.
- SECK Type should match with H dimension of Miniature Linear Guides.
- SECWK Type should match with H dimension of Miniature Linear Guides Wide Type.
- The lever (2) can be screwed off.

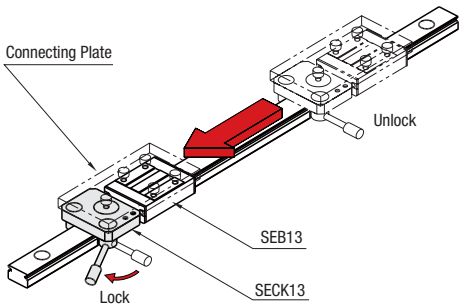
Example



■Characteristics of Linear Guide Clampers

Linear guide blocks can be locked at arbitrary positions by rotating a lever. Convenient when simple position retaining utility is needed.

*When using the Linear Guide Clampers in inclined or vertical applications, provide external means to prevent the slider from falling.

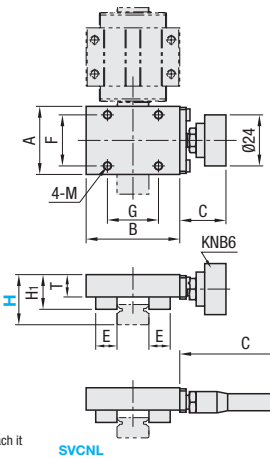
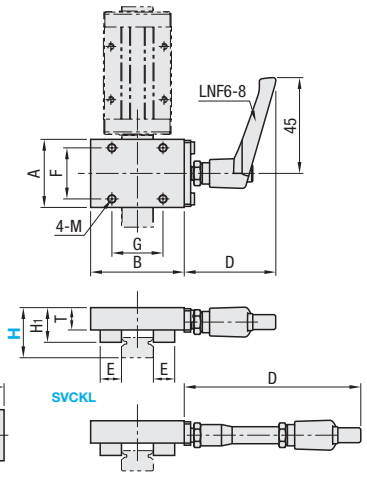
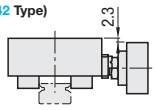
SVCN Knob Type



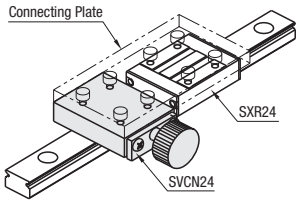
SVCK Assembled Dimensions



SVCNL (SVCN42 Type)



* Do not use for vertical position retaining.



- Linear guide clamp must be fixed to the joint plate for miniature side guide first, then attach it to the rail.
- Connecting plate is to be supplied by user.
- Match with the H dimension of Medium / Heavy Load Linear Guides.
- H42G should be used with matching H dimension 42 of Extra Heavy/Extra Super Heavy Load Linear Guides.
- For KNB6, refer to P. 2 -1025
- For LNF6-8, refer to P. 2 -1004

Cross Roller Tables -Overview-

About Part Numbers

Part numbers of MISUMI Cross Roller Tables and Cross Roller Guides are changed since the 2010 catalog. See the information below.

Price Reduction 20%

Product Name	Shape	Old Part Number	New Part Number	Page
Cross Roller Tables		SYT	CRT	P.591 P.592
		SYTD	CRTD	
		SYTS	CRTS	
		SYTSD	CRTSD	
		SVT	CRU	
Cross Roller Guides		SV	CRV	P.593
		SVS	CRVS	

New Part Number Features

- **20% Significant Price Reduction** (Compared to conventional products.)
- Short Lead Time 8th Day Shipping
- Specifications such as installation dimensions and accuracies are the same as those of products with old part numbers.

* Products with old part numbers are still available online.

Structure and Features

Product Name	Features	Structure
Cross Rollers Table	Highly accurate and rigid cross roller tables with cross roller guides CRV integrated with accurately ground tables and bases.	Cross Rollers Guides	The linear motion bearing structure comprised of two 90-deg. V grooved rails and cylindrical rollers. The rollers are arranged alternately orthogonal to each other, and the structure is able to support moment loads in all directions.	
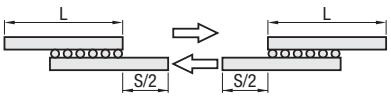
Balls Slide Guides	With no circulation of rolling elements, the Ball Slide Guides slide smoothly, accurately and quietly with little friction.	
Stroke

The travel will be symmetrically 1/2 of the total stoke.



Cage Creep

When the table stops, inertia force applied to the cage may cause cage creep under the following conditions.

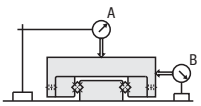
To avoid cage creep, perform full stroke travel several times during use to align the cage in the center.

- Use in half stroke
- Use at high speed

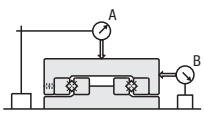
Precision

- Cross Roller Table

Accuracies of Cross Roller Tables are shown by the dial indicator as the table is moved (no load).



A: Parallelism at the center of table (μm)
B: Parallelism at side surface (μm)



A: Parallelism at the center of table (μm)
B: Parallelism at side surface (μm)

No.	CRT CRTS CRTSD Deflection A	CRT CRTS CRTSD Deflection B	CRU Deflection A	CRU Deflection B

- Ball Slide Guides

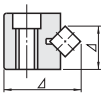
Accuracies of Cross Roller Guides are shown by the dial indicator deflection at table move as the Cross Roller Table CRT Series.

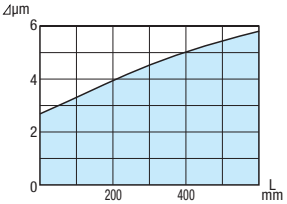
	Deflection A	Deflection B
L≤45	4	6
L≥55	5	8
Height H Tolerance	±20μm	
Width W Tolerance	±25μm	

- Cross Roller Guides

Accuracies of Cross Roller Guides are shown by the parallelism of datum plane and track surface.

Parallelism of datum plane and track surface.





■Load Rating

Calculate the cross roller guide load ratings as below.

1 Rail	Vertical Use of 1 Rail	Parallel Use of 2 Rails
Load Direction 	Load Direction 	Load Direction Dynamic Load Rating (N) $C=\left(\frac{Z}{2}\right)^{3/4}\cdot C_1$	Dynamic Load Rating (N) $C=\left(\frac{Z}{2}\right)^{3/4}\cdot C_1\cdot 2^{7/9}$	Dynamic Load Rating (N) $C=\left(\frac{Z}{2}\right)^{3/4}\cdot C_1\cdot 2^{7/9}$
Static Load Rating (N) $C_0=\left(\frac{Z}{2}\right)\cdot C_{01}$	Static Load Rating (N) $C_0=\left(\frac{Z}{2}\right)\cdot C_{01}\cdot 2$	Static Load Rating (N) $C_0=\left(\frac{Z}{2}\right)\cdot C_{01}\cdot 2$

C_1: Basic Dynamic Load Rating per Roller (N) C_{01}: Basic Static Load Rating per Roller (N) Z: No. of Rolling Elements

■Rated Life

Calculate the rated life of cross roller guide with the following formula.

$$L=\left(\frac{f_T\cdot C}{f_w\cdot P}\right)^{10/3}\cdot 50$$

L : Operating Life (km)
f_T : Temperature Factor (See Fig. 2)
fw: Load Factors (See Table 4)
C : Dynamic Load Rating (N)
P : Applied Load (N)

Life Hours

$$L_h=\frac{L\cdot 10^3}{2\cdot \ell s\cdot n_1\cdot 60}$$

L_h: Life Hours (hr)
L : Operating Life (km)
ℓs: Stroke Length (m)
n_1: Reciprocating cycles per Minute (cpm)

- Load Factor (fw)

To calculate load applied to the Cross Roller Tables, other than object weight, it requires inertia force attributed to motion velocity or moment loads. It, however, is difficult to attain accurate calculations due to potential vibration and impacts caused during reciprocating motion, other than repeated start-stop motions.
Therefore, Load Factor Table helps simplify life calculations.

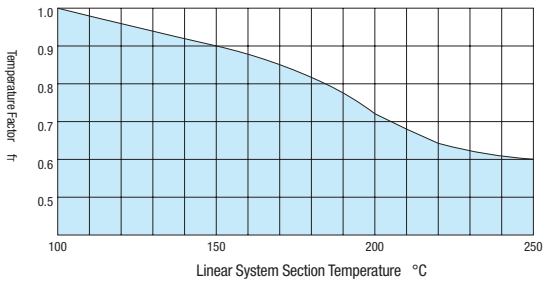
Load Factor Table

Condition of Use	fw
No shocks/vibrations, low speed: 15m/min. or less	1.0~1.5
No significant shocks/vibrations, medium speed: 60m/min. or less	1.5~2.0
With shocks/vibrations, high speed: 60m/min. or more	2.0~3.5

- Temperature Coefficient (f_T)

If the Cross Roller Table temperature exceeds 100°C, the Cross Roller Table and shaft hardness decreases, resulting in less allowable load and shorter life than used at a room temperature.
Please correct the rated life according to the temperature factors. Please use Cross Roller Guides under the allowable temperature shown on each product page.

Temperature Coefficient



■Cross Roller Guides Mounting Procedures

(1) Secure rails A, B, C and D on the table and base with screws and temporarily tighten screws on rail D. (Fig. 1)
(2) Remove end stops and insert the cage from the end. (Fig. 2)
(3) Adjust the table position to place the cage in the center of the rail.
(4) Mount the dial indicator to the predetermined position. (Fig. 3)
(5) Stroke the table and tighten the adjustment screws within the cage (a~e) with a torque wrench. (Fig. 4~6)
(6) Repeat (5) until the dial indicator value becomes and remains minimum.
(7) Fully tighten the adjustment screws while the dial indicator value remains minimum.
(8) Fully tighten the screws on rail D.

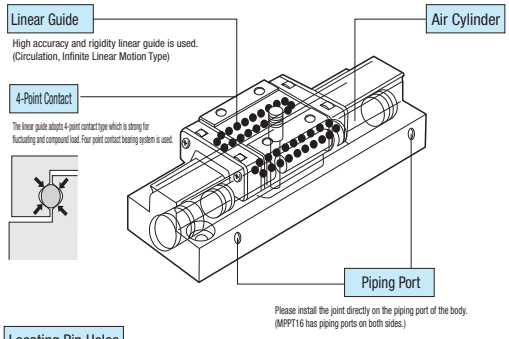
Pneumatically Driven Linear Guides -Overview-

Table Type

Miniature linear guides with built-in air cylinders!

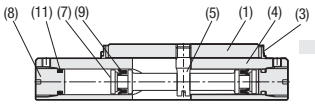


Locating Pin Holes

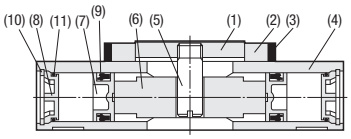
- There are pin holes for work installation and detachment reproductivity on upper surface of the table.
- There are pin holes for body installation and detachment reproductivity on the bottom.

Structure and Construction

MPPT6Y

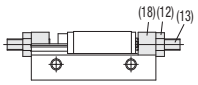


MPPT8, 10, 12, 16



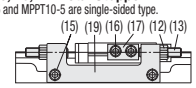
With Stroke Adjustment Mechanism

MPPT6Y Metal Stopper



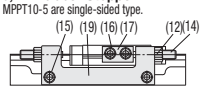
MPPT8, 10, 12 Metal Stopper

MPPT8-5 and MPPT10-5 are single-sided type.

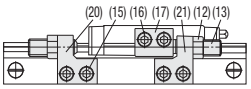


MPPT8, 10, 12 Rubber Stopper

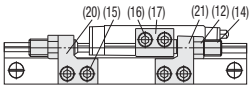
MPPT8-5 and MPPT10-5 are single-sided type.



MPPT16 Metal Stopper



MPPT16 Rubber Stopper



Parts

No.	Product Name	Material	Note	No.	Product Name	Material	Note
1	Table	Stainless Steel (Heat Treatment)		12	Nuts	Steel	Nickel Plating
2	Side Plates	Plastic	MPPT8, 10, 12, 16 only	13	Adjust Screws	Steel	Nickel Plating

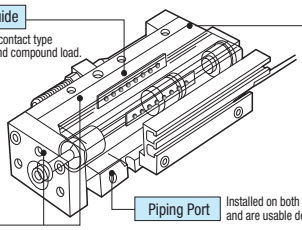
9	Piston Seals	Nitrile Rubber		20	Left Adjusting Block	Steel	Electroless Nickel Plating
10	Retaining Rings for Piston Caps	Steel	Nickel Plating	21	Right Adjusting Block	Steel	Electroless Nickel Plating
11	O-Rings	Nitrile Rubber					

L-Shaped Table Type

Long Stroke Type

4-point Contact Slide Guide

The linear guide adopts 4-point contact type which is strong for fluctuating and compound load.

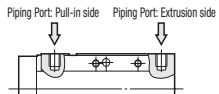


Installation of Load

Installable directly on upper and front surfaces of the table.

Locating Pin Holes

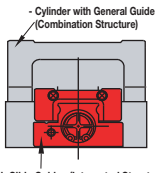
There are pin holes for work installation and detachment reproductivity on upper surface of the table.
There are pin holes for body installation and detachment reproductivity on the bottom.



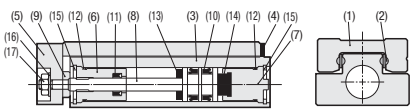
Features of Table Type

Compact Design

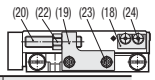
Compared to other cylinders with guides, the cylinder built-in linear guide integrated design is more compact.
(* The sectional area is approx. 1/2 comparing with that of the same inner diameter of cylinder.)



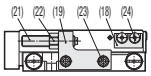
Structure and Construction



Metal Stopper Extrusion Side Adjusting Stroke 1



Rubber Stopper Extrusion Side Adjusting Stroke



No.	Product Name	Material	Note	No.	Product Name	Material	Note

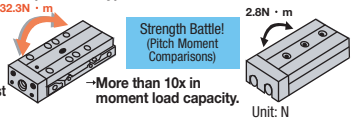
11	Rod Seal	Nitrile Rubber		23	Screws	Steel	Nickel Plating
12	O-Rings	Nitrile Rubber		24	Screws	Steel	Nickel Plating

Features of L-Shaped Table Type

The L Type is a long stroke version of the Table Type.
Also with an integrated cylinder / linear guide design, precision and compactness are equivalent of the Table Type.

Compared in thrust equivalents...

- L-Shaped Table Type: 32.3N・m
- General Cylinder with Guides: 2.8N・m



→More than 10x in moment load capacity.

Specifications

■Switches

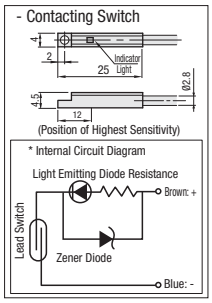
- How to Mount (Diagram in Lower Right)

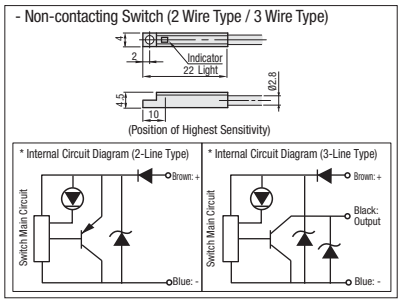
Attach switch installation bracket to the switch (1) and insert it to the switch groove (2).
Set the installing position and tighten the screw with a small screwdriver.
Tightening torque should be 0.1Nm (1kgfcm).

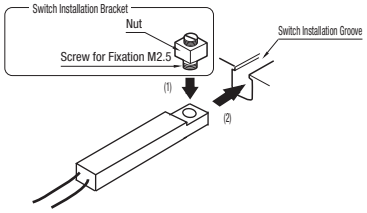
- Switch Specifications

Type	Contact Point 2 wire Type	No Contact 2 wire Type	No Contact 3 wire Type
Indicator Light	Red LED (ON when activated)		
Operating Voltage	DC12~24V		DC5~24V
Load Current	3~24mA	5~40mA	50mA or less
Consumption Current	-	-	10mmA or less
Output Method	-	-	NPN Open Collector
Average response Time	1ms or less		
Operating Temp. Range	5~60°C		
Impact Resistance	30G	50G	
Lead Wire	Ø2.80.18mm², 2 Conductors (+Brown, -Blue)	Ø2.80.15mm², 2 Conductors (+Brown, -Blue)	Ø2.80.15mm², 3 Conductors (+Brown, Black, -Blue)
	Oil-proof, bend-resistant vinyl flexible cable		
Lead Wire Length	1m		
Minimum Bending Radius	R10		
Control Category	(*1) Relay, Programmable Logic Controller		
Internal Voltage Drop	Less than 2.6V	Less than 3.5V	Less than 0.5V
Leakage Current	0	Less than 1mA	Less than 50μA
Insulation Resistance	50MΩ or more at DC250V (between terminal and case)		
Withstanding Voltage	1 minute with AC500V (between terminal and case)		
Degree of Protection	IP67		

(* 1) Please install a load serge protection circuit when an inductive load, such as relay, etc. is used.
- Please be careful of over current when using. (Please consult the load current.)
  It may cause switch damages.
- Switch Mounting Brackets are included with the switches.
  (Note) Two mounting brackets are included for application specific requirements.







■Load and Moment Ratings

Refer to: Allowable Load Moments table for dynamic conditions, Basic Static Load Ratings / Allowable Static Moments table for static conditions to check and confirm that the applications are within the allowable ranges.

Allowable Load Moments — Unit: Nm

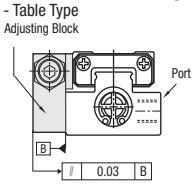
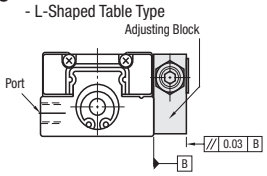
■Parallelism of Adjusting Block

- Table Type



- L-Shaped Table Type



Datum surface on the body side becomes narrower when the stoppers are attached.
In that case, the adjusting block side surface can be used as the datum. "Parallelism 0.03mm"

(* The adjusting block of MPPT16 is divided into two. Considering the thickness tolerance of the adjusting blocks, please designate only one of the two as the datum when using as the datum.)

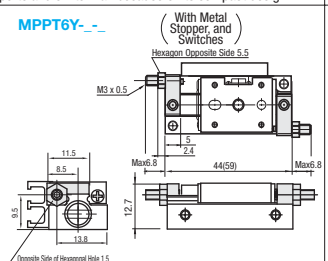
MPPT8-_-N (Main Body Only)

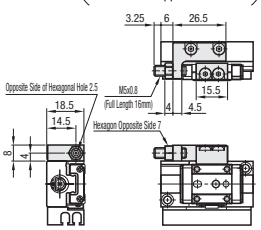
See the CAD data for dimensions of MPPT8 stroke 5.
Dimensions of other sizes are equal to that of "With Switches" type.

MPPT6Y-_-_ (With Metal Stopper, and Switches)

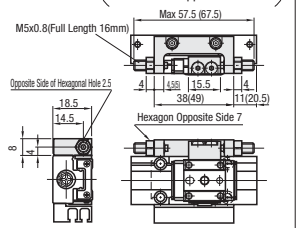


Dimensions in ( ) are for 10mm stroke.

MPPT8-5-_ (With Metal Stopper and Switches / With Rubber Stopper and Switches)



MPPT8-_-_ (With Metal Stopper and Switches / With Rubber Stopper and Switches)



Dimensions in ( ) are for 20mm stroke.

Dimension lines of tapped holes and etc. for switches and stoppers are omitted above. For details of the dimensions, please refer to CAD data.
MPPT6Y: Usable Quick Fittings are round O.D. Ø8 or less with a hexagonal hole in the tube inlets. (Refer to the information below and in P.2-1270).
The sizes differ according to the manufacturer. Please confirm the size before using.

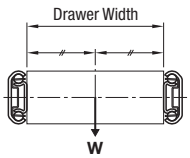
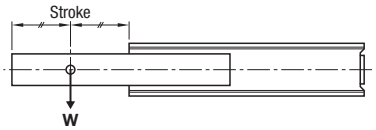
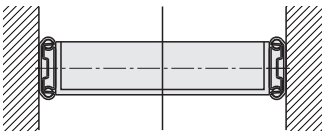
■**Load Rating**
Rated load is a static load at the center of extended rail on drawer side.





■**Installation**
Install a slide rail parallel in right and left in a perpendicular state.

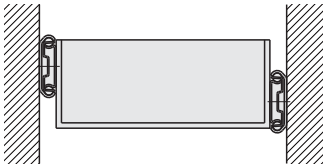


Slide rails are installed vertically and parallel.

O

Slide rails are not vertically installed.

X



Slide rails are not horizontally aligned.

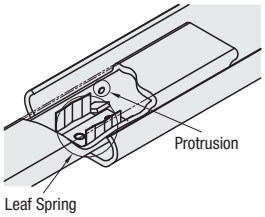
X

※Use in applications where guides are subjected to moment load is not recommended.

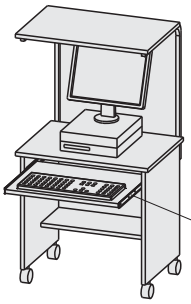
■**Operation**
Strong shocks while opening / closing slide rails will cause damage.
Installation of stopper or buffer on the housing is recommended to protect slide rails from strong shocks.

■About Hold-Open · Closed Latch Mechanisms

<Hold-Open Latch Mechanism>
When the rail is fully pulled out, the tab snap fits into the plate spring and locks against retract direction tentatively. This is suitable for operations with drawers opened.



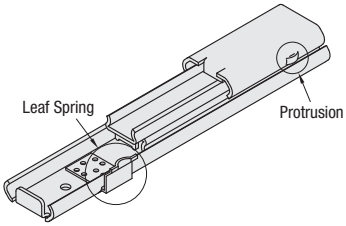
ex



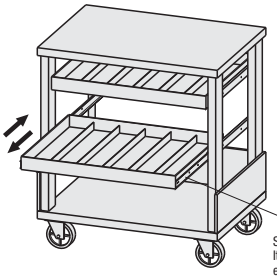
SSRP27 **P.607**

Suitable for Light Load
Convenient when operating with the drawer open

<Hold-Closed Latch Mechanism>
When the rails are retracted to be stored, the tab snap fit into the plate spring and locks against pull-open direction tentatively. This prevents drawers from opening by vibration.



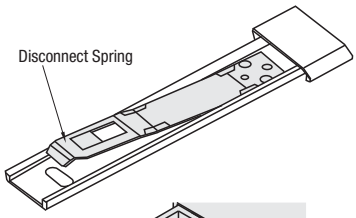
ex

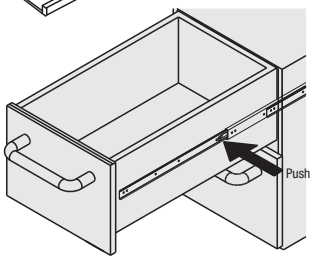


SSRXC27 **P.607**

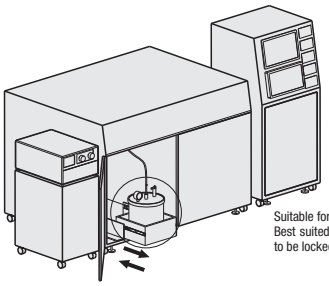
Suitable for Light Load
It prevents drawers from opening by vibration etc.

<Lock Mechanism>
The lock mechanism engages the rail in locked position against retract direction when fully pulled out. It unlocks when the disconnect spring is pushed to allow retraction or rail removal.



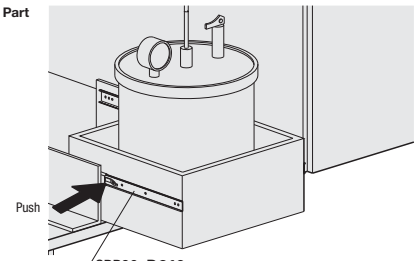


ex



Suitable for Heavy Load
Best suited for usages where the drawers are to be locked open or removed completely.

Enlarged Part

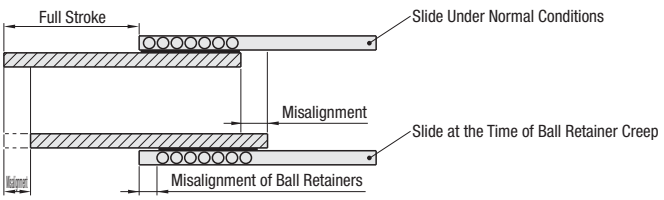


SRR36 **P.610**

■About Ball Retainer Creep (Ball Misalignment)

Due to one of the characteristics of the Slide Rails, the balls may be misaligned and stop before slide rails fully open or close.
This phenomenon is called Ball Retainer Creep.
In the event of a ball retainer creep, travel distances between right and left sliding rails become uneven as shown in the illustration below.

If this occurs, softly pull the rails back to the fully open position.
Quick movements and strong impacts may cause damages when correcting.



Slide Rails Load Rating: 51N ~ 147N/2 pcs.

-Aluminum · Light Load-

CAD Data

Features: The rails are made of aluminum alloy. Lightweight, compactness and economical pricing are achieved.

Light Load, Two-Step Telescopic Slide Rails

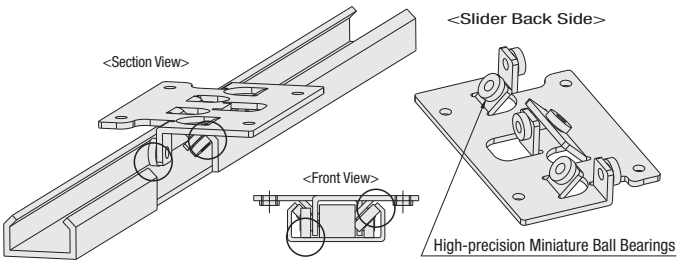
<PLRC · PLR2C · PLR2HC with a Clamper>
Slider position can be easily kept manually by just pushing rail side surfaces with clamper screws. With securing torque of 0.2Nm, position-keeping force of 1.8kg (reference value) is attained.
(In the event that securing torque exceeds 0.2N·m, resin screw tip can deform.)
*When external force more than retaining force is applied, retaining position will change.

<Features>
Low-cost preload is realized with original preload structure and high-precision press technology, although it was difficult for conventional products.
Compared with conventional products, this enables lighter load and smoother transfer and positioning guide performance.

<Structure>
This adopts a slider equipped with original triangular supporting structure, using 6 high-precision ball bearings.
All products are shipped with its rail and slider clearances adjusted, and preload applied.

<Cautions>
When using in wall mounting arrangements, please properly place work piece so that no moment load is applied on the slides that may cause damages.
To use linear rails in vertical or inclined states, provide them with external structures to prevent blocks from falling off.

■**Structure**



■**Maintenance (Grease Application)**
Grease forms oil film on the outer ring of bearings and internal rail surfaces to prevent rail wear.
Please lubricate rail interior surfaces (bearing running surface) with urea-based grease meeting usage conditions, as needed.
Preloaded linear rail type is shipped with rails lubricated.
When at a low speed and for low precision applications, this can be used with no grease applied.

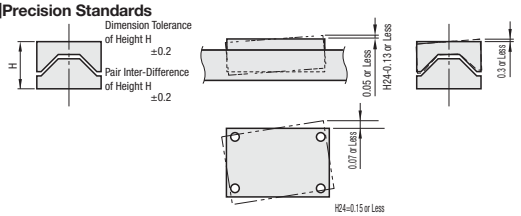
■Features of Simplified Slide Guides for Jigs

1. Linear mechanisms such as simplified jigs can be built at an affordable price.
2. As many blocks and rails can be added as necessary.
3. Common usage is possible as Miniature Linear Guides are in the same height(H), length(L) and installation pitch (N and P).
   However, for H13 Type, P=50 (For Miniature Slide Guides, P=25).
4. Both blocks and rails are made of aluminum (Anodized) to realize weight savings.

■Precision Standards

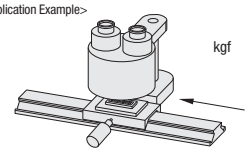


■Quick Retention Type (JKSC)

Please use for retaining horizontally-placed Simple Linear Guide at a specified position (Usage Example: Quick positioning for inspected work piece).

H	Retention Force (kgf)
10	0.5
13	0.5
16	1.0
16A	1.0
24	1.2

<Application Example>



* Refer to the table to the left for retention force (reference values).
  Retaining position alters when external force larger than the retaining force is applied.
* To use Simplified Linear Guides in vertical or inclined arrangements, use additional external structures to prevent rails from falling
* Retaining force (reference value) is the value when quick retention type block fixing screw tightening force is set to 0.1N · m. If tightening force exceeds 0.1N · m, it could cause breakage of screw tip.

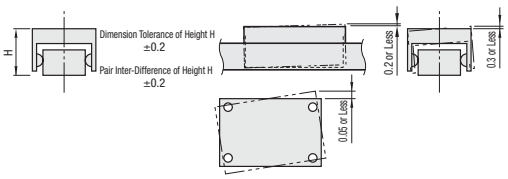
When purchasing 50 or more identical sliders at a time please request for quotation.
Not applicable for ordering rails by a single unit

Features of Simplified Slide Guides

1. Linear mechanisms such as simplified jigs can be built at an affordable price. (Best suited for customers who are unsure about aluminum products on page 617 and 619)
2. As many blocks and rails can be added as necessary.
3. Replaceable with Miniature Slide Guides, as they share common height (H), Length (L) and mounting pitches (N,P).

Precision Standards



Simplified Slide Rails
-Aluminum, Oil Free-

Load Rating: 28 · 110N/pc.

Price Reduction
Up to 2%

CAD Data

Features: Sliders are made of polyacetal resin excellent in sliding property, and is maintenance-free.

RoHS

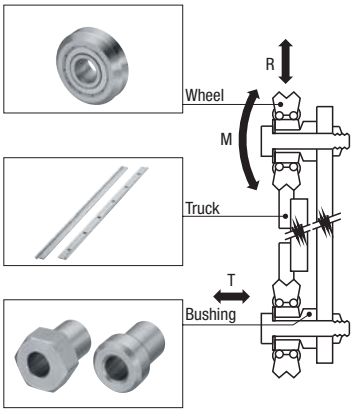
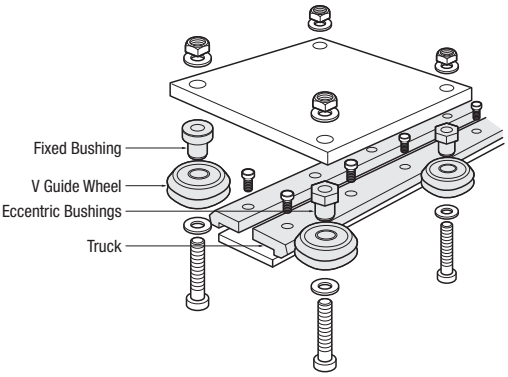
V Guides System Overview

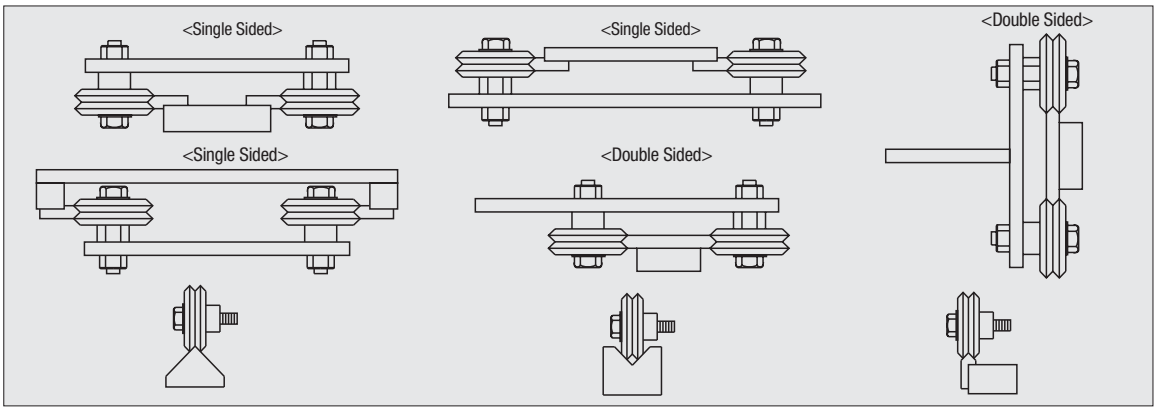
-90° Type-

■V Guide System Structure

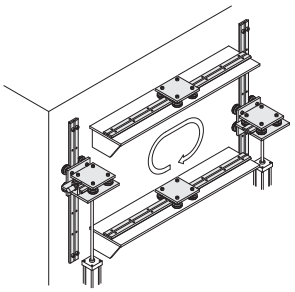


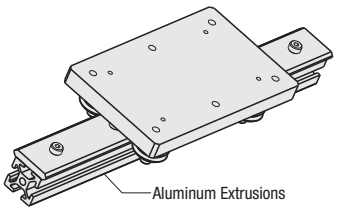


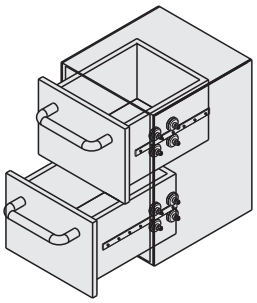
■Wheel-Rail Combination Examples



Example



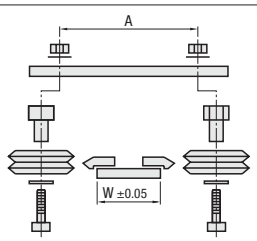




■Functions and Features

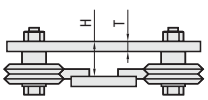
1. Bearing and V groove (90°) are integrated in a single unit.
2. When using 1-Edged Tracks, carriage size can be set freely by adjusting the distance between trucks.
3. When using a Double Edged Track, a system can be structured with only one Track.
4. As the wheel circumference is V shaped, they have wiping effect to clean up automatically while rotating on the track. Lubricating the track sliding surface with grease makes for longer operational life.
5. Inch Sizes

■Mounting Dimensions



Unit: mm

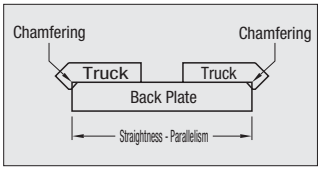
No.	A
1	2x11.104+W
2	2x17.450+W
3	2x25.399+W



Unit: mm

No.	H
1	10.787+T
2	12.790+T
3	18.567+T

Adjustment Method



1. The accuracy of this system depends on the straightness and parallelism of the support (back plate) on which the track rails are mounted.
   The corners of the back plate to which a track rail is mounted must be chamfered 0.5mmx0.5mm.
   Straightness of the track rail: Follow the back plate.
   When mounted on precision back plate, ±0.05
2. When jointing parallel track rails, give a slight offset to the joint locations. This enables the wheels to travel smoothly over the joints.
3. As the circumference of the wheel is V-shaped, the wheel makes wiping effect when it rotates on the track rail. Therefore, it automatically cleans itself.
4. Greasing on the sliding face of the track rails extends their service life.
5. Fixed bushings determine guide system alignment. Main load must be applied on fixed bushings.
6. Adjust the eccentric bushing by rotating so that the wheel travels on the track rail smoothly, then tighten.

Load Calculation

Calculate the load factor (LF) of the wheel to which the biggest load is applied.
Select the wheel whose load factor is less than 1.

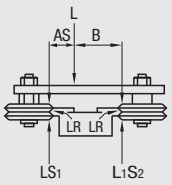
$$LF=\frac{LS}{LSmax}+\frac{LR}{LRmax}$$

LF=Load Factor
LSmax=Maximum Thrust Load
LRmax=Maximum Radial Load
LS=Thrust Load applied to wheel (N)
LR=Radial load applied to wheel (N)

<Calculation Example>

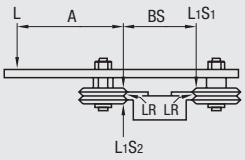
When load applied between the wheels

$LS_1=\frac{LxB}{A+B}$
$LS_2=L-LS_1$
(Ex.) L=500 (N) A=40 (mm)
B=60 (mm)
$LS_1=\frac{500x60}{40+60}=300$ (N)
$LS_2=500-300=200$ (N)



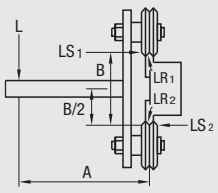
When load applied outside the wheels

$LS_1=\frac{LxA}{B}$
$LS_2=L+LS_1$
(Ex.) L=500 (N) A=60 (mm)
B=40 (mm)
$LS_1=\frac{500x60}{40}=750$ (N)
$LS_2=500+750=1250$ (N)



When radial and thrust load are combined

$LS_1=LS_2=\frac{LxA}{B}$
$LR_1=L+LS_1$
$LR_2=LS_2$
(Ex.) L=500 (N) A=60 (mm)
B=100 (mm)
$LS_1=LS_2=\frac{500x60}{100}=300$ (N)
$LR_1=500+300=800$ (N)



Life Calculation

Calculate life of the system and confirm the validation of size selection.

$$Life\ (km)=\frac{Lc}{(LF)^3}xAf$$

Lc=Life Span Constant
Af= Adjustment Coefficient
LF=Load Factor

<Calculation Example>
When using BVGH3 under the conditions of LS=500, (N) LR=1000 and (N) Af=1

Load Factor $LF=\frac{500}{1701}+\frac{1000}{5900}=0.46$

$Life(km)=\frac{130}{(0.46)^3}x1=1335km$

* For LRmax and LSmax, please refere to **P.623**

Lc = Life Constant

Wheel Size	Lc (km)
1	55
2	87
3	130

Af= Adjustment Coefficient	Application Conditions
1.0-0.7	Clean, Low Speed, Low Shock, Light Load
0.7-0.4	Medium Level Contamination, Medium Level Shock, Medium Load, Vibration
0.4-0.1	Severe Contamination, High Level Acceleration, Heavy Load, Vibration, High Cycle

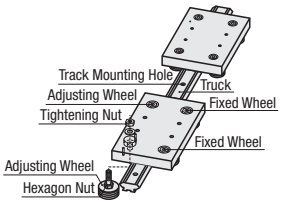
V Guides System Guide
–Millimeter Size 70° Type–

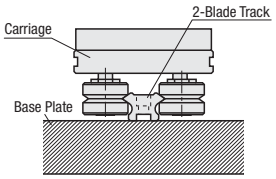
■Functions and Features

1. Bearing and V groove (70°) are integrated in a single unit.
2. When using 1-Blade Tracks, carriage size can be set freely by adjusting the distance between trucks.
3. When using 2-Blade Tracks, system can be structured with only one truck.
4. Both 1-Blade and 2-Blade Tracks have pedestals and can be attached directly to the plate.
5. Metric Sizes.

■Basic Structure



■Usage Examples



■Load Calculation

L=Load (N)
LS=Thrust load applied to wheel (N)
LR=Radial load applied to wheel (N)
A, B=Distance(mm)

When load applied between the wheels

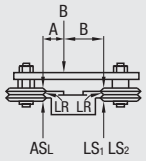
$LS_1 = \frac{LxB}{A+B}$

$LS_2 = L - LS_1$

(Ex.) L=500 (N) A=40 (mm)
B=60 (mm)

$LS_1 = \frac{500x60}{40+60} = 300$ (N)

$LS_2 = 500-300 = 200$ (N)



When load applied outside the wheels

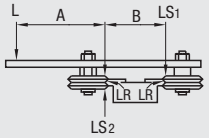
$LS_1 = \frac{LxA}{B}$

$LS_2 = L + LS_1$

(Ex.) L=500 (N) A=60 (mm)
B=40 (mm)

$LS_1 = \frac{500x60}{40} = 750$ (N)

$LS_2 = 500+750 = 1250$ (N)



When radial and thrust load are combined

$LS_1 = LS_2 = \frac{LxA}{B}$

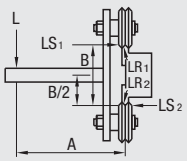
$LR_1 = L + LS_1$

$LR_2 = LS_2$

(Ex.) L=500 (N) A=60 (mm)
B=100 (mm)

$LS_1 = LS_2 = \frac{500x60}{100} = 300$ (N)

$LR_1 = 500+300 = 800$ (N)



■Load Calculation

Calculate the load factor (LF) of the wheel to which the biggest load is applied.
Select the wheel whose load factor is less than 1.

$LF = \frac{LS}{LS\ max} + \frac{LR}{LR\ max}$

LF =Load Factor
LS =Thrust Load applied to wheel
LS max =Maximum Thrust Load applied to wheel
LR =Radial Load applied to wheel
LR max =Maximum Radial Load applied to wheel

Part Number		w/o Lubrication		With Lubrication	
Type	No.	LSmax (N)	LRmax (N)	LSmax (N)	LRmax (N)
MVH MVHS MVHL MVHSL	12	22.5	45	60	120
	25	100	200	320	600
	34	200	400	800	1400

■Life Calculation

Calculate life of the system and confirm the validation of size selection.

$Life\ (km) = \frac{LC}{(LF)^3} XAf$

LF=Load Factor
LC=Basic Life
Af= Adjustment Coefficient

Part Number		LC Basic Life
Type	No.	km
MVH MVHS MVHL MVHSL	12	50
	25	70
	34	100

Af= Adjustment Coefficient	Application Conditions
1.0-0.7	Clean, Low Speed, Low Shock, Light Load
0.7-0.4	Medium Level Contamination, Medium Level Shock, Medium Load, Vibration
0.4-0.1	Severe Contamination, High Level Acceleration, Heavy Load, Vibration, High Cycle

<Calculation Example>
When using MVH-34C under the conditions of LS=100 (N), LR=200 (N) and Af=0.7

$Load\ Factor\ LF = \frac{100}{800} + \frac{200}{1400} = 0.268 \leq 1.0$

$Life(km) = \frac{100}{(0.268)^3} x0.7 = 3637km$

■System Assembly and Adjustments

1. First, assemble the components loosely with a minimum load.
2. Fully tighten the fixed wheels.
3. Next, tighten mounting nuts of adjusting wheel tentatively in order to adjust them.
4. Revolve hexagon nut in the center of adjusting wheel gradually by wrench. Do not leave margin between wheels facing each other in each pair. At the same time, adjust them to apply minimum preload to them.
5. Check if proper preload is applied by turning the wheels with fingers while track is fixed and carriage plate remains still. Although a slight resistance may be felt, the wheels should turn freely under a proper preload. Excessive preload contributes to shortened life.
6. Make adjustments and test all the adjustable wheels in the above manner, and fully tighten the wheel nuts to a prescribed torque value.
7. After adjustment, check again in the same process as 5 to make sure of proper preload.

Step 3. Calculate Free Span Length

↓

Step 4. Check if the Carried Load is within the Free Span Running Range.

↓

Step 5. Calculate Links

↓

Selection Completed.

If required sizes is not available, select a different type of cable carrier.

If required free span cannot be obtained, select a different size.

Step 1. Tentatively Select Cable Carrier Type

<Selection Examples>
Select MPSCS to use in clean room environment.

Please tentatively select type referring to the following features, open-close methods and sizes.

Type	Features	Open-Close System
Slit Type Type **SE / SZ** **P.639**	Cables·hoses can be easily tucked in from both external and internal circumference sides. - Support clean room - No need for link assembly	Tuck the cable into the opening.
Compact Type **MHPKS** **P.641**	Space-saving design enables protection and guide even for only one cable and hose.	Flaps do not open.
Open-Close Type **MHPUS** **P.642**	Flaps open on either side.	Flaps open from either left or right.
Open-Close Full Cover Type **FHPS** **P.643**	Full Cover Type protects cables · hoses from dust	
Low Wear, Low Noise Type **MPSPS** **P.645**	Less wear and noise on Cables · Hoses	
Low Particulates, Low Noise Type **MPSCS** **P.644**	Low dust contributes to achieving Clean Room Class 1000 level and low noise	

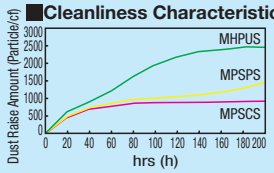
Note

<Dimensions>

	Minimum			Maximum		
	WxB	CxA	Carried Load Max. Diameter	WxB	CxA	Carried Load Max. Diameter
SE / SZ	23x12.5	16x9.4	Ø7	120x64	96x48.5	Ø25
MHPKS	16x12	9x9	Ø7	59x22	44x16	Ø12
MHPUS	27x12	20x9	Ø7	117x40	97x24.5	Ø19
FHPS	26x20	14x13	Ø10	117x40	97x25	Ø20
MPSPS	32x21	20x15	Ø12	101x50	80x35	Ø28
MPSCS	28x25	20x15	Ø12	113x55	100x35	Ø28

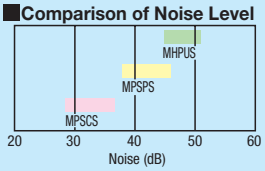
<Cleanliness Characteristics>

■Cleanliness Characteristics



<Noise Characteristics>

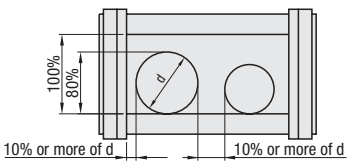
■Comparison of Noise Level



Step 2. Select Cable Carrier Size

Select suitable Cable Carrier size for housing cables/hoses.

<Selection Examples>
One Ø20mm cable needs to be stored.
Select MPSCS2540–60 (Interior Height 25mm) because 20/0.8=25 or more interior height is required for the condition that the cable outer diameter must be within 80% of interior height



** For section dimensions/bending radius by type and size, please refer to product pages.

<Size Selection Tips>

(1) Height
Outer diameter of the cable and hose must be 80% or less than the internal height of the cable carrier.

(2) Space Occupied
Cable and house must be within 60% of Cable Carrier Interior Content=Interior Height x Interior Width.
(MPSPS and MPSCS can be stored up to 70% of interior content)

(3) Bending Radius
When housing different types of cables/hoses together, please select Cable Carrier bending radius meeting the maximum bending radius.

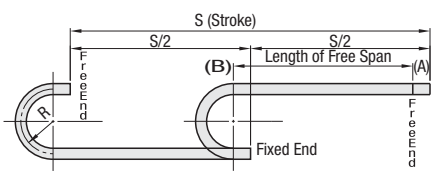
(4) Distance between the running cable/hose and internal wall
The distance between the running cable/hose and Cable Carrier interior wall must be at least 10% of the running cable/hose outer diameter.

(5) Cable / Hose Mutual Distances
The distance between adjacent cables/hoses must be at least 10% of the thicker cable outer diameter.

Step 3. Free Span Length Calculation

Calculate the length of free span by required moving stroke and the position of fixed end.

<Selection Examples>
1500mm is required for strokes. Free span length requires1500/2=750mm as the fixed end can be set at a stroke intermediate point.



<Free Span Length>
Distance between the cable carrier moving end (A) and bending radius arc origin point (B).

When positioning the fixed end in the center of the moving stroke
Free Span Length=Moving Stroke/2

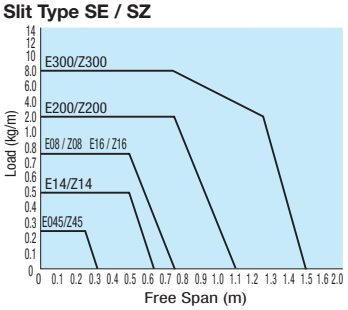
*Possible to minimize the quantity of Plastic Rail Chains by setting the fixed end at the intermediate point of moving stroke.

Step 4. Carried Weight and Free Span Running Range Check

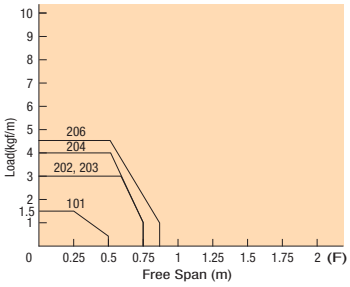
<Selection Examples>
Cable weight is 1.5kg/m. When free span length is 0.75m, it is applicable because 1.5kg falls within the weight capacity line in the graph.

The relationship between the free span length and bearable load (weight of cables/hoses stored) depends on Cable Carrier types. Please check if housed cables/hoses weight falls within the free span travel allowable range (inside the line graph) in the graph below.

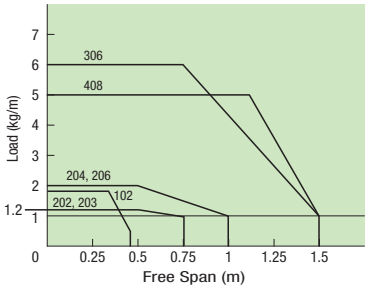
- Slit Type SE / SZ



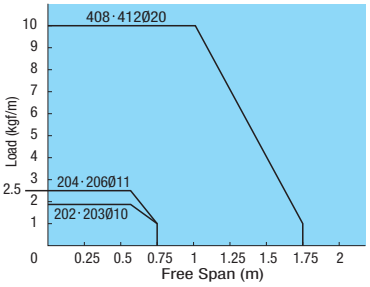
- Compact Type MHPKS



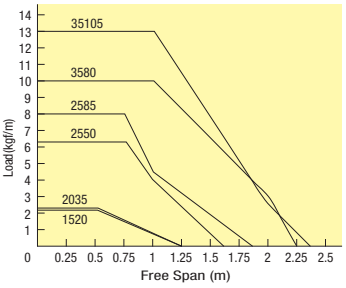
- Flap Open-Close Type MHPUS



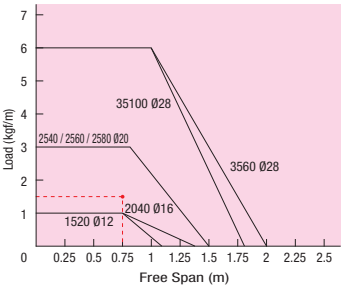
- Flap Open-Close Full Cover Type FHPS



- Low Friction, Low Noise Type MPSPS



- Low Particulate, Low Noise Type MPSCS



Step 5. Link Counting

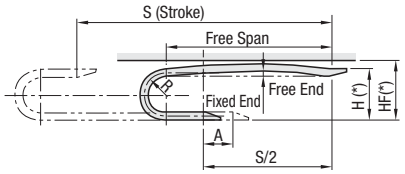
Calculate the number of links by the following formula.

$$n=\frac{\frac{S}{2}+K+A}{P}$$

n: Ling Qty. (Round up the numbers after the decimal point)
S: Travel Stroke
K: Arc+Margin (*)
A: Distance from an intermediate point (mm) when fixed end is not set at a travel stroke intermediate point. (0 when at an intermediate point)
P: Pitch (*)

<Selection Examples>
As 1500mm is required for MPSCS2510-60 and strokes, and the fixed end is set at a stroke intermediate point,

$$\frac{\frac{1500}{2}+251.5\ (\text{Arc+Allowance})+0}{30\ (\text{Pitch})}\approx 34\ (\text{Required Link Qty.})$$

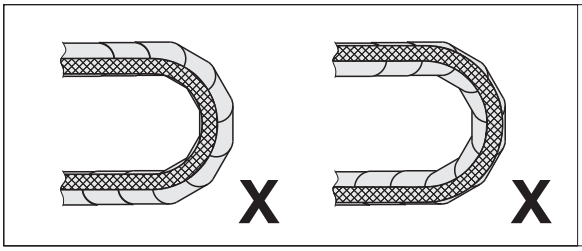


Note
- In the case of new designs, there may be a possibility that carrier links run short.
- It is recommended that links are selected longer by one or two links, and are adjusted (removed) at the time of installing (removing) device.
- Links can be easily removed manually.

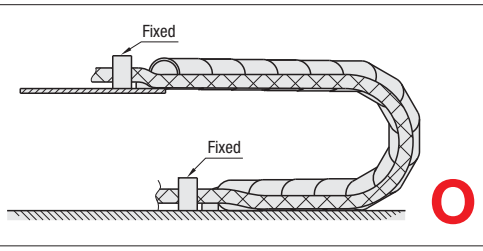
* Drawing mark "HF" indicates a height with a potential bow that may occur when no cable hoses are inserted.

*For K (Arc + Allowance), P (Pitch) and H / HF (Physical Height), see product pages.

Cautions on Cable Installation and Mounting



Please arrange wiring to allow cable free movement.



Please fix cables at both moving and fixed ends so that no undue tension force applies.

For Cable Carrier Slit Type (**P.639**), cables can be tied at the Comb Teeth ends with cable ties.

Cable Carriers

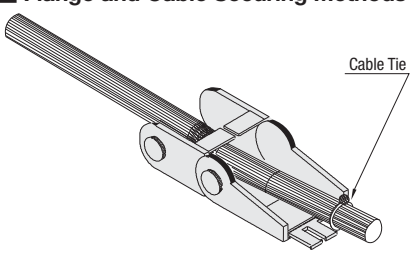
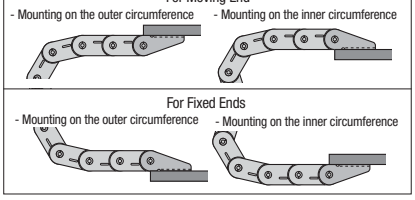
■ Flange and Cable Securing Methods



Cables are tucked in from the outer and inner circumference, and its end comb teeth are fixed in place with cable ties.

■Mounting Direction ⓨCommonly used for both outer and inner circumferences. Except SE045F and SZ045F moving ends can not be mounted on the outer circumference.



ⓨ In the case of new designs, there may be a possibility that carrier links run short. It is recommended that links are selected longer by one or two links, and are adjusted (removed) at the time of installing (removing) device.

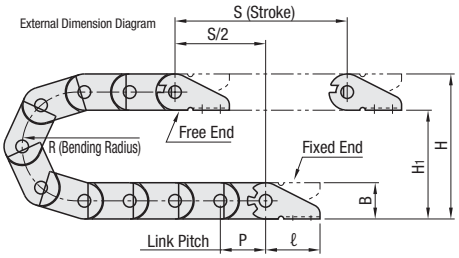
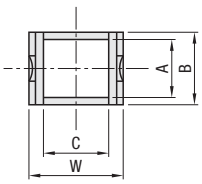
External Dimension Diagram

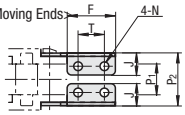


Cross-Section



The above is a drawing of Cable Carrier assembled with 10 links and mounting brackets.

<Moving Ends>



<Fixed Ends>

<Cautions>
- Cable Carrier (10 Links and 1 Link) and mounting brackets are not assembled together at the time of delivery. Links must be connected and mounting brackets must be assembled for use.
- Please install the mounting bracket fixed end on the lower side, and moving end on the upper side (Refer to Positional Relationship in External Dimension Diagram). (Refer to the Positional Relationship in External Dimension Diagram)
- Mounting bracket shape varies depending on size.

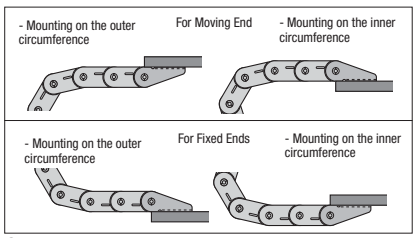
		100	11~49		

<Cautions on Model Selection>
- A Cable Carrier and suitable Mounting Brackets (Moving Ends x 1 set, Fixed Ends x 1 set) are in a set.
- Please note that parts number varies depending on mounting on outer/inner circumference mounting.

<Calculation Example>
For FHPS412-70-38-A (Main Body+Mounting Brackets, 38 Links), 5,90 EUR x 38+13,40 EUR=0,23 EUR 760

■Mounting Direction



In the case of new designs, there may be a possibility that carrier links run short. It is recommended that links are selected longer by one or two links, and are adjusted (removed) at the time of installing (removing) device.

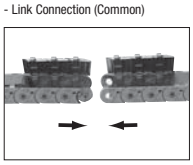
- Flap Opening and Closing

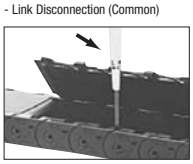
- Flaps are laid on one another. Insert a flat head screwdriver in the side window and pry to open one after another, starting with the top flap.

- Link Connection (Common)



- Open connected link flaps, mate the blocks with each other and push the both ends to joint fit together.

- Link Disconnection (Common)



- Open disconnected link flaps, insert and push down a flat head screwdriver in a gap between the links to disconnect.

Low Particulate, Low Noise Type

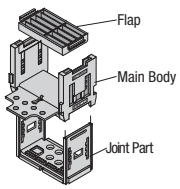
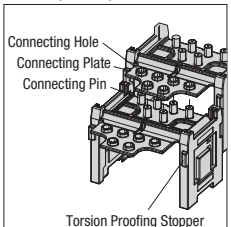
■Low Particulate / Low Noise Cable Carrier (MPSCS) -Link Connection-

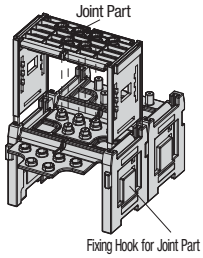
Component Structure Diagram





(1) Connecting the links
Align cable carrier connection pins with the connection holes. Be sure to keep clear of the twist prevention stopper when fitting them together.

(2) Fit in the main body
Make sure that the connection plate is fully mated with the cable carrier.



(3) Fit in joint parts
Please fit in the cable carrier so that joint parts connection holes are aligned with the connection pins.

(4) Check for proper connection
Please check if no gap is made between the joint parts and cable carrier, and if the joint parts fixing hooks are not raised.

Low Friction · Low Noise Type

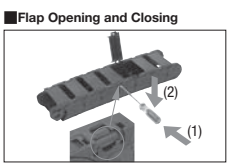
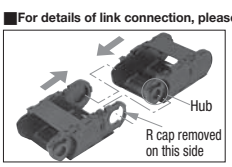
For details of link connection, please refer to attached Instruction Manual.

Flap Opening and Closing

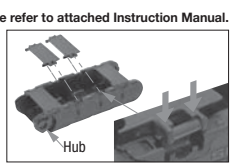


To open the flap, insert a flat head screw driver into the window and pry. To close the flap, push down.

For details of link connection, please refer to attached Instruction Manual.



Remove the connected link flap and R cap, and insert the connected main body cap pilot into the main body equipped with the removed cap, then push the entire body in.



After checking if the pilots and holes are connected, align removed R cap with the cable carrier groove shape, then push it in to install the flap.

Available Greases

Grease type can be changed from the standard type to the following types.
Selecting L or G type allows great reduction of the grease particle dispersion caused by operation.

Part Number	Product Name	Principal Features
L Type	ET-100 (Made by Kyodo Yushi)	Excels in heat resistance, oxidation stability, adhesion and adhesive power. In addition, splash or leakage is little.
G Type	LG2 (Made by NSK Ltd.)	Special grease for linear guides, ball screws and etc. for clean-room use.

Item		Condition	Unit	Measurement Method	L Type	G Type
Grease Performance	Thickener	-	-	-	Aromatic Diurea	Lithium Type
	Base Oil	-	-	-	Ether Synthetic Oil	Mineral Oil + Synthetic Hydrocarbon Oil
	Base Oil Viscosity	40°C	mm^2/s	JIS K2220 5.19	103	30
		100°C			12.8	-
	Worked Penetration	-	-	JIS K2220 5.3	280	207
	Dropping Point	-	°C	JIS K2220 5.4	<260	200
	Evaporation Amount	99°C x 22h	wt%	-	0.15%	1.40%
	Oil Separation Rate	100°Cx24h	wt%	JIS K2220 514	1.2%	0.8%
	Operating Temp.	In Air	°C	-	-40~200	-10~80

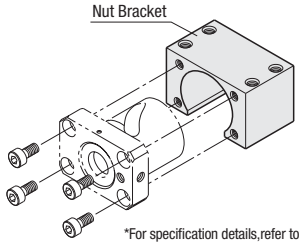
When the Rolled Ball Screw Shaft Diameter 15, Lead 10 is combined with
Support Units Fixed Side (BRW12)
Support Units Support Side (BUR12)

→ **Fixed Side 63,30 EUR**

→ **Support Side 63,30 EUR**

* For details of mounting method of a Ball Screw and a Support Unit,refer to **P.686**. * For details of combination of Ball Screws and Support Units, refer to the Ball Screws Product Page.

- Nut Brackets
  - Various sizes are available for the nut sizes of MISUMI Ball Screws.

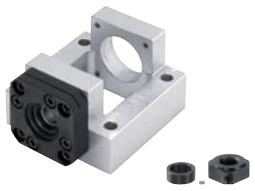


When the Rolled Ball Screw Shaft Diameter 15, Lead 10 is combined with the Nut Bracket (BNFB1510R)

42,00 EUR

*For specification details,refer to **P.695**

- Joint Units
  - The Support Unit and motor locating feature are all-in-one, therefore, the precise shaft centering is possible.
  - Many flanges provided by motor manufactures can be used.



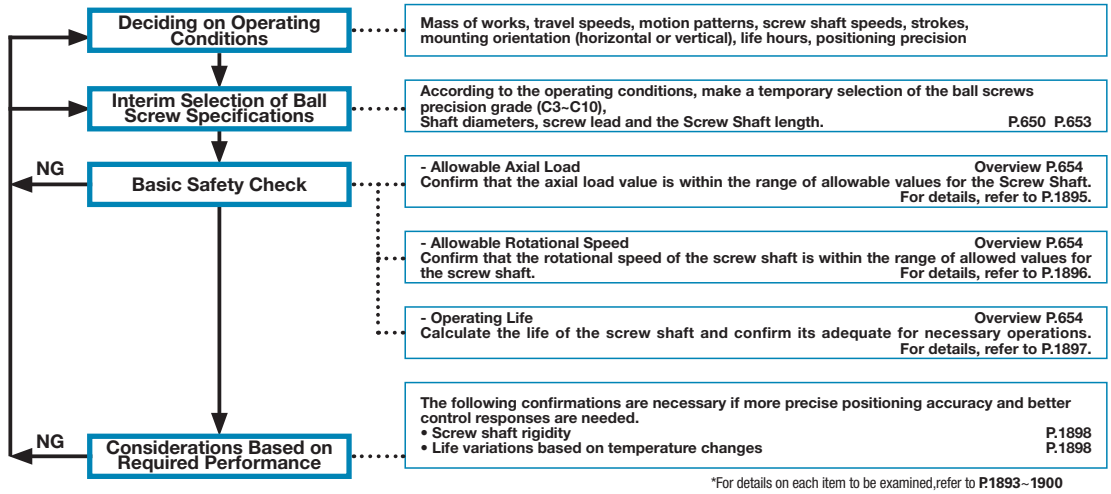
When the Rolled Ball Screw Shaft Diameter 15, Lead 10 is combined with the Joint Unit (BJS12A)

158,00 EUR

*For specification details,refer to **P.696**

- Selection of Ball Screws

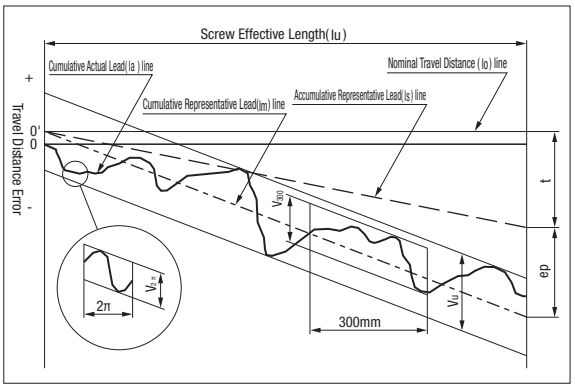
Refer to the following for the standard Ball Screws selection procedures.



*For details on each item to be examined,refer to **P.1893~1900**

- Lead Accuracy of Ball Screws (Details P.1893)

The lead accuracy of the Ball Screws is defined by the JIS Standard Characteristics (ep, Vu, V_{300} and $V_{2\pi}$)
In general, confirm the Actual Mean Travel Error for the Ball Screws is within the range of necessary positioning precision. Then select the precision grade for the Ball Screws to be used. Following are definitions and allowable values for each characteristic.



Term	Symbol	Meaning
Actual Mean Travel Error	ep	Difference between Actual Mean Travel and Specified Travel.
Variation	Vu V_{300} $V_{2\pi}$	Maximum difference of the actual travel contained between two lines drawn parallel to the actual mean travel. Defined by the following three parameters: Vu: Maximum value for the effective thread length. V_{300}: Variation for a 300mm span arbitrarily taken from the effective thread length. $V_{2\pi}$: Variation for an arbitrary 1 revolution (2πrad).
Specified Travel	ls	While the Nominal Travel indicates the nominal travel distance, this is the amount of axial travel distance after compensating possible axis expansion and contraction caused by thermal rise and loads.
Specified Travel Target Value	t	Difference between Specified Travel and Nominal Travel over the effective thread length. This value is predetermined by compensating for possible expansion and contraction caused by thermal conditions and external loads. This is determined by experimental data or experiences.
Actual Travel	la	Actually measured travel distance.
Actual Mean Travel	lm	Straight line representing the trend of actual travel. Straight line obtained by least squares method or other simplified and optimal approximation method from the curve that indicates the actual travel distance.

-Allowable Value-

■Allowable value of Actual Mean Travel Error (±ep) and Variation (Vu) for Positioning Screws (C series) Unit: μm

Effective Screw Length (mm)		Precision Grade			
		C3		C5	
More than	or Less	Actual Mean Travel Lead Error	Variation	Actual Mean Travel Lead Error	Variation
	315	12	8	23	18
315	400	13	10	25	20
400	500	15	10	27	20
500	630	16	12	30	23
630	800	18	13	35	25
800	1000	21	15	40	27
1000	1250	24	16	46	30
1250	1600	29	18	54	35

■Standard values for variations within 300mm of effective thread length (V300) and in one revolution (V2π) for Positioning Screws (JIS B 1192-1997, C accuracy grade series). Unit: μm

Precision Grade	C3		C5	
Item	V_{300}	$V_{2\pi}$	V_{300}	$V_{2\pi}$
Standard Value	8	6	18	8

■Standard values for variations within 300mm of effective thread length (V300) for Transfer Screws (JIS B 1192-1997, Ct accuracy grade series). Unit: μm

Precision Grade	Ct7	Ct10
V_{300}	50	210

Actual Mean Travel Error (ep) for Transfer Screws (JIS B 1192-1997, Ct accuracy grade series) is obtained by ep=2 Lu/300 · V_{300}.

• Allowable axial load of Ball Screws (Details P.1895)

The allowable axial load represents a maximum load, including a safety margin, that causes shaft buckling.
The max. axial load to the Screw Shaft must be equal to or less than the allowable axial load value.

(1) Calculation of the Allowable Axial Load

Use the following 3 factors to find the value from the Allowable Axial Load Curve (Fig.2)
- Screw Shaft Diameter (Ø)
- Method of Mount Support (See Fig. 3)
- Distance between Load Acting Points (Refer to Fig. 3)

* Use a formula to find more accurate Allowable Axial Load.
(Refer to **P.1895**)

(2) Calculation of Maximum Axial Loads

Use the following formulas for calculating each axial load at acceleration, constant speed and deceleration (at horizontal installation).
The largest load is regarded as the Maximum Axial Load.

- Constant speed ··· Axial Load (Pb)=μWg
- Acceleration ··· Axial Load (Pa)=Wα+μWg
- Deceleration ··· Axial Load (Pc)=Wα-μWg

*When vertical mounting, omit "μ" from the calculation.

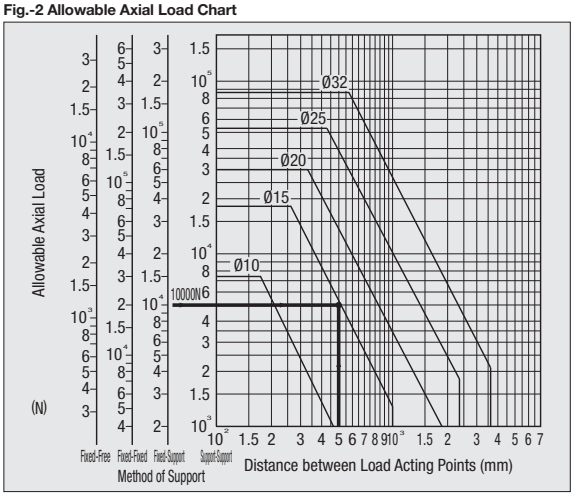
μ: Linear Guide Friction Constant (0.02 for the Linear Guides)
W: Mass of Works
g: Gravitational Acceleration 9.8m/s^2
α: Acceleration (*)

(*) Acceleration (α)=(Vmax/t)X10^{-3}
Vmax:Fast-feed Velocity
t:Acceleration / Deceleration Time

(3) Safety Check

Check the Allowable Axial Load Curve (Fig. 2) to
confirm the maximum axial load value is equal to or less than the allowable axial load values.

Fig.-2 Allowable Axial Load Chart



- Allowable Rotational Speed (Details P.1896)

The rotational speed of Ball Screws is figured out by the necessary travel speed and the Ball Screw lead. The frequency must be equal to or less than the allowable rotational speed.
The allowable rotational speed is examined by using the critical speed on the Rotary Shafts and the DmN value, which is the Rotary Speed limit of the ball circulating in the nuts.

(1) Allowable Rotational Speed

(1) Calculation of Allowable Rotational Speed

Use the following 3 factors to find the value from the Allowable Rotational Speed Curve (Fig.4)
- Screw Shaft Diameter (Ø)
- Method of Mount Support (See Fig. 3)
- Distance between Load Acting Points (Refer to Fig. 3)

*Use a formula to find more accurate Allowable Rotational Speed.
(Refer to **P.1896**)

(2) Safety Check

Use the Allowable Rotational Speed (Fig. 4) to
confirm the Screw shaft rotational speed is equal to or less than the allowable rotational speed values.

(2) DmN value

(1) Calculation of DmN

DmN= (Dm+A)XNmax
Dm: Screw Shaft Diameter
A: Factor determined by the Ball Dia. (Refer to Fig. 5)
Nmax: Screw Shaft Max. revolutions

(2) Confirm the DmN value satisfies the following conditions.
Precision Ball Screws ···DmN≤70000
Rolled Ball Screws ··· DmN≤50000

Fig. 5 Value A

Ball Dia.	Value A
1.5875	0.3
2.3812	0.6
3.175	0.8
4.7625	1.0
6.35	1.8

Fig. 3- Mount Support Orientation

Installation Methods	Characteristics
	· Typically selected installation method · Intermediate ~ high speed applications · Medium ~ High accuracy · For the Support Unit, Standard Type BRW and BUR were selected.
	· Intermediate speed applications · High accuracy · For the Support Unit, Standard Type BRW was selected.
	· Low speed applications · For short shaft length · Medium accuracy · For the Support Unit, Economy Type BRWE

- Operating Life Calculation (Details P.1897)

Use the following formula for calculating the operating hours of the Ball Screws.

$$\text{Life Hours} = \frac{10^6}{60Nm}\left(\frac{C}{Pm \cdot fw}\right)^3$$

C : Basic Dynamic Load Rating (N)
Pm: Allowable Axial Average Load (N)
Nm: Average Revolutions (min^{-1})
fw: Operation Factor

Steady operation without impact	fw=1.0~1.2
Normal operation	fw=1.2~1.5
Operation with impact	fw=1.5~2.0

C :Basic Dynamic Load Rating Definition

When a certain group of the same Ball Screws are operated with a certain Axial Load and 90% of the Screws achieve 1 million revolutions (10^6) without flaking in its operating life, the Axial Load is defined as the Basic Dynamic Load Rating.

-Calculation of Allowable Axial Average Load and Average Revolutions-

It is required to calculate according to the operation patterns. Refer to the table below.
Though it seems very difficult to calculate each condition such as the operation pattern and load, however, the Ball Screws' operating life is always inversely proportional by factor of 3 to the load.
Therefore, the more exact calculation, the wider choice of Ball Screws will become available .

-Operating Pattern Examples- ($t_1+t_2+t_3=100\%$)

Operating Pattern	Allowable Axial Load	Revolutions	Hrs. Rate
A	P_1N	N1min^{-1}	t_1%
B	P_2N	N2min^{-1}	t_2%
C	P_3N	N3min^{-1}	t_3%

-Formula-

$$Pm=\left(\frac{P1^3N_1t_1+P_2^3N_2t_2+P_3^3N_3t_3}{N_1t_1+N_2t_2+N_3t_3}\right)^{\frac{1}{3}} \quad (N)$$

$$Nm=\frac{N_1t_1+N_2t_2+N_3t_3}{t_1+t_2+t_3} \quad (\text{min}^{-1})$$

Fig. 4- Allowable Rotational Speed Chart

A Express Charge of 21,60 EUR for 3 or more identical pieces.

- BSSC (K)

10 Days

For Days to Ship of this product, Saturday and Sunday are not included.

Note

Mounting surface of BSST ball nut flange is not surface-treated.
Filled with lithium soap based grease (Alvania Grease S2 made by Showa Shell Sekiyu K.K).
Notes: Do not let the nuts overrun, as well as remove the nuts from the screw shafts. It may cause the balls to fall out or damage the ball recirculation parts.
Various grease options are available. For lead time, prices and Specifications, refer to P.651 ⊗BSSC is not applicable.
For accuracy of Ball Screws, refer to P.651·653
For details support units, refer to P.685~P.694

Example

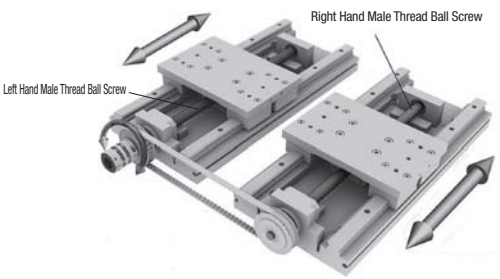
·One motor driving a right hand twist screw and a left hand twist screw together enables synchronized operation



*Precaution for use of Ball Screws

The products shown in the Table 1 still have threads on their parts A. However, this is outside of the motion range, therefore, do not advance the nut into the A area.
Do not let the nuts overrun or remove the nuts from the screw shafts, as ball fall-outs and damages will occur.

Features of Support Units

■Features of Support Units (Fixed Side)

Preloaded bearings are incorporated in the Support Units and they provides steady rotation performance with high-rigidity and high-accuracy.
3 types of fixed side Support Units are available depending on the purpose.

-Standard Type Support Units
Uses the preloaded JIS 5 class Angular Contact Bearings. It is preferable to use for high-accuracy and high-speed precision ball screws.

-Economy Type Support Units
Uses the preloaded JIS 0 class Angular Contact Bearing. While no Axial Play is regulated, it bears the axial load which is the same level to the JIS 5 class axial load. 20% lower in price comparing to those of the Standard Type. It is preferable to use for intermediate and low speed applications.

-Radial Bearing Type Support Units
Uses 2 preloaded JIS 0 class Angular Contact Bearings. Though the allowable axial load is low, it can bear the load from the axial direction. 30% lower in price comparing to those of the Standard Type. It is preferable to use for low speed screws.

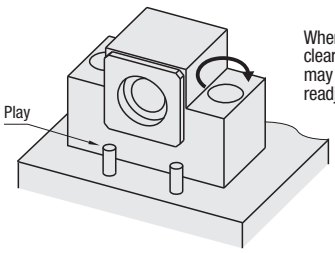
■Features of Support Units with Dowel Holes P.688

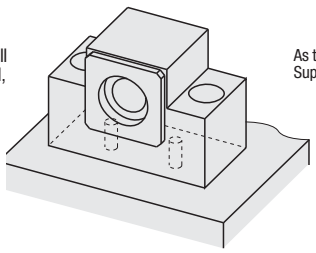
There is a method of pressing against vertical dowel pins for locating support units.
However, it required care in adjustments when tightening the mounting screws not cause clearances between the Pins and the support unit.

- Method of pressing against vertically placed dowel pins



When tightening the mounting screws, clearance between the Pins and the wall may be given. If this clearance is found, readjustment is required.

- Using the Support Units with Dowel Holes



As the Dowel Holes are provided with the Support Units, locating is easy.

■Ball Screw Compatibility Chart

Support Unit Installation

Assembly of Support Units

Installing the support units incorrectly would cause degradation of accuracies and service life expectancy, and the machines would not perform up to their full potential. Considerable care must be taken during installation. Assembly procedure and cautionary points are outlined below.

(1) Pre-assembly Preparation

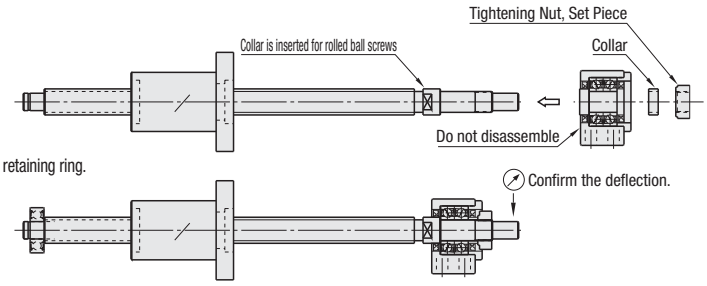
Find a sufficient work area that is as dust-free and moisture-free as possible. Make sure there is little variation in temperature. Choose a clean location and prepare necessary tools on a workbench.

(2) Inspection of Shafts and Support Units

Confirm that there is no dust, foreign objects or burrs on the shaft and bearing inner bore. If burrs are recognized, remove with a oilstone or similar, and brush or wipe off chips thoroughly.

(3) Installing the support unit to the ball screw shaft

- Prepare a ball screws and a support unit.
· Insert the fixed side shaft end into the support unit..
  Cautions on Insertion
  Insert the Shaft straight not to interfere with the Support Unit.
  Also, watch for curled back oil seal lip.
  Apply some grease for smooth insertion.
- Temporarily tighten the bearing nut.
-- Install a radial bearing on ball screw support side. Fix the bearing with a retaining ring.
- Maintain tip runout to be as small as possible.



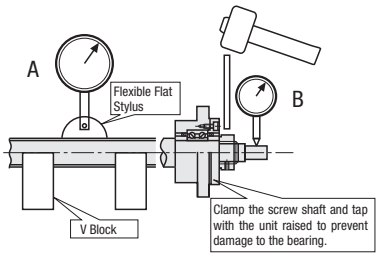
M	Clamping Nut Tightening Torque (N·cm)
4	160
5	200
6	245
8	490
10	930

M	Clamping Nut Tightening Torque (N·cm)
12	1370
15	2350
20	4700
25	8430

For reference only.

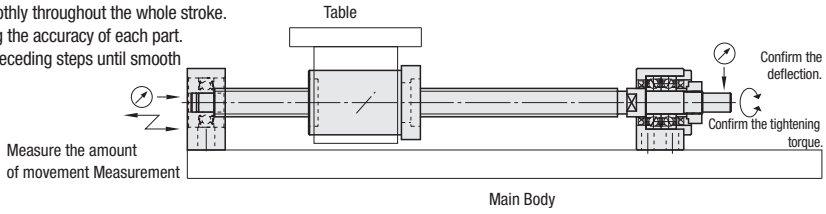
(4) Precautions on installation of bearing nut

(1) Lightly tighten the bearing nut.
  Tighten to 1/3 of the recommended torque (see table).
(2)Place the screw shaft on a set of V-blocks, place a dial indicator at A or B as shown, and rotate the shaft while seeking for a position where the largest indicator deflection is observed.
(3)Using a hammer or other appropriate tools as shown, lightly tap the bearing nut at the aforementioned angular position until the indicator reading becomes minimum.
(4)Progressively tighten the bearing nut by repeating the step (3) above 2 ~3 times until the specified tightening torque is fully reached.



(5) Installation of support side bearing unit and accuracy check

- Move the carriage toward the support side bearing unit and align.
- Reciprocate the carriage so that it travels smoothly throughout the whole stroke.
- Fully tighten the mounting bolts while checking the accuracy of each part.
- If the outcome is not satisfactory, repeat the preceding steps until smooth motion is obtained.



Precautions on Support Unit Installation

When inserting ball screws into fixed side support units, some cases will be slip-fit and others may be light press-fit cases.
If the fit appears to be a light-press, do not force the bearing onto the screw shaft in a tilted manner, or do not strike the bearing inner ring and support unit housing. In case if there is any interferences between the screw shaft and bearing inner ring, do not insert the ball screw forcibly. Remove the screw at once and correct the swell on the shaft, then try reassembling.

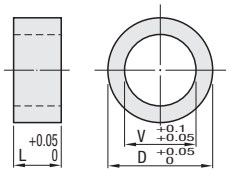
■Precision Collars for Support Units

RoHS

BUSC

As BUSC is slightly larger than the included collar in outer diameter, it is effective in bearing oil retention. The LTBC plating used helps for low particle generation.



M Material: 1.0038/S235JR

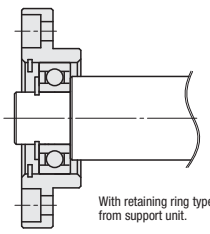
Order Example: Part Number BRWE15 BRWZ15

Days to Ship: 6 Days P.87

Example



With retaining ring type, the bearing does not fall off from support unit.

For details of Support Units Mounting Interface Accuracies and bearings, refer to P.685
Raydent products are filled with Low Particulate Grease and for cleanrooms.

Brackets for Ball Screws

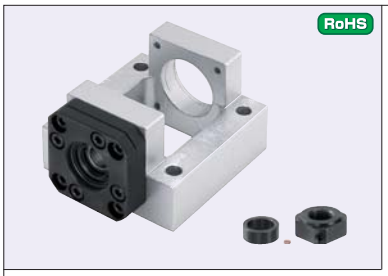
Joint Units
-For AC Servo Motors-

CAD Data

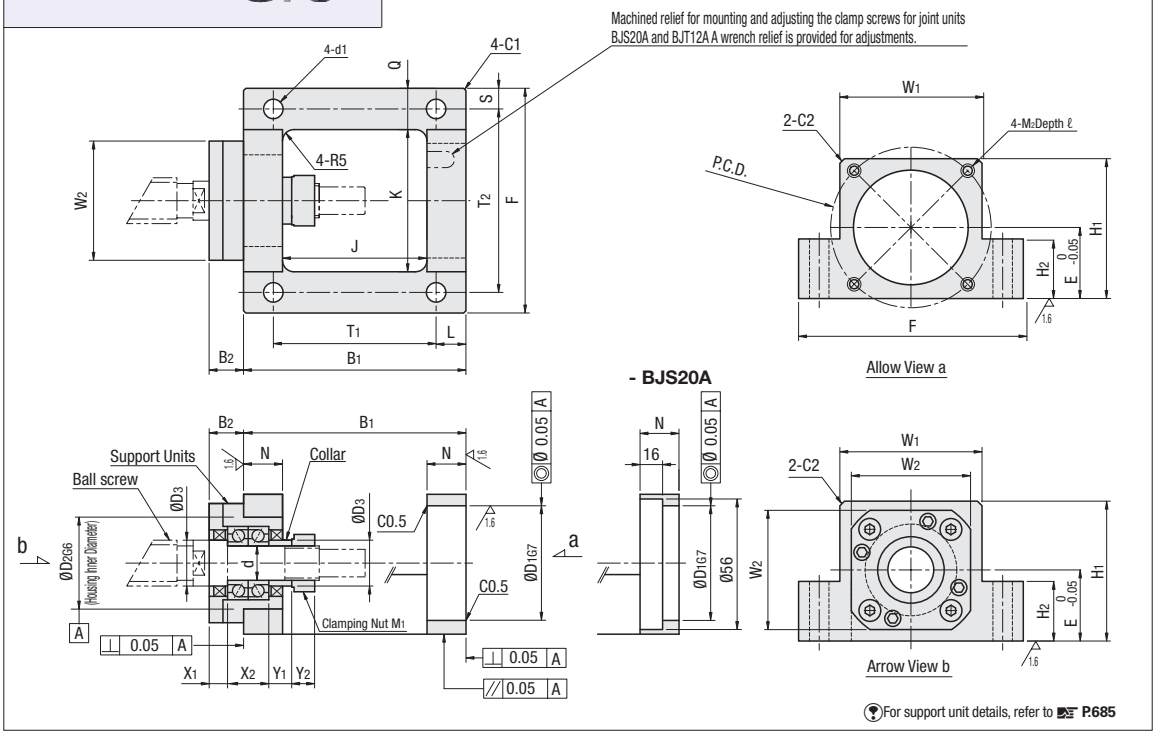


Type	Material		Surface Treatment		Accessory	Applicable Motor
	Main Body	Support Units	Main Body	Support Units		
BJS	EN AW-5052/ AlMg2,5	1.1191/C45E	Clear Anodize	Black Oxide	Collar 1 pc. Clamping Nut 1 pc. (Incl. 1 set piece)	AC Servo Motors
BJSM				Electroless Nickel Plating		

Features

·Simplification of assembly : With a support bearing unit already pre-installed, mounting and aligning a motor becomes simple with a build-in pilot.

·Accurate shaft centering : Unitized construction of the ball screw and motor mounts reduces shaft misalignments.



For support unit details, refer to P.685

Motor part numbers and specifications are subject to change. Refer to motor manufacturers' specifications .

Selection of motors, ball screws and couplings should be made upon confirming user's application specific criteria.

Other motors and couplings not listed in the chart above can also be used. Consult with mounting dimensions and specifications of each product.

When selecting ball screws, use MISUMI Technical Calculation Software.

■Features of Each Screw Type

Type	Slide Screws	Lead Screws	Rolled Ball Screws	Precision Ball Screws
Shape				
Features	Simple feed and adjust mechanisms, etc. Uses stainless steel for the shaft, and resin for the nut. No-grease operation is possible. (App. Example) Stoppers In/Out - Transfer pitch changeover	In case where thrust loads and high loadings exist. (App. Example) Transfer pitch changeover Jacks - Feed screw for lathes	Can be applied at reasonable costs when precision ball screw accuracies are not required. (App. Example) Transfer Line	Little velocity errors are tolerable and high positioning accuracy is required. (App. Example) Measurement Instruments
Allowable Rotational Speed	Low Speed	Medium Speed	High Speed	High Speed
Accuracy	★★	★★	★★★★	★★★★★
Efficiency	Δ Efficiency 0.7	Good Efficiency 0.8	Excellent Efficiency 0.95	Excellent Efficiency 0.95
Allowable Axial Load ( ) is for reference	Δ (max. 540N)	Excellent (max. 30000N)	Good (max. 9960N)	Good (max. 9960N)
Price	★★★★	★★★★★	★★★	★★

Lead Screw Nut Selection Chart

■Material: Brass, round flange group is selected as a foundation.

Photo	Type	Part Number	Purpose	Listed Page
	Standard Type	MTS__	Regularly used nut type. The round flange group is selected initially, then a sub-type is selected based on mounting space constraints.	P.717
	Compact	MTSP_ _	Outer diameter and overall length are smaller than the Standard Type nuts. Can be used in space limited applications.	
	Piloted Type	MTSJR	The Standard Nut with a pilot feature built-in. The pilot is inserted into bores to locate in Z axis applications, etc.	
	Female Thread Hole	MTSER	Mounting holes are tapped to mount from the reverse side with screws.	
	Slotted Hole	MTSQR	The standard mounting holes are replaced with slotted holes. Can be used for fine position adjustments in mounting.	
	RoHS compliant type	MTRFR MTXFR	The Standard Type that is RoHS compliant. Suitable when environmental concerns are of importance.	P.718
	Anti-backlash Type	MTBLR	Reduced axial play type. Has better repeatability than the Standard Type.	
	Oil Free	MTSM_ _	Standard Type with embedded solid lubricant. Reduces lubrication maintenance requirements.	P.719
	Resin	MTSR_ _ MTSF_ _	A resin type dimension compatible with the Standard Type. Reduces lubrication maintenance cycles.	P.720

■Easy Pattern Designing

A complete lead screw unit can easily be designed by sequentially selecting the components from Easy Pattern Designing program.

Step 1 —  — **Lead Screws (P.703)**

Step 2 —  — **Fixed Side Support Unit (P.705)**

Step 3 —  — **Support Side Support Unit (P.706)**

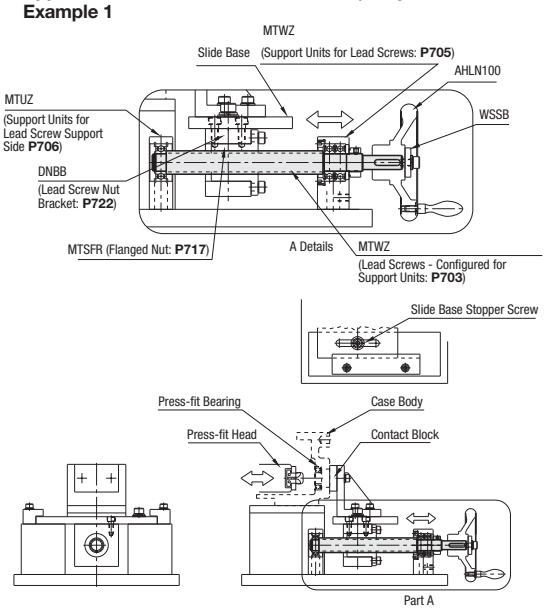
Step 4 —  — **Lead Screw Nuts -Flanged Type- (P.717)**

Step 5 —  — **Lead Screw Nut Brackets (P.722)**

Step 6 —  — **Position Indicators (P.725, 726)**

■Lead Screw Application Examples

■App. Machine Name Reference Shoulder Adjusting Mechanism
Example 1



Configuration comprised of: Shaft Support Unit for Lead Screws, Lead Screw Shaft, and a Position Indicator.

Applications and purposes
Used for transfer feeding, locating stoppers, and guiding of various work.
Adjustments are relatively small, but shock loads in axial direction are anticipated.
Additionally, the lead screw scheme is chosen for its economy.

Selection Criteria

Lead screw shaft
A lead screw shaft configured specifically for MISUMI Shaft Supports with a Keyway is selected.
The configuration supports each end of the shaft with a bearing.

Shaft Sport Unit for Lead Screws
A Shaft Support Unit for Lead Screws is selected for the fixed end.
Selected support unit has two radial bearings in preloaded arrangement and can bear axial and thrust loads.

Shaft Sport Unit for Lead Screws
A Shaft Support Unit for Lead Screws is selected for the shaft support side.
Comes with a radial bearing in the set, and used as is.

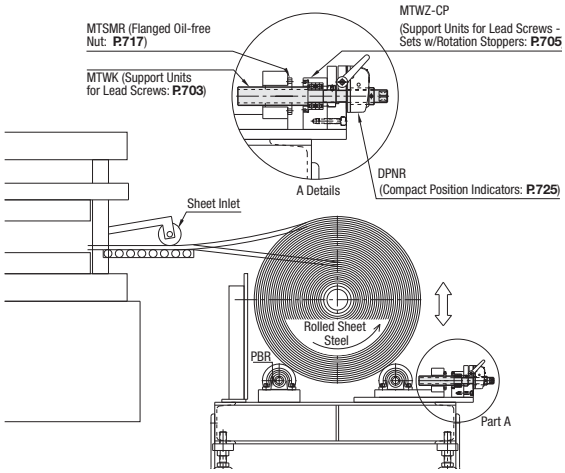
Lead Screw Nut
Commonly used Round Flanged Lead Screw Nut is selected.

Nut Brackets
A Nut Bracket compatible with a lead screw nut is selected.

Use Condition

(1) Applied Load	200N Material Mass: 300N
(2) Setup change-over frequency	Once / Day for Rod changes, etc
(3) Positioning Accuracy	±0.5mm
(4) Stroke	150mm

■Example 2 Machine Name Sheet Steel Roll Base



Applications and purposes
Sheet steel roll's remaining O.D. is measured at set intervals, and the roll is raised accordingly with a lead screw.
The lead screw feed amount is measured by a position indicator, instead of using a conversion table.

Selection Criteria

Leas screw shaft
A lead screw shaft configured specifically for MISUMI Shaft Supports with no R machining on the support side (Alteration RC) is selected.

Shaft Sport Unit for Lead Screws
Shaft Sport Unit for Lead Screws is selected for the fixed side of the shaft.
Selected since axial loads can be supported, and a Compact Position Indicator can be directly mounted.

Lead Screw Nut
Round Flanged Oil-less Lead Screw Nut is selected.
Selected because the lubrication maintenance an be reduced to only once a year.

Position Indicators
A compact position indicator is selected for lead screw feed amount measurements.

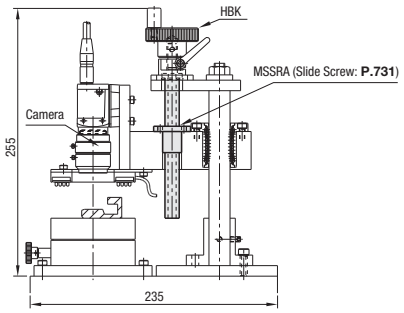
Use Condition

(1) Applied Load	20kN
(2) Maintenance	Once / Year
(3) Positioning Accuracy	1~2mm
(4) Stroke	150mm

■Slide Screw Application Example

A screw feed axis with a stainless steel shaft and a resin nut can be used without grease is suitable for clean environments.
Slide screws are economical and offer smooth movements.

■App. Example 1 Machine Name Camera Inspection Unit



A slide screw is utilized as the Z axis.

Applications and purposes
A slide screw is chosen for fine adjustability, and to be used with as little re-lubrications as possible.

Selection Criteria

Slide Screw Shaft
One end stepped type in 1.4301/X5CrNi18-10 material is selected.
Nut
Tribological resin nut is selected for zero grease requirement and good corrosion resistance.

Use Condition

(1) Applied Load	50N
(2) Setup change-over frequency	Once a day for Rod changes, etc.
(3) Positioning Accuracy	±0.5mm
(4) Stroke	100mm

Lead Screws

50	8	46	(40.4)	3°10'	40310	-	-	-	-	-

( ) dimension is for Tall Block Nut type.

■Lead Screw Technical Calculations

1.Selection of Nut Material

Select the nut material which doesn't cause abnormal abrasion.

(1) Contact Pressure P (N/mm²)

$$P=\frac{Fs}{Fo}\times\alpha$$

Fs: Axial Load (N)
Fo: Allowable Dynamic Thrust (N)
α:α=9.8(Brass), 0.98(Resin)

(Allowable Dynamic Thrust: The thrust when the contact pressure acting on the screw shaft and nuts is 9.8N (0.98N)/mm²)

(2) Speed V (m/min)

$$V=\frac{\pi\cdot d_2\cdot n}{\cos(d)}\times10^{-3}$$

d₂: Pitch Dia. Of Screw Shaft (mm)
n: Screw Shaft Revolution Frequency per Minute (min⁻¹)
d: Screw Shaft Lead Angle (Degree)

2. Screw Efficiency and Load Torque

(1)Screw Efficiency η

$$\eta=\frac{1-\mu\tan(d)}{1+\mu/\tan(d)}$$

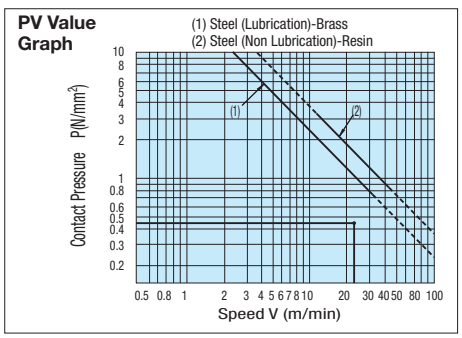
μ: Dynamic Friction Coefficient
d: Screw Shaft Lead Angle (Degree)

(2) Load Torque T (Ncm)

$$T=\frac{Fs*R}{2\pi\cdot\eta}$$

Fs: Axial Load (N)
η: Screw Efficiency
R: Lead (cm)

PV Value Graph



Calculation Example

In case of using MTSRW16 shaft, pitch 3 and MTSFR16 brass flanged nut when the axial load is 300N as rotational speed at 500min⁻¹

(1) Contact Pressure P (N/mm²)

$$P=\frac{Fs}{Fo}\times\alpha=\frac{300}{6670}\times9.8=0.44(N/mm^2)$$

(2) Speed V (m/min)

$$V=\frac{\pi\cdot d_2\cdot n}{\cos(d)}\times10^{-3}=\frac{\pi\times14.5\times500}{\cos(3°46')}\times10^{-3}=22.8(m/min)$$

When the PV Graph is viewed based on the calculated P and V values, the cross point V=22.8(m/min) when P=0.44(N/mm²) is located inside the line, thus it can be stated that no abnormal wear will occur.

Calculation Example

Required torque when using: screw shaft MTSRW16, pitch 3, nut MTSFR16 (flanged brass)

(1)Screw Efficiency η

$$\eta=\frac{1-\mu\tan(d)}{1+\mu/\tan(d)}=\frac{1-0.21\times\tan(3°46')}{1+0.21/\tan(3°46')}=0.24$$

Also, a case of calculating for the Load Torque T (Ncm) when the axial load is 300N.

(2) Load Torque T (Ncm)

$$T=\frac{Fs*R}{2\pi*\eta}=\frac{300\times0.3}{2\pi\times0.24}=59.7(N\text{-}cm)$$

■Reference Value

Screw Shaft	Nut	Dynamic Friction Coefficient μ
Steel (Lubrication)	Brass	0.21
Steel (Non Lubrication)	Polyacetal/PPS Resin with Sliding Property	0.13

Overview of Lead Screw Shaft End Machining

Orders can be placed without drawings by adding the Alteration Specifications listed below to the standard Lead Screw product part numbers. Procurement is quick with short lead times.

Alterations	Alterations	Code	Spec.	Price Adder
Flat Machining		FV FQ FR FE FC	Adds a flat on shaft end. Ordering Code FC5-FW10-FY1 0.5mm Increment Use purpose Used for a screw point seat when mounting a handle Only one end of the shaft is machined When shaft end diameter ≤25, FY≤1.0 When shaft end diameter ≥26, FY≤2.0	2,00
2 flats machining		SQ SE SR SV	2 flats (Width Across Flats) are machined on one end of the shaft Ordering Code SC5-SW10-SY8 1mm Increment Use purpose For wrench use Only one end of the shaft is machined When Shaft End Dia. <15, SW≥ Shaft End Dia. -2 When 15≤ Shaft End Dia. ≤25, SW ≥ Shaft End Dia. -3 When 30≤ Shaft End Dia, SW≥ Shaft End Dia. -5 3≤SY≤20	4,00
Retaining Ring Groove		AC AQ AR AE	Adds a retaining ring groove on one end. Ordering Code AC13.3 Specify in 0.1mm increment Use purpose For bearing mounting, etc. AC (AQ, AR, AE) will be smaller than "End length-m-n"	4,00
Coarse Tap		MC MQ MR ME MV	Adds a coarse threaded tapped hole on a shaft end. Ordering Code MC24 Select from table on right Use purpose Used for threaded item (knobs, etc.) mounting Not applicable for D.I.A. 4 shafts	2,00
Male Thread For bearing nuts		BV BC BQ BR	Cuts a thread on a shaft end. Ordering Code BC20 Select from table on right Use purpose For anti-loosening bearing nuts ☞P.940 Not applicable to shaft end diameters 7, 9, 16. Tap length ≤ M x3 Tap length ≥ Pitch x3 Tap length ≤ Shaft End Length - Pitch x3	2,00
Square Chamfering		ZC ZQ ZE ZR ZV	Adds square chamfering to one end. Ordering Code ZC12-W10-A8 Specify ZC (Z_) as same as the end diameter W=Select from the table on right, or specify in 1mm increment A = 1mm Increment Use purpose For mounting handles, etc. 5≤A≤20 Only one end of the shaft is machined	8,00
Keyway		KC KQ KV KE KR	Adds a keyway on one end. Ordering Code KC8-C10 KC (K_) and C: Specify in 1m increment Use purpose For handle mounting keyway use Only one end of the shaft is machined C≤60 2mm min. required between the keyway and shaft shoulder KC(K_)≥2 When KC (K_)=0, there will be no keyway radius on the end side.	4,00

Notes on selections Alterations

- When flat machining, width across flats, square chamfering and keyway alterations are combined each other, their positions are random.
- When two or more features are specified on a shaft, the alterations may not coincide in angular phase.
- When adding multiple alterations, there must be 2mm or more between each feature.

Applies to Lead Screws with alterations for combination of square machining and tapping. P.703~714

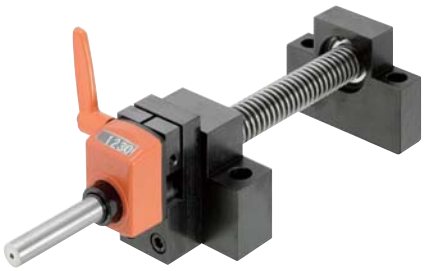
Features

A custom unit with manual lead screw rotation.
A dedicated lead screw, bearing unit and stopper clamp are combined in a set. P.705

The unit can support radial and axial loads, and can be constructed more economically in space saving dimensions.



Lead Screw Support Units
-Fixed Side Radial Bearing Type-

CAD Data

Dedicated bearing units for Lead Screws. They can support radial and axial loads.

For silver covers, order with DP__ changed to DS__.

■Support Unit Mounting Procedure

(1) Insert the lead screw shaft into the fixed side support unit.
(2)After slipping a collar on, thread the included bearing nut on and temporarily tighten at 1/3 of the specified tightening torque.
Mount the support side unit on the support end of the shaft and mount.
(3)While rotating the screw shaft, gradually tighten the bearing nut to obtain smooth motion from end to end.
(4)When smooth motion is obtained, tighten to full tightening torque to finish.

■Support Unit Bearing Type

Q	Bearing Type	Allowable Axial Load (N)
8	608ZZCNM	1300
10	6000ZZCNM	2300
12	6001ZZCNM	2600
15	6002ZZCNM	2900

Use the position indicators within allowed maximum speed ranges.

M	Tightening Nut Tightening Torque (Ncm)
8	490
10	930
12	1370
15	2350

Value is for reference only.

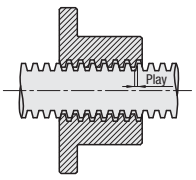
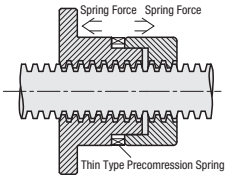
■Features of Anti-Backlash Type

Regular Type



Regular type has axial play of shaft and nut, and this causes backlash on reverse driving direction.

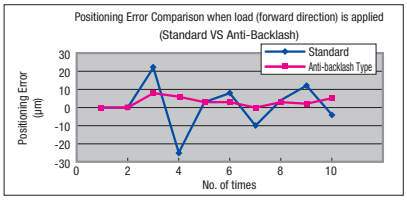
Anti-Backlash Type



Anti-Backlash Type can make a play between shaft and nut free by spring force of thin type pre-compression spring installed between main nut and accessory nut. Even if there is abrasion, spring force controls backlash.

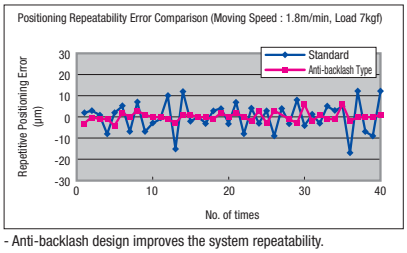
(Notes)The effects will vary based on applied conditions (Load and Direction).

(1) Positioning Error Comparison(Reference Value)



·Controls the deterioration in precision of positioning caused by Moment of Inertia during shut down of motion and driving fluctuation effect.

(2) Positioning Repeatability Error Comparison (Reference Value)



- Anti-backlash design improves the system repeatability.

Test Conditions: Sample Nut: MTBLR16 Axis: MTSRG16-270
Travel Distance: 75mm

■Installation of Anti-backlash Type

(1) Remove the sticker that is temporarily fixing the main and accessory nuts.
In this condition, the main and accessory nuts are fixed by 2 pieces of set screws.
(2) While the set screw is fixed, it is turned to screw shaft of lead screw as it is inserted.
(3) After insertion of accessory nut, set screw is rotated approximately 45° to 90° to loosen.
The tightening of main and accessory nuts is released and activates spring effectiveness.
(Caution)The mounted set screw must not protrude out from external diameter of accessory nut.
In order to prevent dropout of set screw due to vibration and the like, insert up to accessory nut part of housing.

Nuts for Lead Screws

-Oil-free Flanged / Straight Type-

Price Revision

: New Price

CAD Data

Oil free type reduces the amount and number of times of applying grease in comparison to the standard type. Initial greasing is recommended for effective use.

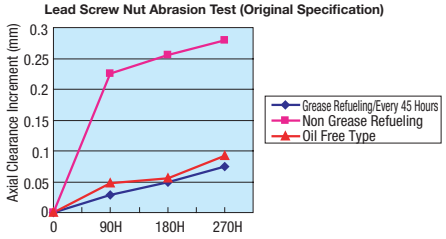
■Features of Oil Free Nut for Lead Screws

As can be concluded by the test result shown to the right that MISUMI Oil-free nuts can achieve performance equivalent of once per 45hrs. lubrication cycles.

After initial greasing, this realizes oil-free operation.
It presents high performance especially under low-speed operation.

Lead Screw Nut Abrasion Test (Original Specification)



Test Conditions: Sample screw shaft: MTSRW10-270, Nut: MTSFR10/MTSMR10 (Oil-free Type)
Applied Load: 220N, Shaft Speed: 1500rpm

Brackets for Lead Screws/Spacers for Wide Block

Position Digital Indicators Guide

■Features

- Digital Display is easy to read.

Positioning and determination with Feed Screw is easy.

It prevents wrong setting caused by error in display indication when the screw mechanism is changed at the factory.

- Various lineup

MISUMI Digital Position Indicators are designed to use in combination with our Lead Screws. Two sizes of display, three mounting types, two colors are available.

4-Digit and 5-Digit indication and With Counter Reset are available.

	Standard Spindle	Front Spindle	Vertical Spindle	Counter Indication
Mounting Position	Suitable for mounting at lower than the operator's eye-level.	Suitable for mounting at operator's eye-level.	Suitable for mounting on vertically configured screw feed mechanisms.	
Compact				 · The left most position is blank on the 4-digit counter.
Large (With Counter Reset)				
- Compact

Color		Display Digit		Feed Screw Pitch (Display Number per Revolution)
Orange	Silver	4-Digit	5-Digit	2 3 4 5 6

- 4-Digit Type and 5-Digit Type are available for the same size.
- Applicable to Mounting Shaft End Dia. 6 · 8 · 10 · 12 and 14.

*When used with a lead screw with the same pitch, display number and pitch number will be the same.

- Large

Color		Display Digit	Feed Screw Pitch (Display Number per Revolution)
Orange	Silver	5-Digit	3 4 5 6

- With Counter Reset
- Applicable to Mounting Shaft End Dia.12 · 14 · 15 · 16 · 17 and 20.

*When used with a lead screw with the same pitch, display number and pitch number will be the same.

- Color

Orange

Color used to make the counter more noticeable when installed.

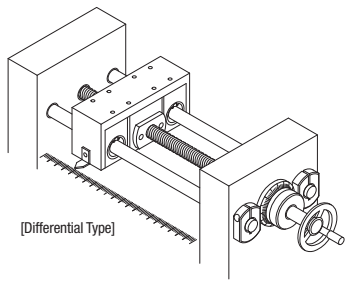
Silver

Color used to make the counter not noticeable when installed.

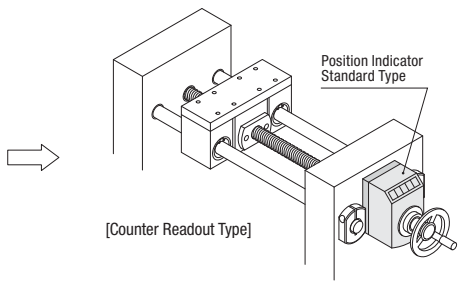
■Use purpose

Can be used to confirm the transfer of table that adopted screw handling mechanism, the slide adjustment and the present setting position.

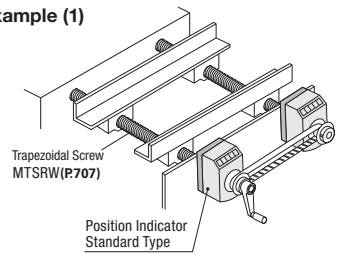
Conventional Method: Reading errors occur.



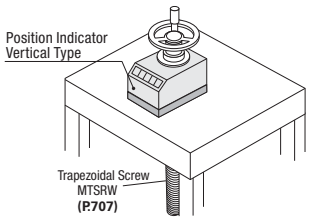
When indicator is used:Digital indication reduces the reading errors.



Example (1)



Example (2)



■Easy Pattern Designing

A complete lead screw unit can easily be designed by sequentially selecting the components from Easy Pattern Designing program.

Step1	Step 2	Step 3	Step 4	Step 5	Step 6
					
Lead Screws (P.703)	**Fixed Side Support Unit (P.705)**	**Support Side Support Unit (P.706)**	**Lead Screw Nuts -Flanged Type- (P.717)**	**Lead Screw Nut Brackets (P.722)**	**Position Indicators (P.725 · 726)**

■Feature of "Zero Set Function" (Only for Large Type)

For the conventional type, the counter needed to set at “0” before fixture on the screw shaft. However, With Counter Reset Type, the counter can be set after fixture. Therefore, precise adjustment is easy. Resetting the counter upon position moving is also easy.

■Zero Setting Procedures (Only for Large Type)

(1) Take off the caps of side holes. (See the figure below for the position of holes.)

(2) Insert a hex wrench (3mm hex), and turn in either direction within 40º.

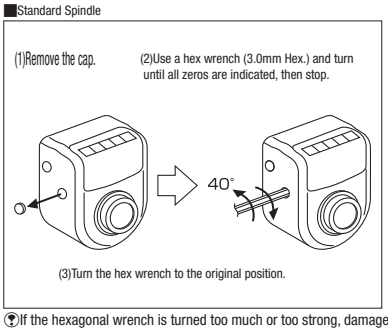
(3) Stop turning the wrench when the counter indicates all zeros. Then turn the wrench back to the original position.

?Caution

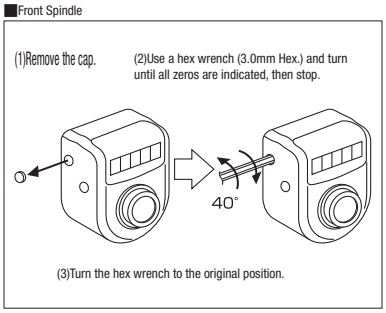
Turn the wrench slowly. Turning the wrench more than necessary may cause damages on the unit.

Please note that there should be space for hexagonal wrench.

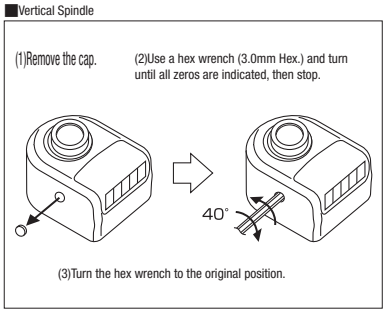
■Standard Spindle



■Front Spindle



■Vertical Spindle



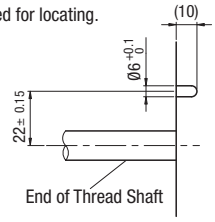
?If the hexagonal wrench is turned too much or too strong, damage will be caused.

■Notes

- The count goes up depending on turning distance, as the screw shaft (trapezoidal screw, slide screw, etc.) is turned clockwise. The count goes down as the screw shaft is turned counterclockwise.
- The rotary speed at the start-up should not exceed 1/3 of maximum rotary speed (rpm).
- Must not be abruptly accelerated or decelerated.
- Do not use a motorized driver. It will cause the breakage.
- Do not use when shafts move to the thrust (shaft) direction.

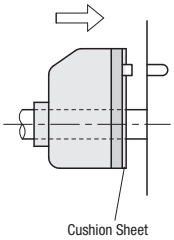
■CompactHow to Mount

(1)Provide a hole used for locating.

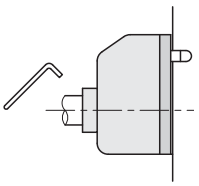


(Not necessary if a clamp plate is used.)

(2)Paste the cushion sheet, an accessory and pass it through the screw shaft.

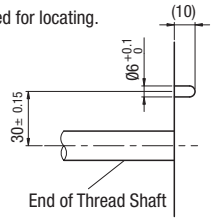


(3)Set the indicator at “0” and then fix it with the attached set screws.



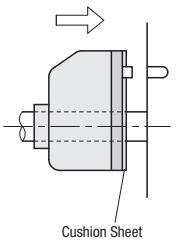
■LargeHow to Mount

(1)Provide a hole used for locating.



(Not necessary if a clamp plate is used.)

(2)Paste the cushion sheet, an accessory and pass it through the screw shaft.



(3)Make sure that the screw shaft is in the correct position and that the indicator is set at 0, fix it with the attached set screw.

Features

Slide screw's nut is made of special resin composed of PPS as base material and solid lubricant (fluorine, for example) filled to increase sliding properties.
The material is superior in polypropylene, nylon, and polyacetal in tribological properties, heat resistance, and moisture absorbing characteristics. Quieter in comparison to ball screws, and lighter in motion with lower torque compared to lead screws.

Material Properties of Nuts

Item	Testing Method	Unit	Values
Base Material	-	-	
Specific Gravity	ASTM D792	-	1.53
Tensile Strength	ASTM D638	MPa	51
Hardness	-	Rockwell R	110
Elongation	ASTM D638	%	3
Water Absorption Ratio	ASTM D570	%	0.05
Application Limit Temperature	-	°C	230

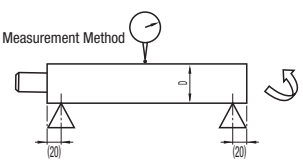
Caution

(1) Positioning repeatability is changed by wear due to usage and exchange of parts during maintenance.
(2) Do not use molybdenum and silicone based greases due to its negative impact to the nuts.
Do not use it due to its negative impact to the nuts.
(3) Sliding properties are based on 25°C. It may vary depending on temperature.
(4) The nuts are made of PPS base material; they may be "cracked" or "deformed" due to shocks or excessive tightening.

Screw Accuracies

- Initial Accumulative Lead Error ±0.21/300mm (Reference Temperature 25°C)
- Bending Accuracy 0.16 or Less

Bend Measurement Method



The screw shaft is supported on both ends with V-blocks and the measurements are taken with a dial indicator at arbitrary points while the shaft is rotated.

Leads

Lead is the travel distance of one revolution.
Lead 01···Travel Distance: 1mm
Lead 24···Travel Distance: 24mm

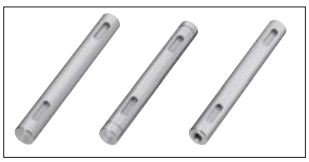
■D Tolerance h9 (Cold-drawn) / h7 (Ground)

Economical h9 (Cold-drawn) and standard grade h7 (Ground) are now available.

Standard Model: SFMR Page **P.735~P.768**



■Rotary Shafts with Keyways have been standardized.

Rotary Shafts with Keyways have been standardized.
Specification has become easier.

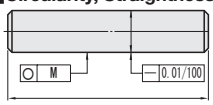
Standard Model: SFMKR Page **P.737**, **P.741**, **P.745**, **P.749**

■Accuracy Standards of Rotary Shafts and Driving Shafts

Values in ( ) are for driving shafts

⊗Not applicable to h9 (Cold-drawn).

■Circularity, Straightness



Straightness of size D2, D2.5 is 0.1/100.

■Circularity of Part D

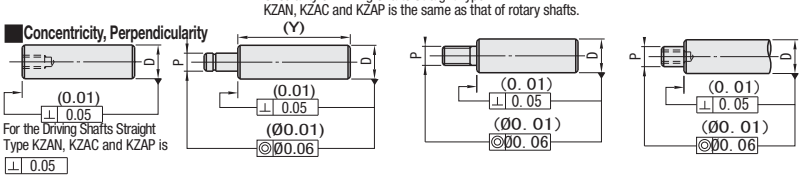
D Over	D To	Circularity M
2	2.5	0.006 (0.003)
3	13	0.004 (0.003)
13	20	0.005 (0.003)
20	40	0.006 (0.005)
40	50	0.007 (0.005)

Circularity of Driving Shafts Straight Type KZAN, KZAC and KZAP is the same as that of rotary shafts.

■Tolerances of L · Y and Other Dimensions

Dimension Over	Dimension To	Dimension Tolerance
2	6	±0.1 (±0.1)
6	30	±0.2 (±0.1)
30	120	±0.3 (±0.1)
120	400	±0.5 (±0.2)
400	800 (500)	±0.8 (±0.2)

■Concentricity, Perpendicularity



For the Driving Shafts Straight Type KZAN, KZAC and KZAP is ⊥ 0.05

31~38	10		5.0		
39~44	12	0 -0.043	5.0		
45~50	14		5.5		

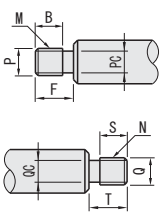
The example below shows the keyway shape for the specs KC, WKC, K=0, KC+A≥L and WKC+C+K+E>L.

Ex.)

■Rotary ShaftsMale Thread Relief (PC · QC) Dimensions (Reference)

When Thread undercut machining (PC · QC) is specified, PC · QC dimension is as shown in the table below. As for the PC and QC Dimensions for the Fine Thread alteration (PMC · QMC), also refer to the tables below.

• Coarse Thread

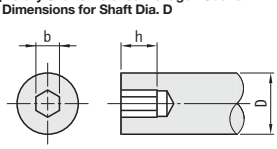


P (=M) Q (=N)	PC QC
3	2.4
4	3.2
5	4.1
6	4.4
8	6.0
10	7.7
12	9.4
16	13.0
20	16.4
24	19.6
30	25.0

• Combined with Fine Thread Alteration

PMC QMC	PC QC
3	2.4
4	3.2
5	4.1
6	4.8
8	6.4
10	8.4
12	10.4
15	13.4
17	15.4
20	18.4
25	22.7
30	27.7

■Rotary Shafts Detailed Hexagon Socket Dimensions for Shaft Dia. D



Shaft Diameter	b	h
6~ 7	2.5	4
8~ 9	3	5
10~11	4	6
12~15	5	8
16~19	6	9
20~24	8	12
25~30	10	15

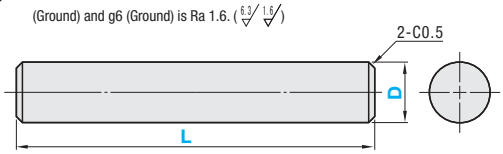
Rotary Shafts -D Tolerance h9 (Cold-drawn) / h7 (Ground) /g6 (Ground)-

-Straight-

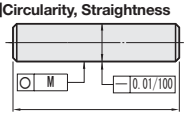
■ h9 (Cold-drawn) and h7 (Ground) are newly added. Select from h9 (Cold-drawn), h7 (Ground) and g6 (Ground) for your purpose.

	Type	D Tolerance	M Material	S Surface Treatment
(1)	SFMR	h9 (Cold-drawn)	1.1191/C45E	Black Oxide
	PSFMR			Electroless Nickel Plating
	SSFMR		1.4301/X5CrNi18-10	-
(2)	SFHR	h7 (Ground)	1.1191/C45E	Black Oxide
	PSFHR			Electroless Nickel Plating
	SSFHR		1.4301/X5CrNi18-10	-
(3)	SFR	g6 (Ground)	1.1191/C45E	Black Oxide
	PSFR			Electroless Nickel Plating
	SSFR		1.4301/X5CrNi18-10	-
	HFR		1.7220/34CrMo4 H Hardness 30~35HRC	Black Oxide
	PHFR			Electroless Nickel Plating

Surface roughness of D part for h9 (Cold-drawn) is Ra 6.3, for h7 (Ground) and g6 (Ground) is Ra 1.6. (6.3 / 1.6 /)



■Circularity, Straightness



Straightness of size D2, D2.5 is 0.1/100.
Not applicable to h9 (Cold-drawn).

■Circularity of Part D

D Over	D To	Circularity M
1	2.5	0.006
3	13	0.004
13	20	0.005
20	40	0.006
40	50	0.007

Not applicable to h9 (Cold-drawn).

■L Dimension Tolerance

Dimension Over	Dimension To	Dimension Tolerance
14	30	±0.2
30	120	±0.3
120	400	±0.5
400	800	±0.8

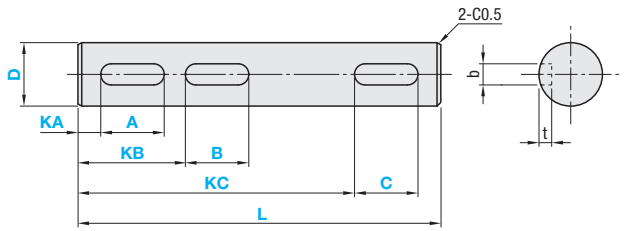
Rotary Shafts -D Tolerance h9 (Cold-drawn) / h7 (Ground) /g6 (Ground)-
-Straight with Keyway-

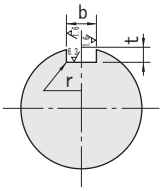
■Rotary Shafts with Keyways have been standardized. No. of keyways can be specified up to 3. Specification of Keyways has become easier.

	Type	D Tolerance	M Material	S Surface Treatment
(1)	SFMKR	h9 (Cold-drawn)	1.1191/C45E	Black Oxide
	PSFMKR			Electroless Nickel Plating
	SSFMKR		1.4301/X5CrNi18-10	-
(2)	SFHKR	h7 (Ground)	1.1191/C45E	Black Oxide
	PSFHKR			Electroless Nickel Plating
	SSFHKR		1.4301/X5CrNi18-10	-
(3)	SFGKR	g6 (Ground)	1.1191/C45E	Black Oxide
	PSFGKR			Electroless Nickel Plating
	SSFGKR		1.4301/X5CrNi18-10	-

Surface roughness of D part for h9 (Cold-drawn) is Ra 6.3, for h7 (Ground) and g6 (Ground) is Ra 1.6. (6.3 / 1.6)
No. of keyways can be specified up to 3.



■Detailed Keyway Dimensions



Shaft Diameter	b Reference Dimension	b Tolerance (N9)	t Reference Dimension	t Tolerance	r
6	2	-0.004 -0.029	1.2	+0.1 0	0.08~0.16

Part Number - L - M - [ ] - (KC, WKC, FC...etc.)
SFMRTS10 - 150 - M4 - SC30 - LKC

Alterations	Keyway	Set Screw Flat	2 Set Screw Flats (Angle Specified)	Slit Cam Groove	L Dimension Tolerance	Retaining Ring Groove
	· One Key Groove: KC · Two Key Grooves: WKC	· One Set Screw Flat: FC · Two Set Screw Flats: WFC				
Code	KC / WKC	FC / WFC	KFC	UC	LKC	TA / TB
Spec.	KC:Adds a keyway. Ordering Code KC50-A10 WKC:Adds two keyways. Ordering Code WKC50-C8-K40-E10 KC, A, WKC, C, K, E=1 mm Increment A, E, C≤100 For keyway details, refer to P737 If 3 keyways are required, use both KC and WKC. Keyways and set screw flats are added in the same plane. When the distance of the alterations are over 500mm, ±2 degree phase differential may occur.	FC:Adds 1 set screw flat. Ordering Code FC10-G3 WFC:Adds 2 set screw flats. Ordering Code WFC10-J3-W10-V3 FC, G, WFC, J, W, V=1 mm Increment G, J, V≤50 D / H: 4, 5 / 0.5; 6~17 / 1; 18~40 / 2; 50 / 3	Adds a set screw flat at any designated angle besides the datum plane (0°). KFC, G= 1mm Increment AG = 15° Increment G≤50 Ordering Code KFC10-G3-AG120 D / H: 4, 5 / 0.5; 6~17 / 1; 18~40 / 2; 50 / 3 When combined with other alterations, ±2 degree phase differential may occur.	Adds a slit cam groove. UC=1mm Increment Ordering Code UC10 UC+ℓ1≤L UC≥1 Not applicable to D13 or more. D / d / ℓ1: 4 / 3 / 4; 5 / 4 / 4; 6 / 5 / 4; 8 / 7 / 4; 10 / 8 / 5; 12 / 10 / 5	Changes L Dimension Tolerance. Ordering Code LKC L<500⋯› L±0.05 L≥500⋯› L±0.1	Adds a retaining ring groove. (Applicable retaining rings are included.) TA, TB = 1mm Increment Ordering Code TA10-TB10 4≤TA, TB<L/2 For dimensions of the retaining ring groove, please refer to P734

NEW

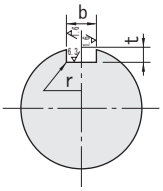
Rotary Shafts -D Tolerance h9 (Cold-drawn) / h7 (Ground) /g6 (Ground)-

-One End Female Thread with Keyway-

■Rotary Shafts with Keyways have been standardized. No. of keyways can be specified up to 3. Specification of Keyways has become easier.

	Type	D Tolerance	M Material	S Surface Treatment
(1)	SFMKRT	h9 (Cold-drawn)	1.1191/C45E	Black Oxide
	PSFMKRT			Electroless Nickel Plating
(2)	SFHKRT	h7 (Ground)	1.1191/C45E	Black Oxide
	PSFHKRT			Electroless Nickel Plating
	SSFHKRT		1.4301/X5CrNi18-10	-
(3)	SFGKRT	g6 (Ground)	1.1191/C45E	Black Oxide
	PSFGKRT			Electroless Nickel Plating
	SSFGKRT		1.4301/X5CrNi18-10	-

■Detailed Keyway Dimensions

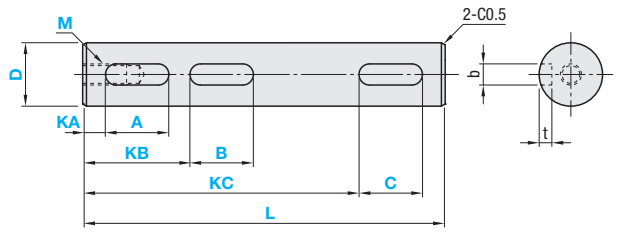


Shaft Diameter	b Reference Dimension	b Tolerance (N9)	t Reference Dimension	t Tolerance	r
6	2	-0.004 -0.029	1.2	+0.1 0	0.08~0.16
8・10	3		1.8		
12	4	0 -0.03	2.5		0.16~0.25
13~17	5		3.0		
18~22	6		3.5		
25・30	8	0 -0.036	4.0	+0.2 0	0.25~0.4
35	10		5.0		
40	12	0 -0.043	5.0		
50	14		5.5		

When KA=0, KA+A=L, KB+B=L, KC+C=L, keyway shape is as shown below.

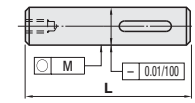
Surface roughness of D part for h9 (Cold-drawn) is Ra 6.3, for h7 (Ground) and g6 (Ground) is Ra 1.6. (6.3 / 1.6)

No. of keyways can be specified up to 3.



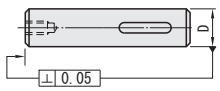
Thread depth of M (Coarse) is M x 2.

■Circularity, Straightness



Not applicable to h9 (Cold-drawn).

■Perpendicularity



Not applicable to h9 (Cold-drawn).

■Circularity of Part D

D Over	D To	Circularity M
5	13	0.004
13	20	0.005
20	40	0.006
40	50	0.007

Not applicable to h9 (Cold-drawn).

■Tolerances of L and Other Dimensions

Dimension Over	Dimension To	Dimension Tolerance
2	6	±0.1
6	30	±0.2
30	120	±0.3
120	400	±0.5
400	800	±0.8

Rotary Shafts -D Tolerance h9 (Cold-drawn) / h7 (Ground) /g6 (Ground)-

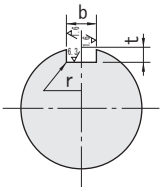
-Both Ends Female Thread with Keyways-

■Rotary Shafts with Keyways have been standardized. No. of keyways can be specified up to 3. Specification of Keyways has become easier.

	Type	D Tolerance	M Material	S Surface Treatment
(1)	SFMKRW	h9 (Cold-drawn)	1.1191/C45E	Black Oxide
	PSFMKRW			Electroless Nickel Plating
	SSFMKRW		1.4301/X5CrNi18-10	-
(2)	SFHKRW	h7 (Ground)	1.1191/C45E	Black Oxide
	PSFHKRW			Electroless Nickel Plating
	SSFHKRW		1.4301/X5CrNi18-10	-
(3)	SFGKRW	g6 (Ground)	1.1191/C45E	Black Oxide
	PSFGKRW			Electroless Nickel Plating
	SSFGKRW		1.4301/X5CrNi18-10	-

■Detailed Keyway Dimensions

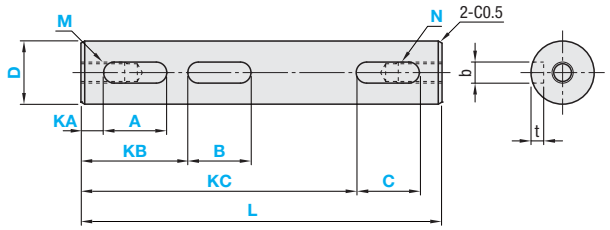


Shaft Diameter	b Reference Dimension	b Tolerance (N9)	t Reference Dimension	t Tolerance	r
6	2	-0.004 -0.029	1.2	+0.1 0	0.08~0.16
8, 10	3		1.8		
12	4	0 -0.03	2.5		0.16~0.25
13~17	5		3.0		
18~22	6		3.5		
25 / 30	8	0 -0.036	4.0	+0.2 0	0.25~0.4
35	10		5.0		
40	12	0 -0.043	5.0		
50	14		5.5		

When KA=0, KA+A=L, KB+B=L, KC+C=L, keyway shape is as shown below.

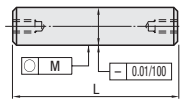
Surface roughness of D part for h9 (Cold-drawn) is Ra 6.3, for h7 (Ground) and g6 (Ground) is Ra 1.6.(6.3 / 1.6)

No. of keyways can be specified up to 3.



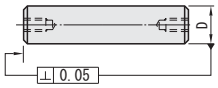
Thread depth of M (Coarse) and N (Coarse) is M x 2 and N x 2 respectively.

■Circularity, Straightness



Not applicable to h9 (Cold-drawn).

■Perpendicularity



Not applicable to h9 (Cold-drawn).

■Circularity of Part D

D Over	D To	Circularity M
5	13	0.004
13	20	0.005
20	40	0.006
40	50	0.007

Not applicable to h9 (Cold-drawn).

■Tolerances of L and Other Dimensions

Dimension Over	Dimension To	Dimension Tolerance
2	6	±0.1
6	30	±0.2
30	120	±0.3
120	400	±0.5
400	800	±0.8

Alterations

Part Number - L - F - B - P (PMC) - N - SC - (KC · WKC · FC...etc.)
SSFRHDS10 - 150 - F10 - B5 - P5 - N5 - SC20 -

	Keyway	Set Screw Flat	2 Set Screw Flats (Angle Specified)	Slit Cam Groove	Undercut, L Dimension Tolerance	Keyway on Shaft End, Concentricity	Fine Thread
Alterations	- One Keyway: KC  - Two Keyways: WKC 	- 1 Set Screw Flat: FC - 2 Set Screw Flat: WFC 					PMC (Fine Thread) 
Code	KC · WKC	FC · WFC	KFC	UC	PC · LKC	PKC · CKC	PMC
Spec.	KC: Adds one keyway. Ordering Code KC50-A10 WKC: Adds 2 Keyways. Ordering Code WKC50-C8-K40-E10 (?) KC, A, WKC, C, K, E = 1mm Increment (?) A, E, C≤100 (?) For keyway details, P.737 (?) If 3 keyways are required, use both KC and WKC.	FC: Adds 1 set screw flat. Ordering Code FC10-G3 WFC: Adds 2 set screw flats. Ordering Code WFC10-J3-W10-V3 (?) FC, G, WFC, J, W, V = 1mm Increment (?) G, J, V≤50 D / H 6~17 / 1 18~40 / 2 50 / 3	Adds a set screw flat at any designated angle besides the datum plane (0°). KFC, G= 1mm Increment AG = 15° Increment (?) G≤50 Ordering Code KFC10-G3-AG90 D / H 6~17 / 1 18~40 / 2 50 / 3 (?) When combined with other alterations, ±2 degree phase differential may occur.	Adds a slit cam groove. UC=1mm Increment Ordering Code UC10 (?) UC+ℓ1≤L (?) UC≥1 ⊗ Not applicable to D13 or more. D / d / ℓ1 6 / 5 / 4 8 / 7 10 / 8 / 5 12 / 10	PC: Adds an undercut on P. Ordering Code PC (?) For undercut dimension details, refer to P.734 (?) F-B≤Mx2 ⊗ Not applicable when D=P. LKC: Changes L dimension tolerance. Ordering Code LKC (?) L<500→L±0.05 L≥500→L±0.1	PKC: Adds a keyway on the shaft end P. Ordering Code PKC10 (?) = 1mm Increment (?) PKC≤50 PKC≤F(T) (?) For keyway details, P.737 ⊗ Not applicable to P5 or less. CKC: Changes the concentricity to Ø0.02. Ordering Code CKC (?) Applicable within dimension L range in the table below. D / Lmax 6~22 / 450 25~50 / 600 (?) Not applicable to D part of h9 (Cold-drawn) .	Changes threads to Fine Thread in the table below. Ordering Code PMC20 D / PMC 6 / 3 4 5 8 / 3 4 5 6 10 / 4 5 6 / 8 12 / 13 / 5 6 / 8 10 15 / 16 / 5 6 / 8 10 12 17 / 18 / 6 / 8 10 12 15 20 / 22 / 6 / 8 10 12 15 17 25 / 8 10 12 15 17 20 30 / 8 10 12 15 17 20 / 25 35 / 10 12 15 17 20 / 25 30 40 / 12 15 17 20 / 25 30 35 50 / 15 17 20 / 25 30 35 40 Pitch / 0.35 / 0.5 / 0.75 / 1.0 / 1.5 (?) P dimension is the same as PMC. (?) Specify PMC instead of P
	(?) Keyways and set screw flats are added in the same plane. When the distance of the alterations are over 500mm, ±2 degree phase differential may occur.						
Price Adder	KC: 4,00 WKC: 8,00	FC: 2,00 WFC: 4,00	6,00	2,00	PC: Free LKC: 4,00	PKC:4,00 CKC:8,00	3,00

Rotary Shafts -D Tolerance h9 (Cold-drawn) / h7 (Ground) /g6 (Ground)-
-One End Stepped and Female Thread-

■ h9 (Cold-drawn) and h7 (Ground) are newly added. h7 or g6 can be selected for P part tolerance of h9 (Cold-drawn).

RoHS

	Type Standard	Type Wrench Flats	Tolerance D	Tolerance P	Material	Surface Treatment

Alterations

Part Number - L - F - P - T - Q - (KC, WKC, FC...etc.)

SFRMHQ30 - 300 - F25 - P10 - T25 - Q10 - KC40 -A20

	Keyway	Set Screw Flat	2 Set Screw Flats (Angle Specified)	Slit Cam Groove	Wrench Flats	L Dimension Tolerance – Concentricity	Keyway on Shaft End
Alterations	- One Keyway: KC - Two Keyways: WKC	- 1 Set Screw Flat: FC - 2 Set Screw Flats: WFC					
Code	KC / WKC	FC / WFC	KFC	UC	SC	LKC / CKC	PKC / QKC
Spec.	KC:Adds a keyway. Ordering Code KC50-A10 WKC:Adds two keyways. Ordering Code WKC50-C8-K40-E10 KC, A, WKC, C, K, E = 1mm Increment A, E, C≤100 For keyway details, **P.737** If 3 keyways are required, use both KC and WKC. Keyways and set screw flats are added in the same plane. When the distance of the alterations are over 500mm, ±2 degree phase differential may occur.	FC:Adds 1 set screw flat. Ordering Code FC10-G3 WFC:Adds 2 set screw flats. Ordering Code WFC10-J3-W10-V3 FC, G, WFC, J, W, V = 1mm Increment G, J, V≤50 D / H 6~17 / 1 18~40 / 2 50 / 3	Adds a set screw flat at any designated angle besides the datum plane (0°). KFC, G = 1mm Increment AG = 15° Increment G≤50 Ordering Code KFC10-G3-AG90 D / H 6~17 / 1 18~40 / 2 50 / 3 When combined with other alterations, ±2 degree phase differential may occur.	Adds a slit cam groove. UC=1mm Increment Ordering Code UC10 UC+ℓ1≤L UC≥1 Not applicable to D13 or more. D / d / ℓ1 6 / 5 / 4 8 / 7 10 / 8 / 5 12 / 10	Adds a wrench flat. SC=1 mm Increment SC+ℓ2≤L SC=0 or SC≥1 D / W / ℓ2 6 / 5 / 8 8 / 7 10 / 8 12 / 13 / 10 / 10 15 / 16 / 13 17 / 18 / 14 20 / 22 / 17 25 / 22 30 / 27 / 15 35 / 30 40 / 36 / 20 50 / 41 When combined with other alterations, ±2 degree phase differential may occur.	LKC: Changes L dimension tolerance. Ordering Code LKC L<500⋯L±0.05 L≥500⋯L±0.1 CKC:Changes the concentricity to Ø0.02. Ordering Code CKC Applicable within dimension L range in the table below. D / Lmax 6~22 / 450 25~50 / 600 Not applicable to D part of h9 (Cold-drawn).	Adds a keyway on the shaft end P (Q). Ordering Code PKC10 (QKC10) PKC, QKC=1mm Increment PKC, QKC≤50 (QKC)≤F (T) Keyway Details **P.737** Not applicable to P (Q)=5 or less.
Price Adder	KC: 4,00 WKC: 8,00	FC: 2,00 WFC: 4,00	6,00	2,00	4,00	LKC:4,00 CKC:8,00	4,00

Rotary Shafts -D Tolerance h9 (Cold-drawn) / h7 (Ground) /g6 (Ground)-
-Both Ends Stepped and Male Thread-

■ h9 (Cold-drawn) and h7 (Ground) are newly added. Select from h9 (Cold-drawn), h7 (Ground) and g6 (Ground) for your purpose.

Standard

	Type		Tolerance		M Material	S Surface Treatment

Alterations	Keyway	Keyway on Shaft End, Retaining Ring Groove	Set Screw Flat	2 Set Screw Flats (Angle Specified)	Slit Cam Groove	Undercut, L Dimension Tolerance	Concentricity, Left-hand Thread / Thread	Fine Thread
	- One Keyway: KC  - Two Keyways: WKC 		- 1 Set Screw Flat: FC  - 2 Set Screw Flats: WFC 					Code	KC · WKC	PKC · QKC	FC · WFC	KFC	UC	PC · QC· LKC	CKC· PLM · QLM	PMC · QMC
Spec.	KC: Adds a keyway. Ordering Code KC50-A10 WKC: Adds two keyways. Ordering Code WKC50-C8-K40-E10 KC, A, WKC, C, K, E = 1mm Increment A, E, C≤100 For keyway details, **P.737** If 3 keyways are required, use both KC and WKC combined.	PKC · QKC: Adds a Keyway on the shaft end P (Q). Ordering Code PKC10 (QKC10) PKC, QKC=1mm Increment PKC, QKC≤50 (QKC)≤F (T) For keyway details, **P.737** Not applicable to P (Q)=5 or less.	FC:Adds 1 set screw flat. Ordering Code FC10-G3 WFC:Adds 2 set screw flats. Ordering Code WFC10-J3-W10-V3 FC, G, WFC, J, W, V = 1mm Increment G, J, V≤50 D | H 6~17 | 1 18~40 | 2 50 | 3	Adds a set screw flat at any designated angle besides the datum plane (0°). KFC, G= 1mm Increment AG = 15° Increment G≤50 Ordering Code KFC10-G3-AG90 D | H 6~17 | 1 18~40 | 2 50 | 3 When combined with other alterations, ± 2 degree phase differential may occur.	Adds a slit cam groove. UC=1mm Increment Ordering Code UC10 UC+ℓ1≤L UC≥1 Not applicable to D13 or more. D | d | ℓ1 6 | 5 | 4 8 | 7 10 | 8 | 5 12 | 10	PC, QC: Adds an undercut on P and Q. Ordering Code PC For undercut dimension details, refer to **P.734** F-B≤Mx2 Not applicable to D=P or D=Q. LKC: Changes L dimension tolerance. Ordering Code LKC L<500⋯L±0.05 L≥500⋯L±0.1	CKC: Changes the concentricity to Ø0.02 Ordering Code CKC Applicable within dimension L range in the table below. Not applicable to D part of h9 (Cold-drawn). D | Lmax 6~22 | 450 25~50 | 600 PLM / QLM: Changes the threads on shaft end P(Q) to Left-hand Thread. Ordering Code PLM-(QLM) Applicable to Both Ends Male Thread Type only. Combination with PMC and QMC is not applicable.	Changes threads to Fine Threads in the table below. Ordering Code PMC20 (QMC16) D | PMC / QMC 6 | 3 4 5 8 | 3 4 5 6 10 | 4 5 6 8 12 / 13 | 5 6 8 10 15 / 16 | 5 6 8 10 12 17 / 18 | 6 8 10 12 15 20 / 22 | 6 8 10 12 15 17 25 | 8 10 12 15 17 20 30 | 8 10 12 15 17 20 25 35 | 10 12 15 17 20 25 30 40 | 12 15 17 20 25 30 35 50 | 15 17 20 25 30 35 40 Pitch | 0.35 0.5 0.75 | 1.0 | 1.5 P(Q) dimension is the same as PMC(QMC)002E Use PMC(QMC) to specify P(Q) dimension.
	Keyways and set screw flats are added in the same plane. When the distance of the alterations are over 500mm, ±2 degree phase differential may occur.

- KZAF (Induction Hardening)

When alterations on the right page are specified, the shafts are induction hardened (except the threaded sections) after machining.

Thus far, the following may occur:
(1) : Due to thermal conduction to the thread, the threads may be hardened by 2~3mm.
(2) : Induction Hardening may shrink the keyway width (around -0.01~-0.02).
If the key becomes hard to fit, adjust by spot fixing.

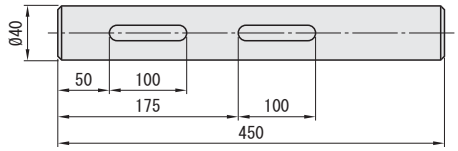
■Selection of Driving Shaft

In selecting a driving shaft, select the basic shape and size from the specification table, then select necessary alterations such as thread machining, keyway addition etc.

<Selection Example of Part No.>

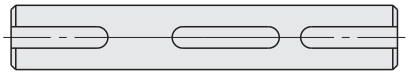
- Alteration Selection: Two Keyways



The example below shows the keyway shape under the following conditions:

KA, KB, KC, KD, ZA, ZB, ZC, ZD=0

KA+HA, KB+HB, KC+HC, KD+HD, ZA+HA, ZB+HB, ZC+HC, ZD+HD=L



<Price Calculation Example>

Body Price 68,70 EUR + Keyway 4,00 EUR x 2

= Total Price 76,70 EUR

<Example>

- KZCF (Induction Hardening)

When alterations on the right page are specified, the shafts are induction hardened (except the threaded sections) after machining.
Thus far, the following may occur:
(1) : Due to thermal conduction to the thread, the threads may be hardened by 2~3mm.
(2) : Induction Hardening may shrink the keyway width (around -0.01~-0.02). If the key becomes hard to fit, adjust by spot fixing.

*marked sizes are not available for KZCE.

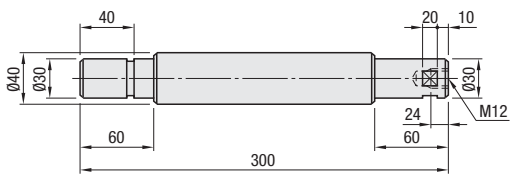
■Selection of Driving Shaft

In selecting a driving shaft, select the basic shape and size from the specification table, then select necessary alterations such as thread machining, keyway addition etc.

<Selection Example of Part No.>
- Alteration Selection: A retaining ring groove, two set screw flats at 0° and 90° and a tap.

<Price Calculation Example>
Body Price 74,00 EUR + Retaining Ring Groove 4,50 EUR + Set Screw Flat 5,00 EUR + Female Thread Hole Machining 3,00 EUR
= Total Price 74,00 EUR



<Example>

■Selection of Driving Shaft

In selecting a driving shaft, select the basic shape and size from the specification table, then select necessary alterations such as thread machining, keyway addition etc.

<Selection Example of Part No.>

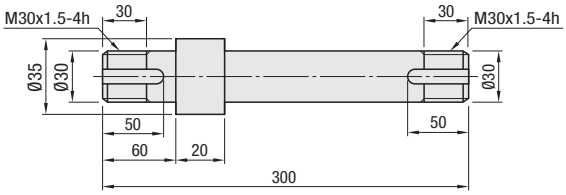
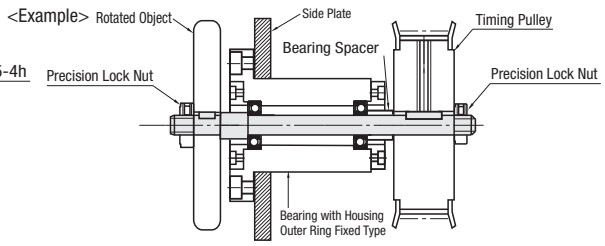
- Alteration Selection: Two Male Thread Ends (Fine Thread, Precision Class), Two Keyways

<Price Calculation Example>
Body Price 90,00 EUR + Male Thread End (Fine Thread) 6,00 EUR x 2 + Keyway 4,00 EUR x 2
= Total Price 110,00 EUR





Alterations

Part Number	-	L	-	T	-	P	-	LA	-	(MA, NA, KA, TA, SA, WA...etc.)
KZEF30	-	300	-	T20	-	P30	-	LA60	-	MMA30 - MMB30 - KA0 - HA50 - KB0 - HB50

Alterations	Code Left End	Code Right End	Spec.	Price Adder Coarse	Price Adder Fine
Male Thread Ends 	MA MSA MMA	MB MSB MMB	Adds threads at shaft ends. Specify the length of the threads. (For accuracy, coarse or fine threads can be specified by an ordering code.) Ordering Code MA15 - MSB15 1 mm Increment 5≤Thread length≤Mx5, LA-2 Code: Left End / Right End: MA–MB, MSA–MSB, MMA–MMB; Screw Precision: Coarse JIS 6h (Class 2); Fine (Coarse) JIS 6h (Class 2); Fine (Precision Class) JIS 4h (Class 1) M (Coarse) / Pitch / M (Fine) / Pitch: M6 1.0 M6 0.75 M25 1.5; M8 1.25 M8 0.75 M30 1.5; M10 1.5 M10 0.75 M35 1.5; M12 1.75 M12 1.0 M40 1.5; M20 2.5 M15 1.0 M45 1.5; M24 3 M17 1.0; M30 3.5 M20 1.0; M36 4 ▼When D, P=M, thread length can be specified. - KZFF (Induction Hardening)

When alterations on the right page are specified, the shafts are induction hardened (except the threaded sections) after machining.
Thus far, the following may occur:
(1) : Due to thermal conduction to the thread, the threads may be hardened by 2~3mm.
(2) : Induction Hardening may shrink the keyway width (around -0.01~-0.02). If the key becomes hard to fit, adjust by spot fixing.

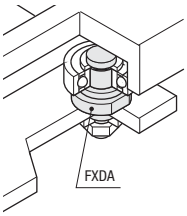
Cantilever Shafts

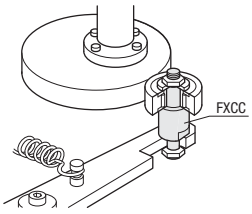
Can be used as a fulcrum for rotary parts such as Idlers.
Tension type is also available.

Example

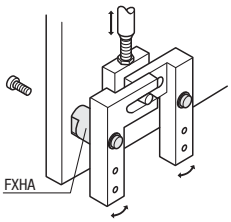
P.801



P.805



P.807

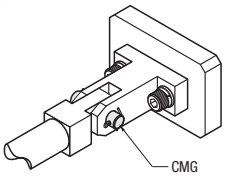


Pivot Pins

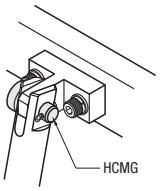
Can be used as a fulcrum for various types of connections.
We offer two types: the affordable L dimension selectable type and the L dimension configurable type.

Example

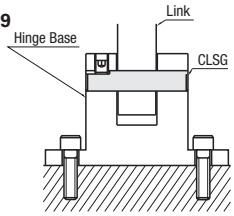
P.819



P.821



P.829

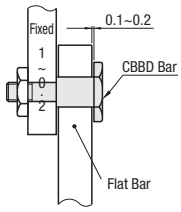


Fulcrum Pins

Can be used as a fulcrum for rotary motions of steel metal parts.
Four types of screw heads are available such as Straight Slot Groove and Hexagonal Sockets.

Example

P.835



P.836

				Code	SET	YKC	APC	MSC
Spec.	Attaches a retaining ring to each applicable shaft diameter. Ordering Code SET Available for retaining ring type. Retaining Ring Shape No.=6~8A: E Type Retaining Ring No.10~30: C Type Retaining Ring Retaining Ring Material Cantilever Shafts: Material: 1.1191/C45E, 1.4301/X5CrNi18-10; Surface Treatment: Black Oxide, Electroless Nickel Plating, -; Retaining Ring Material: Spring Steel, 1.4301/X5CrNi18-10-CSP	Changes Y dimension tolerance to ±0.05. ※Applicable to all types. Ordering Code YKC	Adds a pilot to the flange seat. ※Applicable to all types. Ordering Code APC D: 6 → APC g6: 8; 8~30 → 10; 35~50 → 12	Changes the Lock Nut Type Thread M to Fine Thread listed in the table below. ※Applicable to Lock Nut Type only. ※Specify MSC instead of M. Ordering Code MSC8 MSC: M6 → Pitch: 0.75; M 8~20 → 1.0; M25 · 30 → 1.5

RoHS

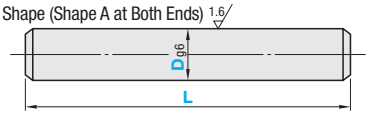
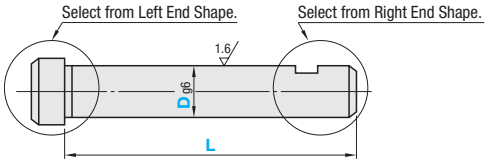
Type	Material	Surface Treatment	Hardness
FCL_ _	1.1191/C45E	Black Oxide	-
FCLH_ _			40~45HRC
PFCL_ _		Electroless Nickel Plating	-
PFCLH_ _			40~45HRC
GFCL_ _		Hard Chrome Plating Plating Thickness 3μm or More	Plating Hardness 750HV~
FCLS_ _	1.4301	-	-
FCLSH_ _	1.4125		45~50HRC
GFCLSH_ _		Hard Chrome Plating Plating Thickness 3μm or More	45~50HRC Plating Hardness 750HV~

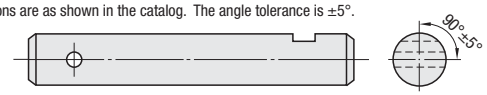
Base Shape (Shape A at Both Ends)





- When machining is needed at one end only, select Shape A for the other end.
- Identification grooves on the side of FCL_ _ and PFCL_ _ are to be distinguished from Hardening Type.
- FCLSH_ _ and GFCLSH_ _ (1.4125/X105CrMo17 equivalent) may be discolored by hardening.
- When selecting shapes B and G or BG and GB for both ends, hole and flat positions are as shown in the catalog. The angle tolerance is ±5°.

ex)



- For L ≤the depth of tap's pilot hole, the pilot hole might go through.
- ⊗ Selecting Shape D (FCLDD) for both ends is not available.

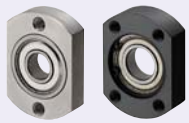
Bearings with Housings

-Space Saving Small Flanged-

CAD Data



RoHS

For No Retaining Ring Type, bearing may protrude 0.1 and 0.2mm due to negative tolerance of B dimension.

Type		Material		Surface Treatment
Retained	Non-retained	Bearings	Housing	Housing
BGTAB	BGTNB	Steel	1.1191/C45E	Black Oxide
BGTCA	BGTN			Electroless Nickel Plating
SBGTA	SBGTN	Stainless Steel	1.4301/X5CrNi18-10	-

* Bearings with Rubber Seals (V V and DD) are all made of steel.

Bearing Accuracy JIS B 1514 Class 0

6.3 (1.6)

Features

By changing the conventional counterbored holes to tapped holes, this product has 4 to 13mm smaller flange dimensions suitable for use in space-savings.

The price of Sealed V V and DD are the price shown in the table multiplied by 1.1. (Round down to ten Cent.) (Ex.) When BGTN606DD, the price in the table is 14,20 EURx1.1=15,62 EUR→15,60 EUR

Bearings with Housings

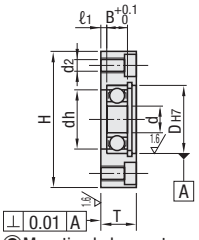
-With Retaining Rings-

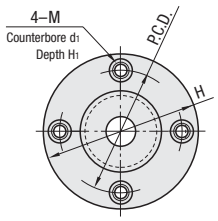
Type			Material		Surface Treatment	Accessory
Round	Square	Compact	Bearings	Housing	Housing	Retaining Ring
BGRAB	BGSAB	BGCAB	Steel	1.1191/C45E	Black Oxide	Spring Steel
BGRA	BGSA	BGCA			Electroless Nickel Plating	**1.4301/X5CrNi18-10
BARA	BASA	BACA		EN AW-2017/ AlCu4MgSi	Clear Anodize	1.4301/X5CrNi18-10
SBARA	SBASA	SBACA	Stainless Steel			
SBGRA	SBGSA	SBGCA		1.4301/X5CrNi18-10	-	

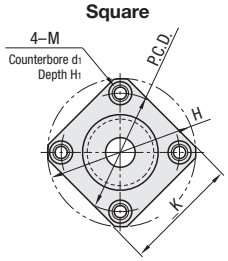
* Bearings with Rubber Seals (V V and DD) are all made of steel.
** When D=68 ~ 90, the retaining ring is Spring Steel + Electroless Nickel Plating.

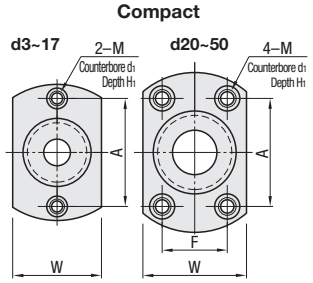
Bearing Accuracy JIS B 1514 Class 0

6.3 (1.6)









Mounting holes are tapped and counterbored so the housing can be mounted from either side.

Bearing Accuracy JIS B 1514 Class 0

6.3 (1.6)

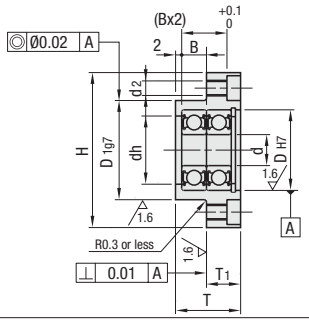
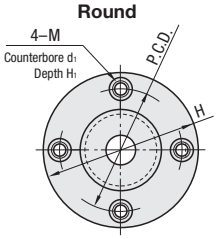
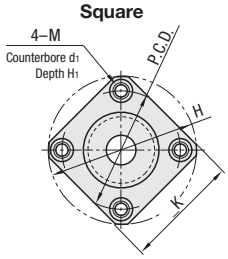
Easier to obtain required radial load ratings when space is limited.

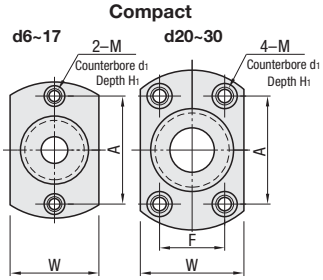
* Bearings with Rubber Seals (VV and DD) are all made of steel.

The "(Bx2)" dimension for "Short Double Bearings, Retained" type indicates the position where the retaining ring groove begins. Please note that considering the groove width tolerance and the retaining ring thickness tolerance, there may be up to max. 0.3mm of axial clearance on the bearings.









Mounting holes are tapped and counterbored so the housing can be mounted from either side.

- Easier to obtain required radial load ratings when space is limited.
- * Bearings with Rubber Seals (V V and DD) are all made of steel.
- The "(Bx2)" dimension for "T-Shaped Short Double Bearings" type indicates the position where the retaining ring groove begins. Please note that considering the groove width tolerance and the retaining ring thickness tolerance, there may be up to max. 0.3mm of axial clearance on the bearings.

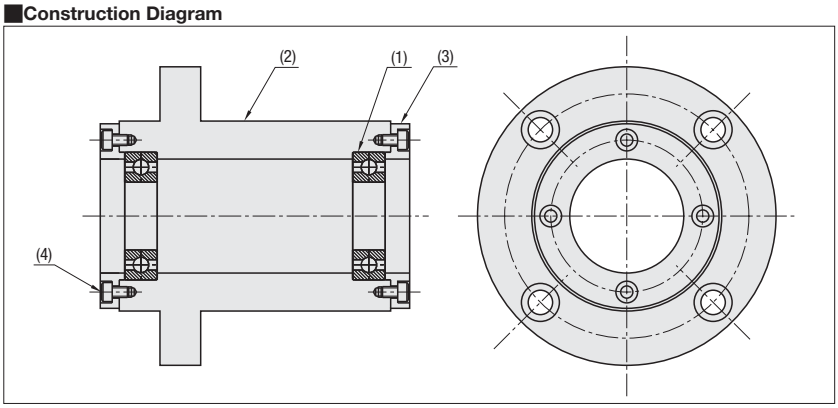
Bearings with Housings, Outer Ring Captured -Overview-

Bearings with Housings, Outer Ring Captured

■Features

-Bearings with Housings Outer Ring Captured have outer ring covers as standard features, which prevents the bearing outer rings from moving in thrust directions.

■Construction Diagram



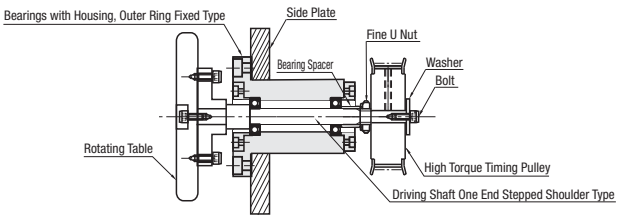
(1) Deep Groove Ball Bearings
(2) Housing Body
(3) Outer Ring Covers (2 pcs)
(4) Outer Ring Cover Mounting Screws (8 pcs)

■Usage

- Suitable for relatively high-loading uses such as heavy load / high-speed applications.
(When used to support thrust loads, please consider Angular Contact Bearings with Housings **P.891~896**

■Example

Example (1) (Standard Type)



Example (2) (With Pilot Type)

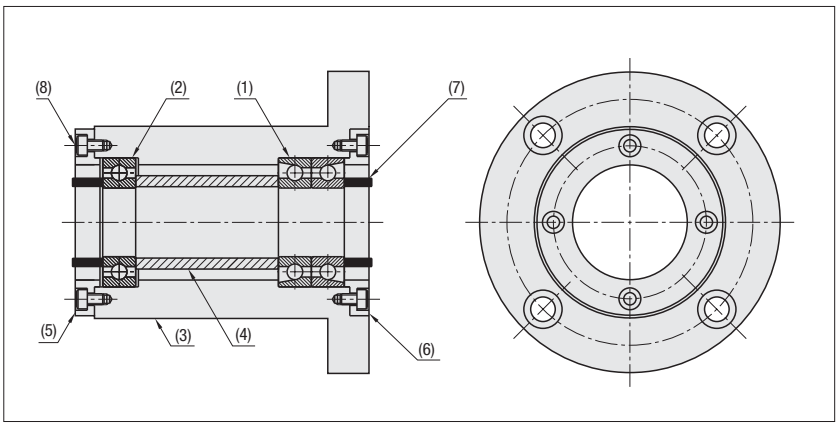
Angular Contact Bearings with Housing Sets
-Overview-

Angular Contact Bearings with Housing Sets

■Features
The angular contact bearings with housing set is a unit holder which concludes Back-to-Back bearings.

■Usage
Suitable for high loading applications with both radial and axial loading components.

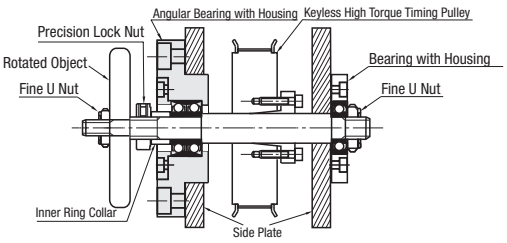
■Construction Diagram



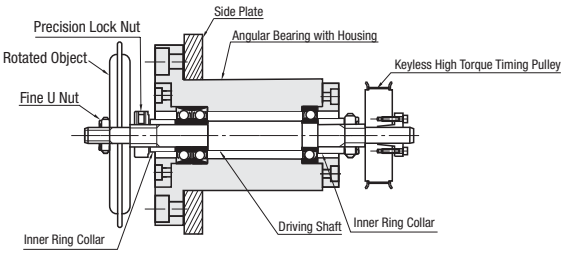
(1) Back-to-Back Combination
(2) Deep Groove Ball Bearing
(3) Holder Body
(4) Spacer for Inner Ring
(5) Standard Cover
(6) Standard Cover [N]
Cover for Oil Seal [S]
Cover for O-Ring [R] Selection
(7) Collars for Inner Ring (2 pcs.)
(8) Screws for Covers (8 pcs.)

■Product Lineup and Example of Use
- 2 New types, the flanged type and the pilot type, have been added to back-to-back combination and deep groove type.
- A compact back-to-back combination type that can be combined with other bearing housings has also been newly added.

Example(1) (Back-to-Back Combination type)



Example(2) (Back-to-Back Combination + Deep Groove type)



■Cautions on Angular Contact Bearings with Housing selections

- MISUMI angular contact bearings are designed for grease lubrication.
- Angular contact bearings are not pre-greased at the time of shipment. Please apply grease before use.
- An outer ring cover for grease splash prevention is included with the angular contact bearings.
- For grease splash prevention, an outer ring fixing cover can be selected from type S (for oil seal) and type R (for O-ring). An oil seal and O-ring are included as standard.
- An inner ring collar is included for use with bearing lock nuts. (The collar is not necessary on stepped shafts)

~For back-to-back Combination type (ABGEB, ABGE)~

- When the rotary shaft is long, it can be used in combination with the regular bearing with housings for deep groove ball bearings. (Refer to the example of use (1))

~For back-to-back Combination + Deep Groove type (ABGCB, ABGC, ABGYB, ABGY) ~

- A normal cover for outer ring fixing is included with the radial bearing.
- Outer ring of the radial bearing is not fixed in thrust direction.
- A spacer for inner rings is included as an accessory that can be used to axially tie the inner rings of the angular contact bearings and deep groove ball bearing together.

■Mounting Procedures for Angular Contact Bearings with Housing

1. Apply grease on an angular contact bearings.
2. Put the bearings together in a back-to-back relationship.
3. Insert the rotary shaft into the Angular Contact Bearings set.
4. Insert the shaft into the inner ring spacer.
5. Insert the angular contact bearings into the holder.
6. Install the deep groove ball bearing on the shaft, and then into the holder.
7. Mount the outer ring cover with the screws by tightening them evenly.
8. Install the inner ring collar on the shaft with a bearing nut.
9. Verify whether the shaft rotates smoothly.

Angular Contact Bearings with Housing Sets

	M Material	M Material	S Surface Treatment	M Material	S Surface Treatment
ABGEB	1.3505/100Cr6	1.1191/C45E	Black Oxide	1.7220/34CrMo4	Black Oxide
ABGE			Electroless Nickel Plating	1.4301/X5CrNi18-10	-

Bearing Accuracy (Angular Contact Bearings) JIS B 1514Class 4* Contact Angle 15°

- The Angular Contact Bearings with Housing is delivered with the parts unassembled to the holder body.
- Be sure that bearing outer race rings and inner rings are firmly captured by the covers and bearing lock nuts before use.
- Collar (4) is not included with Cover for Oil Seal and O-Ring.
- Contact with O-Ring may generate some torque load.

- The Angular Contact Bearings with Housing is delivered with the parts unassembled to the holder body.
- Be sure that bearing outer race rings and inner rings are firmly captured by the covers and bearing lock nuts before use. 1mm axial clearance is designed on each side of the deep groove bearing outer ring where the inner ring can be tighten upon without adjusting the length of the inner ring spacer.
- A normal cover is included with Deep Groove Ball Bearing side (5) as a standard accessory. For Angular Contact Bearings (6), please select **N** Standard Covers, **S** Oil Seal Covers or **R** O-Ring Covers.
- Collar (4) is not included with Cover for Oil Seal and O-Ring.
- Contact with O-Ring may generate some torque load.

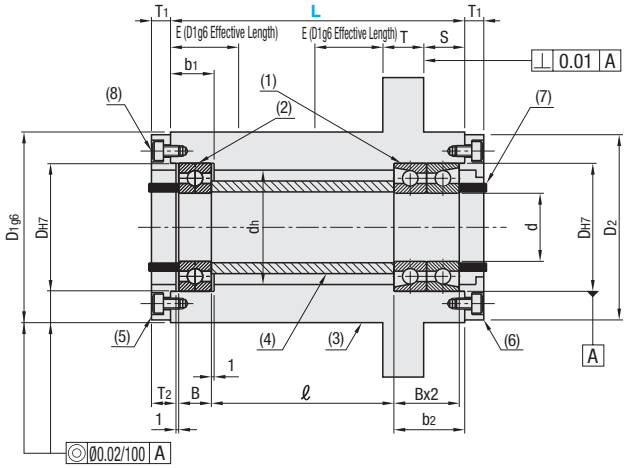
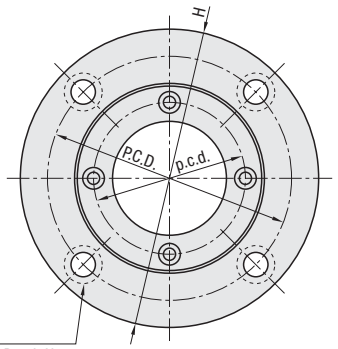
Angular Contact Bearings with Housing Sets

-Angular Contact Bearings Back-to-Back Combination + Deep Groove Ball Bearings -With Pilot-

Type	(1) Angular Contact Bearings (back to back) (2) Deep Groove Ball Bearing	(3) Housings (4) Inner Ring Spacers (5) Standard Covers (6) Standard / Oil Seal / O-Ring Covers (7) Inner Ring Collars		(8) Cover Mounting Screws	
	M Material	M Material	S Surface Treatment	M Material	S Surface Treatment
ABGYB	1.3505/100Cr6	1.1191/C45E	Black Oxide	1.7220/34CrMo4	Black Oxide
ABGY			Electroless Nickel Plating	1.4301/X5CrNi18-10	-

- The Angular Contact Bearings with Housing is delivered with the parts unassembled to the holder body.
- Be sure that bearing outer race rings and inner rings are firmly captured by the covers and bearing lock nuts before use. 1mm axial clearance is designed on each side of the deep groove bearing outer ring where the inner ring can be tighten upon without adjusting the length of the inner ring spacer.
- A normal cover is included with Deep Groove Ball Bearing side (5) as a standard accessory. For Angular Contact Bearings (6), please select **N** Standard Covers, **S** Oil Seal Covers or **R** O-Ring Covers.
- Collar (4) is not included with Cover for Oil Seal and O-Ring.
- Contact with O-Ring may generate some torque load.





Bearing Accuracy (1) Angular Contact Bearings) JIS B 1514 Class 4
(2) Deep Groove Ball Bearing) JIS B 1514 Class 0
* Contact Angle 15°

Deep Groove Ball Bearings
-Double Shielded with C3 Clearance-

CAD Data

Features: Radial clearance is larger than standard products. Specially use for tight joining-fit and potential temperature difference between outer and inner rings.

RoHS

■Structure and Features of Ball Bearings

Type	Open Type	Double Shielded	Non-contact Sealed	Contact Sealed
Friction Torque	Low	Low	Low	Large Due to seal contact
High Speed	○	○	○	Δ
Dust Resistance	X	Δ	○	◎
Water Resistance	X	X	X	○ Usable in the conditions of exposure to water splashes
Operation Temperature	-10 ~ +100°C	-10 ~ +110°C		-10 ~ +100°C

The table above is for reference to compare the four shapes.
◎: Excellent ○: Good Δ:Questionable X:Poor

CAD Data

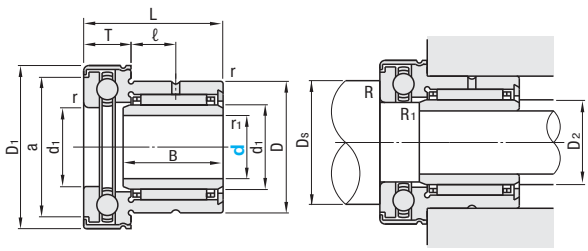
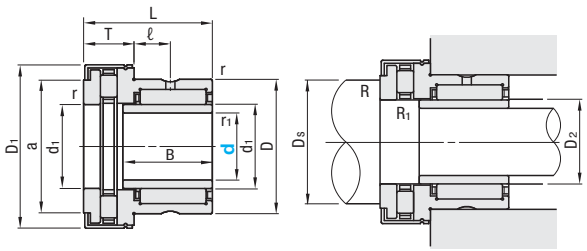
■Needle Roller Bearings RoHS

NKXZ (With Thrust Ball Bearings)



NKXRZ (With Thrust Roller Bearings)



■Features

-Dust cover is provided on the thrust bearing side to prevent intrusion of dirt and lubricant leakage.

-With its ability to sustain radial and axial load simultaneously, NKZX is suitable for the compact design to use on fixed shaft ends. The NKXRZ has better performance against Axial loads.

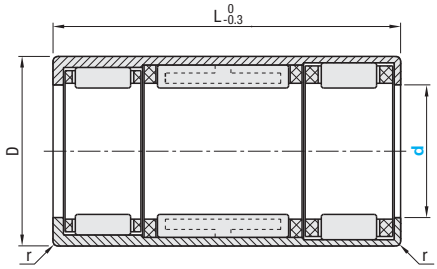
One-way Clutches

CAD Data

Features: Bearings are on both ends of the clutch to support radial loads. Usable with the unit alone.

RoHS

BHFL



One-way Clutch Structure

During lock-up

Shaft torque is transmitted to the Housing during lock-up.

During Free Running

Shaft torque is not transmitted to the Housing during free running.

Recommended Fits

Shaft	Housing	
	Steel	Light Metal
h5 (h6)	N6 (N7)	R6 (R7)

*When applied torque is smaller than half the allowable torque, tolerance in () can be applied.

Note the mounting direction as the clutch will lock in one direction and free-spin in the other.

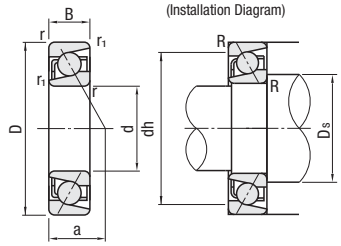
■Angular Contact Bearings
Universal Combination
(Precision Class)
RoHS

B70_ _SU

(Installation Diagram)

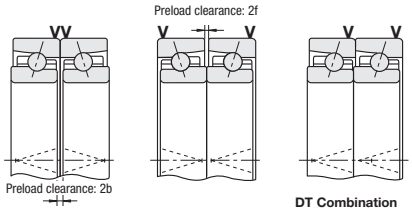


* Contact Angle 15°

Shipped with no grease applied.
Please apply grease when using.

M Material: 1.3505/100Cr6
Bearing Accuracy JIS B 1514 4 Class

■Features The width differences of front and back side are controlled so that designated preload can be obtained no matter how the same model bearings are combined. Outer ring is marked with a V mark to help obtain correct combination.



DB Combination
Back side width difference x 2 = 2b(= 2f), and the designed preload is obtained.

DF Combination
Front side width difference x 2 = 2f(= 2b), and the designed preload is obtained.

DT Combination
Because of front side width difference f = back side difference b, DT clearance does not occur similar with the normal DT combination.

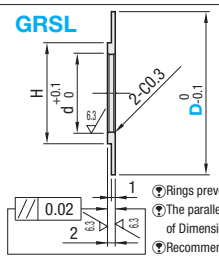
Sold by each.
When using multi-row combination, it is recommended to match inner and outer diameter variations of each row.

■Grease Seal Rings
RoHS

GRSL



25/ (6.3/)

M Material: 1.0038/S235JR
S Surface Treatment: Black Oxide

Rings prevent grease splash but have no sealing ability
The parallelism is guaranteed within the range of Dimension H.
Recommended for use at 5000 rpm or less.

Self-aligning Ball Bearings

NEW

Reduced Delivery Time

Price Reduction Average 20%

CAD Data

Features : The self-aligning ability enables to tolerate mounting misalignment and deflection during rotation. Suitable to use with power transmission shafts that may sustain deflection.

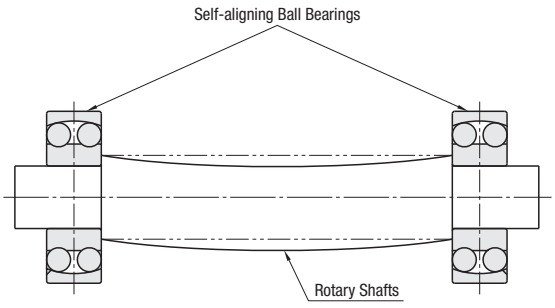
kgf=Nx0.101972

Design and Features

The outer ring raceway forms a spherical surface, whose center of curvature is common to the bearing center. Thus the inner ring, balls and cage are capable of freely revolving around the bearing center with self-aligning ability. Suitable to use with drive shafts, which tend to undergo deflection. This is also fit to use in a situation that alignment of a shaft and housing is difficult.



Allowable misalignment angle

Note : Allowable misalignment angle of self-aligning ball bearings is approx 0.07 ~ 0.12 radian (4° ~ 7°) at normal load condition, however this degree of allowable misalignment may be limited by the abutment and fillet dimensions around the bearing.

*2-M (Set Screw) angles are 120° for set screws and 90° for eccentric rings.

Eccentric rings are used to secure shafts.

Ball bearing moves slightly due to self-aligning function.

To maintain transition fit, the fit between the body and the bearing is designed slightly tight. (Except casting) If the bearing is inclined when delivered, insert the shaft into the bearing to adjust the inclination.

■How to Secure the Shaft

Set Screw Fixed	- There are two set screws at the end face of the bearing inner ring (at 120°). The shaft is connected by tightening the set screws.
Eccentric Ring Fixed	- Dissociate the centers of the convex outer surface at the end of the bearing inner race (part a) and the concave inner surface of the eccentric ring (part b), connect the shaft and the inner ring by forming a wedge on the circumference (Refer to Figure 1) - Also, there is a set screw and a hole each (at the angle of 90°) on the end face of eccentric ring, which helps to prevent loosening by using the set screw as well as tightening as described above. - The D hole is for inserting a small diameter rod when loosening the connection.

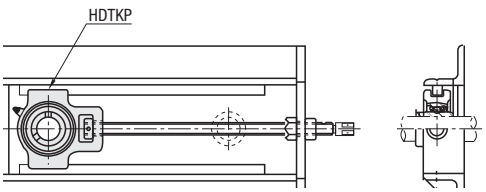
Example



-HDMC

With the pilot (dia. E part) on the plate mounting side, the ball bearing misalignment can be prevented even if the mounting screws become loose after installation.

- HDTKP

Tension can be adjusted by sliding the guide groove A2. Suitable for adjusting the tension of a belt conveyor, etc.

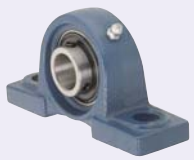
Deep Groove Ball Bearing Units (Economy Type)

-Cast Housing Units-

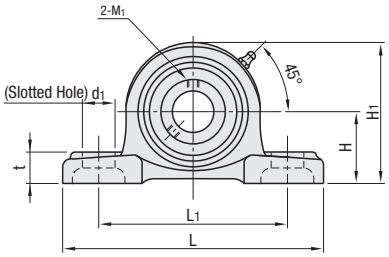
CAD Data

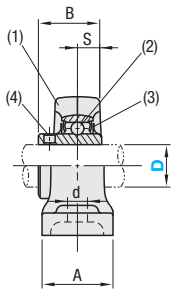
Features: Major overseas manufacturers' economical Deep Groove Ball Bearing units. Please use for sizeable loads transfer.

RoHS



CPDR (Pillow Type)





Accuracy: JIS B 1558
JIS B 1514
JIS B 1559
Bearing Housing Spherical Bearing Seat Diameter Precision: J7*
Operation Temperature: -15 ~ +100°C
*J7 tolerance constitutes a tight fit (transition fit) and does not allow aligning adjustments before mounting a shaft. Please make adjustments after mounting a shaft.

Example

Mounting steps

1. Insert the shaft into the bearing and locate it to the predetermined position.
2. Sandwich the bearing between the housings (2 steel plates) and secure them with screws (the bearing is fixed after the assembly).
3. Decide the position of the shaft and secure it with a set screw.

Bearing Nuts and Tooth Lock Washers

-These 2 items are common parts for securing bearings.
-Nut loosening can be prevented by machining a vertical groove (Keyway) on the thread of a rotary shaft, and by tightening the nut and the shaft with the tooth lock washer.

[Mounting Procedure]

(1) Assemble a bearing onto a rotary shaft.
(2)Fit the tooth lock washer tab (S2) in the groove of the rotary shaft (a).
(3) Tighten the bearing nut.
(4)Fold the tooth lock washer tab (S1) to fit the groove of the rotary shaft (S).

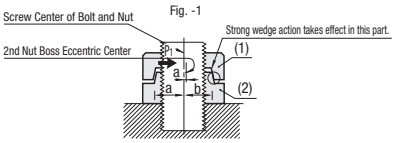
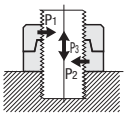
Structure and Function of Hard Lock Nut





Wedge action does not change even when nuts are installed upside down of the figure on left.

Fig.-1 When upper nut is tightened, stress is automatically applied in P1 arrow direction. Horizontal stress continues to increase with tightening until upper nut closely contacts lower nut as shown in Fig.-2. The nuts are fully locked by the wedge effect.

Fig.-2 After nuts are tightened, internal stress remains distributed as composite stress of P1 + P2 + P3 to resist external impact.

Comparison with Conventional Products

Unlike standard bearing nut sets, no keyway machining is required for toothed washers and shafts.

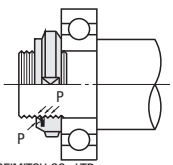
Hard Lock Structure

As shown in the figure, stress P is caused by the spring effect when Friction Ring contacts the thread. The reaction force P' together with P presses hard upon the threads, which creates friction torque (preventing torque) to prevent any free motion.



Cautions for Use

Mating thread should be made to JIS6g (Class 2) accuracy with a C = 1 tread pitch equivalent chamfer on the starting tip.
- Use lubricant when threading in and out. (Use extra high performance lubricant when shaft hardness is low.)
- For optimal performance, ensure that the complete thread portion is to extrude by 2 pitches or more from function ring side.
- The perpendicularity of the plane end in the above table is effective only when tightened with twice or more the preventing torque.
- Not usable with high speed impact wrenches.
- Not usable on machined thread portion of shafts (keyway, etc.)
- Screwing in from the friction ring side is impossible.
- Do not use when the deflection of Friction Rings or Clamp Part occurs.

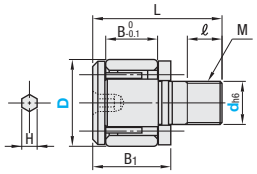
Regular	CFFAM	1.4125/X105CrMo17	1 Hexagon Nut (1.4301/X5CrNi18-10)
Low Particulate Generation	CFFAMC		
Heavy Load	CFFANG	1.3505/100Cr6 (Stud: 1.7242/16CrMo4 Alloy Steel)	1 Hexagon Nut (1.1191/C45E, Black Oxide)
	CFFAMG	1.4125/X105CrMo17	1 Hexagon Nut (1.4301/X5CrNi18-10)

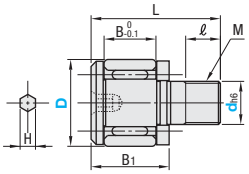
Operating Ambient Temperature 80°C or Less

Regular, Low Dust



Heavy Load

Full roller for heavy load.



<Note>
The thread diameter of a miniature cam follower is small.
To prevent damage, please be sure to use torque wrench and tighten with the force below the maximum tightening torque.
(Please note that the maximum tightening torque for a miniature cam follower is about one fourth of that of the conventional equivalents.)

Load beyond limit, rotary speed and unbalanced load may cause a plastic sleeve to come off.
Data below are for reference, not guaranteed.

Plastic Sleeve Retention Test

Test data when a load is applied from the upper part of the cam follower at a constant speed.
Loads when the plastic sleeves came off more than 0.5mm are shown. Travel distance is (speed ≤ 4.5km) = 1km, (speed > 4.5km) 2km.

Room Temperature 21°C x=0°, y=0°

■About High Rigidity Keyless Clamp Couplings (P.966~970)

-Features

- Eliminates the need for shaft machining (keyway, tec.)
- Shaft strength not compromised since no machining.
- Easy angular position adjustments.
- Zero backlash.

- Installation

(1) Wipe the shaft surface clean and apply a thin layer of oil or grease.
(Do not use oils or greases containing Molybdenum friction reducer additives)
(2)Wipe clean the contacting inner bores of the coupling, as well as the seating surfaces of the locking screws.
(3) Insert the shaft into the coupling.
(Please do not tighten Keyless Clamping flange to the bolt before inserting the shaft.)
(4)After locating, tighten the locking screws using a torque wrench in the diagonal order, beginning lightly (approx. 1/4 of the predetermined tightening torque).
(5) Tighten the screws to higher torque (Approx. 1/2 of specified max.)
(6) Tighten the screws to the prescribed max. torque.
(7) Finally, tighten the screws in a circumferential order.

- Cautions on Installations

- Do not tighten the locking screws before inserting shafts into couplings.
(Tightening the lock screws with empty bores will cause bushing distortion.)
- Use a torque wrench to tighten the locking screws.
- Never use screws other than included for the locking screws.

- Removal

- Ensure that the machine has completely stopped before starting work.
- Loosen the locking screws sequentially in a circular order.
- Insert screws into removal screws holes and tighten evenly.
- Repeat the installation procedure for re-installation.

Couplings
-Overview-

How to Select a Coupling

Operating Temperature (ºC)	Temperature Correction Factor
-20~30	1.00
30~40	0.80
40~60	0.70
60~100	0.55

· Couplings are machine components designed to connect two separate rotating bodies and transmit a torque between them. They allow various misalignments (Lateral/Angular/Axial) of the rotating bodies by absorbing, and alleviate installation and adjustment work loads. Furthermore, they protect expensive inter-connected machine components from sudden and unexpected excess loads by breaking and disconnecting. Please select a coupling type from the provided chart based on your application specific needs.
· For applications with frequent direction reversals, choose a coupling with max. torque capacity 2~5x of the motor's peak torque.
· For servo motor applications, choose a servo motor compatible product with max. torque capacity 5~10x of the servo motor's peak torque.
· Ensure that the specification parameters such as Allowable Torque, Max. Speed, and Dimensions published in this catalog are properly applicable to your application.
· Resin spacer couplings such as Oldham and Jaw types have allowable torque values that are variable based on operation temperatures. Select couplings by multiplying couplings allowable torque max. speed, etc with correction coefficient value.

Precautions for Use

· Make sure to keep misalignment within the allowable range and avoid excessive torque. Otherwise the coupling's service life will be shortened considerably due to plastic deformation.
· For your safety, enclose the revolving parts of equipment with a protective cover.
· If the coupling item generates abnormal metallic noises, immediately turn off the equipment and identify the cause, such noises may be an indication of improper alignment, shaft interference or a loose screw.
· For applications with a large load fluctuation, apply an adhesive agent on the coupling's screws to prevent them from loosening, alternatively select 1 size larger couplings.

Disc Couplings Zero backlash, and best suited for high torque servo motor applications.

· Characteristics
· Designed to absorb misalignments by disc flexures.
· Zero backlash nature provides high angular accuracy, suitable for applications requiring high positioning accuracies.
· The High Rigidity Type couplings have largely improved torsional rigidity over the Standard Types due to screw-coupled discs instead of the swage-coupled discs of the Standard.

* Products in RED frame are servo motor compatible.

Oldham Couplings Easy to install with large angular · lateral misalignment allowances

· Characteristics
· The spacers are designed to flex and slide to allow misalignments.
· Larger misalignment allowance ranges compared to the other types, making for easy to adjust for installing.
· The high rigidity type has bronze spacer material instead of resin, and has torque capacity 2x of the conventional type.
· The Space Saving Type are up to 17% shorter in length contributing to space saving machine deigns.

* If used with the lateral misalignment less than 0.1mm, the backlash amount will practically be zero.

Slit Couplings Unitized construction with no backlash

· **Characteristics** · Slits are designed to allow misalignments.
· Suitable for applications requiring high positioning accuracies due to zero backlash nature.
· Please consider the Disc Types if higher torque transmission capability is needed.

* Products in RED frame are servo motor compatible.

Alignment adjustment

Couplings are designed to transmit angular motion and torque while being able to absorb some misalignments. However, if the allowable maximum values are exceeded, the coupling's service life may dramatically be shortened, or cause vibrations.

· Types misalignments are: Angular Misalignment (Fig.1); Lateral Misalignment (Fig.2); and Axial Misalignment (Fig.3). Be sure to perform thorough alignment procedures, using tools such as dial indicators and the like, in order to reduce any misalignments below the value indicated in the specification chart.
· The allowable misalignment values shown in the specification chart assume that only one of: Lateral; Angular; or Axial Misalignment is occurring at a given time.
When multiple misalignments are simultaneously, the allowable maximum value will be reduced to 1/2 each.
It is recommended that each misalignment is to be kept below 1/3 of the allowed maximum value in order to prolong the service life of couplings.

Fig. 1 Declination (Parallelism Error between Two Shaft Centers)

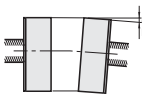

Fig. 2 Eccentricity (Angle Error between Two Shaft Centers)

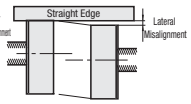

Fig. 3 End Play (Shaft's Shift in the Axial Direction)

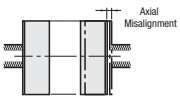

Simple Method To Confirm the Alignment of Disc Type Coupling

[Before Installing]
· Confirm that the clamping screws are loosened, and wipe clean the inner bore and shaft surfaces of dust and oils.
· Insert the shaft into the coupling while taking care not to apply undue compressive/tensile forces on the disc section.
[Quick Lateral Misalignment Check]
· With all the locking screws loose, slide the coupling axially over both shafts (Fig.4) to ensure smooth sliding movements.
If not smooth, perform the lateral alignment procedure again.
[Quick Angular Misalignment Check]
· Rotate the coupling/shaft and visually check for smooth and even movement.
If not smooth, perform the lateral alignment procedure again.
[Final Assembly]
· With a torque wrench, tighten the screws on both the motor and driven shafts to the prescribed torques.
[Verify Operations]
· Check for tightening torques after approximately 30min. of continuous operation to account for any initial self-loosening of the screws.

Fig. 4 Quick Lateral Misalignment Check

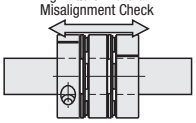

Fig. 5 Quick Angular Misalignment Check

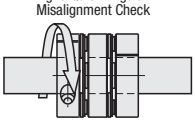

Servo-Fine couplings

-High Positioning Accuracy Disc Clamping Type / Keywayed Bore Type / High Rigidity Disc Clamping Type- For Servo Motors

The stainless discs of this product have sharp edges that may cause injuries. Use of thick protective gloves is recommended.

CAD Data

■Features:Torsional rigidity is improved over the conventional type (SCPW) (maximum approx 26%). Excellent for applications requiring high accuracy positioning at high speeds. All the screws are Trivalent Chromate treated and reliable to use in clean environments.

■For Servo Motors (High Positioning Accuracy Type)

-High Rigidity Disc (Outer Dia. 40) Keyless Clamping/Keyway- For Servo Motors

⚠ The stainless discs of this product have sharp edges that may cause injuries. Use of thick protective gloves is recommended.

CAD Data

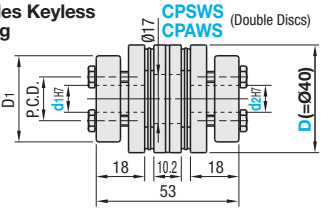
■Features: Compact and highly rigid couplings for servo motors selectable in keyless clamping and keywayed bores.

■For Servo Motors

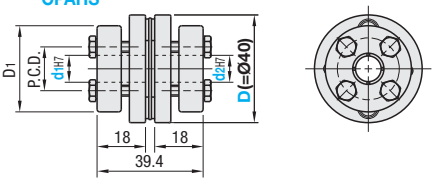
RoHS

■Both Sides Keyless Clamping

CPSWS CPAWS (Double Discs)

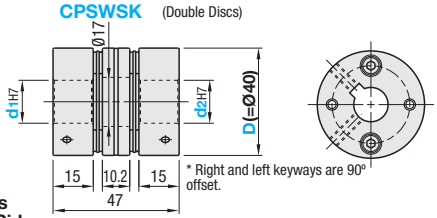


CPSHS CPAHS (Single Disc)



■Both Sides Keywayed Type

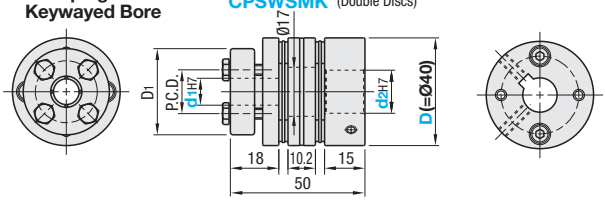
CPSWSK (Double Discs)



* Right and left keyways are 90° offset.

■One Side Keyless Clamping · One Side Keywayed Bore

CPSWSMK (Double Discs)



The allowable lateral · angular · axial misalignment values shown are for each to be singularly occurring at a time. If all three are to be occurring simultaneously, allowable max. value of each will be 1/2.

Shipped after center-aligned and assembled.

For the selection criteria and alignment procedures, see P.961

Camping keyless flange has two screw holes for removal.

For installation and removal of Keyless Clamping Type couplings, see P.960

Couplings
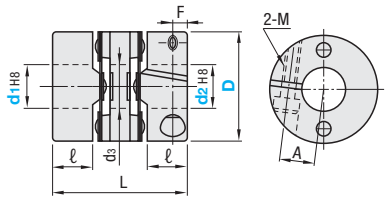
-High Torque Disc · Clamping-

CAD Data

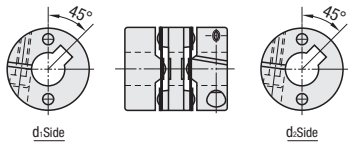
■Features: Couplings with carbon fiber discs have higher torque ratings than the polyimide discs, and are more lateral · angular misalignment tolerant than stainless steel.

RoHS

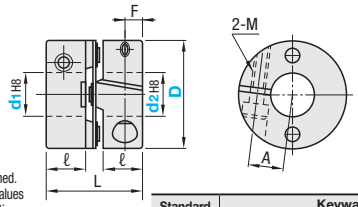
Double Disc Type
MCKLC (Standard Bore)



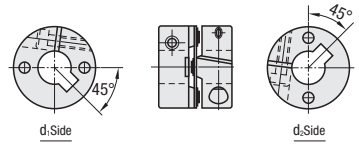
MCKLCLK (Keyawed Bore d_1)
MCKLCRK (Keyawed Bore d_2)
MCKLCWK (Keyawed Bore d_1, d_2)



Single Disc Type
MCKSC (Standard Bore)



MCKSCWK (Keyawed Bore d_1, d_2)



For keyway dimensions, see **P.973**

d1, d2 tolerances are values before slits are machined.
The allowable lateral/angular/axial misalignment values shown are for each to be singularly occurring at a time. If all three are to be occurring simultaneously, allowable max. value of each will be 1/2.
For the selection criteria and alignment procedures, see **P.961**

■Details of the product

- Keyless locking by friction:
  Allows high-accuracy mounting with no backlash.
  Easy phase matching.
  No machining for keyway contributes to total cost saving.
- High torque transmission / High Thrust Load Capacity:
  Allows combined load of torque and thrust.
- Easy locking with a nut:
  It is easy to mount where a space is limited. Requires no space in axial direction.
- Keywayed shafts can be used. (15~20% less allowable torque)

■Cautions

- Tightening torque control is required. (A torque wrench is recommended.)
- Replace the Teflon tape on the threads for reuse.
- Use shafts with h7 tolerance and 8S or better surface roughness.
