

Ex. (A)
If KMBU(S)12 is selected with supported load to be 150kg per foot, transmissibility for vibrations above 30Hz is reduced to 1/3 or less.
Ex.(B)If KMBU(S)6 is selected with supported load to be 50kg per foot, transmissibility for vibrations above 40Hz is reduced to 1/10 or less.

All values are calculated, and not guaranteed.

Example

Equipment vibrations are suppressed by the damper effect.

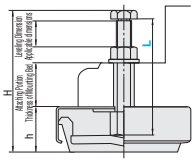
Anti vibration Mounts

-Standard Type · Economy Type-



CAD Data

The exterior of Economy Type is designed for workability. Economy Type has the same antivibration function as Standard Type.
For round type, turn the thread tip to adjust height. For square type, turn the handle to adjust height.

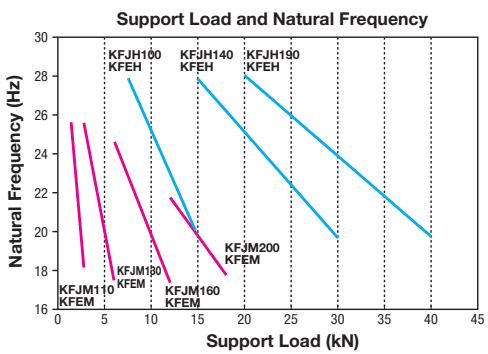
KFJH140	-	120
KFEM160	-	200

Days to Ship: 8 Days

Express A 5,00 EUR/ piece P.88

A Express Charge of 13,50 EUR for 3 or more identical pieces.



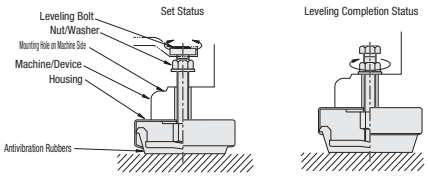
How to Select

(1)Calculate applied load per antivibration mount.
Ex) When an object of 40KN load is supported by 4 supporting points
40kN/4=10kN

(2) Frequency for supported object
As the frequency is the number of vibration per second,
Ex)when motor speed is 3000rpm
3000/60(s)=50Hz
Select an antivibration mount with natural frequency less than 1/2 the frequency of vibration sources (motors, etc.).
50/2=25Hz

If the vibration is square root of 2x or less, it is within the range of resonance. Please select again.

(3)The natural frequency can be found by following along the mount's applied load axis to reach the intersections with the graph lines of respective part numbers.
Ex) In the case of motor with 10KN and 50Hz, when KFJM160 is selected, the natural frequency will be 20Hz. In the case KFJH100 is selected, the natural frequency will be 25Hz.



Example

1 Jack up the machines and devices (sling up) to place the Mounts under the holes. For KFJM and KFEM type, place a level washer on the Mounts, and lower the machines and devices)
2 Insert leveling bolt after attaching the nut and washer into the mount from top side.
3 Turn the leveling bolt with a wrench to adjust the level of the machine.
(For KFJM and KFEM turn the handle with a tool to adjust level of the machine.)
4 After horizontal level has been obtained, tighten the nut and washer.

To prevent concentration of load, adjust each mount in sequence in small amounts to level.
For KFJM, the leveling will be smoother if grease is applied on the contact surface of the handle and the level washer.

Example

How to Use

The projection at the head of the screw makes it easy to disengage the serrations.

How to Use

(1)Pull up the lever to disengage the serrations. The clamp is unlocked.

(2)Turn the unlocked lever to desired position.

(3)Release the lever, the return spring automatically engages serrations and locks again.

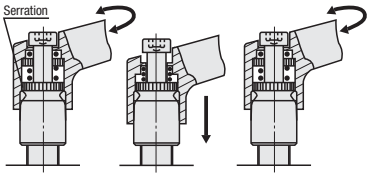
CLNPA



Example

Levers are in a free state at the home position and
(1) do not harm operators.
(2) lever will not come loose if accidentally turned.

How to Use

(1)The lever is unlocked. Turn the lever to the desired position.

(2)By pushing down the lever, the serrations are engaged and locked.

(3)By releasing the lever, the serration are disengaged by spring force and the lever is unlocked.

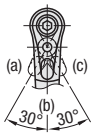
Ratchet Clamping Levers / Quick Levers

CAD Data

■Ratcheting Clamping Levers RoHS



CLRA

Example

In Use	Ratchet Operation
(a) Clamp	Clamp the screw by right rotation of lever (rotates free in left direction)
(b) Clamped Status	Lever is free in both directions.
(c) Unclamp	Loosen the screw by left rotation of lever (rotes free in right direction)

· Direction of ratchet mechanism can be easily changed by switching the position of tab.
· By setting the switching tab to the (b)position after clamping, lever is released in both rotational directions and accidental loosening can be prevented.

Order Example: Part Number SKN6 - Cap Color Y

Days to Ship: 6 Days P.87

M in Part Number indicates the size of bolts. Regardless of manufacturers or materials, any commercially available hexagon bolts and nuts can be used.

Example

■How to Assemble

(1) Insert hexagon bolt or hexagon nut into the hexagonal hole of the knob perfectly.
(2) Fit the cap by setting two of the three claws.
(3) Then push the remaining claw using a screwdriver or lancet to complete.
* In case of tapped knob, pay attention to the engagement length with its threaded counterpart (Bd dimension in the figure).
Caps may fall off.

■Adjustment Screws with Knobs

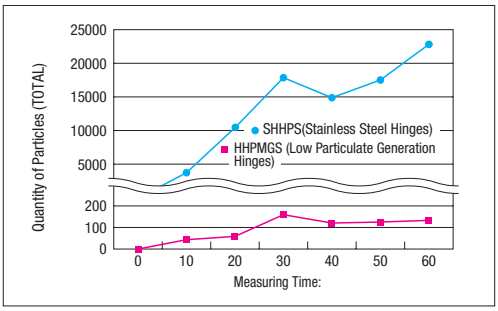
■Low Particulate Generation Hinges



RoHS

HHPMGS

M Material:EN AW-6063/AlMg0,7Si-T5
Bushing : Oil Soaked Polyacetal
S Surface Treatment: Electroless Nickel Plating

Features

■Excels in friction resistance and sliding. Has less dust compared with conventional hinges because the resin of sliding section is made from the special material (oil embedded Polyacetal) .

■The aluminum part is electroless nickel plated instead of conventional clear anodizing. It provides an excellent electric conductivity, resulting in less dust collection.

When the hinges are mounted onto an object such as a panel, hinge nuts are recommended as shown on **P.1057**

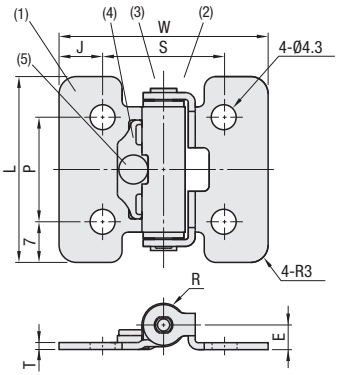
Torque Hinges

-Fixed Torque Type · Torque Adjustable Type-



CAD Data

■Fixed Torque Type

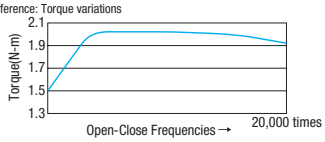
RoHS

HHPT

Operating Temp. Range: -10°C~50°C
Operating Humidity Range: 90%RH or Low

Caution

- Use 2 hinges.
- Align the axes of the two hinges.
- Do not use the hinges outdoors or in any places where oil or grease adheres to the hinges.
- Do not use the hinges in any places requiring continuous open-close movements.
- Vertical use is not assumed given product characteristics. For vertical use, adjust allowable load and torque value to the actual operating conditions.



Part Name	Material
(1) Vane	1.4301/X5CrNi18-10
(2) Resin Barrel	Polyacetal
(3) Shaft	1.4305/X10CrNiS18-9
(4) Plate	1.4301/X5CrNi18-10
(5) Swage Pin	1.4567/X3CrNiCu18-9-4

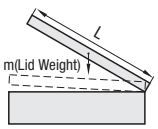
Part Number		Rated Torque*		Mass (g)	L	W	P	J	S	T	E	R	€ Unit Price	Volume Discount
Type	No.	N · m	kgf · cm										Qty.1~19	20~
HHPT	3	0.35	3.4	15	32	36	18	7.5	21	1.2	4.25	7.5		
	7	0.7	6.9	28	40	48	26	8	32	1.2	4.75	8.5		
	15	1.5	14.7	64	50	48	36	8	32	2	6.5	12		

* Rated torque has a margin of error between +40% and -20%.
* Rated torque value is for a single hinge.

Example

Ambient Temp.(20±15°C),Operating Humidity Range: 90%RH or Low
Reference: Torque variations

Data above are not guaranteed values but reference values of HHPT.
Open-Close intervals: 5 times /min. (Single open-close operation=0°<>160°)
* Considering torque deteriorations caused by aging, temperature and humidity variation, the torque value is set higher than the rated torque value at shipping.



Order Example — Part Number: HHPT7

Days to Ship — 6 Days P.87

■ How to select a Torque Hinge.
Basically, the lid is operated as shown on right.
Calculate necessary torque according to the following formula before selecting a torque hinge that satisfies the specifications.
(Assume that the lid's center of gravity lies in the middle.)

[Formula]
Max. Torque T=L/2xm(Weight: kg)x9.8(Newton: N)

(Example) When L=0.3m and m=2kg,
Max. Torque T=0.3/2x2x9.8=2.94N m.
→Select two pieces of **HHPT15**

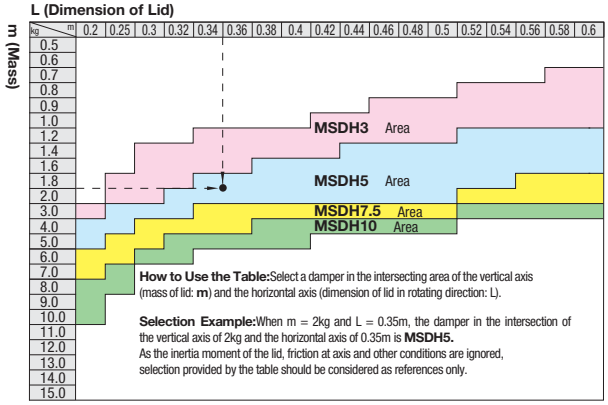
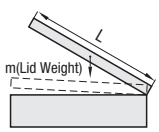
For orders larger than indicated quantity, please request a quotation.



<Basic Principle>

The rotation of the vanes compresses the oil and generates control (brake) force to act against work force.

■Table of Selection Guide



L (Dimension of Lid)

How to Use the Table: Select a damper in the intersecting area of the vertical axis (mass of lid: **m**) and the horizontal axis (dimension of lid in rotating direction: L).

Selection Example: When m = 2kg and L = 0.35m, the damper in the intersection of the vertical axis of 2kg and the horizontal axis of 0.35m is **MSDH5.**
As the inertia moment of the lid, friction at axis and other conditions are ignored, selection provided by the table should be considered as references only.

■How to select a damper hinge.

The lid in a horizontal position generates maximum torque as shown on left. Calculate maximum torque according to the following formula before selecting a damper that satisfies the specifications.

[Formula]
Max. Torque T=L/2xm(Weight: kg)x9.8(Newton: N)

Example) When L=0.4m and m=5kg,
Max. Torque T=0.4/2x5x9.8=9.8N-m.
→Select **MSDH10**

Note) The selection made by the calculation above is for reference only.
The friction resistance and the effect of inertia moment at the hinge were not taken into consideration in the example above.

The viscosity of the oil in the damper changes depending on the temperature of the operating environment. Generally, the damping characteristic decreases with rising temperature, whereas it increases with lowering temperature.

Precautions for Use

- Do not apply any strong impacts since a [illegible] switch is used.
- Do not use or store in places with strong magnetic fields, [illegible] objects, etc. away from the attraction surface of the product.
- Carefully keep magnetic materials (particles) a[illegible] objects, etc. away from the attraction surface of the product.
To mount it on a nonmagnetic object (wood, resin, glass, aluminum, etc.), mount the included back plate or a similar magnetic object o[illegible] surface.

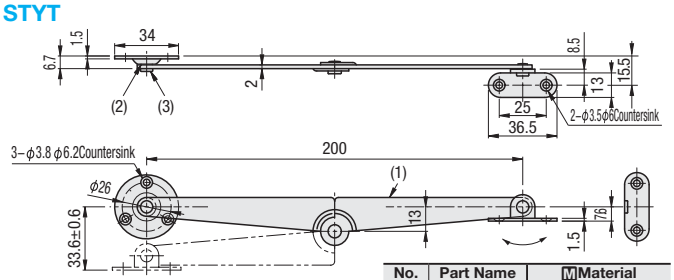
Cautions



- The upper and lower brackets can be positioned according to the height and degree of the door/lid. When the door/lid is closed, L min dimension must be larger than the minimum dimension of contraction. (If L min dimension is smaller, the hinges and latches might be damaged.)
- When two latches are used, they might not be in sync. on right and left sides.

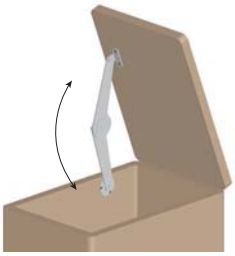
Latches with Catch Mechanisms / Rotary Latches / Spring Loaded Latches

CAD Data

■Latches with Catch Mechanisms

STYC



The Latches click when open at 160° before being fixed by the catch mechanism.
The catch mechanism can be released when firmly pushed at the ends of the latches (e.g. with hands).
The Latches do not have a locking and fixing mechanism.

The body and the bracket can be used on both sides.

Example

Example of STYSP

■Features

When the door/lid is opened or closed, it will automatically stop at the preset position by the action of the spring.
An extra stroke or action is not required.
The mounting example shows the distance from the rotation center of hinge.
When the door/lid is closed, L min dimension must be larger than the minimum dimension of contraction. (If L min is smaller, the hinge or the latch might be damaged.)

Type	Mass of Door (kg)	Angle of Open Door	Lmax	A	Y

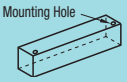
[Reference] Recommended Tightening Torque
(When the recommended values are exceeded, the threads may be damaged or tapered threads may interfere with each other.)

Thread Size		M3	M4	M5	R1/8	R1/4	R3/8	R1/2	R3/4	R1
Through hole diameter		2.5~2.6	3.3~3.4	4.2~4.3	8.2~8.5	11~11.5	14.4~14.5	18.0	23~23.5	29~29.5
Tightening Torque N·m (kgf·cm)	For Hydraulics (1.0038/S235JR · JIS SUS)	0.3~0.5 (3 ~ 5)	1.0~1.5 (10 ~ 15)		8~10 (80 ~ 100)	12~16 (120 ~ 160)	25~30 (250 ~ 300)	35~40 (350 ~ 400)	50~60 (500 ~ 600)	80~90 (800 ~ 900)
	For Hydraulics (Brass) For Pneumatic Type (EN AW-5052/AlMg2,5 · EN AW-6063/AlMg0,7Si)	0.3~0.5 (3 ~ 5)	0.5~1 (5 ~ 10)		4~6 (40 ~ 60)	7~9 (70 ~ 90)	10~13 (100 ~ 130)	20~23 (200 ~ 230)	30~35 (300 ~ 350)	40~50 (400 ~ 500)

*When sizes of through holes on the side (G and K) are different, smaller size is applied.
*Tightening torque is the reference value.
*Please wrap seal tapes twice around the mating parts such as joints before use.



[G (PF) Thread Manifold]
G (PF) Thread represents "Hollow Parallel Tap" in compliance with "JIS B 0202" and interchangeable with "ISO 228-1".
The prices and lead-times are the same as those of PT / NPT thread.

[G (PF) Thread Manifold Ordering Method]
Please place an order specified with G before model No.

(Ex.) <PT Threads> **BMAF4-Q3-R2-S3**
<PF Threads> **G-BMAF4-Q3-R2-S3**

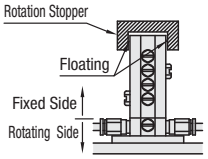
Order Example: Part Number BMRTN4 - Nominal M5

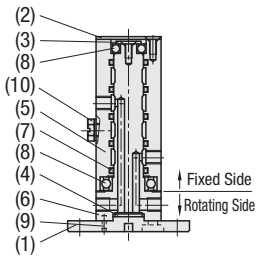
Days to Ship: 6 Days P.88

Features



- Can be used for piping on rotary parts such as index tables.
- Bearing is embedded to achieve high rigidity and rotation with low friction.
- Seal portion has a low friction seal structure that ensures low leakage.

Precautions for Use



- Use clean air preconditioned with dryer or filter. (Do not use synthetic oil containing chemical and organic solvent, air containing salt and corrosive gas. They cause damage and malfunction.)

Installation Method

- The upper portion of the fixed side should have a rotation stopping measure designed to fit the equipment, and the floating condition should be ensured. Excessive load to the rotating side shaft may cause damages and air leakage.

Operating Conditions of Joints

Fluid State	Max. Operating Pressure MPa (kgf/cm²)
Steam · Air · Gas · Oil: Up to 300°C	1.0 (10.2)
Steam · Air · Oil · Pulsating Water: Up to 200°C	1.4 (14.3)
Static Flow Water: Up to 120°C	2.0 (20.4)

*Pulsating water is a stream of water that is generated under steady operating conditions and variation of pressure and flow rate occurs in cycles. (Except for transitional change)
*Static Flow Water is a non-pulsating stream of water.

	1016	1 1/4	2	36	63	36	68				
	1216	1 1/2	2	36	63	36	68				

No. 1016 and 1216 have octagonal B part. All other parts are hexagonal.

Operating Conditions of Joints

Fluid State	Max. Operating Pressure MPa (kgf/cm²)
Steam · Air · Gas · Oil: Up to 300°C	1.0 (10.2)
Steam · Air · Oil · Pulsating Water: Up to 200°C	1.4 (14.3)
Static Flow Water: Up to 120°C	2.0 (20.4)

*Pulsating water is a stream of water that is generated under steady operating conditions and variation of pressure and flow rate occurs in cycles. (Except for transitional change)*Static Flow Water is a non-pulsating stream of water.

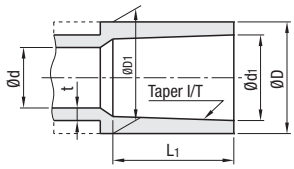
PVC Pipes, Fittings / PVC Pipes
-Overview-

CAD Data

Operation Temperature and Pressure

Application	Main Pipe	Main Pipe Fittings			Tensil Yield Strength
For tap water	Unplasticized poly (vinyl chloride) (PVC-U) pipes VP for tap water	TSFittings	Normal temperature (5~35°C)	0.75MPa (StaticWater)	45MPa or more (23°C)
For force-feed	Unplasticized poly (vinyl Chloride) (PVC-U) pipes VP	TSFittings		1.0MPa (StaticWater+Water Impact Resistance)	
For water supply	Unplasticized poly (vinyl chloride) (PVC-U) pipes HI-VP for tap water Impact Resistance	HIFittings		0.75MPa (StaticWater)	40MPa or more (23°C)



(Note)1.Operating temperature and pressure may vary depending on the type of joints and conjugation methods.
2.Note that the faster the flow within pipes, the higher the pessure of water is. Keep the flow rate under 2m/s as a principle. 2m/sor more
3.Pipes that exposure PVC should be treated for expansion and contraction due to elasticity of PVC pipes by temperature difference.

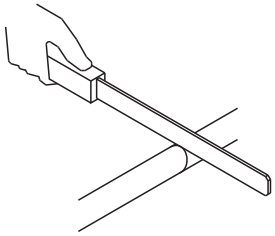
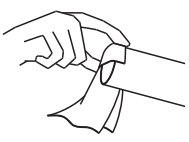
Example

-How to Cut Off



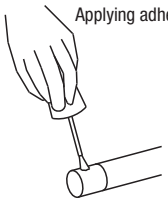
By electric circular saw

By disk sander



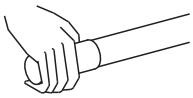
By PVC pipe saw

Cut perpendicular to axis of pipe, using cut line as a guide.



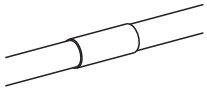
- How to Bond

Cleaning



Clean the inside of joints and outer surface of insertion part with dry cloth.

Applying adhesive



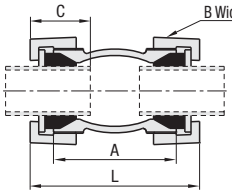
Apply adhesive evenly with the inside of joints, and then outer surface of insertion part in circular order.

Insertion

Insert the pipe into the joint up to the marking line in one stroke after applying adhesive, and hold it for 30 seconds or more.

Completed

Wipe off extra adhesive immediately, and prevent excessive pressure on the junction.

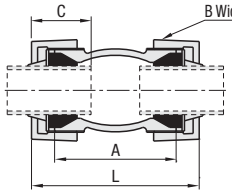


Compound Fittings

CAD Data

Features: These joints can connect steel pipes (**P. 1125**), PVC pipes (**P. 1146**) and polyethylene pipes (not dealt). Be able to insert pipe without removing the nut.

Sockets RoHS — CJMAS



Part No. Type	No.	L	A	B Width Across Flats	No. of Nut Square	C Insert Length	€ Unit Price 1~9	Vol. Discount 10~
CJMAS	13	77	57	46.5	8	30

30	32	30	30	30	30	120	80	80	40	

Step and Cautions

STEP1: Cut off the pipe.

(1)Be sure to wipe off burr or flush which generate at the cut off, using file or reamer.

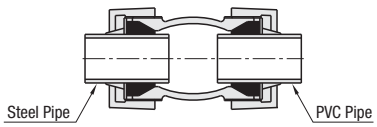
(2)Inserting pipe into compound joint while generating burr or flush may damage rubber packing and cause leakage.

STEP2: Insert the pipe.

(1)Specify the line with marker fit to insert length (C). Do not remove the nut when inserting the pipe. Be sure to follow the insert length.

(2)Inserting pipe too deep may cause leakage due to inadequate tightening.

STEP3: Tightening



(1)Tighten the nut by hand after inserting pipe. Afterwards, use a pipe wrench to tighten until standard tightening torque.

(2)Inadequate tightening may cause the pipe pull-outs and leakages. Be sure to tighten until standard tightening torque.

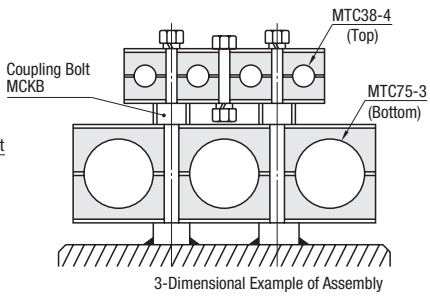
Order Example



Part Number	-	N (No. of Holes)
MTC50	-	4

Days to Ship 6 Days P. 87

Example

When fixing the clamp on the frame by assembling a mounting adapter on the clamp body.

3-Dimensional Example of Assembly

* Assembly is possible with recommended hexagon bolts for assembling (For 2-Stacks Type).
○: Assembling is possible using coupling bolts (MCKB).
X : Assembling is not possible.

Example

- Pin-ring joint (P.1158) is available when thin metal pipes and hard tubes are used with copper pipe fittings.
- Set a ring nut and a ring in a joint pipe, insert the pipe into the main body all the way until the pipe end touches the pipe stopper and tighten the nut by hand. Afterwards use a wrench or a spanner for further tightening.
- As annealed copper pipes are soft, use fittings for annealing copper pipes (P.1160), instead of this Ring Type coupling.

Fitting Specifications

Applicable Fluid	Air · Water · Industrial Oil
Normal Operating Pressure	3.5MPa (35kgf/cm²)
Max. Operating Pressure	7.0MPa (70kgf/cm²)
Operation Temperature Range	-20 ~ 150°C (Not to be frozen)

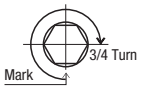
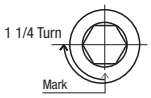
10	-	28.1	44.0	-
12	-	23.2	36.1	49.5

■Tightening procedure of joints



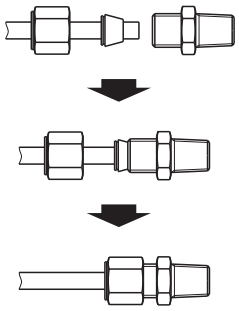
(1)Insert the pipe into the fitting till the tip hits the shoulder inside without removing the nut.

(2)Hand start and tighten the nut in till the end of its rotation. Put a mark on this position as ○ Point.



(3)Fix the fitting body firmly with a screw wrench etc. and tighten the nut with another screw wrench by the rotation number on the right.

Note:For plastic tube connections, use Insert (SKITK) for tubes together without fail and tighten Ø4~Ø12.7 tubes by 1 1/4~1 1/2 rotations.



Ø4 Model

Ø6~Ø12.7 Model

■How to Tighten after Removing

(1)Be sure to confirm the position of the nut (the standard position for rotation) before loosening it to remove the nut.
Make sure that front ferrule is applied at the appropriate position.
Make sure that there is no foreign object on the tapered surface, front and rear of the body.

(2)Insert the pipe all the way until the front ferrule contacts closely, and then tighten the nut by hand.
(Insert carefully to prevent the pipe end from damaging the tapered part on the main body.

(3)Tighten with a little more rotation than before by a wrench.

Position before tighten the nut

Position of retightening
(Tighten with a little more rotation)

[Applicable Pipe Specification]
- Applicable Type of Pipe: Stainless Steel Pipe
  Stainless steel pipes for plumbing (JIS G3459) subject to 1.4301/X5CrNi18-10 and 1.4401/X5CrNiMo17-12-2 for stainless steel pipes.
- Outer Diameter Tolerance ±0.05mm - Pipe Surface Hardness HV190 or less (HRB90 or Less)
- Condition of Pipe Surface: Avoid using pipes with defects such as surface roughness and scratches.

Structure and Tightening Procedure of Swaging Sleeve Type Fittings

Swaging Sleeve Type Fittings are composed of a body, a sleeve and a nut.

[Tightening Procedure]

For utilizing performance of Swaging Sleeve Type Fittings for steel pipe, use of appropriate pipe and accurate tightening of joint are required. The following pre-tightening will make plumbing smooth and secure.

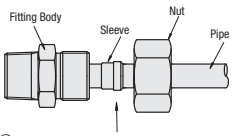
(1) Pre-tightening

(1)Insert the pipe with nut and sleeve inserted as shown in right figure into the fitting body. Make sure that pipe end contacts abutment part. Inadequate swaging due to the inadequate tightening may cause the pipe to pull out.

(2) Tighten the nut by hand.

(3)Tighten the nut with a wrench while rotating the pipe to the end of its rotation. Put a mark on this position of joint body and the nut.

(4)Further tighten the nut by a wrench with1-1/4 turn at this mark.



(5)Loosen the nut once to see the state of the sleeve in order to confirm the following.

1) There is some millimeter distance between pipe end and sleeve end.

2)No substantial movement of the sleeve toward the direction of pipe axis is allowable. Moving toward circumferential direction is acceptable.

(2) Full Tightening

Attach the pre-tightened pipe with joint body and tighten the nut by a wrench until you feel sudden resistance. Further tighten the nut by 1/4 turn, and tightening will be done.

Make sure that the tapered end of the sleeve is facing fitting body.
If inserted backwards, pipe will not be properly swaged and may pull-off.

[Standard Specifications]

Accurate JIS STKM Hollows for Hydraulics OST

[Disassembly · Retightening]

-Can be disassembled just by loosening the nut. However, never tighten and loosen the nut while pressurized as it is very dangerous.

-8 or more disassemblies and retightening are possible by following the Full Tightening Procedure as shown in (2).

Material Shapes	Hose Body	Synthetic Rubber Reinforcement: Hard Steel Wire	Weather Resistant Synthetic Rubber Reinforcement: Wire Braid : Spiral Wires	Polyester Elastomer Reinforcement: Polyester Fiber
Material Shapes	Swaging Parts	1.1158/C25E / 1.4301/X5CrNi18-10	1.1158/C25E	1.1158/C25E
Features		-Excels in flexibility, durability and abrasion resistance, and can be laid in a space-saving. -Usable in a wide temperature range.	-Length can be determined based on applications, and assembled. For assembly process,refer to **P.1170**	-Lightweight and excels in flexibility and durability. -Reduces the generation of kinks and can be laid in narrow spaces.

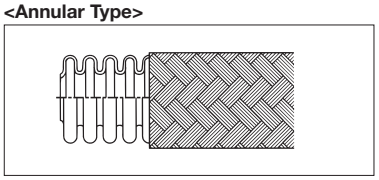
Usage		-Plumbing in high ambient temperature (for steam etc.) -Absorbs variation in elongation of pipe due to temperature change. -Plumbing that utilizes the benefit of zero penetration leakages.	-General purpose plumbing with misalignment prevention. -Thermal expansion absorption.	-General purpose plumbing with misalignment prevention. -Equipment that require flexibility. (Reciprocating Motion - Thermal Expansion Absorbing)	-General purpose plumbing with misalignment prevention. -Thermal expansion absorption.
Features		-Excellent in pressure · heat and chemical resistance. -Suitable for carrying a variety of fluids · such as high-pressure steam · air · gas · water · oil · gasoline and chemicals.	-Lightweight compared to High Pressure Type. -Positive Metal Seating Type which requires no maintenance. -Excellent in flexibility.	-Excellent in corrosion resistance · as joint of fittings is not welded. -Superior in heat and pressure resistance · anti-vibration property and has high flexibility of motion. -Suitable for carrying a variety of fluids · such as high-pressure steam · air · gas · water · oil · gasoline and chemicals.	-Non-welded Type which excels in corrosion resistance. -Positive Metal Seating Type which requires no maintenance. -Excellent in flexibility.

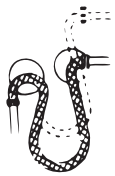


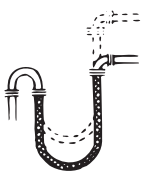
- Hose Braiding Types

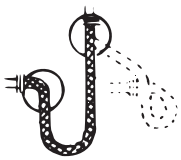
<Spiral Wound Type>

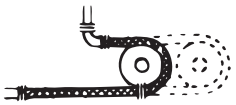
-Spiral reinforcement provides smooth bend around a small radius.
-Suitable for general purpose, as kink may occur if tension or compression is applied during movement.

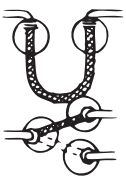
<Annular Type>

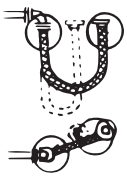


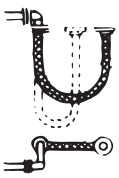












-Convolutions are a series of complete rings (bellows)
-Unlikely to cause twist even it is stretched during operation.

■Fluoro Resin Flexible Hoses Specification Chart

		HOSFR/HOSFRS	HOSJRS
		Standard Type	High-Flex Type
		P.1174	P.1174
Type			
Operating Pressure		17.0~20.5MPa (Depends on size.)	1.0MPa
Operation Temperature Range		-54 ~ 232 °C (When using with steam: 198°C)	-100 ~ 120°C
Applicable Fluid		Air · Gas · Water · Solvent	Air · Gas · Water · Solvent
Material Shapes	Hose Body	Fluorine Resin Reinforcement: 1.4301/X5CrNi18-10	Fluorine Resin Reinforcement: 1.4301/X5CrNi18-10
	Swaging Parts	1.0038/S235JR / 1.4301/X5CrNi18-10	1.4301/X5CrNi18-10
Features		-Excellent in heat resistance and chemical resistance. -Having non-viscous property · it is suitable for use with viscid materials such as adhesive and paints · with fluids for which a high level of cleanliness is required such as fluids used in food processing equipments · and steam.	-Hose is formed from a continuous spiral corrugation into tubing · which allows for flexibility of the hose. -Suitable for high vibration environment and applications where damages from deformation are expected.

■How to Mount Flexible Hoses Appropriately

Wrong			Right		
Excessively small bend radius will dramatically shorten the hose's service life.		X	Use pipes for tight radius sections and keep the hoses within allowed bend radius ranges.		O
Repeatedly flexed sections require extra cautions.		X	Use the curved pipes, and mount tubes in order to form U-shapes.		O
Hose twisting loads due to repeated horizontal motion are very dangerous.		X	Avoid excessive curvatures by attaching rollers that turn with movements of the hose.		O
The hose will be twisted if rotary motions are applied to the mounting points.		X	Avoid the hose twists by mounting rotary joints.		O
The hose will twist if not mounted in-line with the direction of motion.		X	Be sure to mount the hose in-line with the direction of motion.		O

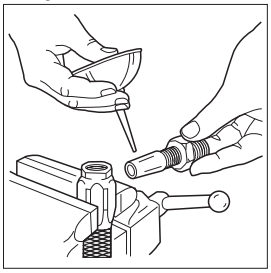
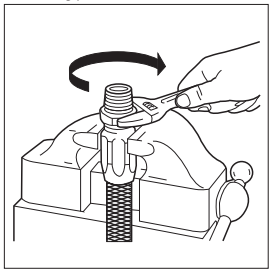
■Features
- Length is determined based on machine in order to assemble.

■Precautions for Use
- Due to customer assembly, it is not applicable to PL Law (Product Liability Law). Please note that any trouble after assembly will be self-responsibility.



■Assembling Procedure ((?) The cut length of hose is the length of hose with fitting deducted of D dimension of both ends fitting.)



(1)Hose is cut perpendicular to axial direction. Use saw to cut the hose, thereafter, remove to clear cutting chips from inside the hose.

(2)Nip the socket into the vice, insert the hose. While rotating counterclockwise, screw all the way completely, then return 1/4 rotation.

(3)Apply assembly lubricant to nipple outer surface and hose inner surface.

(4)While rotating the nipple clockwise, screw into the socket, and make the clearance between hexagon of nipple and socket to become 0.2 to 1.0mm.

HOEJFS	1.4301/X5CrNi18-10	1.4301/X5CrNi18-10

■Specifications
- Permissible fluid: Steam · Air · Gas · Water · Oil
- Operation Temperature Range: 0 ~ 100˚C
- Maximum Operating Pressure 1.0MPa

■Features
- Excellent in corrosion resistance, as joint of fittings is not welded.
- Suitable to absorb vibration.

■Purposes of Use
- General purpose plumbing, such as control of pipe displacement.

■CAUTION
- Tolerance of a hose length is 0 ~ 3% of the full length.

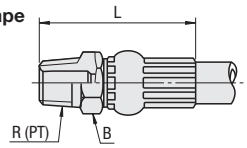
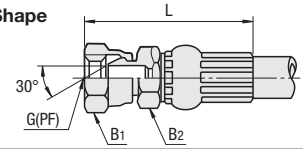
HOSFRS			1.4301/X5CrNi18-10	-

Hose Length (Swaging Metal Included)



Specifications
- Permissible fluid: Air · gas · water · solvent
- Operation Temperature Range: -54 ~ 232°C
- Maximum Operating Pressure: Depends on size.
- When using with steam: Operation Temperature 198°C
  Operating Pressure 1.4MPa or lower

Features
- Excellent in heat resistance and chemical resistance.
- Suitable for use with viscid materials, such as adhesives and paints.



CAUTION
- Avoid using the same hose for steam and water or for steam and nitrogen.

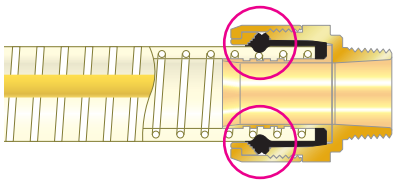
Transparency		○	○	○
Flexibility		○	○	○



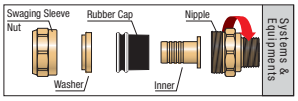
[Cautions]

Scent and taste may generate as a result of reaction with the hose itself or with the fluids (water, food, detergent etc.) during or after operation. Check these factors before use.

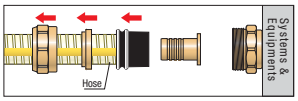
Hoses including PVC material may generate dioxin during combustion under 800°C.

When using PVC hose with high concentration alcohol, hose may harden quicker.

■Features of Hose Fixing Connector

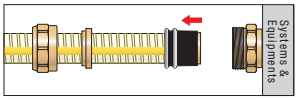


*Rubber cap inside the joint holds the circumference. Rubber gasket continues to hold the hose even if hose thins and prevents fluid from leaking and hose from falling off.

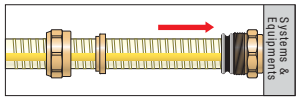


■How to Insert Connector

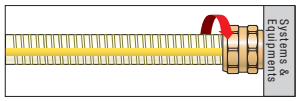
* Assembling methods are common in every hose.



1 Attach a nipple on the machine side.



2 Insert a domed nut and a washer into hose (make sure to insert toward right direction) and put a rubber cap (until it touches the end of rubber cap).

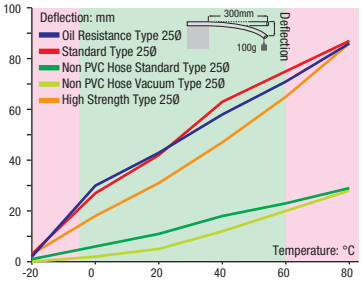


3 Insert inner into hose.

4 Insert the hose including rubber cap into the main body.

5 Tighten the domed nut until there is no clearance.

⚠ For tightening, use a wrench (adjustable wrench).
Do not use a "pipe wrench". It may cause damage the nut.
For reuse, replacement of rubber cap will be required.



Selection Table of Resin Hoses for Ordinary Purposes

Type		HOTR_	HOTRS_	HOTG_	HOTSG_

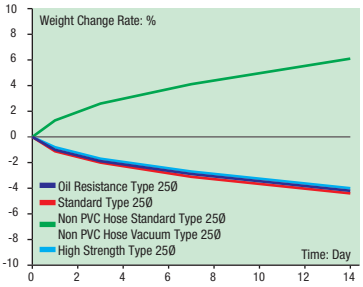
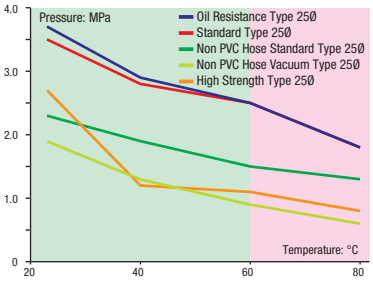
Comparison Graph for Performance of Resin Hoses for Ordinary Purpose



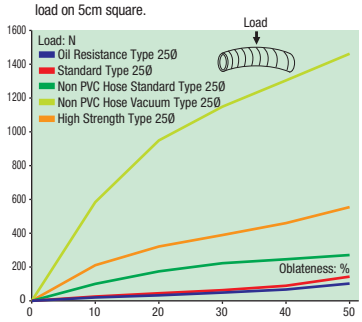
Flexibility

Measurement:
Measures deflection of sample hose with 300mm protrusion after loaded with 100g load.



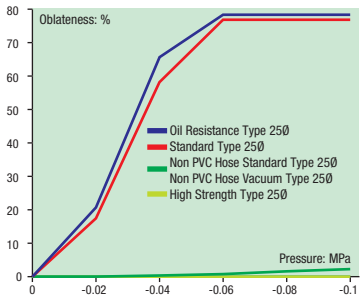
Oil Resistance

Measurement:
Conforms to JIS6723.
Soaking Temperature: 40°C Soakinfg Oil: Compressor Oil



Property of Withstanding Pressure

Measurement:
Measures after putting sample for 30 minutes under each temperature condition.



Crush Strength

Measurement:
Measures variation rate of outer diameter when providing load on 5cm square.

Vacuum Strength

Measurement:
Measure after keeping samples for 5 minutes under each negative pressure (Temperature 23°C±3°C)

*-0.1MPa is an approximate value. It may be not applicable depending on application and conditions.

<Price Calculation Example>
For HOFWR1S-2.5-LC-RC,
€ Unit Price of Hose/m: 14,00
14,00x2.5+305,20=340,20
By rounding it down to the nearest ten Cent, it is 340,20 EUR

■Features of HOFW

- Available in high temperature up to 70°C.
- Superior in flexibility.
- Excels in transparency and enables the transferred materials to be observed.
- Conforms to Food Sanitation Laws.

■Features of HOGFW

- Available in high temperature up to 70°C.
- Resistant to deformation and excels in shape-retaining property.
- Excels in transparency and enables the transferred materials to be observed.
- Conforms to Food Sanitation Laws.

■CAUTION

- Cleanse inside the hose.
- Do not soak the hoses or joints in drinking water, food or fluids. Fluid may remain behind the joint and unwanted bacteria may adhere to it.

For orders larger than indicated quantity, please request a quotation.

Volume discount rate is applicable to the unit price/m for hose only.

<Price Calculation Example>
For HOSSWR12-2.5-LA-RB
€ Unit Price of Hose/m: 22,90
22,90x2.5+93,40=150,65
By rounding it down to the nearest ten Cent, it is 150,60 EUR

Feature of HOSSW
- The spirally knitted pressure-resistant reinforcement wire prevents burst due to wire failure near couplings.
- Semi-transparent wall enabling the transfer of materials to be observed
- Excellent in cold resistance and heat resistance.
- Conforms to Food Sanitation Laws.
- FDA compliant.

Features of SNHT
- Provides high level of deformation resistance to enable force-feed and vacuum.
- Semi-transparent wall enabling the transfer of materials to be observed
- Excellent in cold resistance and heat resistance.
- Conforms to Food Sanitation Laws.
- FDA compliant.

CAUTION
- Avoid use with non-polar organic solvents (benzene, toluene, hexane etc.), halogenated hydrocarbon (methylene chloride, trichloroethane etc.), strongly acid condensed agent, strong alkali solution, mineral oil, steam (long-time use) or animal and vegetable oil at 70 °C or warmer.
- Cleanse inside the hose before using with drinking water or food.
- For food plumbing, metal shape C is recommended for its safety in sanitary respect.
- At steam cleansing, apply saturated steam at 0.2MPa or lower for a short time.
- Do not soak hoses or joints in drinking water, food, or fluids.
  Fluid may remain behind the joint and unwanted bacteria may adhere to it.

25	25	33	175	0~0.6	0~0.3	100	-0.1~0.4	-0.1~0.2

Features

- Being superior in flexibility, it improves operating efficiency.
- Features non-viscous property and easy to wash.
- Excellent in chemical resistance and transparency.
- Conforms to Food Sanitation Laws.

Quantity	1~4	5~9
Rate	€ Unit Price	5%

For orders larger than indicated quantity, please request a quotation.

Volume discount rate is applicable to the unit price/m for hose only.

<Price Calculation Example>
For HOJFR9-2.5-LAS-RBS,
Hose m Price/m: 23,50 EUR
23,50x2.5+22,00=80,75 EUR
By rounding it down to the nearest ten Cent, it is 80,70 EUR

Features

- Prevents trouble caused by electrostatic discharge.
- Conforms to Food Sanitation Laws.
- Smooth interior surface helps transfer of high viscosity fluids efficiently, and makes cleaning easy with little residual fluds.

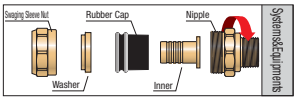
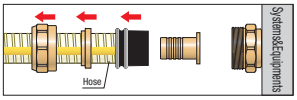
Features

1. Environment-friendly
   Wider effective sectional area compared to male hose nipple results in reduction of pressure loss.
2. Enhanced working efficiency
   No need of cumbersome retightening. Standardizes mounting operation of hoses.
3. Improved maintenability
   Prevents hoses from falling off and fluid from leaking.
4. Safety Operation
   Easy detachment of hose results in enhanced working efficiency. Can prevent twists.

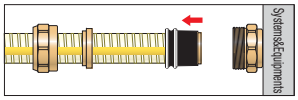


Structure Diagram of Hose Fixing Connector

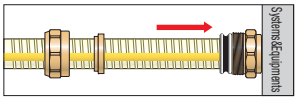


How to Mount Fitting

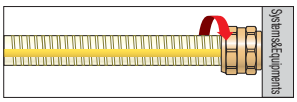
* Assembling methods are common in every hose.



1 Attach a nipple on the machine side.

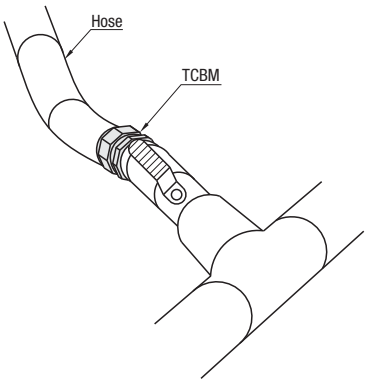


2 Insert a Swaging Sleeve nut and a washer into hose (make sure to insert toward right direction) and put a rubber cap (until it touches the end of rubber cap).



3 Insert inner into hose.

4 Insert the hose including rubber cap into the main body.



5 Tighten the domed nut until there is no clearance.

⚠ For tightening, use a wrench (adjustable wrench).
Do not use a "pipe wrench". It may cause damage the nut.
For reuse, replacement of rubber cap will be required.

Air Hoses -Standard Type-

RoHS

Material: Polyurethane

Part Number Type	Hose Nominal Inner Dia.	Hose Length (m) Selection	Hose Color	Inner Diameter (mm)	Outer Diameter (mm)	Thickness (mm)	Min. Bending Radius (mm)	Operating Pressure MPa	Operation Temperature Range	€ Unit Price 1 ~ 4	Volume Discount 5 ~ 9
EHOS	6	10	Not Specified (Red)	6.5	10	1.75	40	0~1.5	-20~60°C		
		20									
	9	10	BL (Blue)	8.5	12.5	2	55	0~1.5			
		20									

For orders larger than indicated quantity, please request a quotation.

Features
- Hose weight is very light.
- Excellent in cold resistance and oil resistance.

Specifications

Applicable Fluid	Air
Operation Temperature Range	-20~60°C
Normal Operating Pressure	0~1.5MPa

Air Hoses -Sliding Type-

RoHS

Material: Special Polyurethane

Part Number Type	Hose Nominal Inner Dia.	Hose Length (m) Selection	Hose Color	Inner Diameter (mm)	Outer Diameter (mm)	Thickness (mm)	Min. Bending Radius (mm)	Operating Pressure MPa	Operation Temperature Range	€ Unit Price 1 ~ 4	Volume Discount 5 ~ 9
ERHOS	6	10	Not Specified (Red)	6.3	10	1.85	40	0~1.5	-20~60°C		
		20									
	9	10	BL (Blue)	8.3	12.5	2.1	40				
		20									

For orders larger than indicated quantity, please request a quotation.

Features
- Enhances sliding of hose and facilitates movement and operation.
- Soft and flexible hose leads to less burden on wrist and arm.
- Lithe hose causes less leaping and secures safety at foot.

Specifications

Applicable Fluid	Air
Operation Temperature Range	-20~60°C
Normal Operating Pressure	0~1.5MPa

Air Hoses -High-Flex Type-

RoHS

Material: Polyvinyl Chloride

Part Number Type	Hose Nominal Inner Dia.	Hose Length (m) Selection	Inner Diameter (mm)	Outer Diameter (mm)	Thickness (mm)	Min. Bending Radius (mm)	Operating Pressure MPa	Operation Temperature Range	€ Unit Price 1 ~ 4	Volume Discount 5 ~ 9
AHOS	6	10	6.5	13	3.25	30	0~1.0	-5~60°C		
		20								
	9	10	8	15	3.5	35				
		20								

For orders larger than indicated quantity, please request a quotation.

Features
- Soft type easy to insert into metal fittings such as hose nipples.
- Band tightening with high air tightness prevents leakage of air.
- No sticking of oil. No swelling often seen in rubber hoses.

Specifications

Applicable Fluid	Air
Operation Temperature Range	-5~60°C
Normal Operating Pressure	0~1.0MPa

Order Example: Part Number EHOS6 - Hose Length 10 - Hose Color BL

Duct Hoses

-Overview-

	HOSEE/HOSEE_	HOSKK	HOSSD/HOSSD_	HOSHD/HOSHD_
	Lightweight Type	**Swivel Type**	**Flexible Type**	**Friction Resistant, Antistatic Duct Hoses**
	P.1194	P.1194	P.1195	P.1195
Type				
Type	Blast and Exhaust	Spot Cooler	Blast and Exhaust	Powder and grains
Fluid · Application	- For blast and exhaust of air, wooden powder, dust, etc.	- For air (spot cooler · supply of air-conditioner)	- Blast and exhaust of warm air - Air Conditioning, Ventilation - Exhaust emission of equipments	- Carriage of particles, iron powder, paper trash, wood particles - Heat-resistant Hot Air Heaters
Material	Flexible or Hard PVC	PP	Polypropylene Reinforcement: Hard Steel Wire	Polypropylene Reinforcement: Synthetic Rubber (EPDM)
Operation Temperature Range	-10 ~ 50°C	-	-20 ~ 80°C	-30 ~ 80°C
Allowable Pressure Range Below ambient temperatur	0~0.06MPa	0~0.001MPa	0~0.002MPa	0~0.03MPa
Allowable Pressure Range Above ambient temperature	0~0.03MPa	0~0.0005MPa	0~0.002MPa	0~0.01MPa
Features	- Being excellent in flexibility and lightweight property, it improves operating efficiency. - Easy to cut and mount.	- Capable of being bent or flexed as desired and keeping its bent state. - Diameter can be varied by twisting the opening. - Can be cut with a utility knife.	- Highly flexible and can be fixed at desired angles and positions. - It can be shortened to 1/3~1/4 of the original length.	- Resistant to cold, heat and abrasion. - Excels in antistatic property. - Reduces generation of ozone crack (deformity).

	HOSDY/HOSDY_	HOSCD/HOSCD_	HOSCE/HOSCER
	Oil-proof Type	**Translucent Type**	**Antistatic Translucent Type**
	P.1196	P.1196	P.1196
Type			
Type	Suction and Exhaust	Blast and Exhaust	Blast and Exhaust
Fluid · Application	- Suction of exhaust emission of oil mist - Collection of oil mist such as lathes and milling machines	- Blast and exhaust of systems & equipments - Blast and exhaust emission of food processing evaporator systems - Blast and exhaust emission in environments where dust must be avoided. - Clean room air supply and exhausts	- Blast and exhaust of systems & equipments - Blast and exhaust emission of food processing evaporator systems - Blast and exhaust emission in environments where dust must be avoided. - Clean room air supply and exhausts
Material	Oil Resistance Hard, Flexible PVC	Polypropylene Olefin Type Elastomer	Polypropylene Olefin Type Elastomer
Operation Temperature Range	-10 ~ 50°C	-20 ~ 50°C	-20 ~ 50°C
Allowable Pressure Range Below ambient temperatur	0~0.04MPa	0~0.04MPa	0~0.04MPa
Allowable Pressure Range Above ambient temperature	0~0.02MPa	0~0.02MPa	0~0.02MPa
Features	- Excellent in oil resistance. - Lightweight and Excellent in heat resistance. - High efficiency due to low interior resistance contributes to energy savings.	- Being very excellent in lightweight property, flexibility and bend performance, it improves operating efficiency. - The hose is semi-translucent so transported materials can be observed. Compliant to Health, Labor and Welfare Ministry Notification No.201 Food Sanitation Laws.	- Not only it is semi-translucent, it features antistatic effect. Compliant to Health, Labor and Welfare Ministry Notification No.201 Food Sanitation Laws.

	HOAD	HOCTD	HOTD
	Aluminum Type	**Low Particulate Generation Type**	**Heat-resistant Free Alignment Type**
	P.1198	P.1198	P.1198
Type			
Type	Air Conditioning, Ventilation	Air Conditioning, Ventilation	Air Conditioning, Ventilation
Fluid · Application	- Exhaust Duct for Ventilation Fan	- For air supply and exhausts such as clean rooms where low particulate generation is required. Pumping and exhausting of hot air. - Intake and exhaust for warm air generators.	- Hot air generator · circulator unit, spark collection ducts for grinders and welders.
Material	Aluminum Foil (Laminated) Reinforcement: Hard Steel Wire	Aluminum Polyester Cloth Reinforcement Core: Zinc Plating Steel Plate	Special Coating Glass Reinforcement Core: 1.4301/X5CrNi18-10
Operation Temperature Range	-20 ~ 80°C	~130°C	~250°C
Allowable Pressure Range Below ambient temperatur	0~0.02MPa	0~0.007MPa	0~0.007MPa
Allowable Pressure Range Above ambient temperature	0~0.02MPa	0~0.007MPa	0~0.007MPa
Features	- Being superior in flexibility and bending property, it can be laid in a narrow space. - It can be shortened to 1/5 of the original length.	- Special laminated film is adopted to reduce generation of dust caused by friction on the surface. - Flexible and easy to store and transport.	- Highly flexible. Highly elastic and flame resistant.

	HOTDH	HOTDK
	Heat-resistant Fixed Alignment Type	**High Heat-resistant Alignment Type**
	P.1199	P.1199
Type		
Type	Air Conditioning, Ventilation	Air Conditioning, Ventilation
Fluid · Application	- Hot air, acid and alkali containing gases (normal temperature)	- Supply and exhaust of hot air, air-conditioning and ventilation
Material	1.4301/X5CrNi18-10 Reinforcement Core: 1.4301/X5CrNi18-10	1.4301/X5CrNi18-10 Reinforcement Core: 1.4301/X5CrNi18-10
Operation Temperature Range	30 ~ 450°C	~600°C
Allowable Pressure Range Below ambient temperatur	0~0.007MPa	0~0.027MPa
Allowable Pressure Range Above ambient temperature	0~0.007MPa	0~0.027MPa
Features	- Excellent in heat resistance. - Corrosion resistive material that endures gases containing acid, alkali and solvents. - Though designed for fixed plumbing, it can form curved portions.	- Excellent in flame and heat resistance.

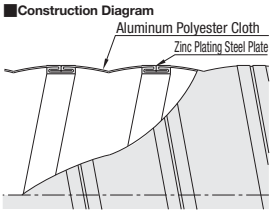
■-Heat Resistance, Low Particulate Generation Type-

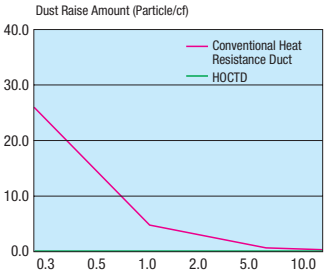


RoHS

Type	Material	Operating Temp. Range (°C)
HOCTD	Hose Body: Aluminum Polyester Cloth Reinforcement Core: Zinc Plating Steel Plate	~130°C
HOTD	Hose Body: Special Coating Glass Cloth Reinforcement Core: 1.4301/X5CrNi18-10	~250°C

■Construction Diagram

Features
<HOCTD>
- Special laminated film is used to reduce generation of particles caused by friction on surfaces (For supply and exhaust in environments such as clean rooms where low particulate generation is required.)
- Flexible and easy to store and transport.



<HOTD>
-Free flexibility. Highly elastic and flame resistant.

Part Number Type	Nominal Dia.	Hose Length 0.1m Increment	Hose Inner Dia. (Reference) (mm)	D	P	Allowable Pressure Range (Mpa)	Allowable Decompression (Ambient Temp.) (kPa)	Allowable Bending Radius (mm)	Reference Mass g/m	€ Unit Price € Unit Price of Hose/m

HOTDH

HOTDK

Features

<HOTDH>
- Corrosion resistive material that endures gases containing acid, alkali and solvents.
- Though designed for fixed plumbing, it can form curved portions.

<HOTDK>
Excellent in fire and heat resistance.

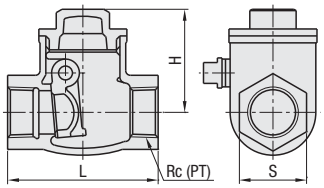
Globe Valve / Check Valves / Strainers / Hydraulic Valves

CAD Data

Globe Valve

Type	Material	Max. Operating Pressure
GBUCL	Body: 1.4308/G-X6CrNi18-9 Seal:8A ~ 15APTFE 20A~25A Expanded graphite+PTFE Braided	Water · Oil · Air: 1.0MPa

Part Number		Rc (PT)	S	L	(H)	W	GBUCL	
Type	No.						€ Unit Price Qty.1-4	Volume Discount Qty. 5~10
GBUCL	8A	1/4	18	44	68	55		
	10A	3/8	22	48	68	55		
	15A	1/2	26	52	68	55		
	20A	3/4	34	60	93	60		
	25A	1	41	72	100	70		



Features

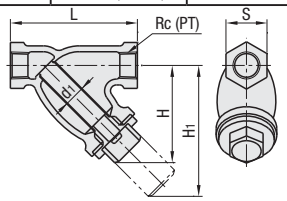
- S-shaped flow valve with bulkhead inside body, positioning the center of inlet and outlet in straight line.

Check Valve

Type	Material	Max. Operating Pressure
THKB	Body: 1.4308/G-X6CrNi18-9 Gasket: Non-asbestos Sheet	Water · Oil · Air: 0.6MPa

This product will be put on sale on August, 2010.

Part Number		Rc (PT)	S	L	H	THKB	
Type	No.					€ Unit Price Qty.1-4	Volume Discount Qty. 5~10
THKB	15A	1/2	29	65	45		
	20A	3/4	35	80	55		
	25A	1	44	90	61		



Features

- Flexible structure that can be used by hanging one end of disc in hinge shape. In addition to horizontal piping, it can be used in vertical piping.
- The smooth fluid design reduces pressure losses.

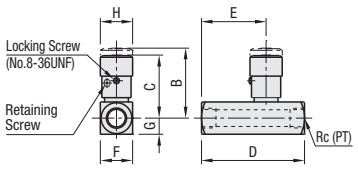
Strainer

Type	Material	Max. Operating Pressure
STRY	Body: 1.4308/G-X6CrNi18-9 Gasket: PTFE (With Filer)	Water · Oil · Air: 0.6MPa

Part Number		Rc (PT)	S	L	H	H1	d1	STRY	
Type	No.							€ Unit Price Qty.1-4	Volume Discount Qty. 5~10
STRY	8A	1/4	21	65	50	67	15		
	10A	3/8	23	70	50	68	15		
	15A	1/2	29	85	60	80	18		
	20A	3/4	35	100	65	90	23		
	25A	1	43	115	77	107	30		

STRY10A will be put on sale on August, 2010.

Features



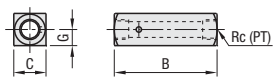
-Separates and removes foreign objects or dust in fluids.

Oil Hydraulic Valve

Inline Flow Control Valve

Type	Material	Applicable Fluid	Operating Temp.	Max. Operating Pressure
BKFS	Body: Steel	Common Mineral Operational Oil	-10~60°C	34.5MPa

Part Number		Rc (PT)	Max. Flow	B	C	D	E	F	G	H	Mass (g)	BKFS	
Type	No.											€ Unit Price Qty.1-4	Volume Discount Qty. 5~10
BKFS	8A	1/4	19ℓ/min	45.5	41	67	42	21	10.5	21	220		
	10A	3/8	30ℓ/min	56.5	49.5	70	44.5	25	12.5	25	365		
	15A	1/2	57ℓ/min	70	61	87.5	57	32	16	30	690		



Features

- Fine adjustments at low flow rate possible by 3 initial turns of the knob with step needle.
- Flow rate setup time can be reduced by using the colorings as a guide.

Check Valve

Type	Material	Applicable Fluid	Operating Temp.	Max. Operating Pressure
BCKB	Body: Steel	Common Mineral Operational Oil	-10~60°C	34.5MPa

Part Number		Rc (PT)	Max. Flow	B	C	G	Mass (g)	BCKB	
Type	No.							€ Unit Price Qty.1-4	Volume Discount Qty. 5~10
BCKB	8A	1/4	19ℓ/min	67	21	10.5	170		
	10A	3/8	30ℓ/min	70	25	12.5	260		
	15A	1/2	57ℓ/min	87.5	32	16	510		

Features

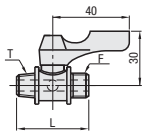
-Prevents reflux by integrating this valve into hydraulic circuit.

Order Example — Part Number: GBUCL10A

Days to Ship: 6 Days P.87

For orders larger than indicated quantity, please request a quotation.

Compact Ball Valves
-Straight Type-



CAD Data

Picture shows "open" condition. Close condition can be obtained by counterclockwise rotation of 90°.

Be sure to use valves in fully open or close conditions.

■Features of Needle Valves

- Suited for fine adjustment of flow rate of water, oil or air.
- The body and the needle are chrome plated to improve air tightness, damage-proofing and smooth operation.
- The spindle is provided with a lock nut to prevent loosening due to vibration.

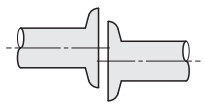
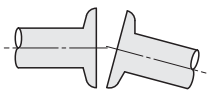
2.5S	63.5	2	2781	386	3.06	2.78	10
3S	76.3	2	4106	467	3.7	4.11	14.8



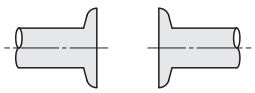
For weight of pipe and liquid (kg/m), add capacity of liquid in pipe to weight of pipe.
Weight of pipe and liquid indicates weight per length (m) when pipe is filled with water (calculated as specific gravity 1.0).
For liquid with different specific gravity, multiply capacity of pipe by specific gravity, and add weight of pipe to it.
Use flow rate 1m/sec for calculating flow rate and velocity in pipe and diameter of pipe.
(Ex.)For flow velocity when using 2S pipe at $10m^3/h$: V(velocity of flowing fluid)=10(m^3/h)/6.46[(m^3/h)/(1m/sec)]=1.55m/sec

■Recommended Tightening Torque and Incompatible Mounting Method

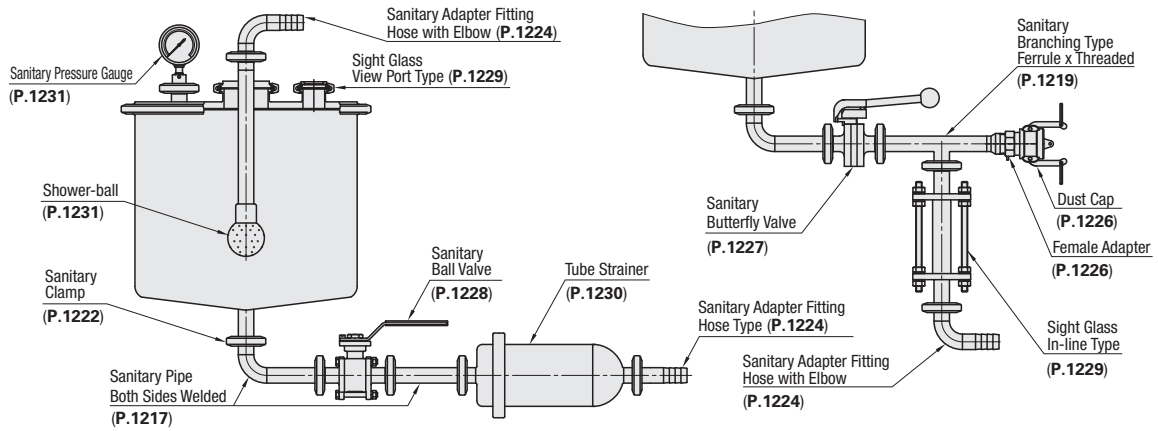


Use 3N·m for 1S~3S; 3N·m or lower for 8A~15A. Further tightening or loading of pipe may deform the gaskets and cause liquid slug, leakages and damages. When fluid leaks during use, retighten pipe with torque above. If this fails to stop leakage, replace gasket.

<Incompatible Mounting Methods>



1) When it does not match with the alignment of plumbing



2) When it is not horizontal to the alignment of plumbing

3) When there is much clearance between pipe and joint

Sanitary Pipe Fittings

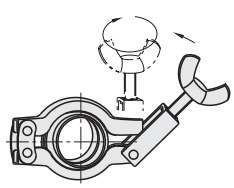
-One-touch Clamp / Gasket for Mounting Accessories-

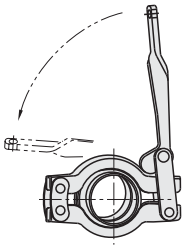
CAD Data

■One-touch Clamp

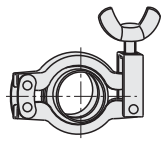
Type	Material	Recommended Operating Pressure
SNCPW	1.4301/C5CrNi18-10	0~1MPa



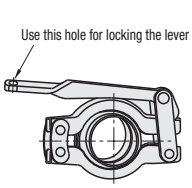
RoHS



Part Number		D	A	B	W	€ Unit Price	Volume Discount
Type	No.					Qty. 1~9	10 ~ 20 PCS.
SNCPW	1S	60	114	70	25		
	1.5S						
	2S	75	124	88	25		



※SNCPW1S and 1.5S are same shape.



※For orders larger than indicated quantity, please request a quotation.

-Conventional Product (SNCP) -New Product (SNCPW)

■Features

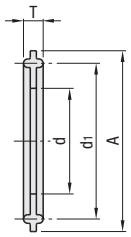
-Reduces time for attaching or detaching the clamps, and improves operating efficiency.
-Suitable for test equipment which requires many attachment and detachment. Lever provides fixed tightening torque to enable secure tightening without damaging the gaskets.
-Lack of cross-threading results in more durability compared to screw fastening type.
-Lack of friction at the thread has results in less metal power and excellent hygiene.

■Allowable Pressure Range: 1MPa or lower

■Results of Pressure Test (Conditions of Pressure Resistance: Water Pressure, Ambient Temperature)

-1.5MPax30 minutes: No Leakage
-After 300 times of open/shut cycles, 1.5MPax30 minutes: No Leakage

Caution



Excessive pressure at lever may cause band to come off, as there is no locking mechanism.
To prevent the malfunction of the band, locking of lever using a hole at lever is recommended.

■Gasket for Mounting Accessories

Pressure Tanks
-Overview-

■Features

- Pressure tank suitable for liquid pumping and vacuum defoaming. Capacity and tank shape (3 options) are selectable.
- Number of holes on rid (0, 3 ~ 5) and hole size (Rc (PT) 1/8 ~ 3/8) are selectable.
- Level gauge and float switch can be mounted as alteration.

■Product Overview

- (1) Capacity: 1~22.5ℓ
- (2) Material: 304 Stainless Steel
- (3) Finish: Buffing on inner and outer surface Polishing grade 400 (* Note)

(* Note) Buff Polish Grade: (a)240--- Coarse Buff Polish. High level of brightness or luster is not provided.
(b)320--- Standard Buff Polish
(c)400--- Fine Buff Polish Our product is provided with this type of polish.

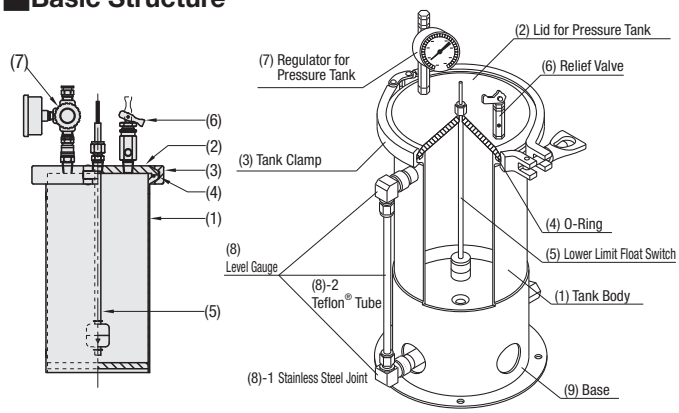
■Condition of Use

- (1) Operating Pressure Range: 0.5Mpa or lower
- (2) Chemical Resistance: See <Table> 1 to the right for details.
- (3) O-Ring: Physical Characteristics, Chemical Resistance **P.1309**
  Oil Resistance - Solvent Resistance: See Table <2> below.

<Table 1> Stainless Steel Chemical Resistance Chart

O: Excellent Δ: Slight Corrosion X: Severe Corrosion

Chemical Solution	1.4301/ X5CrNi18-10	Chemical Solution	1.4301/ X5CrNi18-10
Alcohol	○	Bicarbonate Soda	○
Ether	○	Lactic Acid (5%, boiled)	Δ
Ammonia Water	○	Lactic Acid (10%, boiled)	X
Butyric Acid	○	Sulfuric Acid (5%)	Δ
Salt (Dry)	○	Sulfuric Acid (50%)	X
Vinegar	○	Chlorine Gas (Humid)	X
Dilute Nitric Acid	○	Chlorine water	X
Concentrated Nitric Acid	X	Hydrochloric Acid	X
Acetic Anhydride	○	Ferric Chloride	X
Acetic Anhydride (Boiled)	X	Bromine	X



<Table 2> O-Ring Oil Resistance and Solvent Resistance

Chemical Solution	Nitrile	Fluorine	Chemical Solution	Nitrile	Fluorine
Gasoline, Light Oil	◎	◎	Trichloroethylene	Δ	◎
Benzene, Toluene	Δ	◎	Methyl Alcohol	_	Δ
Animal and Vegetable Oil	◎	◎	Methylethylketone	X	X
Diester Lubricating Oil	X	○	Ethyl Acetate	X	X
Phosphate-chlorinated Hydraulic Oil	X	Δ	Ether	_	X

The information in <Table 1> and <Table 2> above is reference data and to be used only as a guide. Values may differ depending on operational conditions or operating environment.

■Basic Structure

Part No.	Name of Parts	Purpose
(1)	Tank Body	Container for liquid
(2)	Lid for Pressure Tank	Applies pressure and prevents contamination
(3)	Tank Clamp	Fix body and lid
(4)	O-Ring	Seal for body and lid
(5)	Lower Limit Float Switch	Activates an alarm when the liquid level drops to low limit
(6)	Relief Valve	Releases pressure
(7)	Regulator for Pressure Tank	Controls pressure within tank
(8)	Level Gauge ((8)-1 Stainless Steel Joint)	Provides visual view of the liquid level
	Level Gauge ((8)-2 Teflon® Tube)	
(9)	Base	Secures tank body

Caution CAUTION

Precautions for Use

- Pressure tanks featured in this catalog are not classified as first-class or second-class pressure vessels.
- Please use in the operational conditions above. When applying pressure, use pressure gauge, relief valve and safety regulator for your safety.
- When the internal pressure is high, never loosen clamps etc., that tighten rid and nozzle.
- Never use as a container to generate vapor by steaming, heating or as a result of chemical reaction.

Caution CAUTION

Handling Instruction

1.)O-ring is used in the rid of this product.
When closing the lid, please make sure the O-ring is securely fit into the groove on tank body.
2.)Tighten the clamp by hand, then secure with a wrench the extra half revolution or so.
3.)Maximum operating pressure of the tank is 0.5Mpa or less. Do not operate beyond the maximum pressure.
Pressure relief valves are recommended when using tanks in compression mode.
4.)When loosening clamps, be sure to release the internal pressure by a relief valve etc. into the ambient condition.
Also, confirm that the pressure gauge (regulator) indicates ambient pressure.

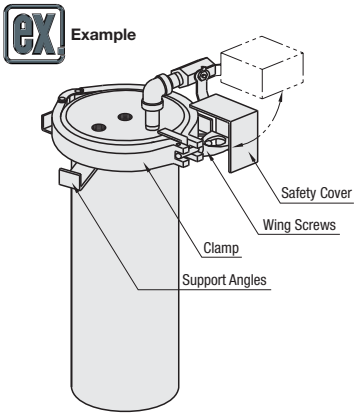
Pressure Tanks with Safety Function



-Overview / Standard-

CAD Data

Schematic Diagram

Example

Features

(1) Safety Cover: Lifting the cover discharges the pressure, preventing inadvertent operation.
(2) Support Angles: Support angles prevents the tank from falling after detachment, improving safety.
(3) Clamp Locating Tang: Use the tang to position the clamp to improve repeatability.

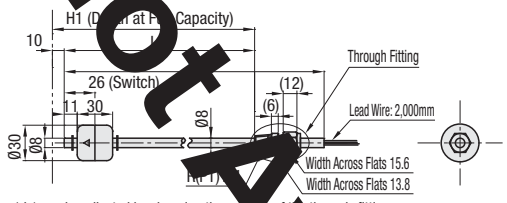
Days to Ship: 8 Days

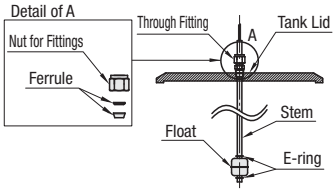


■Cautions on Installation and Handling
- Install in a place which is not subject to vibration.
- Use within surrounding temperature range of 5 ~ 60℃.
- Do not squeeze the pipe to the connecting port in the halfway.

■Features
Controls pressure within pressure tank. By securing in the "lock" position after setting the pressure, set value is fixed and does not change during operation.

■Low Level Float Switch

RoHS



* L1 can be adjusted by changing the p[illegible] of [illegible] through-fitting.

■Feature: Switch to operate as alarm or signa[illegible] level [illegible]quids such as water and oil.

■Installation Manual
1 Apply adhesive tape to through fitting (R1/4 portion) and screw the fitting into tank lid.
2 Thread lead wire through the through fitting from inside of the lid, and insert the stem.
3 Insert the ferrule of through fitting and nut for fitting, into the stem pushed outward the lid (see below drawing)
* Do not tighten the nut for fitting at this stage.
4 Confirm the distance from the tip of the stem and switch portion to the bottom of the tank, define the location where the stem will be fixed, and hand tighten the nut.
5 Turn until hand-tight and then secure with a wrench

Open Tanks
-Overview-

■Features

- Open-top tank suitable for storage or mixing of liquids (powders). Selectable from a wide capacity range from 2.0 to 45.8ℓ.
- By specifying inner diameter and desired depth, depth is automatically determined (refer to "How to Specify Tank Capacity" below).
- Selectable between 4 outlet shapes (see "Shapes of Liquid Outlets" below for details) and 2 types of covers, according to the application.
- Position of the tank can be adjustable by specifying the weld height of feet in 10mm increment.

■Product Overview

- (1) Effective Capacity: 2.0~45.8ℓ
- (2) Material: 304 Stainless Steel
- (3) Finish: Buffing on inner and outer surface Polishing grade 320 (* Note)

(* Note) Buff Polishing Grade: (a) 240--- Rough Buffing High level of brightness or luster is not provided.
(b) 320--- Standard Buff Polish Our product is provided with this type of polish.

■Condition of Use

- (1) Operating Pressure (Atmospheric Pressure)
- (2) 304 Stainless Steel Chemical Resistance (See Table 1 to the right for details)
- (3) Gasket for Sealing Cover (For physical properties and chemical resistance, see **P.358**)
  (See Table 2 below for oil and solvent resistance)
  Confirm (1) ~ (3) above before use.

Gasket for Sealing Cover Oil Resistance and Solvent Resistance

O: Good _: Acceptable Δ: Inferior X: Not Acceptable

Chemical Solution	Silicon	Chemical Solution	Silicon
Gasoline, Light Oil	Δ	Trichloroethylene	X

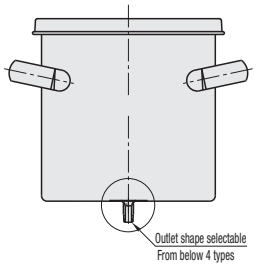
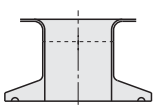
Acetic Anhydride (Boiled)	X	Bromine	X

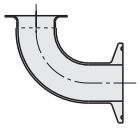
The information in <Table 1> and <Table 2> above is reference data and to be used only as a guide. Values may differ depending on operational conditions or operating environment.

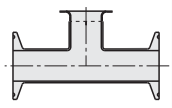
How to Specify Tank Depth

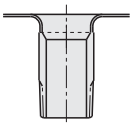


■Point







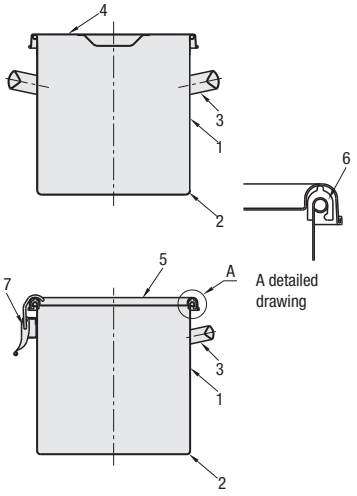


(1) Outer Diameter: Selectable from 6 sizes
(2) Capacity Configurable: Selectable from a depth range from 90 to 450mm
A variety of tank shapes is possible by the combination of (1)&(2).

Ex.) Tanks with full capacity of 5ℓ, with 3 different inner diameters

Inner Diameter (D)	Depth (H)	Features
180	200	Slim and deep tanks
210	150	Medium-sized tanks
240	115	Thick and shallow tanks

Liquid Outlet Variation



Sanitary Type (Straight)	Sanitary Type (L-Shaped)
	
Sanitary Type (T-Shaped)	**External Threads Type**
	

Point
(1) Sanitary type is selectable between 3 shapes; Straight, L-shape and T-shape.
(2) Male Thread type is selectable from R(PT) 1/8, 1 and 3/8.

Features

These vacuum pipes are for auxiliary exhaust system of High Vacuum System or rough vacuum fitting of an Ultrahigh Vacuum System.
The flexibility of the pipe enables it to absorb the vibration from vacuum pumps · vacuum system to weaken the swing of vacuum fittings.
Distance adjustment is available due to its flexibility of length.

Example

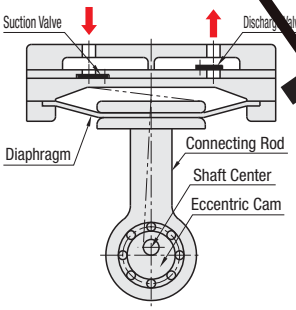
■Features

These vacuum pipes are for auxiliary exhaust system of High Vacuum System or rough vacuum fitting of an Ultrahigh Vacuum System. The plumbing parts of NW (KF) Flanged Type enables frequent detachment without tools compliant with ISO or KF.

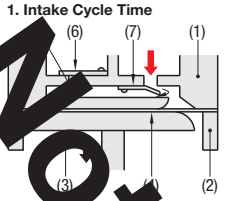
■Specifications

Dimensions and shapes are compliant with ISO2861/1-1974 - JISB8365: 1988.

Vacuum Pumps
-Overview-



Features: Vacuum pumps exhaust emission utilizing reciprocating motion of thin film (diaphragm) of rubber with no use of oil or water. Thermal protector is built in all products to ensure safety. Simple structure easy for maintenance.



Unit Conversion Table

From \ to	Pa(N/m²)	Torr(mmHg)	atm	mbar	psi(bf/in²)	kgf/cm²	mH₂O(15°)
1 Pa(N/m²)	1	$7.5X10^{-3}$	$9.87X10^{-6}$	10^{-2}	$1.45X10^{-4}$	$1.02X10^{-5}$	$1.02X10^{-4}$

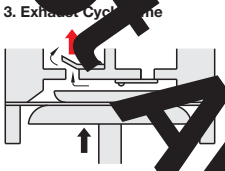
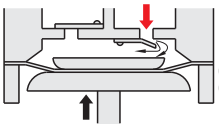
Working Principle



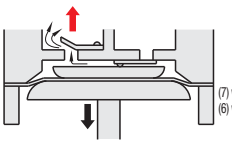
Diaphragm Type Dry Vacuum Pump

(1)Pump Head
(2) Casing
(3) Connecting Rod
(4) Diaphragm
(5) Diaphragm Washer
(6) Exhaust Valve
(7) Air Suction Valve



(7) opens by being suctioned down.
(6) will close by being pulled.

(7) will close by being pushed.
(6) will open by being pushed.



➡ indicates flow of air.
➡ indicates the motion of connecting rod into next process.
Procedure of process: 1→2→3→4→1

2. Intake Cycle Final State (bottom dead center)

(7) will open fully.
(6) will remain closed.

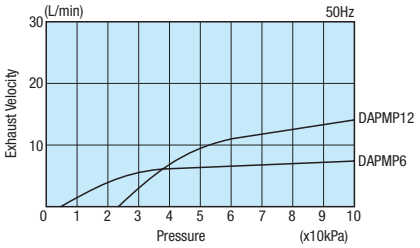
4. Exhaust Cycle Final State (top dead center)

(7) will remain closed by being pushed.
(6) will open fully by being pushed.

How to Select Pump

1. Calculation of Time and Velocity of Exhaust

$$t=\frac{V}{S}\times 2.303\log\frac{P1}{P2}$$



t; Time of Exhaust (min)

t0; Total Time of Exhaust (min)

$t0=t1+t2+t3+\ldots$

V: Tank Capacity (ℓ)
S: Velocity of Exhaust (L/min)
P1: Initial Pressure
P2: Final Pressure

-Curvature of Exhaust Velocity

-Actual Calculation Example

(Ex1) When decompressing a container of 25ℓ capacity from atmospheric pressure (101,324Pa) to 10,000Pa in 10 minutes,

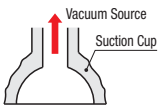
$$S=\frac{V(25)}{t(10)}\times 2.303\log\frac{P1(101,324)}{P2(100,000)}\approx 5.79\text{L/min (at 1Pa)}$$

DAPMP6 will be required as 5 L/min or faster exhaust velocity is needed for 10,000Pa.
However, be sure to select pump considering conductance of plumbing and leakage.

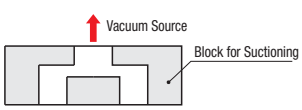
(Ex2) Time for decompressing a container of 25ℓ capacity from atmospheric pressure (101,324Pa) to 40,000Pa

In use of DAPMP12

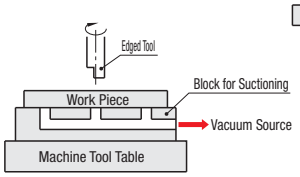
1:101,324Pa→80,000Pa	S1=12 L/min	t1=10/12x2.303log(101,324/80,000)≈0.2
2:80,000Pa→60,000Pa	S2=11 L/min	t2=10/11x2.303log(80,000/60,000)≈0.26
3:60,000Pa→40,000Pa	S3=6L/min	t3=10/6x2.303log(60,000/40,000)≈0.68
		Total t=1.14min



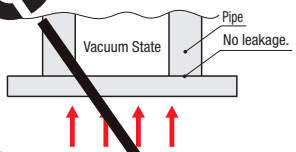
2. Calculation for Suction by Vacuum



-Vacuum Suction

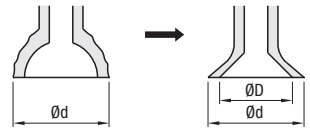


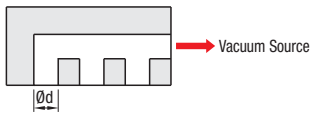
Vacuum suction means sucking an object to vacuum side utilizing differential pressure between vacuum and atmospheric pressure. Atmospheric pressure indicates 1kg/cm2. Accordingly, differential pressure is 1kg/cm2 under absolute vacuum; 0.5kg/cm2 under 50662Pa (1/2 pressure).



-Actual Suction

When suctioning, suction cup or suction block is generally used.





Strength of vacuum suction depends on performance of vacuum pump or the area of suction cup or suction block.

Suction area A when using suction cup

Before Suction A=πd2/4 After actual suction A=πD2/4

Suction area A when using perforated block

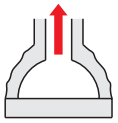
A=πd²/4x(n: No. of holes)

-Actual Calculation Example

$$W=\frac{(101,324-P)}{101,324}\times AxT$$

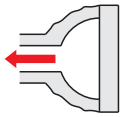
W: Theoretical Suction Power (kg) A: Area of Suction Pad (cm²)
P: Pressure of Suction Pad (Pa) T: Power by Atmospheric Pressure (1kg/cm²)

-Actual Calculation Example



(Ex.) Area of suction pad when suspending load of 0.5kg perpendicularly. Assume that pressure of suction pad is 40,000Pa.

$$A=\frac{(101,324xW)}{(101,324-P)xT}=\frac{(101,324x0.5)}{(101,324-40,000)x1}=0.83(cm^2)$$



Considering that work is suspended vertically: 0.83x3=2.69cm²

-Safety Factor

When load is suspended perpendicularly
Theoretical Value x 3

When load is suspended horizontally
Theoretical Value x 6

■Specifications

Type	PUT·PUTL·PUTSP·MPUT			PUTY·PUTYL		PUTN·PUTNL				PUTHP·PUTHPL
Material	Polyurethane			Soft Polyurethane		Nylon (Polyamide)				Nylon (Polyamide)
Applicable Fluid	Air	Water	Vacuum	Air	Vacuum	Oil	Air	Water	Vacuum	* Refer to Operation Temperature Range
Operation Temperature Range	-5~60°C	0~40°C	-5~60°C	-5~60°C	-5~60°C	-5~40°C	-40~100°C	0~80°C	-5~100°C	-40~120°C (Air - Oil) 0~80°C (Water)
Burst Pressure	3.0MPa		-	1.7MPa	-	Depends on size.			-	Depends on size. Refer to specification table
Max. Operating Pressure	0.8MPa	0.3MPa	-	0.4MPa	-	Depends on size.			-	Depends on size. Refer to specification table
Operating Vacuum Level	-		-100kPa	-	-100kPa	-			-100kPa	-
Features	· Highly water resistant. · More flexible than Nylon tubes with smaller bend radius. · Excellent mechanical (especially wear resistance) strengths.			· Flexibility similar to the Silicon Tubes and easier to handle than the Polyurethane Tubes. · Excellent mechanical (especially wear resistance) strengths.		· Highly oil resistant, and best for oil tubing. · Excellent mechanical (especially wear resistance) strengths.				· Available for Oil Supplying or Oil Hydraulic plumbing. · It can take the place of copper pipes.

Type	PUTNS·PUTNSL			PUTMF·PUTMFL·PUTMSP		PUTS·PUTSL			PUVF·PUVFL	
Material	Nylon			Polyurethane (Multi-core Type)		Incombustible Polyurethane			Soft Polyurethan	
Applicable Fluid	Air	Water	Vacuum	Air	Vacuum	Air	Water	Vacuum	Air	Vacuum
Operation Temperature Range	-15~60°C (Antifreeze)			-5~60°C		-5~60°C	0~50°C	-5~60°C	-15~60°C	
Burst Pressure	3.0MPa		-	3.0MPa	-	3.0MPa		-	0.8MPa	-
Max. Operating Pressure	1.0MPa	0.3MPa	-	0.8MPa	-	0.8MPa	0.3MPa	-	0.2MPa	-
Operating Vacuum Level	-		-100kPa	-	-100kPa	-		-100kPa	-	-100kPa
Features	· Excellent in pressure, abrasion, whether and low temperature resistance, as well as softness. · It is suitable for high pressure pipeline in narrow pitch.			· Suitable for multiple tubing to double acting cylinders, etc. · It is easy to peel and connectable to joint without any pre-processing.		· Connectable to joints without being covered or peeled. · Quickly carbonize upon contact with hot sputter to prevent fusion pitting. · More flexible and easier to handle than the Flame Retardant Tubes.			· The tube excels in softness and bending stress. · Non-creasing when bent. Best suited for end effectors connections.	

Type	PUAS·PUASL		PORF·PORFL			PUTF·PUTFL·PUFN			PUJTF·PUJTFL
Material	Conductive Polyurethane		Polyolefinic Resin			Fluorine Resin			Fluoro Resin (ETFE)
Applicable Fluid	Air	Vacuum	Air	Water	Vacuum	Air	Water	Vacuum	Air, Water
Operation Temperature Range	-5~60°C		-20~60°C	0~40°C	-20~60°C	-65~260°C			-20~80°C
Burst Pressure	3.0MPa	-	2.0MPa		-	Depends on size. Refer to specification table			Refer to specification table
Max. Operating Pressure	0.8MPa	-	0.5MPa		-	Depends on size. Refer to specification table			Refer to specification table
Operating Vacuum Level	-	-100kPa	-		-100kPa	-		-100kPa	-
Features	· Electrically conductive tube is suitable for applications where static electricity is undesirable. · Surface resistivity is 10^{10} (Ω) or less.		· Clean and conforms to the Food Sanitation Laws (except oil-processed foods). (Health, Labor and Welfare Ministry Notification No.370) · Highly water resistant and non-hydrolysable. · Low specific gravity, and light weight. · Disposable by combustion without emitting harmful gases. · Suitable for uses in food, beverage, physicochemical and other industries.			· Excels in heat and low temperature resisting. · Inactive to most of corrosive gases, chemicals and solvents. · Highly weather resistant, and does not deteriorate with time. · Incombustible. · No toxic substances released.			· Excels in chemical resistance. · Good clarity allows visual checks of contents. · Compliant to Health, Labor and Welfare Ministry Notification No. 20 under Food Sanitation Laws of Japan

Type	PUTFB·PUTFBL·PUTFG·PUTFGL			PUTC·PUTCL
Material	Fluoro Rubber			Silicon Rubber
Applicable Fluid	Oil	Air	Water	Water, Pure Water, Beverage, etc.
Operation Temperature Range	-20~180°C			-30~150°C
Burst Pressure	Depends on size. Refer to specification table			-(Elastic body. Not available under pressure.)
Max. Operating Pressure	Depends on size. Refer to specification table			-(Elastic body. Not available under pressure.)
Operating Vacuum Level	-			-(Elastic body. Not available under pressure.)
Features	· Excellent in heat resistance, oil resistance, weather resistance and chemical resistance. · Excellent resistance in the environment of ozone and light.			· Compliant to Food Sanitary Act (MHLW Notification No. 201) · Excels in heat and low temperature resisting. · Retains the characteristics as an elastic body within the above temp. range.

Various fittings are prepared.

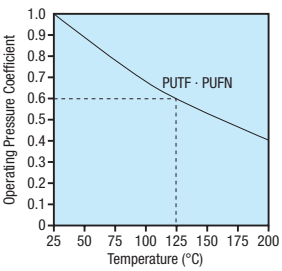
■Correction Coefficient for Temperature-Dependent Tube Burst Pressure (Reference)

Temperature-Dependent Maximum Operating Pressure (Mpa)=Max. Operating Pressure x Correction Coefficient



(Calc. Ex.) PUT6-20 (Polyurethane Tube) used at 40°C

→0.8 (Mpa)x0.6=0.48MPa

■Polyurethane - Nylon

■Fluorine Resin

■Polyolefin

Ambient Temperature	20°C or less	30°C	40°C	50°C	60°C
Correction Factor	1	0.9	0.7	0.6	0.5

■Chemical Resistance of Tubes (Reference)

The list below is for reference only and not guaranteed.

	Mineral Oil	Water	Hydrochloric Acid (10%, RT)	Ammonia Water	Gasoline	Organic Solvent
Polyurethane Tubes	○	○	△	△	◎	△
Soft Urethane	○	○	△	△	◎	△
Nylon Tubes	◎	◎	△~×	◎~○	◎	△
Soft Nylon Tubes	○	◎	×	◎	○	△
Sputtering Resistant Tubes	○	○	△	△	◎	△
Vacuum Tubes	○	◎	×	◎	△	△
Antistatic Tubes	○	○	△	△	◎	△
Polyolefin	×	◎	◎	◎	×	×~○
Fluororesin Tubes	○	◎	◎	◎	◎	○
Silicon Tubes	×	◎	○	◎	○~△	△

◎ = Excellent. Little affected.
○ = Good. Affected or swollen to some extent but usable depending on conditions.
△ = Unsuitable. Evidently Affected.
× = Not Usable. Dissolve.
(RT is for ambient temperature=20°C, % is concentration of solution.)

P.87

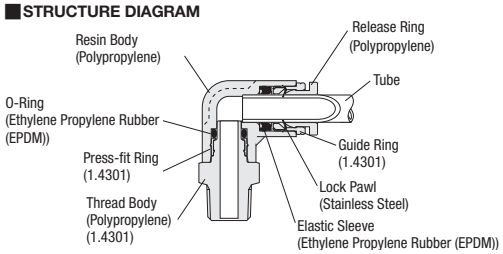
■ Features

- Clean environment compatible PP (polypropylene) is used for the main body. Plastic body is semitransparent so that fluid is recognizable from the outside.



Specifications

Applicable Fluid	Compressed Air · Water · Some Medicine
Operation Temperature Range	0~80°C
Max. Operating Pressure	0.9MPa (20°C)
Operating Vacuum Level	-100kPa

■ Precautions for Use

- For water, Inserts for Soft Tubes (**P.1261** PUIT · PUSIT) must be used, and keep the surge pressure to below max. pressure rating.
- If threaded portion is made of PP, tighten coupling by screwing hand tight, then giving 2 or 3 turns with a wrench.
  Over tightening may damage threads. Insufficient tightening may cause loosening or leaking.
- Due to creep deformation, screws may become loose and minute leakages may occur.
  Periodical tightening maintenance is recommended.
  If retightening does not work, then replace the coupling in use.
- When possibilities of machine and equipment damages exist due to fluid medium leakages, consider providing protective measures such as covers prior to use.
- Oil is prohibited from use for the couplings.

■ STRUCTURE DIAGRAM

‹Recommended Tightening Torque›
Thread Body: Polypropylene
R1/8: 0.5N-m R1/4: 0.7N-m R3/8: 1.0N-m
Thread: 1.4301/X5CrNi18-10
R1/8: 7~9N-m R1/4: 12~14N-m R3/8: 22~24N-m
(The values are for seal tape 2 rotations. Tighten more max. 2 rotations if required.)

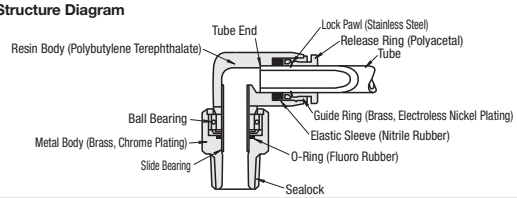
Turning torque is the torque necessary for the joint to turn when it is free of compressed air pressure.



■Features

- Use as handy couplings for connecting tubes to swivel and rotary parts of general pneumatic equipment.
- With ball bearings used at the rotary part, rotary joints offer suitable use for tube connecting to fast-moving swivel and rotary equipment parts.

■Features

- Use as handy couplings for connecting tubes to swivel and rotary parts of general pneumatic equipment.
- With ball bearings used at the rotary part, rotary joints offer suitable use for tube connecting to fast-moving swivel and rotary equipment parts.

Specification

Applicable Fluid	Compressed Air
Operation Temperature Range	0~60°C
Max. Operating Pressure	1MPa
Operating Vacuum Level	–100kPa

■Features

Single handle type has a scale on lever and is able to control the flow.
Double handle type is possible to flow water.

Specification

Type	Single Handle	Double Handle
Applicable Fluid	Air	Air - Water (*)
Operation Temperature Range	0~60°C	
Max. Operating Pressure	0~0.7MPa	0~0.9MPa
Operating Vacuum Level	–100kPa	

* Observe following conditions when water is the applicable fluid.
1. Operating Pressure: 0~0.3MPa
2. No water hammer (impulsive flow)
3. Attach insert for soft tube (**P.1261**) to plumbing tube.

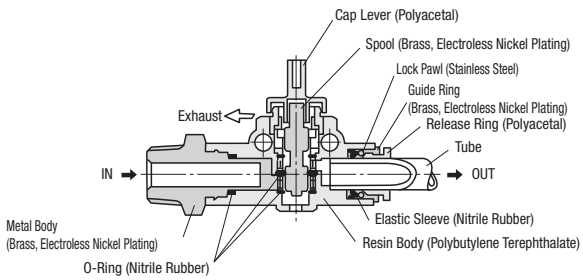
■Features
- Capable of opening and closing air pressure inlet to equipment.
- 3-Way valve exhausts residual pressure from outlet side (equipment).
- 2-Way valve has no function to exhaust residual pressure.

■3-Way Valve and 2-Way Valve



- 3-Way valve releases residual pressure from outlet side (equipment) when air is shut off to ensure safety during adjustment and repair of equipment.
- 2-Way valve has no function to exhaust residual pressure and is suitable for use with air supply lines of equipment where residual pressure release is not desired, such as a tank and etc. Also suitable for vacuum plumbing.

Specification

Applicable Fluid	Compressed Air
Operating Pressure Range	0~0.9MPa
Operating Vacuum Level	-100kPa
Operation Temperature Range	0~60°C

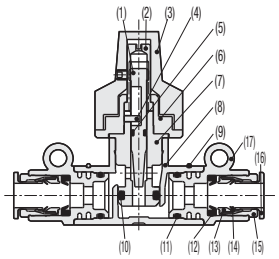
Express A 2,00 EUR/ piece



A Express Charge of 5,40 EUR for 3 or more identical pieces.

Specification

•NBDY

Applicable Fluid	Compressed Air / N2 Gas / Low Vacuum
Max. Operating Pressure	0.7MPa
Negative Pressure	-100kPa
Proof Pressure	1.5MPa
Operation Temp. Range	5 ~ 60°C (No freezing)

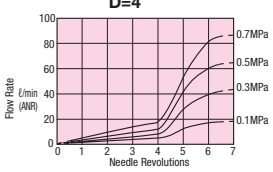
■Structure Diagram

No.	Name of Parts	Material
(1)	Needle	Brass
(2)	Rotary Shaft	Brass
(3)	Dial	Aluminum Alloy, Polyamide, or others.
(4)	Dowel Pin	Stainless steel
(5)	O-Ring	Fluoro Rubber
(6)	Guide Bushing	Brass
(7)	Check Metal	Brass
(8)	Body	Thread: Brass (Electroless Nickel Plating)
(9)	Stopper Ring	Stainless steel
(10)	O-Ring	Hydrogenated Nitrile Rubber
(11)	O-Ring	Hydrogenated Nitrile Rubber
(12)	Gasket	Hydrogenated Nitrile Rubber
(13)	Holder	Brass
(14)	Chuck	Stainless steel
(15)	Outer Ring	Brass
(16)	Push Ring	Thread: Brass (Electroless Nickel Plating)
(17)	Joint Case	Thread: Brass (Electroless Nickel Plating)

All brass parts are electroless nickel plated.

■Features

- Linear flow rate characteristics proportional to needle revolutions.
- Dial display makes it easy to control value of flow rate.
- Mounting part with 360° turn provides free mounting..
- Slide locking lever provides easy locking.



■Cautions

- Not applicable as a stop valve which requires no leakage.
- Fix the dial with slide locking lever after adjusting flow rate.
- Tighten the mounting screw at 0.8N·m or lower.

Specification

Applicable Fluid	Air
Operating Pressure Range	0.1~0.7MPa
Max. Pressure	1.35MPa
Operation Temperature Range	5~60°C (No freezing)
Min. Operating Pressure	0.05MPa

Features

- Applicable to high-speed driving cylinder since air is quickly exhausted. For exhaust throttle type, the driving speed of cylinder can be adjusted.

Notes

- For exhaust throttle type, due to clogging of elements, exhaust resistance may increase and cause deterioration in general system function. In such case, discontinue the use and replace the main body.
- Not applicable as shuttle valve.

■Features

- This is a compact type regulator with a pressure gauge.
- The gauge can be changed in direction using the hexagonal part of its body.

■Precautions for Use

- To avoid equipment damage or malfunction, do not use the regulator in such a way that the pressure exceeds the preset level due to large secondary pressure fluctuations. It may result in equipment damage or malfunction. In the case of such possibility, provide separate safety device.
- Set the pressure upward (dial clockwise). Downward setting (dial counterclockwise) does not provide accurate regulation.
- When the pressure has been set at the desired level, be sure to tighten the lock nut to hold the setting.

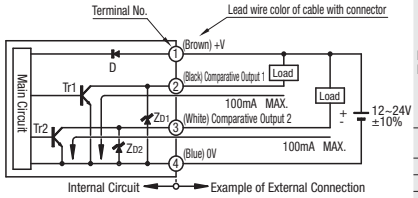
■Features



- A compact type sensor with a size of 30x30mm
- Dual display shows the current value and threshold value simultaneously. It makes a smooth checking and setting of a threshold value without switching the display mode.
- The color of the main display panel changes by the output ON/OFF operation. Displayed in 3 colors which provides excellent operability and visibility.
- Response time can be set at 10 levels between 2.5ms and 5,000ms. It prevents chattering or malfunctions caused by rapid pressure changes.

■Precautions for Use

Do not use this product as a detection device for human body protection.
(For human body protection, use products compliant with the local laws and regulations such as OSHA, ANSI, and IEC)

- Be sure to use within the range of rated pressure.
- Do not apply pressure that exceeds a withstanding pressure. Don't put wire into the pressure port. It damages the diaphragm and normal operation cannot be obtained.
- Avoid using during the power-on transitional state (0.5s).
- Avoid use where exposed to vapor or dust.
- Avoid direct contact with solvent such as thinner, water, oil or grease.
- Don't operate the buttons with pointed objects such as a needle tip.

■Specification

Type			
Type / Use		Low Pressure Type / (Mainly) for Negative Pressure	High Pressure Type / (Mainly) for Positive Pressure
Pressure Type		Gauge Pressure	
Rated / Set Pressure Range		-100.0~+100.0kPa	-0.100~+1.000MPa
Pressure Resistant		500kPa	1.5MPa
Applicable Fluid		Non-corrosive gas (Not applicable for liquid or corrosive gas)	
Power supply voltage		12~24V DC ±10% Ripple P-P10% or less	
Power Consumption		Normal State: 840mW or less (Supply Voltage: 24V, consumption current: 35mA or less)	
Comparator Output		NPN Transistor / Open Collector · Max. Allowed Current: 100mA · Applied Voltage: 30V DC or less (Between comparator output and 0V) · Residual Voltage: 2V or less (load current 100mA)	
	Output Operation	Select NO or NC by key operation	
	Hysteresis	1 digit minimum (variable)	
	Repeatability	±0.1%F.S (±2 digits or less)	±0.1%F.S (±2 digits or less)
	Response Time	Select from (2.5, 5, 10, 25, 50, 100, 250, 500, 1,000, 5,000) ms.	
	Short Circuit Protection	YES	
External Input		Not applicable	
Analog Voltage Output		Not applicable	
Display		4 digits + 4 digits and 3 colors LCD display (display update cycle: select from 250, 500 and 1,000ms)	
Indicated Pressure Range		-100.0~+100.0kPa	-0.100~+1.000MPa
Indicator Light		Orange LED	
Environmental Resistance	Protection Structure	IP40 (IEC)	
	Operating Ambient Temperature	-10~+50°C, for storage: -10~+60°C	
	Operation Environment Humidity	35~85%RH (No condensation, no freezing), for storage: 35~85%RH	
	Withstanding Voltage	AC 1,000V 1 minute between hot and case	
	Insulation Resistance	50MΩ or more with DC500V mega between hot and case	
	Vibration Resistance	Endurance 10~500Hz Full Wave Amplitude of 3mm 2 Hours, in X, Y, Z Direction each	
	Impact Resistance	Endurance 100m/s2 (Approx. 10G) 3 times for X, Y, Z Direction each	
Temperature Characteristics		within ±0.5% F.S. (+20°C as a reference)	within ±1% F.S. (+20°C as a reference)
Pressure Port		M5 Female +R (PT) 1/8 Male	
How to Connect		Connector	
Wire Length		100m long cable with sectional area of 0.3 square millimeter or more	
Material		Case: PBT, LCD Display: Acrylic, Switch: Silicon Rubber Pressure Port: 1.4305/X10CrNiS18-9 Bracket Screw: Brass (Nickel Plating) Mounting Bracket: Low STKM (Trivalent STKM STKM Bright Chromate)	
Body Mass		Approx. 40g	

* The ambient operating temperature is +20°C for the measurement conditions without any specification.

Moisture Trap

Structure Diagram

Part Number		€ Unit Price
Type	No.	
	15A	

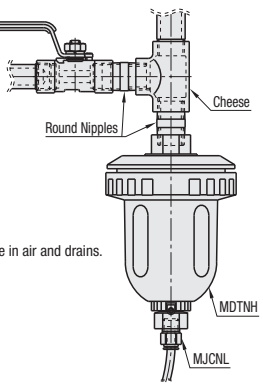
Do not use for exhausting heavy drain such as a mixture of dirt and oil in lower part of air tank.

Components List

No.	Name	Material
(1)	Cover	ZC0400/ZnAl4
(2)	Clamp Ring	ZC0400/ZnAl4
(3)	Case	PC
(4)	Float Assembly	-
(5)	Joints	POM
(6)	Coupling	POM

Specification

Pneumatic Fitting Port	Rc1/2
Drain Exhaust Port	G1/4
Applicable Fluid	Air or Drain
Operating Pressure	0.14~1.0MPa
Pressure Resistant	1.5MPa
Ambient Temperature	5~60°C
Capacity	10cc/1 time
Product Mass	0.7kg



Features

- Float type prevents unnecessary air exhausts.
- Magnetic mechanism ensures positive drainage.

When operating pressure is 0.05MPa or less, drain exhaust port opens.

Dirt clogging in the float may cause air leakages. In such a case, clean the float. Never use drain trap under dusty air tanks.

M Material: Polyacetal

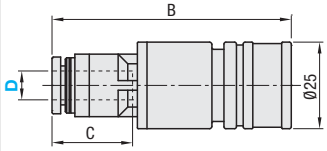
Specification

Applicable Fluid	Air
Operation Temperature Range	0~60°C
Max. Operating Pressure	0.9MPa
Operating Vacuum Level	-100kPa

Feature (One-Touch Articulated Connector)

-Able to attach and detach multiple tubes at a time.
-Able to combine multiple connectors using connector bands.

Cautions



-For the combination of threaded and tapped connectors, Ø4 and Ø6 are available, but Ø8 is not available.
-Make sure to lock the lock pin at the center of the body with a flathead screwdriver or hexagonal wrench after attaching the male and female bodies.
-Max. 4 pcs. are attachable vertically or horizontally.

Resin Connectors -Socket-

■Features (High Flow Rate Type)
- Unlike conventional types, pushing in the plug is all that is required to connect it to the socket.
- Low pressure-loss valve structure has increased the flow rate by 15%.

■Precautions for Use (All Standard Type)
- Be sure that the fluid flows from the socket side to the plug side.
- Not available for vacuum service as unit or connected.

High Chemical Resistant Products · High Heat Resistant Seals

CAD Data

Type	Grade	Color	Max. Operating Temp.	Material
MPPEM	Chemical Resistant	Black	260°C	Perfluoro Rubber
MPPEJ	Special Heat Resistant	Black	320°C	

Features

(1)Excellent resistance required in extreme conditions such as strong acid, strong alkali, amines, steam and high temperature polar solvent (260 to 320°C).
(2)Low gas precipitation, with low out-gas property and can be used under high vacuum.
(3)Heavy metal and molding agents are not used in the process of production.

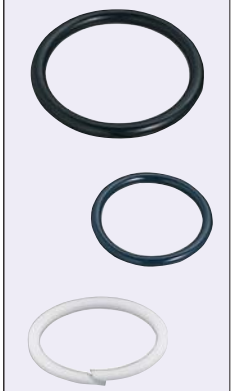
Specification

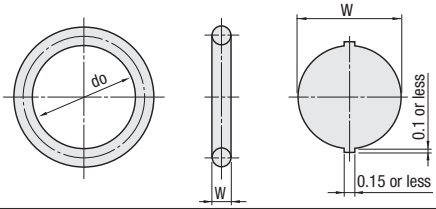
Type		MPPEM Chemical Resistant	MPPEJ Special Heat Resistant
Color		Black	Black
Hardness	(Shore)	75	74
Tensile Strength	(kgf/cm²)	216	161
Elongation	(%)	183	205
Operation Temperature Range	(°C)	260	320
Compression Set	200°C x 70h (%)	21	19
	230°C x 70h (%)	31	26

Order Example — Part Number: MPPEM5



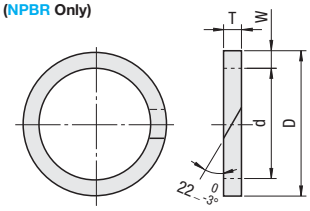
Days to Ship: 6 Days P87

Chemical Resistance Data (MPPEM Chemical Resistant)
[Evaluation] A: ΔV=5% or Less B: 5~20% C: 21~35%



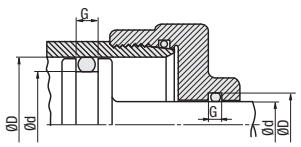
Chemicals	Soaking Temperature (°C)	Soaking Time (Day)	Volume Change (ΔV%)
Sodium Hydroxide (50%)	150	7	A
Ammonia Water (35%)	45	20	A
Ammonia	100	7	A
N-Butylamine	23	7	A
Formic Acid (12%)	100	7	B
Chlorosulfonic Acid	23	7	A
Hydrochloric Acid (37%)	24	28	B
Nitric Acid (65%)	40	30	B
Sulfuric Acid (94%)	70	14	A
Phosphoric Acid (45%)	60	7	A
Hydrogen Sulfide	70	7	A
Hydrogen Fluoride (50%)	80	7	B
MIBK (Methyl isobutyl ketone)	118	7	A
Dimethylformamide	153	7	B
1.2-Dichlorobenzene	180	7	B
Chlorobenzol	100	7	A
R123(CFC)	24	28	C
Steam	121	7	A
Phenol	220	7	A
Ethylene Oxide	23	7	A

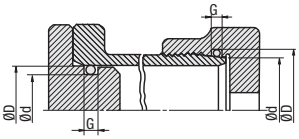
*Data above are not guaranteed values but experimental log.
For actual use, confirm the applicability under specific conditions.



O-Ring
-P Series-

Type	M Material	H Hardness (JIS Hs)	Color	Operation Temperature Range	JIS Symbol	Usage	Features
NPA	Nitrile Rubber	70±5	Black	−30~100°C	Class 1 A	Mineral Oil Resistant	Most representative material with superior oil / abrasion resistance and heat stability.
NPB	Nitrile Rubber	90±5	Black	−25~100°C	Class 1 B		
NPSW	Silicon Rubber	50±5	Milky White	−50~200°C	-	Heat Resistant	Having excellent high and low temperature resistances, this material has the widest range of operating temperatures among synthetic rubbers. It is suitable for food-related applications.
NPS	Silicon Rubber	70±5	Blue	−50~200°C	Class 4 D	Heat Resistant	
NPF	Fluoro Rubber	70±5	Black	−15~200°C	Class 4 D		Best in oil / chemical resistance and heat stability as synthetic rubber. Suitable for a wide range of applications.
NPFH	Fluoro Rubber	90±5	Black	−15~200°C	-	Heat Resistant	
NPEG	Ethylene Propylene Rubber	70±5	Black	−45~130°C	-	For weather resistant items	NPBR
NPBR	Fluorine Resin	-	White	Subject to O-ring	-	High Voltage Use	Used when the pressure resistance of O-ring is insufficient.





(NPBR Only)

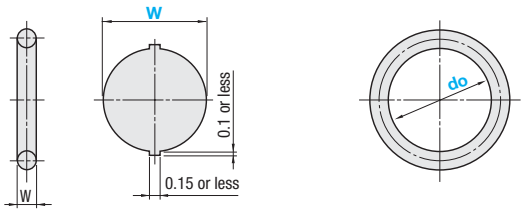
Large Diameter O-Rings
-Configurable Type-



CAD Data

■Large Diameter O-Rings RoHS

Type	Material	Hardness (JIS Hs)	Color	Operation Temperature Range	JIS Symbol
DFA	Nitrile Rubber	70±5	Black	-30~100°C	Class 1 A
DFB	Nitrile Rubber	90±5	Black	-25~100°C	Class 1 B
DFF	Fluoro Rubber	70±5	Black	-15~200°C	Class 4 D

■Features
(1)Wire diameter and inner diameter are selectable.
(2)Able to keep high level of air tightness because of vulcanization molding.
(3) No breaks from joint parts.

Part Number Type	Wire Dia. W	Wire Dia. Tolerance	Inner Dia. do 1mm Increment

JIS Symbol	Class 1 A	Class 1 B	Class 4 D
Tensile Strength (MPa)	9.8	14	9.8
Elongation (%)	250	100	200
Tensile Stress (MPa)	2.7	-	1.9
Compression Set (%)	40	40	40

■Design Standards of O-Rings and Groove Dimension
(1)In case of internal or external pressure seal on flat surfaces, set crush rate at 8 to 30% as a guide.

Setting Crush Ratio (Operating Range 8~30%)

$$E = \frac{L \times 100}{W}$$

E(%) : Crush Rate
d (mm) : Crush Width (=W-H)
W(mm) : O-Ring Wire Dia.
H (mm) : Groove Depth

(2)Design Standards of Internal and External Circumstances (Reference)
Inner Diameter Expansion Rate (%) 0 ~ 5%
Outer Tensil Rate (%) 0~3%

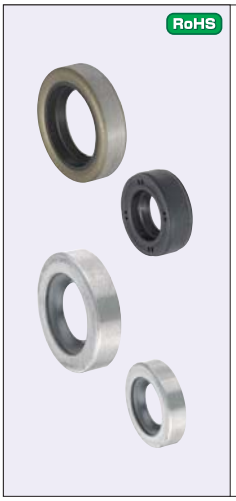
Features
Oil seal for cases with seal subject substance on one side and small amounts of dust on the other.

Usage
Seals for oil hydraulic with dust



Conditions of Oil Seal Use

Operation Temperature Range	–25~120°C
Operating Pressure	0.03MPa or less
Wind Velocity	10m/sec. or less
Shaft Tolerance	h8 (or g6)
Shaft Coarseness	3S or less
Sealed Substance	Oil - Grease

*Shafts with tolerance g6 on 1-P.107 to 1-P.182 are available.
*The operating temperature range is heat resistant temperature of rubber material.
*The oil seal, when in use, withstands heat 20 to 30°C below the specified heat-resistance level at most.

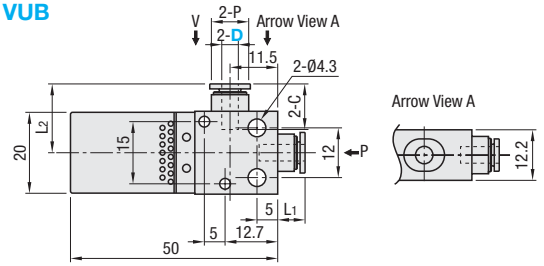
VUHK4 - 4 - 7
VUB6

Days to Ship: 6 Days P.87



Larger nozzle diameter provides more suction flow and shortens time required to vacuum inner volume from the generator to work. In this case, however, air consumption is larger.

Vacuum Generators -Square Union-

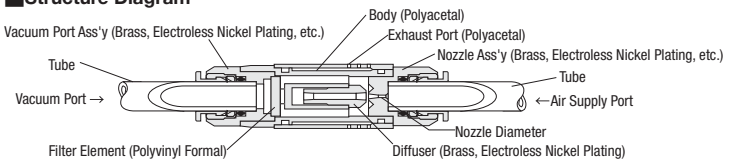
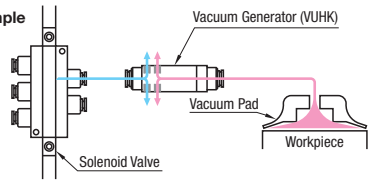
	6	0.7	10.5	11.6	7	17	0.5	93	13	23	18.5		

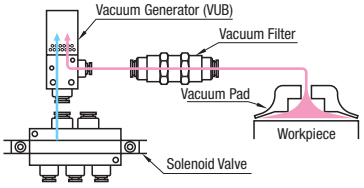
Specification



Applicable Fluid	Air
Operation Temperature Range	0~60°C
Operating Pressure Range	0.15MPa~0.7MPa
Rated Supply Pressure	0.5MPa

Principle of Vacuum Generation

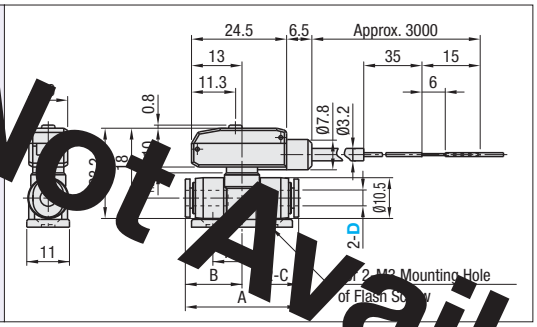




Compressed air introduced draws secondary air through its viscosity, generating vacuum function force.

Structure Diagram

Example



Cautions

-Dusts on work material may cause damage to the vacuum generator. Use in combina e vacuum filter on the next page.

Vacuum Pressure Sensor -Union-

RoHS

Specification of Sensor Head

Applicable Fluid		Compressed Air
Pressure Detection Method		Diffusion Semiconductor Pressure Switch
Power Supply		DC10.8 ~ 30V (Ripple included)
Power Consumption		20mA or less (at DC24V, no load)
Operating Pressure Range		-100~0kPa
Max. Pressure		200kPa
Storage Temp. Range		-20 ~ 70°C (Atmospheric pressure, Humidity 60% or less)
Operation Temperature Range		0 ~ 60°C (Not to be frozen)
Operating Humidity Range		35 ~ 85% (Not to be frozen)
Protection Structure		IEC Standards (conforming to IP40)
Switch Output	No. of Pressured Positions	1
	Switch Output	NPN Open Connector Output 30V80mA or less Residual Voltage 0.8V or less / Residual Voltage 0.8V or Less
	Operation Indicator	N.O. (Red LED On at or above set pressure)
	Operating Difference	Fixed (2%F.S. or less)

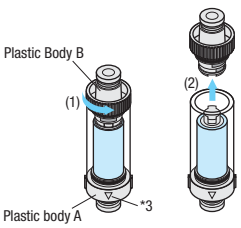
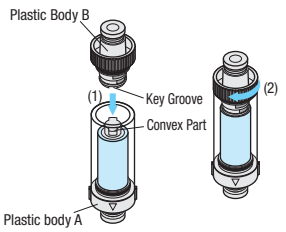
■Plumbing Example



Plumbing between Vacuum Generator and Vacuum Pad removes dusts entered from Pad and prevent Generator from failures.

■Element Replacements



■How to Remove

(1) Turn plastic body B 45° counterclockwise.*
(2) Pull out plastic body B.
* Do not turn the plastic body B beyond 45°. It may damage the plastic body.

■How to Lock

(1) Press-fit plastic body B completely to plastic body A. Be sure that the lug of plastic body A aligns with the key slot in plastic body B.
(2) Turn plastic body B 45° clockwise*1 to lock.
* 1. Do not turn the plastic body B beyond 45°. It may damage the plastic body.
* 2. When locking, be sure that the lug of plastic body A comes to the center of the hole in plastic body B.

*3. Be sure that the vacuum generator is installed on the Δ marked side. If installed on the opposite side, the element inside will become fouled, making it impossible to know the proper time for maintenance.

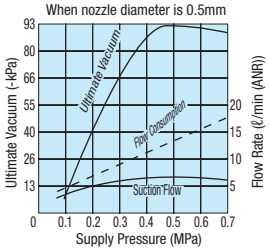
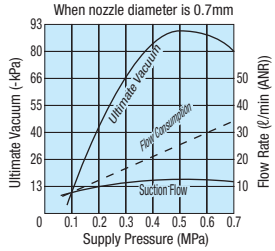
6 Days

P.87

■Features



· Vacuum generator with built-in electromagnetic valve enables compact wiring.
· Because of the vacuum break air (air used for release vacuum environment) pressure, work is protected from being blown off.
· Relief function (relieves extra pressure) on vacuum release circuit shortens vacuum break time.

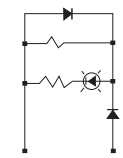


■Properties

· Supply Pressure – Ultimate Vacuum · Suction Flow · Flow Consumption

When nozzle diameter is 0.5mm

When nozzle diameter is 0.7mm



1. The characteristic supply pressure above is for vacuum generation.
2. Valve can cause abnormal sounds just before the supply pressure (0.4~0.45Mpa) of Ultimate Vacuum is reached. This abnormal sound indicates unstable properties, and the noise will be large. It may affect the sensor and other objects and cause troubles. Please reset supply pressure.
[Ex. 1] When pressure is 0.5Mpa with vacuum generator operating, pressure supply declines until 0.43Mpa due to pressure drop and abnormal noise occurs.
→Reset the supply pressure to 0.5Mpa when vacuum generator is operating.

[Ex. 2] Though the pressure is 0.5Mpa when vacuum generator is operating, abnormal sound occurs.
→Insufficient supply air flow rate (Air flow is squeezed by pipe resistance in the vacuum generator, not obtaining supply air flow rate that meets the characteristics).
→Select plumbing and equipment to confirm necessary effective sectional area.
[Ex. 3] When nozzle diameter is 0.5mm, the sectional area is 0.25×0.25×π×3=0.59mm²
→Select plumbing and equipment to spare necessary effective sectional area, 0.6mm2 or more.

■Material List

No.	Material
Body	Glass Fiber Filled PBT (Polybutylene Terephthalate)
Seal Rubber	Nitrile Rubber
Main Valve	Aluminum Alloy
Joint Portion	Brass + Electroless Nickel Plating
Vacuum Filter Cover	PCT (Polycarbonate)
Filter Cover Holder	Aluminum Alloy
Vacuum Generation Nozzles	Brass + Electroless Nickel Plating
Vacuum Generation	Brass + Electroless Nickel Plating
Break Air Flow Rate Control Needle	Brass + Electroless Nickel Plating

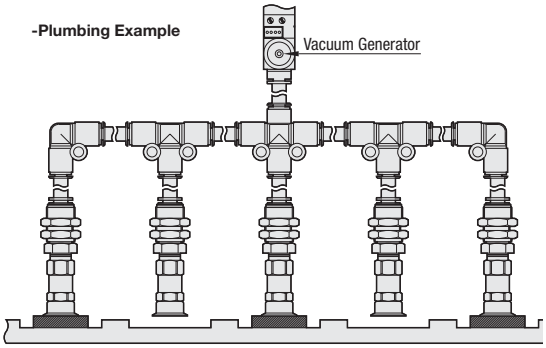
■Description of Fall Prevention Valve

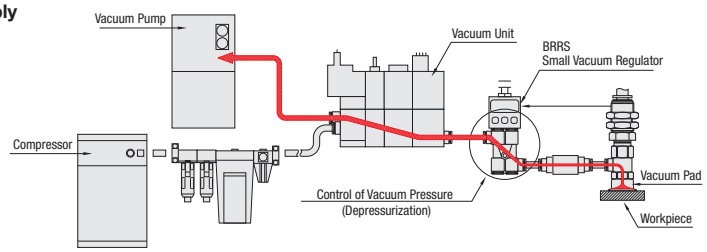
-Fall Prevention Valve Operating Condition



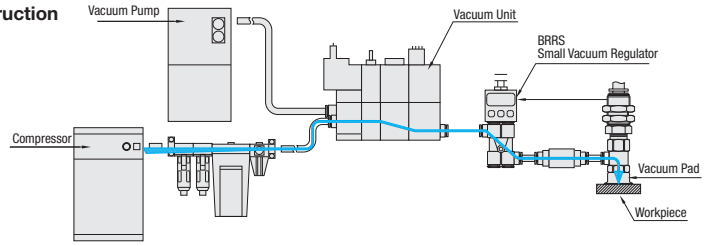
When a work is away from the vacuum pad, airflow pushes up the valve and shuts the air passage. During operation, the valve sucks small amount of air through a small hole in the middle.

-While Holding Work

When a work is tightly stuck to vacuum pad, the suction flow is reduced and the spring inside pushes down the valve. As the result, the air passage between the valve and body opens.



-Plumbing Example



Prevents process stop problems by lowering vacuum decline levels on open pads due to missed pickups or absence of work pieces, when a single vacuum source is used for multiple pads. For adopting this system, the maximum number of open pads should be confirmed. If unsafe numeber of open pads is used, be sure to provide a safety measure.

Example

What is Mini Suction Cup

This is a pad for vacuum pickup, developed to definitely vacuum pickup, attach and remove miniture devices without damaging them. This can be used for vacuum of for packaging equipment, as well as for manufacturing and inspection of semiconductors as with die holders and IC handlers.

Holder End Machining Guide

Features

1. Makes no scratch on devices.
2. Easy replacement by sharing the holder insert part.
3. Devices can be definitely absorbed and attached or removed.
   Although up to size and shape of device, the tip of Mini Suction Cup is selectable, holder insertion part has only 2 types to select, and used in common, to provide easy insertion and replacement of this product.
   To vacuum, use it while applying air pressure.
   To remove, stop the air pressure.
   The surface of the absorptive portion of the mini suction cups is treated with satin finish, providing easy device removal.
   The material of RBTR - RBTS is NBR (Nitrile Rubber) and can vacuum (convey) with no scratch on devices.
   The material of SCTR and SCTS is silicon rubber and excels in chemical, heat, low temperature and weather resistance.

Example

- Soft Type is excellent in flexibility, vacuum is possible with comparatively no scratch on work.
- The Soft Bellows Type is excellent in flexibility and best suitable for sticking to things like paper.

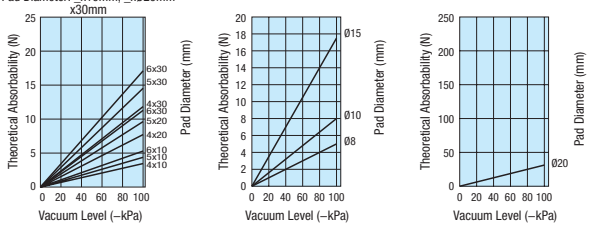
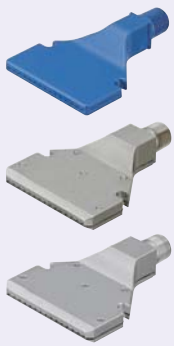
EX Example
- Oval Type is suitable for work requiring several small pads.
- Thin Object Type is suitable for conveying a thin paper-like object such as vinyl.



Order Example — Part Number: VPET4-10, VPTS8 — Days to Ship: 6 Days P.87

Properties

- Oval Type
- For Thin ObjectType

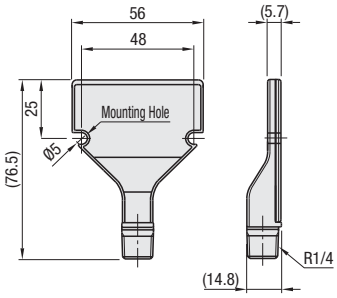


Pad Diameter: _x10mm, _xØ20mm x30mm

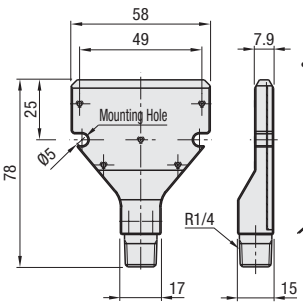
Air Nozzles
- Flat Type · 90° Type-

Features: Air Nozzles with even and strong jet force. Less air consumption and lower noise than the conventional metal nozzles such as Economy Type on P.1337, etc.

Flat Type RoHS



Type	Material	Max. Operating Pressure	Heat Resistant Temperature
AFTP	Thermoplastic (Denatured PPE)	0.7MPa	110°C
AFTA	EN AW-5052/AlMg2,5	0.4MPa	200°C
AFTS	1.4301/X5CrNi18-10		200°C



Applications: For removal of oil, water drops and scrapes, cooling / drying and air curtain, etc.
(Steel Hollows for Air Nozzles on **P.1339** is recommended for use as air curtains.)

Do not disassemble the body.
To prevent damage
· Avoid excessive tightening of screw.
· Avoid shocks to the screw.

There is no surface treatment on threaded part and slit machining and its peripheral part. *Over tightening at machining threads may scratch them.
Excessive tightening may deform the female thread portion. Wrap with sealing tape for air tightness and after manual tightening, tighten it up further by giving one rotation or so.

■**Features:** Simple nozzles with a slit in a pipe.
Suitable when the distance to the object is short.

■**Precaution for Use:** Actual spray width and colliding force vary. And the slit width may increase in width depending on air pressure. When more even blows are required, use Air Nozzles (**P.1335**, **1336**) and Steel Pipes for Air Nozzles.

Component Details

Principle of Operation

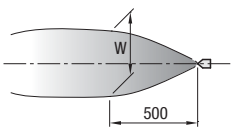
Fluid and air are mixed in the nozzle.

Features

-Able to spray fine mists by mixing fluid and air at the same time.
(Produces finer particles than the Spray Nozzles (**P.1347·1348**)
-Compact and lightweight and useable in small space.
-Fluid flow rate and air are adjustable by adjusting pressure. Particle diameter gets finer as air percentage (air-water volume ratio) gets higher.

Usage

Humidification, cooling, spray of chemical solution, etc.



Air Pressure (MPa)	Water Qty. (mℓ/min) / Air Qty. (ℓ/min (ANR)) of Hydraulic Pressure below (MPa)								Spray Width (mm) at Water Pressure (MPa) below (Spray Distance 500mm)

Compact Lateral Grippers Overview

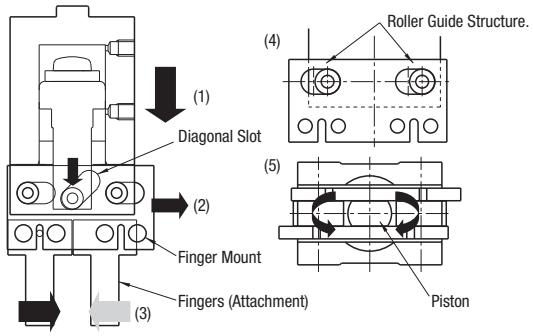
■Compact Lateral Grippers Overview

- Best for work piece handling applications such as automated assembly machines and inspection machines.
- With strong grip forces and high-rigidity, smaller machine designs are possible.
- Strong gripping force and high gripping repeatability lead to less gripping errors, contributing to higher machine speeds.

■Compact Lateral Gripper Features

-MISUMI's compact parallel grippers can be used with the original fingers, which are easy-to-select depending on column, cylindrical or square work sizes.
-Different with the guide-integrated type Air Grippers, these grippers use cam-rollers for guiding the pistons. These are lightweight and compact, as well as achieving the high-rigidity and high grip forces.
-Different from the guide-integrated type Air Grippers, the fingers can be mounted to the main body directly, having more freedom for designing.
-By installing attachments (optional), it can be mounted with the same mounting method with the guide-integrated type Air Grippers.

■Selection Guide



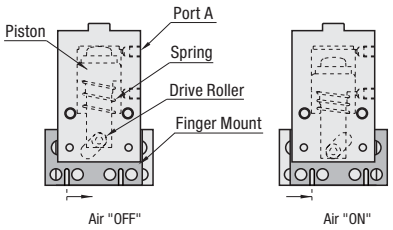
- Selection Procedure

(1)Confirmation of Work
Confirm the necessary stroke and weight calculated by the size of work.
(2)Calculation of Required Grip Force.
The required grip force is 10 to 20 times of the weight of work. (Varies depending on the friction coefficient of the fingers and works or work shape.)
(3)Selection of Types
Depending on types, the grip forces are different by gripping methods (Outer Dia. grip / Inner Dia. grip), Gripping point distance and operating pressure. Select the appropriate model from the Grip Force Chart.

- Precautions for Selection

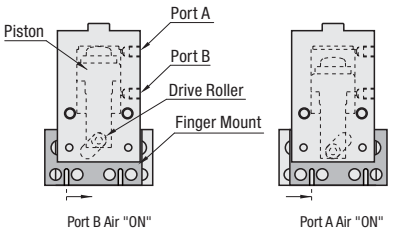
Design the Finger Attachments to be lightweight and short.
Set the overhang under the limit of specified value of each product type.
Lateral overhang loads will apply torsional moments on the sliding components and it may cause premature wear.

■Product Structure



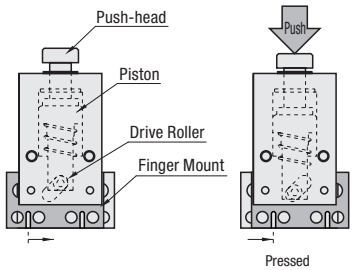
(1) Piston descends.
(2) The diagonal slot moves to the arrow direction.
(3) Fingers (Attachment) close.
(4) 2 rollers guide the cylinder movement.
(5) The piston rotates when moving forward and back and presses the finger mount onto the inner wall of the cylinder. The clearance will be locked up by this mechanism.

■Open/Close Operation



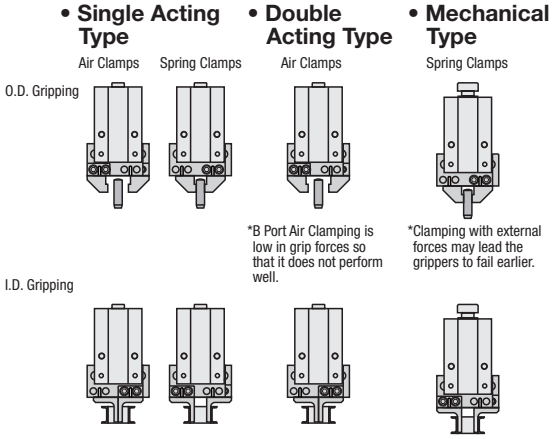
Single Acting Type

When the air enters the Port, it presses the piston and the drive roller presses the finger mount to slide.



Double Acting Type

When the air enters the Port A, it presses the piston and then the drive roller presses the finger mount to slide.

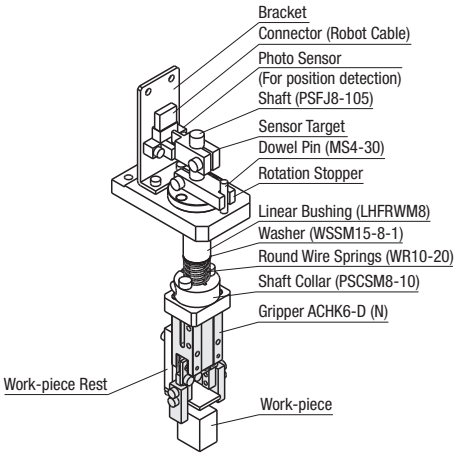


Mechanical Type (External · Unclamp)

When the push-head is pressed externally, the piston is depressed and the drive roller presses the finger mount to unclamp the gripper.

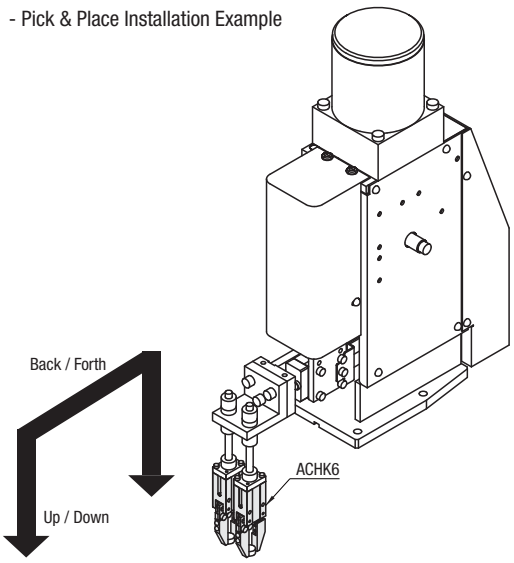
■Method of Grip

*B Port Air Clamping is low in grip forces so that it does not perform well.



*Clamping with external forces may lead the grippers to fail earlier.

•Performance



Repeatability	±0.01mm
Non-load Durability Test	No play after 100 million Open/Close cycles
Stroke Accuracy	0~0.3mm
Gripping Forces	Comparing to the same size products from other manufacturers: Approx. 2 times ~ * Comparison between other manufacturer's cylinder with 6mm dia. And ACHK4 (Research by MISUMI)

Example of Use

- Up and Down Floating Function

- Pick & Place Installation Example

Safety Precautions

Danger

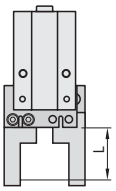
- Do not use the cylinder for the following purposes:
  1. Medical equipment for sustaining human life or maintaining the human body
  2. Systems or machine equipment for moving or transporting humans.
  3. Vital parts of machinery
  These products are not designed to be used for purposes requiring high levels of safety. Loss of human life may result.
- Do not use in locations with dangerous combustible or flammable objects. The objects may ignite or catch fire.
- Never modify the products. It may cause injury, electric shock or fire by abnormal operations.
- Avoid inappropriate dismantling or re-assembling of the products which affect the basic structure, performance or functions.
- Do not splash water on the products. If the products are made wet, washed or used in the water, they may cause injury, electric shock or fire by abnormal operations.

Warning

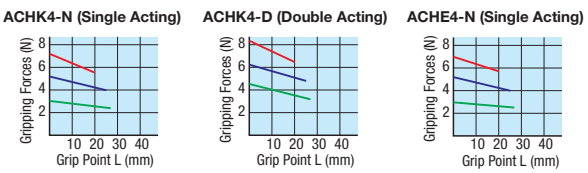
- Do not throw the products into the fire. The products may be broken or poisonous gas may be generated.

Note

- Do not apply forces to grippers for press-fitting or pulling.
- Avoid high-speed rotation of the grippers. The gripping force is negated by the centrifugal force, causing the object to be let go and may cause injuries.
- Do not apply sudden impacts. The grippers may be damaged or the gripped object may fall due to temporarily lost holding forces, and may cause injuries.
- When installing the grippers, ensure secure mounting. The products may fall off or operate abnormally, and may cause injuries.
- Avoid using in the following atmospheres or locations: Direct sunlight (ultraviolet); locations with dusts, iron and iron powders; atmospheres including organic solvents, phosphoric acid ester-type hydraulic oil, sulfur dioxides, chlorine gas and acid.
- When supplying air to the products or operating the products, be sure to conduct safety checks within the device's operating range. Carelessly supplying the air may cause injury by moving parts.
- When the products are in operation or in operable conditions, avoid entering in the operational area of the machines. The products may move unexpectedly and may cause injuries.
- When conducting maintenance, inspection, overhaul or alteration of the products, ensure that the air supply has been completely blocked beforehand.

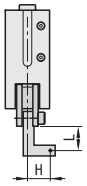


Specifications of ACHK4 and ACHE4



Specifications

Operating Method	Single and Double Acting / Parallel Open/Close
Permissible Fluid	Clean Air (Filtered, Compressed Air)
Operating Pressure Range	0.3~0.5MPa
Ambient Temperature	5~50°C
Lubrication	Non-lubrication (Lithium Grease Applied)
Pneumatic Fitting	M3x0.5
Operation Speed (max)	Single Acting 120CPM / Double Acting 180CPM
Repeatability	±0.01mm
Stroke Tolerance	0~+0.3mm



* For ACHE Type, only Single Acting is available.
*The Pneumatic Fitting of ACHE Type is M5x0.8.
* The operation speed of ACHE Type is Max.180CPM.

Compact Air Cylinders Overview

■Compact Air Cylinders Overview

MISUMI compact air cylinders are designed to be compact to save space.
The general-purpose thin-type cylinders have been standardized.
Fixed-stroke compact air cylinders can be shipped immediately, while those of selected shape (with specified stroke) can be dispatched on the 10th day after receiving an order.
Each of the MISUMI standard thin-type cylinders is equipped with a magnet rubber cushion.

■Features of Compact Air Cylinder Body

For the inner diameter of the cylinder tube, eight types are offered.
For selected shapes (with specified stroke), the stroke can be specified in 1mm increments, and the rod tip type can be selected.
The cylinder body can be fixed directly through four through holes.
In addition, connecting parts can be selected among four shapes: foot, rod end flange,
Sensors can be installed at eight locations (Ø12:3 locations; Ø16:6 locations).

■Selection of Cylinders

(1) Define the requirements for the load.

1) Load (N) - - - - - - - - - - - - - - - - Refer to "Load Calculation".
2) Operating Pressure (MPa)
3) Stroke (mm)
4) Operating Time (s)

(2) Calculate the cylinder output. (For Double Acting cylinder)

1) Determine the cylinder output. (for outstroke)
F1 ηxA1xp
F1 =Thrust for pushing (N)
A_1 =Outstroke Pressure area (mm^2) - - - Refer to "Cylinder Pressure Area Table".
η =Load Factor Meeting the Purpose (%) - - -Refer to "Load Factor Coefficient Table".
P =Operating Pressure (MPa)
2) Determine the cylinder output. (Instroke)
F2 =ηxA2xP
F2 =Thrust of instroke (N)
A_2 =Instroke pressure area (mm^2) - - - Refer to "Cylinder Pressure Area Table".
η =Load Factor Meeting the Purpose (%) - - - Refer to "Load Factor Coefficient Table".
P =Operating Pressure (MPa)

(3) Determine inner diameter of the tube.

- Determine the inner diameter of the tube based on the cylinder output (N) and load (N). Select a cylinder for required load to be within a (▭) range in the table.
- - - - - Refer to "Tube Inner Diameter Selection Table" and "Theoretical Output Table". For example, if the operating pressure is 0.5MPa and the 105N cylinder is required, the cylinder diameter is selectable from following 3 sizes: Ø20 (load factor: approx. 70%), Ø25 (load factor: approx. 45%), and Ø32 (load factor: approx. 25%).

$$\text{Load Factor} = \frac{\text{Load}}{\text{Theoretical Output}}$$

Theoretical Output (N)= Pressure Area (mm^2) x Operating Pressure (MPa)

(4) Determine the theoretical reference speed.

- Determine the theoretical reference speed based on the stroke (mm) and operating time (s).
- - - - - Refer to "Theoretical Reference Speed Selection Table".

(5) Verify the cylinder cushion mechanism.

- Check allowable kinetic energy (J) when the load is to be stopped near the end of the cylinder stroke.
E=m/2x Refer toefer to the "Allowable Kinetic Energy Table."
E=Kinetic Energy (J) m=Mass (kg) V=Velocity (m/s)
1) Review the inner diameter of the cylinder tube.
2) Install an external stopper.
The measures above are required.

(6) Verify the lateral load to be applied to the cylinder.

- If the lateral load is applied to the tip of the cylinder piston rod, check the allowable lateral load (N). Verify the load based on the following three conditions.
- - - - Refer to the "Allowable Tip Lateral Load Table".
1) Inner diameter of cylinder tube
2) Cylinder Stroke (mm)
3) Lateral load applied to the tip of the rod (N)
CAUTION: If load beyond the allowable lateral load (N) is applied to the tip of the cylinder piston rod, check the allowable lateral load (N).
1) Review the inner diameter of the cylinder tube.
2) Install a guiding mechanism on the piston rod to contain the applied load under the allowable lateral load. The measures above are required.

■Theoretical Output

Unit: N

Tube Inner Ø mm	Operating Direction	Operating Pressure (MPa) 0.1	0.2	0.3	0.4	0.5	0.6	0.7	0.8	0.9	1

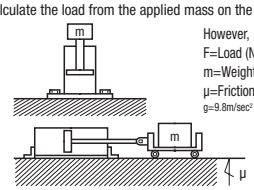
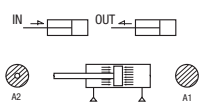
	Pull	165	330	495	660	825	990	1155	1319	1484	1649
Ø63	Push	312	623	935	1247	1559	1870	2182	2494	2806	3117
	Pull	280	561	841	1121	1402	1682	1962	2242	2523	2803



Load Calculation Calculate the load from the applied mass on the cylinder and its direction.

For vertical direction

F= mxg



For lateral direction

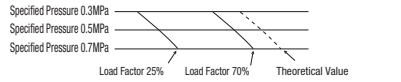
F=mxgxμ

However,
F=Load (N)
m=Weight of Object (kg)
μ=Friction Coefficient (Standard μ=0.3)
g=9.8m/sec²

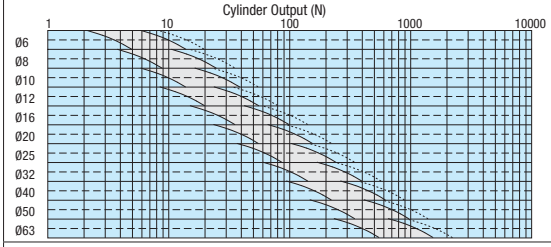
Cylinder Pressure Area Table

Cylinder Pressure Area

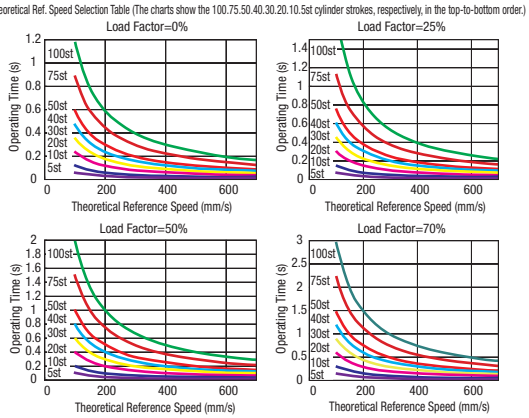
Tube Inner Dia. (mm)	Rod Dia. (mm)	A2 Pressure Area (mm^2) IN (Pull)	A1 Pressure Area (mm^2) OUT (Push)
12	6	85	113
16	8	151	201
20	10	236	314
25	12	378	491
32	16	603	804
40	16	1056	1257
50	20	1649	1963
63	20	2803	3117



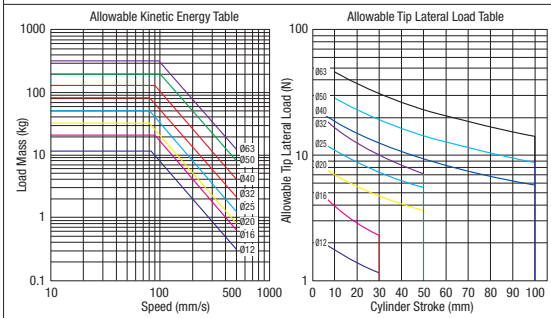
Load Factor Coefficient Table



Load Factor Constant



Purpose of Work		Load Factor η
Static Work (clamping, low speed vise tightening, etc.)		0.7 or Less
Dynamic Work	Lateral direction of the load placed on the guide.	1 or Less
	Vertical to horizontal operation of load	0.5 or Less



Tube Inner Diameter Selection Table

Theoretical Ref. Speed Selection Table (The charts show the 100.75.50.40.30.20.10.5st cylinder strokes, respectively, in the top-to-bottom order.)

Above two tables (Allowable Kinetic Energy Table and Allowable Tip Lateral Load Table) are for Compact Type Cylinders (☞ **P.1371**).
Refer to **P.1375** / **1376** for Small Cylinders, and **P.1393** for Air Cylinders (Pen-shaped Type).

■Air Consumption and Required Air Amounts

- Air Consumption (per Reciprocating Motion of Double Acting Cylinder)

(1) Amount of the air consumed by the reciprocating motion of the air cylinder, in the cylinder or between the cylinder and the changeover valve. It is required to select an air compressor or to calculate the running costs.

(Formulas)

$Qcc=(A1+A2)xLx\frac{P+0.1013}{0.1013}x10^{-6}$

$Qcp=2naxℓx\frac{P}{0.1013}x10^{-6}$

Qc =Qcc+Qcp

Qcc=Air Consumption of Air Cylinder [ℓ(ANR)]

Qcp=Air Consumption of Tube or Hollow [r(ANR)]

A1 =Extruding End Pressure Area [mm²] ---------- Refer to "Cylinder Pressure Area Table".

A2 =Retreating End Pressure Area [mm²] ---------- Refer to "Cylinder Pressure Area Table".

L =Cylinder Stroke [mm]

P =Operating Pressure [MPa]

ℓ =Hollow Length [mm]

a =Inner Cross-sectional Area of Hollow [mm²]

Qc =Air consumption required for one reciprocating motion of air cylinder [ℓ (ANR)]

(2)Select a compressor that has enough capacity for the total amount of air consumed downstream by the air actuator. Air is consumed due to leakages in the pips, or in the drain valve or pilot valve. In addition, air volume decreases with the temperature decrease.

(Formulas)

Qc´ =Qc x n x Number of Cylinders Used x Margin Ratio

Qc´ =Compressor Discharged Flow Rate [ℓ/min(ANR)]

n =Cylinder Reciprocating Motions Per Minute

Margin Ratio=1.5~ (To be set by the user)

- Required Air Amounts(per minute)

Amount of the air necessary for actuating the air cylinder at a predetermined speed. This is required for selecting a diameter of any pipe upstream of the changeover valve, or selecting the F, R and L equipment (filter, regulator and lubricator.). ☞P.1294

(Formulas)

$Qr1=60xA1xVx\frac{P+0.1013}{0.1013}x10^{-6}$

$Qr2=60xA2xVx\frac{P+0.1013}{0.1013}x10^{-6}$

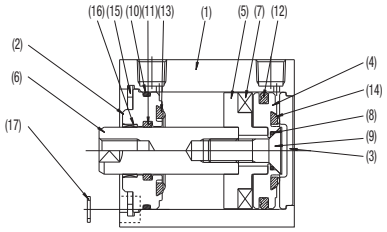
Qr1=Extruding End Air Requirement [ℓ/min(ANR)]

Qr2=Retreating End Air Requirement [ℓ/min(ANR)]

A1 =Extruding End Pressure Area [mm²] ---------- Refer to "Cylinder Pressure Area Table".

A2 =Retreating End Pressure Area [mm²] ---------- Refer to "Cylinder Pressure Area Table".

V V =Maximum Piston Speed [mm/s]



P =Operating Pressure [MPa]

* For Double Acting cylinders, use one with larger Qr1 and Qr2.
When there are multiple air cylinders downstream in selecting the plumbing or equipment, apply the maximum amount among all cylinders in simultaneous operation.

■Compact Cylinder Basic Specifications

[IMPORTANT!] Precautions

DANGER: A clearly dangerous state. Unless avoided, death or serious injuries might be caused.
CAUTION: A potentially dangerous state depending on usage. Unless avoided, death or injuries might be caused .
NOTE: A potentially dangerous state depending on usage. Unless avoided, low-grade to moderate injuries might be caused, or property might be damaged .

(Cylinder)▲CAUTION

(1) Check the air cylinder specifications and use the cylinder within the allowed specification range. If the cylinder is used under pressure or temperature exceeding the specifications, or any fluid other than compressed air is used, there is a danger of personal injury or damage to the machine by broken or malfunctioning cylinders. Be sure to use the cylinder in accordance with the specifications.

(2) Please note that there are potential damages to the machine or human body, e.g., hands and/or legs being caught in the moving mechanisms.
If there are potential hazards to human body, install a protective cover as a safety measure.

(3) Provide safety measures against possible injuries and equipment damages by air cylinder malfunctions due to power and air supply troubles.

(4) The air cylinder and the coupling with other equipment must be fixed securely to avoid loosening.

(Cylinder)▲NOTE

(1) Use a filter and a dryer in order to supply clean and dry compressed air to the air cylinder. Impurities in the compressed air may cause malfunctions.

(2) Use a speed controller to operate the air cylinder at a predetermined speed.

(3)A lateral load beyond the allowable range must not be applied to the piston rod.
Otherwise, the air cylinder may operate improperly, or the gaskets may be damaged.

(4) The air cylinder can be operated without re-lubrication.
For lubricating the cylinder, supply Category-1 turbine oil (ISO VG232). Once lubricated, continue to use the same lubricant. If lubrication is stopped, the initial lubricant may be lost, thus causing the cylinder to malfunction.

(Cylinder Sensor)▲DANGER

(1) Never use the cylinder in an atmosphere containing explosion gas.
Otherwise, the sensor may cause an explosion because it does not have an explosion-proof structure.

(Cylinder Sensor)▲CAUTION

(1) After reviewing the cylinder sensor specifications, use the sensor within the specifications. If the sensor is used with a load current, voltage, temperature, impact, or any other condition outside the range of the specifications, the sensor may break or operate improperly.

(2) Do not use the sensor under conditions such as: a magnetized area; an atmosphere containing an explosive gas; water or oil may be splashed to the cylinder; the temperature may change in an extremely wide range; an impact may occur; a dusty area. Otherwise, the sensor may operate improperly or break.

(3) Perform wiring correctly according to the color-coded labels of the sensor lead wires.
‹Lead type sensor›
- If the wiring is reversed, the lamp will not light, although the sensor operates (24 VDC only).
‹Two-wire non-contact sensor›
- If the wiring is reversed, the lamp will continually stay on.
‹Three-wire non-contact sensor›
- If the power and output lines are wired incorrectly, the sensor will break.

(4) To connect a load that generates a surge voltage (e.g. relay), use a switch that contains a contact protection circuit, or use a protection circuit.

(5) If power is turned on without connecting a load such as relay, PLC (programmable controller), or a similar load to the two-wire sensor, the sensor will fail. Be sure to connect a load before turning the power on.

(6) Do not bundle sensor wires with power lines or high voltage circuits.
Otherwise, noise may be generated, resulting in malfunction of the sensor.

(7) If the wire contains insulation faults, an over-current may flow through the sensor, causing the sensor to fail.. Confirm that there is no insulation fault.

(8) If the sensor wire is too long, turning power on may generate a in-rush current, resulting in breakage of the contacts. If the wire length exceeds 5m, be sure to connect a contact protection circuit.

(9) Do not drop or bump the sensor, as the internal mechanism of the sensor may break.

(10) Fix the sensor in accordance with the tightening torque specifications (0.1~0.2Nm).

Compact Cylinders

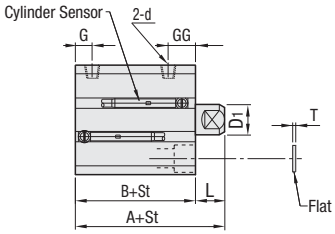
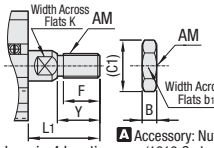
	Male Thread	MSCCA	(Cylinder Sensor, No Bracket)
Configurable	Shape Selectable	MSCCS	Stroke and end shape are selectable in 1mm increments.



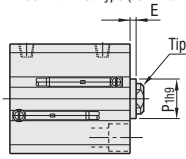
For Cylinder Brackets for the Fixed Stroke Type, refer to **P.1373•1374**

Operation Temperature Range: 5~60°C

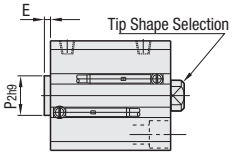


Cylinder Body End

Standard Type (Terminal A)
Rod Tip Female Thread

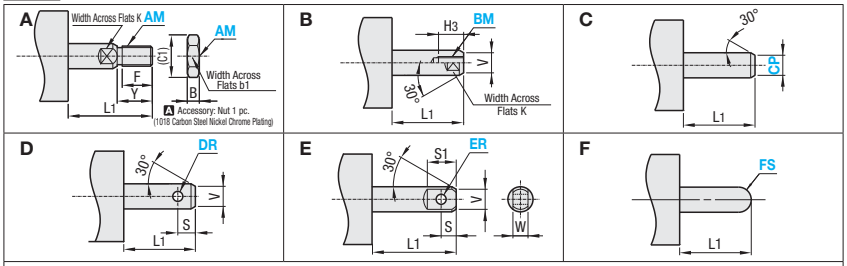


Rod Tip Male Thread



A Accessory: Nut 1 pc. (1018 Carbon Steel Nickel Chrome Plating)

Rod With Pilot Type (Terminal B)



Head With Pilot Type (Terminal C)

For material and surface treatment, refer to the "Compact Cylinders Overview" on **P.1370**
A Accessory: Flat Washer 4 pcs. (1.0330/DC01 Nickel Plating)

Overview of Cylinders with Guides

Overview of Cylinders with Guides

The MISUMI cylinders with guides provide more enhanced lateral load capacity, rigidity and accuracy compared to the compact type cylinders.

- High rigidity
  The integrated two robust guide rods and one cylinder assures high rigidity.
- High accuracy
  The twin guide mechanism ensures excellent non-rotating and locating accuracy.
- Easy installation
  There are three ways of mounting the cylinder body.
- A magnet is provided as standard equipment.
  One piece of magnet is included as a standard equipment as shown in the "Basic Structure of Cylinders with Guides: No. (15)."

Basic Specifications of Cylinders with Guides

Cylinders with Twin Guides: Component List

Number	Name		Material	Surface Treatment	Quantity

		Ø20~50	1.0038/S235JR	Nickel Plating	

Features of Cylinders with Guides

Two types of bearings: sliding type and linear bushing type are available as guide rod bearings.
There are three ways of mounting the cylinder body: mounting it from the front, back, or bottom faces.
The sensors can be installed in four locations: 2 locations on the front face and 2 locations on the bottom face.
Plumbing is possible from two directions: the front and the sides.

Basic Specifications for Cylinders with Twin Guide

[IMPORTANT!] Notes on Cylinder with Guides

*Be sure to read the precautions in [IMPORTANT!] in the "Compact Air Cylinders - Overview" on P.1370

(Cylinders with Guides) ▲CAUTION

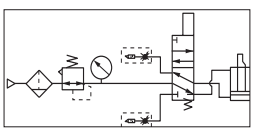
Never touch any moving part while the cylinder is in operation.
It is extremely dangerous because fingers may be caught between moving parts.

(Cylinders with Guides) ▲NOTE

(1) Protect the sliding sections of the piston rods and piston guide rods from being scratched and dented.

(2) Mounting position
Load should be applied in the direction of the piston rod axis or at 90°.

(3) Installing the speed controller
Install the speed controller (meter out: throttle on the exhaust side) to the air pressure outlet side.
The performance of the speed controller affects the operation of the cylinder.
Use a speed controller with low cracking pressure.



(4) Installing conditioning equipment
Cylinder failures are mostly caused by foreign materials in the atmosphere or drains.
Protect the cylinder from trouble by installing an air dryer or air filter upstream.

Recommended System Plumbing Drawing

(5) Space
Provide sufficient space around the equipment to ensure easy handling.

(6) Flushing
Before plumbing, flush the pipe thoroughly to protect it from solids or seal tape fragments.

(7) Ambient Environment
Do not use the cylinder in the following environments:
X An area filled with oil or grease It may cause dust to adhere to the sliding section.
X An area where intense vibrations may occur.
X An area where the equipment may be affected by chemicals.

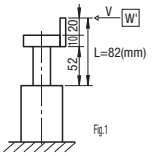
■Selecting a Cylinder for Each Purpose of Use

- As a stopper (without a stopper plate).

(1) Obtain the intersection point of the amount of conveyed material and the conveyance speed from the [Allowed Stopper Capability Chart.]
Ex.): If the amount of conveyed material is 50 kg and the conveyance speed is 10 m/min, the intersection point is at 1.

(2) Select a desired cylinder with an inner diameter above the intersection point in the chart.
Ex.) For Intersection Point 1, cylinders with Ø20 or larger can stop conveyed objects.
Note that the "Allowable Stopper Capability Chart" below refers to 30mm and 25mm strokes for Ø12~Ø25 and Ø32~Ø50, respectively. Conversion is required to use the cylinder with more than the above strokes.
Note that the "Allowable Stopper Capability Chart" below refers to 30mm and 25mm strokes for Ø12~Ø25 and Ø32~Ø50, respectively. Conversion is required to use the cylinder with more than the above strokes.
L: Distance from the top face of the cylinder body to the top of the link bar used in upward motion of the cylinder
= Conversion coefficient+Stroke used (mÇcm)–Stroke in the "Allowable Stopper Capability Chart" (mm)
Ex.) F32–100 mm, conveyance speed=10 m/min. Converted value of maximum amount of conveyed material = 230 (kg)×44/(44+100 (mm)–25 (mm))=85 (kg). Any conveyed material up to 85 (kg) can be stopped.

- As a stopper (with a stopper plate).



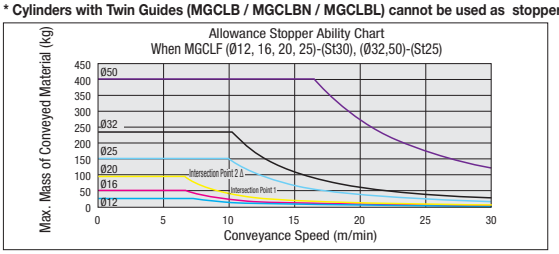


Fig.1

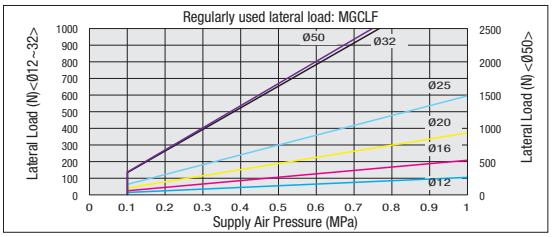
<Conditions>
Mass of Conveyed Material: 50kg
Conveyance Speed: 10m/min
Inner Diameter of Cylinder: Ø25
Stopper Plate: 30mm
L=82mm

(1) Conversion is required if the cylinder is used with more than the strokes in the "Allowable Stopper Capability Chart" below.
Conversion Formula: Converted value of maximum amount of conveyed material = Maximum amount of conveyed material in "Allowable Stopper Capability Chart" x conversion coefficient (K) /L
L: Distance from the top face of the cylinder body to the tip of the stopper plate used in upward motion of the cylinder
=Outer dimension of the plate from the link bar (mm)+Conversion coefficient+Stroke used (mm)
-Stroke in Allowed Stopper Capability Chart (mm)
Ex.) If the outer dimension of the plate is 30 (mm) relative to the link bar in the conditions of Ø32-100 mm and the conveyance speed 10 m/min,
Maximum amount of conveyed material = 230 (kg)×44/(30+44+100 (mm)–25 (mm))=68 (kg)
Any conveyed material up to 68 (kg) can be stopped.

*** Cylinders with Twin Guides (MGCLB / MGCLBN / MGCLBL) cannot be used as stoppers.**

- Factor Table for Conversion (k: Factor)

Tube Inner Dia. (mm)	Ø12	Ø16	Ø20	Ø25	Ø32	Ø50
k	40	42	42	42	44	53



- As a stopper (Verification of allowable lateral load)

To use the cylinder as a stopper, make sure that the cylinder can be lowered with conveyed objects on.

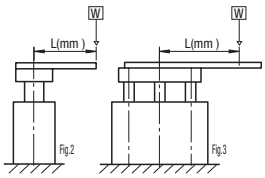
<Calculating the lateral load>
(Example of calculation conditions)
- Supply air pressure: 0.4 MPa - Mass of work: 50 kg - Gravitational acceleration: 9.8 m/sec2
- Friction coefficient of conveyor μ = 0.2

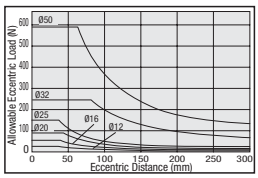
(1) Obtain the lateral load (N).
Lateral load (N) = Mass of work (kg) × Gravitational acceleration (9.8 m/sec2) × Friction coefficient of conveyor (μ)
Ex.) Lateral load (N) = 50(kg) × 9.8 (m/sec^2) × 0.2 = 98 (N)

(2) Obtain the intersection point between "air supply pressure (MPa)" and "lateral load (N)" in the "Normal Lateral Load" chart below.
Tube inner diameter above the intersection point can be used.
(Ex.) The intersection point between the lateral load 98 (N) and supply air pressure 0.4 (MPa) shows that the
applicable tube diameters are Ø20, Ø25, Ø32 and Ø50.

- As a lifter

(1) Obtain the total mass (kg) of the work to be lifted.
(2) If the center of gravity of the work is placed in the center of the cylinder, select a tube inner diameter with the mass of work (kg) approximately 60% or lower of the theoretical thrust (N).
(3) If the center of gravity of the work is eccentrically located from the center of the cylinder (Fig. 2), obtain the intersection point between the eccentric distance (mm) and the allowable eccentric load (N) from the "Allowable Eccentric Load" chart.
Note that the upper limit in the chart accounts for approximately 60% of the theoretical output under a supply pressure of 0.5MPa.
The upper limit in the chart changes with supply pressure.
If the cylinder is to be used with a supply pressure other than 0.5 MPa, the load factor must be within 60% of the theoretical output.
(4) The cylinder ability is 50% if it is used in the direction of eccentricity of the work as shown in Figure 3.
Double the mass of work for selection.





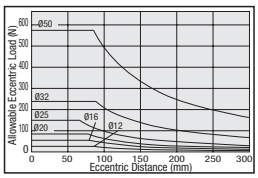


Fig.2 Fig.3

Overview of Rotary Clamp Cylinders

■General Information

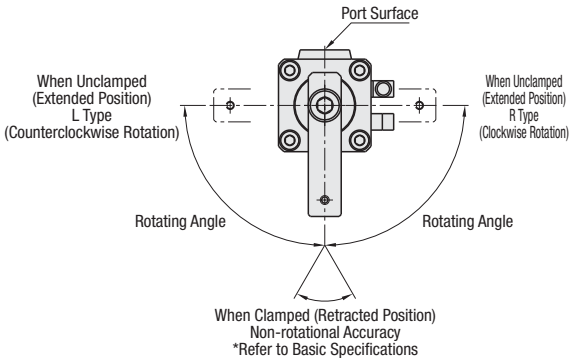
The square and space-saving cylinders have built-in rotary (swing) clamping mechanisms.
They are suited for clamping small workpieces such as electronic parts in space-savings.

■Features

- Space-saving / Square Type

Sensors of all diameters (Contact / No Contact) are mountable to the cylinders.

- High Rigidity



For enhanced wear resistance, the cylinders are equipped with two guide grooves compatible with all diameters.
In addition, each of the guide pins is outfitted with a roller(Ø32~Ø50).

■Basic Specifications of Clamp Cylinders

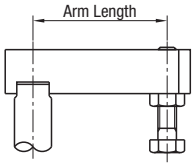
Tube Inner Diameter (mm)		25	32	40	50
Operating Type		Double Acting			
Permissible Fluid		Compressed Air			
Max. Operating Pressure (MPa)		1.0			
Min. Operating Pressure (MPa)		0.2			
Guaranteed Withstand Pressure		1.6			
Operating Temp. Range (°C)		-10 ~ 60 (No Freezing)			
Connection Diameter		M5	Rc1/8		Rc1/4
Piston Speed (mm/s)		50~200			
Cushion Mechanism		With Cushion Rubber			
Lubrication		N/A			
Rotating Angle		90°±10°			
Rotating Direction		Right / Left			
Rod Non-rotating Accuracy (When Clamped): Initial Value		±1°	±0.9°		±0.7°
Pressure Area (mm2)	Instroke Side	377	603	1055	1649
	Outstroke Side	490	804	1256	1963
Service Life		1 Million Times			

■Stroke

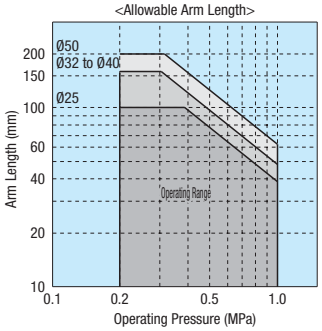
Tube Inner Dia. (mm)	Stroke	Stroke on Rotating Section (mm)	Stroke on Clamping Section (mm)	Rotating Direction
Ø25	31	11	20	Counter-clockwise Rotation Clockwise Rotation
Ø32	35	15	20	
Ø40	35	15	20	
Ø50	70	20	50	

■For Design · Selection

▲NOTE



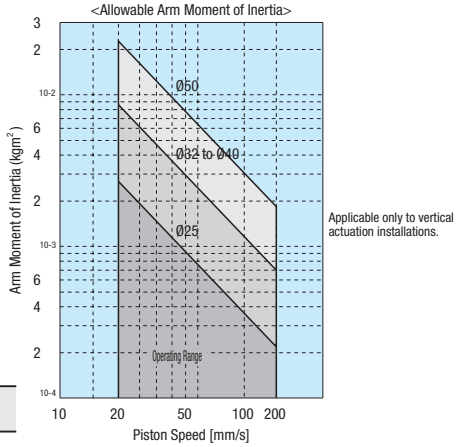
■In operation, the piston rod of this cylinder strokes while rotates (at 90°).
Be sure that the arm mounted onto the tip of the piston rod does not interfere with any external objects while rotating.
Take precautions such as installing a protective cover if the pivoting arm mounted onto the tip of the piston rod poses a hazard to human body.



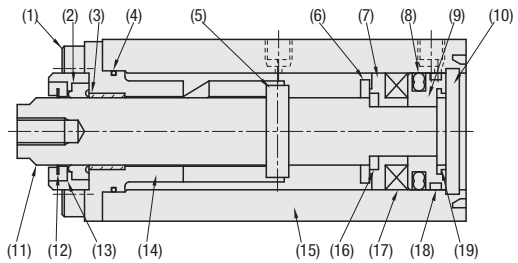
■Clamping Position

Do not clamp while the arm is rotating.
For clamping, allow 3mm or more before the stroke end.

■Arm Length & Operating Pressure

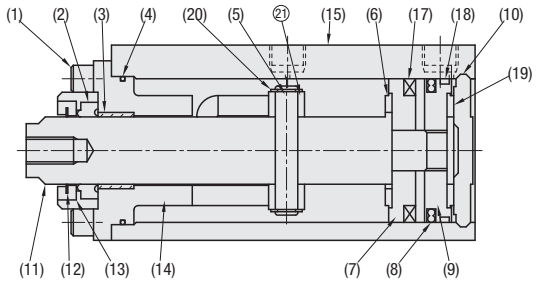


Set the arm length and the operating pressure to be within the ranges below.



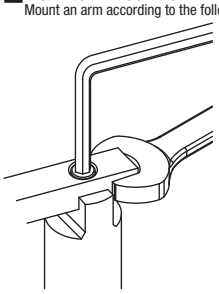
■Arm Inertia Moment & Piston Speed

Set the arm inertia moment and the piston speed to be within the operating range as shown in the applicable Figure.



(Note) The Arm Allowable Inertia Moment Chart applies only to vertical actuation installations.

MKRCA25



MKRCA32 · 40 · 50

Number	Product Name	Material	Number	Product Name	Material

7	Spacer	Ø25: Special Resin Ø32~Ø50: Aluminum Alloy	17	Magnet	Plastic
			18	Wearing	Acetal Resin
8	Piston Gasket	Nitrile Rubber	19	Cushion Rubber	Urethane Rubber
9	Piston	Aluminum Alloy	20	E Type Retaining Ring	Steel
10	Cover	Ø25: Stainless Steel Ø32~Ø50: Aluminum Alloy	21	Roller	Steel

How to Amount an Arm.

Mount an arm according to the following steps as shown below.

Tighten the screw with a hex wrench.

Fix the arm with a vise/spanner.

Draw the rotating portion out of the piston rod. Make sure that the piston rod rotates before fixing the arm. If the arm is fixed at any other location, overload might damage the internal components.

Piston Speed

Adjust the speed to make sure that the arm inertia moment and the piston speed are with in the operating ranges as shown in the applicable Figure.

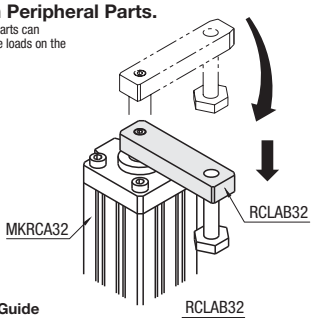
* The values of the maximum load current 20mA is for 25°C 20mA less when used in ambient temp. 25°C or higher. (5~10mA when 60°C)

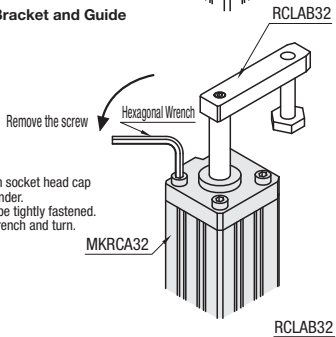
Selection Example A

<Requirements>
- Required Clamping Force: 500N
- Operating Pressure: 0.5Mpa
- Piston Speed: 100mm/s
- Arm Length: 80mm
- Arm Inertia Moment: 2.0x10-3kg/m



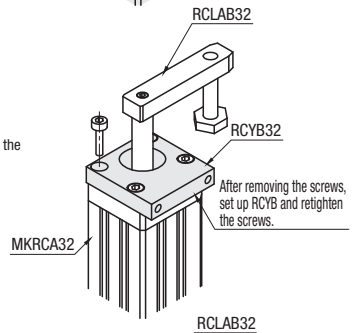
1. Calculate a required pressure area.
   Required Pressure Area (mm^2)= Required Clamping Force (N) / Operating Pressure (MPa)= 500/0.5=1000 (mm^2).
2. Select a cylinder size based on the list and the pressure area (instroke side).
   Ø40 Pressure Area: 1055 (mm^2) > Required Pressure Area 1000(mm^2)
3. Make sure that the arm length and the operating pressure are within the operating ranges as shown in the applicable Figure.
   Operating Pressure 0.5MPa-Arm Length 80mm: Within the Operating Range
4. Make scue that the arm inertia moment and the piston speed are within the operating ranges as shown in the applicable Figure.
   Lever Inertia Moment 2.0x10-3kg/m-Piston Speed 100mm/s: Within the Operating Ranges

How to Combine with Peripheral Parts.



Combined use of MISUMI's peripheral parts can stabilize a clamping position and reduce loads on the rod.

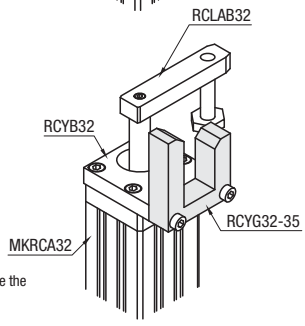
- Basic Actions



The rod strokes down while rotating. After the rotational stroke, the arm clamp strokes downward.

- Assembling Bracket and Guide

Remove the hexagon socket head cap screws from the cylinder.
Ⓨ The screws may be tightly fastened. Firmly insert a wrench and turn.



After removing the screws, set up the guide and retighten the screws.
Ⓨ Be careful not to disassemble the cylinder.

Comply with the following tightening torques.

Tightening Torque

Tube Dia.	Tightening Torque
25~40	4.3~5.3Nm
50	10.8~13.2 Nm

Mount the guide onto the side of the bracket.
Ⓨ Note the rotating direction.

Clamping position stabilizes because the guide draws the arm in.

[IMPORTANT!]Precautions for Handling Rotary Clamp Cylinders

*Be sure to read the precautions in [IMPORTANT!] in the "Compact Air Cylinders - Overview" on **P.1370**

(Rotary Clamp Cylinders)▲CAUTION

Never touch any moving part while the cylinder is in operation.
It is extremely dangerous because fingers may be caught between moving parts.

(Rotary Clamp Cylinders)▲NOTE

(1) Protect the sliding sections of the piston rods and piston guide rods from being scratched and dented.
(2) Mounting position
Use the cylinders in vertical.
(3) Installing the speed controller
Install the speed controller (meter out: throttle on the exhaust side) to the air pressure outlet side).
The performance of the speed controller affects the operation of the cylinder.
Use a speed controller with low cracking pressure.
(4) Installing conditioning equipment
Cylinder failures are mostly caused by foreign materials in the atmosphere or drains.
Protect the cylinder from trouble by installing an air dryer or air filter upstream.
(5) Space
Provide sufficient space around the equipment to ensure easy handling.
(6) Flushing
Before plumbing, flush the pipe thoroughly to protect it from solids or seal tape fragments.
(7) Ambient Environment
Do not use the cylinder in the following environments:
An area filled with oil or grease It may cause dust to adhere to the sliding section.
An area where intense vibrations may occur.
An area where the equipment may be affected by chemicals.

Overview of Clamp Cylinders

Overview of Clamp Cylinders

MISUMI's clamp cylinders are equipped with crevices having concaved knuckles. They are specialized clamping cylinders.

- **Quick Delivery**
  Quick delivery is available for the three off-the-shelf strokes.
- **Light Weight**
  The optimized shape of the cover has trimmed and streamlined the products.
- **Safety**
  The compact cylinders each houses a speed controller, a cushion and a needle. They materialize both easy adjustments and increased safety thanks to the needle projecting in the shortest possible length.

Basic Structure of Clamp Cylinder

Number	Name	Material	Surface Treatment	Number	Name	Material	Surface Treatment
1	Piston Rod	Steel	Chrome Plating	14	Piston*	Aluminum Alloy Die Casting

Cushion Characteristic Chart

Tube Inner Dia. (mm)	Effective Cushion Length(mm)	Allowable Energy (J)	
		w/ Cushion	w/o Cushion
Ø40	13.5	5.14	0.137
Ø50		6.41	0.137
Ø63		11.37	0.205

- Cushion

The cushion mechanism is provided in order to prevent the piston from hitting the cover at the stroke end, by absorbing kinetic energy owned by the piston through air compressibility.Thus the cushion does not actuate the piston at low velocity near the stroke end. The above chart refers to kinetic energy that can be absorbed by the cushion. Consider using separate buffer equipment if the kinetic energy exceeds these values, or if bounces from air compressibility should be avoided.

Kinetic Energy (J)= 1/2xMass (kg) x={Velocity (m/s)}^{2}

Cylinder Mass

(Unit: kg)

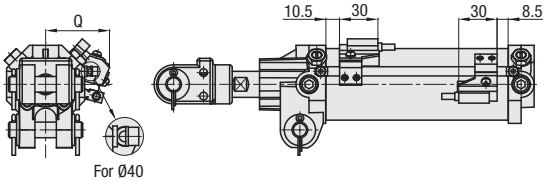
Current consumption				DC24V 10mA or less
Internal Voltage Drop	3V or less		4V or less	0.5V or less
Lamp	LED (Lights when ON)			
Leakage Current	0mA		1mA or less	10μA or less
	1m(Oil Resistant Vynil Cab Tyer Cord 2 Conductors 0.2mm^2)			
Maximum Impact	294m/s^2		980m/s^2	
Insulation Resistance	20MΩ or more at 500V, with a High Resistance Value Meter			
Dielectric Strength Voltage	No anomaly to be recognized after AC1000V applied for 1 minute.			
Ambient Temperature	-10~+60°C			
Protective Structure	IECStandards IP67/JIS C0920(Water-resistant)/Oil-proof			
Mass	1m:20g 3m:50g			
Circuit	Brown line [+] Blue line [-]		Brown line [+] Blue line [-]	Brown Wire [Power Supply+] Black line [Output] Blue line [Power Supply -]

* The values of the maximum load current 20mA is for 25°C 20mA less when used in ambient temp. 25°C or higher. (5~10mA when 60°C)

How to Mount



(1)Pass a hexagon split head cap screw through a spring washer and a flat washer before setting up a holder.
(2)Fit a mounting bracket in the tie rod of a cylinder, and then tightenthe hexagon split head cap screw with a tightening torque of 0.5~0.7N・m.
(3)Finally, tighten the hexagon socket head cap screws with a tightening torque of 1.7~2.0N・m.

Tuning

(1)Fine-tuning
Loosen the hexagon split head cap screw and move only the sensor body before tightening at torque of 0.5~0.7N・m.
(2)Coarse-tuning
Loosen the hexagon split head cap screw and the set screws, and move the cylinder to a predetermined position before tightening at torque of 0.5~0.7N・m. Finally, tighten the set screws at torque of 1.7~2.0N・m.

Dimensions for Auto Switch Mounting

For details of auto switches, refer to **P.1383**

Tube Inner Dia.	Q
Ø40	46
Ø50	50
Ø63	56

Note the rotating direction in mounting a tie rod.

[IMPORTANT!] Precautions

Danger: A clearly dangerous state. Unless avoided, death or serious injuries might be caused.
CAUTION: A potentially dangerous state depending on usage. Unless avoided, death or injuries might be caused .
NOTE: A potentially dangerous state depending on usage. Unless avoided, low-grade to moderate injuries might be caused, or property might be damaged .

*Be sure to read the precautions in [IMPORTANT!] in the "Compact Air Cylinders - Overview" on **P.1370**

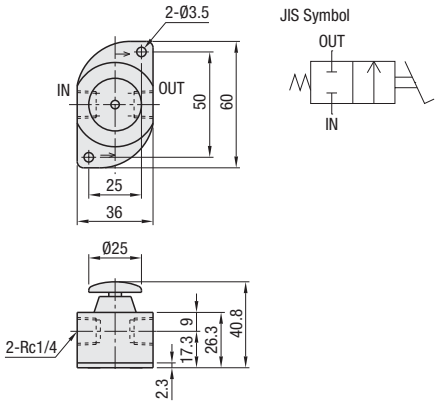
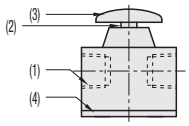
Step Switch Valve

-2-Port Type · 3-Port, 4-Port Type-



CAD Data

■2-Port Type



RoHS

MSFF (No Lock Mechanism)

■Features

-Switching valve to switch a flow of compressed air on and off. Air starts flowing by pressing the pedal, and the flow stops by releasing the pedal.
-Mountable either vertically or horizontally. Manual operation is also possible.

■Parts List

Part No.	Name	M Material	S Surface Treatment

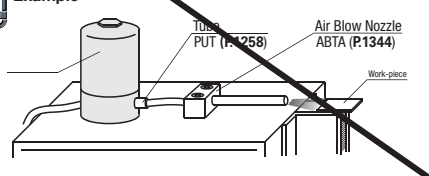
	C(200VAC)	43/37			

Flow Rate Properties (Air)

Flow Rate Properties (Water)



Features

-Compact 2-port solenoid valves for both air and water.
-Direct operation enables use under low pressure as well.

Precautions for Use

- Operating Environment
  - Use the solenoid valves at temperatures between 5 and 40 °C. Avoid any use and storage in a corrosive atmosphere.
  - Keep the solenoid valves away from strong impacts and vibrations. They may be closed from being open, and vice versa.
- Fluid Quality
  - When compressed air is used as a fluid, removes drainage and dust through an air filter.
  - When the fluid is water, remove grit and rust inside a pipe through a filter. Do not run poor quality water.
- Installation
  - Install the Solenoid Valves horizontally with the coil part upward.
  - The body might be damaged if the M4 screws are excessively tightened up.
- Plumbing
  - Before plumbing, cleanse and flush thoroughly the valves to remove cutting chips, dust and cutting oil.
  - Mate sure that plumbing will not cause a strong turbulence on the IN side.
- Maintenance
  - Do not disassemble the solenoid valves.

■Electromagnetic Valve Precautions for Use

•Operating Environment
- Do not use this product when it is exposed to any corrosive gases, chemicals, water or water vapor.
- Note that drain sludge will freeze when operating under temperature of 5°C or lower.
- Protect it with covers when it is used in water-dropping or oil-dropping or dusty places.
- Install silencers etc. on the exhaust port to protect from powder dust intrusions.

•Air Quality
- Use air as fluid.
- Attach air filter to circuit for compressed air in order to remove moisture and dusts from circuit.
  Drain the air filter regularly.

•Installation
- The valve must be installed by mounting the body and must not be supported by the plumbing.
- Provide space for attaching, detaching, wiring, plumbing around the electromagnetic valve.
- Although this can be used without lubrication maintenance, use turbine oil "ISO VG32" if any lubricant is to be added.
- After installation, do not wash with water or solvents, or paint it.

•Plumbing
- Before plumbing, make sure to clean the inside of the pipes. Brush and remove saw chips, scrap, and oil, etc.
- Note that when twisting pipes and joints together, do not let cutting chips or sealing tape inside.
  When using sealing tape, please leave 1.5~2 threads unwrapped from the tip.

•Maintenance
- Before the maintenance, be sure that you have turned off the power, stopped the compressed air supply, and no residual pressure left.
- Be sure to unlock the manual button of electromagnetic valve before trial operation.
- Do not disassemble the electromagnetic valve when trouble occurs.

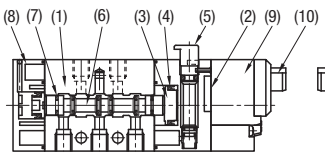
■Basic Specifications of Solenoid Valves

Type	Direct Plumbing Type	Base Plumbing Type
Valve Type	Pilot Type, 5 Port Valves	
Number of Position	4	
Number of Ports	2	
Media Fluid	Air	
Operating Pressure (MPa)	0.15~0.7	
Pressure Resistance (MPa)	1	
Effective Sectional Area (mm²)	3.8	
Response Time (ms)	30	
Operating Temperature Range (°C)	5~50	
Rated Voltage	DC24V,AC100V,AC200V	
Power Consumption	1.6/2.5VA (AC100V/AC200V), 1.2W (DC)	
Allowable Voltage Range	±10%	
Insulation Class	B Type	
Pipe Connection Bore Dia.	M5x0.8	



Check for the following when operating condition is poor..
- If the operating pressure is 0.1~0.7MPa.
  (Not operational at less than 0.1MPa.)
- If operated within the range of rated voltage.

■Features
- Direct plumbing type can be directly connected to the pipes.
- Base plumbing type must be attached on the base unit MSSYB for connection.
  Refer to the base unit MSSYB on the right page if purchase is required.

For orders larger than indicated quantity, please request a quotation.

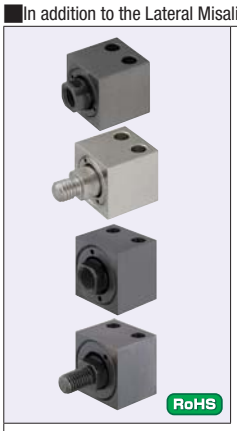
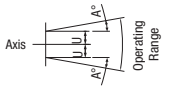
■Comparison with Conventional Type





■Features
1. The distance between cylinder and operated object can be made short.
2. Large allowable eccentricity absorbs misalignment.
3. For threaded (for tapped cylinder), a thread on the operated object is larger than that on the cylinder to stabilize the strength. (N-Pitch part)

Days to Ship

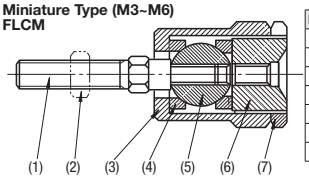
-FLCM · FLCT (Products within Price List*): **6 Days**

-FLCF · FLCL · FLCT: **8 Days** — Express A: 3,00 EUR/piece P.88

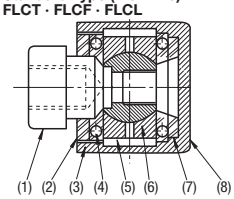
A Express Charge of 8,10 EUR for 3 or more identical pieces.



General Information

- The tip inside the connector is spherical, and absorption of misalignment is possible. Shaft alignment and parallelism setting in cylinder mounting can thus be achieved merely by visual estimation.
- Due to integration of connector and holder, selecting is easy, and at the same time, number of parts is reduced.
- For Miniature Type (FLCM), screws with sizes M3 to M6 are provided for small cylinders.
- For Standard Type, three mounting variations are offered: screw-in type (FLCT), Flange Mounting Type (FLCF), and Bracket Mounting Type (FLCL).

Components



Thread Diameter		Type (How to Mount)
Miniature Type	M3~M6	FLCM (Screw-in)
Standard Type	M8~M26	FLCT (Screw-in), FLCF (Flange Mounting), FLCL (Bracket Mounting)

Miniature Type (M3~M6)
FLCM

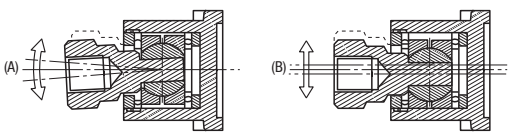
Standard Type (M8~M26)
FLCT · FLCF · FLCL

Part No.	Part Name	Main Body
(1)	Rod Tip Socket	1.0038/1.1191/C45E (M26 is S45C)
(2)	Cap	1.3505/100Cr6
(3)	Rubber Steel Ball Retainer Plates	Nitrile Rubber
(4)	Steel Ball	-
(5)	Ball Holder	1.3505/100Cr6
(6)	Ball Joiner	1.1191/C45E
(7)	Steel Ball Retainer	1.3505/100Cr6
(8)	Case	EN-JL 1030/EN-GJL-200

Features

- Misalignment is absorbed in three-dimensions through the ball joint swing A and misalignment motion B(Refer to Figure (1)).
- FLCT, FLCF and FLCL have a built-in bearing, which reduces lateral load significantly and absorbs misalignment(Refer to Figure (2)).

Figure (1)



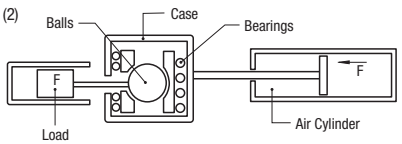


Figure (2)

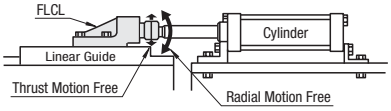

Effects

The following benefits are obtained by installing on the cylinder rod.

- Prevents one end of cylinder rod from getting worn out. Prevents breakage of the gasket.
- Enables operation at low pressure - Prevents thrust decline.

Example

Precautions for Use

- Although the screw is rotatable, the connector cannot be used as a rotating joint.
- Non-reusable after disassembled.
- Grease filled to eliminate oiling.
- The applied load shown is in static condition. Note that the applied load value for repeated impact load will be lower than shown.
