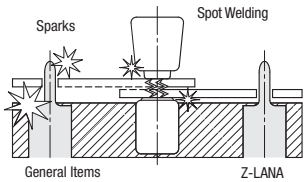
Type D						
Z-LANA10	-	P7.8	-	B6	-	L10
Z-LATD10	-	P11.5	-	B20		

Example



Best suited for locating pins in spot welding.
Pins prevent current from causing sparks during welding.
Prevents pin wear from sparks and reduces the causes for positioning problems and work piece appearance degradations.

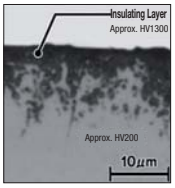
Alumina Coated Pin (Material: KCF) Cross-Section Diagram



Insulating Layer with depth of 5~10μm (approx. HV1300) is formed.
Alumina coating excels in abrasion resistance and insulation compared to metal.
*Contacts with pointed objects may cause conduction.

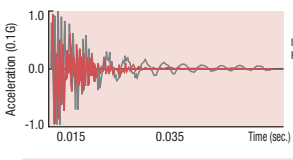
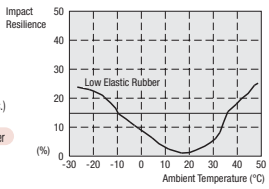
■Material with Excellent Shock Absorption

·Low Elastic Rubber

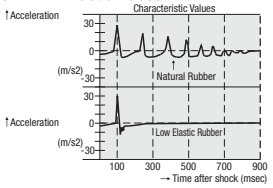
It is used as cushioning material pallet damper, conveyor machine, precision instrument etc, because of its good elongation and shock absorption. Also it is used as vibration absorption materials of various precision instruments because of its excellent vibration absorption.



■Impact Resilience Variation by Temperature of Low Elastic Rubber



■Shock Absorption of Low Elastic Rubber



■Properties

Item	Unit	Low Elastic Rubber

By machining oval shape on the moving part, fine adjustment of positioning is made possible by turning the adjusting.
Adjusting pins have no function of fixing.
AJP (Retaining Ring Type) cannot fix the pin, but AJPB (Bolt Type) can fix it by using double nuts.

Screw Jacks / Leveling Screws

-Standard Type · Large Holes for Adjustment with Wrench Flats-

■Notes on Clamping Screws

This product is used not to rotate face balls but to clamp works.
(The face balls do not necessarily rotate depending on each caulking conditions of face balls.)
For Angle Type, a sphere of its hemisphere appears on the face, instead of a flat plane by its rotation. In such a case, return its position using adhesive tape and magnet. Otherwise use Non-reverse Type to avoid rotations.

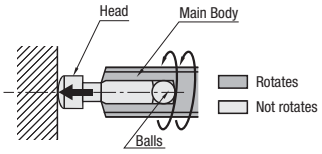
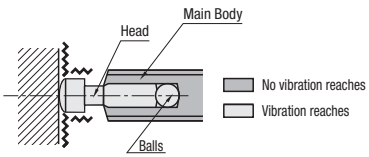
Example



■Features: Although the screw rotates, the screw head contacting the work does not rotate, thus the head will not damage the work.



■Features: Screws are less likely to loosen due to intervention of a ball absorbing the work vibration.

Notes on Clamping Screws

This product is used not to rotate face balls but to clamp works.
(The face balls do not necessarily rotate depending on each caulking conditions of face balls.)
For Angle Type, a sphere of its hemisphere appears on the face, instead of a flat plane by its rotation. In such a case, return its position using adhesive tape and magnet. Otherwise use Non-reverse Type to avoid rotations.

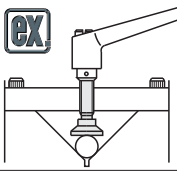
Screws and pads are not assembled when shipped.



■Features

- Useable to tighten or position the work or as a stopper.
- Clamping Screws can be made easily by assembling with a lever or a knob.
- Pad is made of plastic and doesn't hurt work. It is effective when the work surface is uneven or tilted.

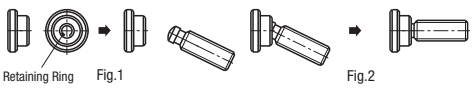
SGTPP is SGTP attached with a polyacetal cap.
Screws and pads are not assembled when shipped.

Example



•How to assemble Grub Screw and Thrust Pad

Insert a tilted grub screw to the open side of the retaining ring set in the thrust pad as shown in Fig.1. Pull the grub screw up to fit it into the pad as shown in Fig.2.
Assembleable by hand.
Do not beat with hammers, etc. Do not assemble forcibly or the retaining ring may be broken.

Eccentricity in the counterbored hole position makes fine adjustments of guiding position possible.
Suitable for guiding works which are not accurate in finished dimensions, such as castings.

Plunger Overview

■Ball Plungers

As the tip ball strokes, it can be used for tentative locating the work or indexing.

	Economy	Standard	Roller	Load Adjustable	Plastic	Fine Thread	Short	Long
Type								
Features	By omitting the hardening on the plunger, dramatically competitive pricing is achieved	General Ball Plunger	As the ball rotates smoothly, it prevents the mating parts from being damaged.	By compressing the inner spring, the load can be adjusted.	Ball Plunger with the plastic body.	Fine threads provide an easy fine adjustment of strokes.	As the overall length is shorter than conventional ball plungers by 30%, it can be mounted to a thin plate.	As the overall length is long, it can be fixed with nuts. Length Selectable Type is also available.
Page	P.1469	P.1469	P.1470	P.1470	P.1471	P.1471	P.1471	P.1472·1473

Some products' Hexagon Holes are colored with markers for identifying products.

■Roller Plungers

As the tip bearing stroke is longer than that of Ball Plungers, it is suitable for positioning of sliding works.

	Bolt	Flanged	Press-Fit	Press-Fit Rollers
Type				
Features	As the Plunger bodies are bolt shape, easy positioning of the tip is possible.	Flanges keep constant heights from the plate.	A Ball Plunger which has no threads on the outer diameter. It keeps constant heights from the plate.	A Press-Fit Plunger with a ball which rotates smoothly.
Page	P.1474	P.1474	P.1475	P.1475

	Bolt	Mount
Type		
Features	Can be mounted to a plate with Female Thread Holes.	Can be mounted to flat locations. The position can be adjusted with long holes.
Page	P.1476	P.1476

■Spring Plungers

The head is pin shaped, and is possible to use for pushing the work out, or as a stopper.

	Standard	Long Sleeve	Short	Micro	Micro Spring Pin	Female Thread Tip	Hexagon Socket Tip	Hexagon Nose	Flat Tip	Flanged
Type										
Features	General Spring Plungers.	As a long pin-guide is used, it is strong enough to bear the diagonal load.	A Spring Plunger with both short length and stroke.	The Small Diameter Type with Ø1.5~5 in outer dimensions. It contributes to space-saving.	It has a resin tip, thus suitable for holding the base.	Stop pins can be mounted on the tip.	As a hexagonal hole is provided on the tip, it can be mounted using a wrench.	As the pin is hexagonal shape, users can mount it with a spanner.	Suitable for working with its flat tip on the work.	Flanges keep constant heights from the plate.
Page	P.1477	P.1479	P.1480	P.1481	P.1482	P.1482	P.1483	P.1483	P.1484	P.1484

Some products' Hexagon Holes are colored with markers for identifying products.

■Indexing Plungers

The pin can be push in / out manually by using a knob or lever. It is suitable for tentative work location.

	Standard	Flanged	Tip Female Thread	Short Threads	Compact	Long	With Precision Pilot	Press-fitted
Type								
Features	Most general Indexing Plungers	Fine position adjustment is possible for the flanges.	The attachment can be mounted on the tip.	Has shorter threads than those of the Standard Type and saves space.	As the overall length is 2/3 for conventional products, it can be used in the space-saving.	As this Type has longer mounting threads than those of the Standard Type, it can be mounted to a thick plate.	The combination of pilots and the inner structure keeps high repeatability.	Can be mounted by press-fit, not with screws.
Page	P.1485	P.1486	P.1486	P.1487	P.1488	P.1488	P.1489	P.1489

■Ball Block Pins

The pins and their side balls can smoothly locate and fix the works.

	Knob-less	Lever Type	Push Type	Plate Mount Type
Type				
Features	The most suitable knob for each purpose can be mounted.	Can be used in space-savings.	A Push-Type can be operated by one finger.	Can be used in the location without space for pulling the knob.
Page	P.1490	P.1491	P.1492	P.1492

	Spring	Push Type
Type		
Features	The spring moves the ball. Economical products.	Manual operation is possible for taking-in / out the ball.
Page	P.1494	P.1494

On Standard Type,Thread-lock treatment is not provided on M2, M3 and M4.
The Thread Locking Coating fixes parts using a microencapsulated anaerobic adhesive. Once parts have been loosened, adhesion is lost, use an anaerobic adhesive when reassembling.
The thread-lock is most effective by leaving the parts for 72 hours or more in 25°C. Be noted if the parts are left for short period of time and in low temperature, the thread-lock will be less-effective.

Example

Features

-The tip part is rolling mechanism and long stroke, it is suitable for the position setting of sliding work-pieces or indexing for rotating tables.

-The stroke is longer (5~10mm) than that of ball plungers (0.2~2.5mm).

Spring Plungers

Thread-lock treatment is not provided on M3 and M4.

Thread-lock Treatment

To fix the position of the spring plunger use a micro-encapsulated anaerobic adhesive. Once parts have been loosened, adhesion is lost, use an anaerobic adhesive when reassembling.

The thread-lock is most effective by leaving the parts for 72 hours or more in 25°C. Be noted if the parts are left for short period of time and in low temperature, the thread-lock will be less-effective.

The Thread Locking Coating fixes parts using a microencapsulated anaerobic adhesive. Once parts have been loosened, adhesion is lost, use an anaerobic adhesive when reassembling.

The thread-lock is most effective by leaving the parts for 72 hours or more in 25°C. Be noted if the parts are left for short period of time and in low temperature, the thread-lock will be less-effective.

The Thread Locking Coating fixes parts using a microencapsulated anaerobic adhesive. Once parts have been loosened, adhesion is lost, use an anaerobic adhesive when reassembling.

The thread-lock is most effective by leaving the parts for 72 hours or more in 25°C. Be noted if the parts are left for short period of time and in low temperature, the thread-lock will be less-effective.

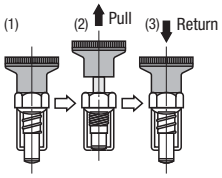
Features of the Return Type and Rest Position Type

•Return Type

(1) In normal condition, the tip protrudes.
(2) When pulling up the knob, the tip retracts.
(3) When releasing the knob, the internal spring resets the plunger to the protruding position.



•Rest Position Type

(1) In normal condition, the tip protrudes.
(2) When pulling up the knob, the tip retracts.
(3)Pulling the knob and turning it by 90° locks the plunger with the tip retracted.
(4)To unlock, pull the knob slightly and turn it by 90°.
(5) When releasing the knob, the internal spring resets the plunger to the protruding position.

Example

Clamps a work piece from the side by spring force.

Toggle Clamps Overview

MISUMI toggle clamps are offered in a wide variety of shapes such as Hold-down Types (Vertical / Horizontal Handle) and Side-push Types. 28 new products are added, and conventional products are reduced in price following the reduction in 2009 (up to 20%). Suitable for inspection, welding, assembly and machining jigs.

Selection Table

For { - Clamping Force (Force to Hold Down) / - Distance to the work piece (Stroke, Arm Height and length) / - Material (Steel, Stainless Steel) } refer to the information below and see each product page.

Shape		Appearance	When Clamped (Solid Line) / When Unclamped (Dotted Line)	Features	Mount Type *
Hold Down Horizontal Handle	Standard Handle			- Low Profile Design - Selectable from flange, straight and side mount types according to the installation space and the shape.	Flanged Straight Side
	Standard Handle High Arm Types			- High Arm Types - Arm positions higher than those of conventional products eliminate the need for raising the clamps for high work positions.	Flanged
	Long Handle			- Longer handles prevent fingers from being caught, thus resulting in improved operability.	Flanged
Push-pull Type 360° Mountable				- Handles are mountable at any desired positions and angles.	- { Mounted with a bracket held by a hex nut and a threaded sleeve. }
Horizontal Handle				- Small clamps For light-duty operations. - Horizontally-moving handles are effective if there is an obstacle above.	Flanged
Hold Down Vertical Handle	Stan-dard			- Most widely used in inspection and welding jigs for automotive and aerospace industries. - 90°or more arm open-close angle* secures enough space to remove work pieces when unclamped. * Except MC04-6 series. - Selectable from flange and straight types according to the installation space and the shape.	Flanged Straight
	High Arm Types			- High Arm Types - Arm positions higher than those of conventional products eliminate the need for raising the clamps for high work positions.	Flanged
	Two-pronged Arm			- Two clamping positions at a time enhances operability and saves space.	Flanged
	Long Arm			- Long Arm Types - Suitable when clamping A work piece from A distance.	Flanged Straight
Side Push Types	Stan-dard			- Suitable when clamping a work piece from the side. - Available in a wide range of clamping forces, strokes and mounting types including compact and lightweight types.	Flanged
	Smooth Stroke Smooth			- Suitable when clamping a work piece from the side. - Built-in Oil Free Bushing requires no lubrication, and enables smooth strokes.	Flanged
Welded Types				- Assembly-required clamps. - Suitable for various purposes since arms and handles can be welded in desired angles.	Flanged Straight

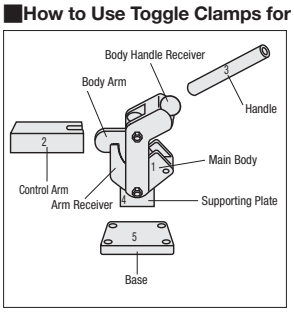
How to Use Toggle Clamps for Various Purposes



Toggle Clamps are composed of 4 parts shown to the left; handle, body, base and arm.
(1) Determine the mounting position of the body.
(2) Determine the length of the control arm, then connect to the body arm by welding.
(3) Given space from the jig for clamp mounting, determine the height of the handle, and weld the handle and the body handle receiver.
(4) Determine the angle between the body and the supporting plate, and weld them together.
(5) Determine how to mount a clamp on to the jig. If the base is used, weld the base and the supporting plate together.
Assemble a toggle clamp as described above.
- Toggle Clamps can be flexibly assembled depending on different working situations, thus leading to A wide range of applications currently in use.
- Heat treatment (hardness 60HRC) ensures abrasion-resistant assembly of the pin constituting the supporting point, and the surrounding bushing. The clamps are best for jigs that require frequent use or accuracy.

Add. Spec. Metal Heads for Clamps

CAD Data

Features: Bolts for toggle clamps. In addition to the standard type, we offer a variety of types of bolts that are highly capable of resisting abrasion, or buffering impacts from a work piece. M5 bolts as well as M6 and M8 bolts of intermediate length are newly added to NBR head types.

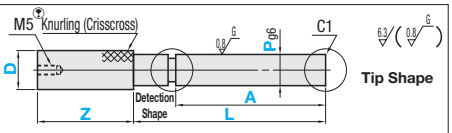
M4	MH	Adds M4 tapped hole for the wire chain on the handle. When combined with KH, the tapped hole is on a flat surface. ⊗Combination with CH is not available.	3,00
Additional Surface Treatment (Black Oxide)	STC	Adds Black Oxide Surface Treatment Available for pins only.	2,00
Chain Alteration	CH	Loss-proof chain (length 600 mm) is attached to the gauge body. For chains only, refer to P.1568 Added on a flat surface when combined with KH. ⊗Combination with MH is not available.	5,00

Features: Visually verifies accuracy of work location by checking if bushing end is within the groove or slit.

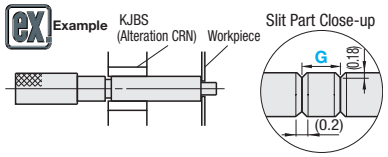
With Groove

RoHS

Material	Hardness	Type	Detected Shapes	Tip Shape
1.1191/C45E	-	KJPB	S1 S3 S5	N(Standard) D(Stepped) C(Hollow)
1.1191/C45E	45HRC~	KJPBH		



Example KJBS (Alteration CRN) Workpiece



Tip shapes N and D have centering holes at tips. Tip shape D may have a relief groove approx. 1mm in width (0.2mm in depth) at joint of each step.

When handle length (Z dimension) is 0, pin part has M5 tapped. M4 when P dimension is 8 and handle length is 0.

Detector Shape

S1: Groove
S3: 3 Slits
S5: 5 Slits

Tip Shape

N: Standard
D: Stepped
C: Hollow

* When the alteration TN is used, the tolerance is H7.

Contact Probes
-Overview-

■Overview
Contact Probes can be used in connection tests of all electronic circuits.

■How to Use
Press-fit appropriate receptacles in the mating holes drilled in a bakelite or other plastic plate. If the mating holes are loose, use appropriate adhesives (Locktite, etc.) to fill the gap. After press fitting, wire the receptacles. If wires need to be soldered, do not solder past the stopper in the receptacle. After wiring insert Contact Probes. Pressing plungerstoo hard cause damage on the tip and internals of Contact Probes and result in performance decrease.
It is recommended to make several tests under operating environment before actual use.

■Major Types and Typical Uses

Type	Typical Uses
Contact Probes	Suitable for extensive use in testing printed circuit boards, mounted circuit boards, semiconductors · in-circuit, harnesses, etc.
Double Tipped Probes	Suitable for small spaces as receptacles are built-in.
Turn Probes	The plunger turns with stroke to destroy flux and oxide film. Successful use proved in open / short circuit tests of printed circuit boards.
Prove Assembly	Contact probe of one-piece construction formed by one continuous pin from the tip to the end. Permits stable electric conduction, regardless of the stroke length.

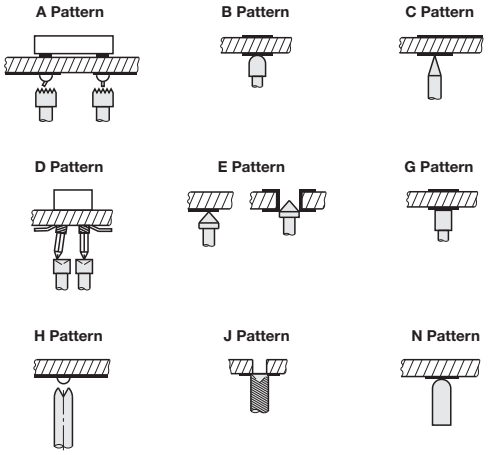
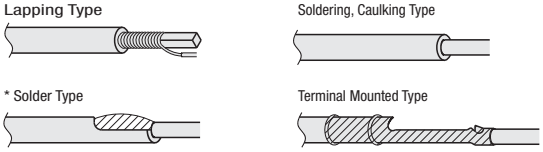
■Contact Probe Tip Shapes and Patterns



■Receptacle End Shapes



*Solder Type (C Type and NR68S) have a bulged at the exterior surface of the end due to its manufacturing method. That will present no problem as long as the probe is pushed in firmly, but the O.D. adjustments are allowed as needed.

■General Environmental Conditions
- Operation Temperature 10 ~ 40°C, Humidity 30% or Less
- Operating Atmosphere: Free of dust, corrosive gases and oil components etc., where the contact probe may not be contaminated.

■Stroke Conditions
- Apply load in the axial direction only. Do not apply lateral load.
- Stroking over the specified stroke (2/3 of full stroke) will significantly decrease the lifetime of the Contact Probe.
- Stroking over 60 times per min (constant velocity) may decrease the lifetime of the Contact Probe.

■Electrical Current Application Conditions
- Apply current only after contact is made and the part is seated.
- Applying current while stroking, with irregular strokes, or in open state where the contact subject is not contacted will severely decrease the lifetime of Contact Probes.
- Allowable current shown in the catalog may not be sufficient due to contact probe deterioration. Consider actual applications carefully in the designing stage.

■Voltage Application Conditions
- Apply current only after contact is made and the part is seated.
- Do not energize in open state where the contact subject is not touched. Discharge before contacting will result in damage to Contact Probes.
- When applying high voltage to a contact probe, be sure to satisfy Current Application Conditions and Voltage Application Conditions, and be careful of instantaneous large current including discharge.

■Allowable Current
- Allowable current provided in the catalog is the maximum continuous current for 1 min, under the following conditions, General Environment, Stroke, Current Application, and Voltage Application Conditions.

■Resistance
- Resistance value provided in the catalog is the representative value at rest with 2/3 of full stroke when 10mA current flows under the following conditions, General Environment, Stroke, Current Application, and Voltage Application Conditions.
- Large current may cause deterioration of contact and inner parts, resulting in resistance value increase.
- Stroke cycles repetition may cause deterioration of contact and inner parts, resulting in an increase of resistance value.

■Replacement Cycle (Reference)
- Replacement Cycle provided in the catalog is the typical value when a probe works properly at 10mA current under the following conditions, General Environment, Stroke, Current Application, and Voltage Application Conditions.
- Replacement cycle can vary depending on operating environment and conditions including resistance increase and spring pressure decrease. Replace Contact Probes considering actual applications.

■Spring Pressure
- Spring pressure decreases if temperature of contact probe is higher than 80°C.
- Spring pressure may decrease due to heat generation of a contact probe at larger current.

■Mounting Hole for Press-Fitting (Reference)
- The values provided are for reference. Appropriate dimensions vary depending on material and thickness of resin plate. Please take the dimensions of receptacle press fit part as a guide for your design.

Contact Probes Assembly Service

- Assembly Service

- Holes are machined on each plastic plate, and Probes are installed according to customer supplied drawings.

- How to order assembly service

Quotation

(1) Please use Contact Probe Installation and Machining Service RFQ (inserted in the catalog as a separate sheet) to specify plastic plate standards (material, thickness and width/length dimensions), Contact Probes and Receptacles **(P.1573 ~ 1585)**. Please also specify Receptacle mounting hole diameter and positions on plastic plate machining drawings.

Quotation Request Form Example

Overview of Simplified Adjustment Units

[Simplified Adjustment Units]

MISUMI's Simplified Adjustment Units are designed with simple guide and feed mechanisms for manual positioning and adjustments.
The products were developed based on our many customer voices such as "Slotted hole adjustments for setup changes are time consuming!", "Precision stages are too costly!"
Ideal for adjusting applications non-demanding on accuracies such as jig fixtures, cameras, sensors, nozzles, and conveyor width.
Since the products utilize simplified mechanisms, there are some clearances. For accurate adjustments without clearances, see the Stage Products on **P.1607**
See each product page for accuracy standards and clearances.

[Three major merits to selecting the Simplified Adjustment Units]

1.Cost reduction
Greatly economical compared to producing precision stages in-house (designing, materials, machining, and assembly).

2.Reduced time and tool-less adjustments
Screw tightening tasks commonly associated with in-place adjustments are eliminated. Factory floor work hours can be reduced by tool-less tasking.
* Some products require tools. See each product page for details.

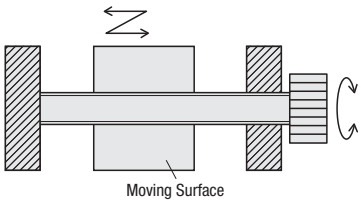
3.Wide product variety
Select from a wide variety of table sizes, feeds, axis selections, and patters. (See table below)

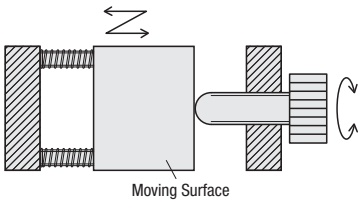
[Feed mechanisms]

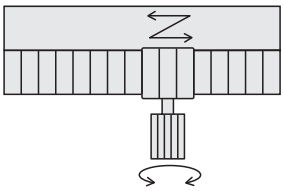
1. Feed Screw
A feed screw runs through the nut, and the table is moved by a screw feed.
Since the table moves by the screw/nut feed mechanism, even in vertical applications, load capacity is higher than the Push Screw type.

2.Push Screw
The table is pushed by a screw. The table is axially loaded with springs from the other side to reduce backlash.
Suitable for feeding light objects in small increments.
The handle protruding location changes as the table moves.

3.Rack & Pinion Type
The table is moved by a combination of rack gear and a pinion.
Features 19mm rapid feed per handle rotation.







Product Lineup

[X Axis] Can be used for fine adjustments in horizontal direction and vertical direction.

*Load capacities listed below are for horizontal use references.
See each product page for vertical load capacities.

[Simplified Adjustments] X Axis Push Screw Standard Type

-Standard Handle · Screw Length Specified-

CAD Data

Features: Economical adjustment unit for applications not requiring high precision. Springs are utilized to minimize backlash. A screw length specifiable type is provided for remote operating applications.

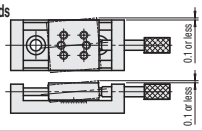
Standard Type

Screw Length Configurable Type (CL alteration)

RoHS

Travel Distance Per Handle Rotation: 0.5mm

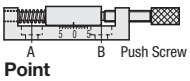
Accuracy Standards



Unsuitable for precise positioning due to backlash shown on the left.

How to Mount

(1) Remove the Push Screw
(2) Screw down the A side
(3) Move the table manually to the A side.
(4) Screw down the B side.
(5) Re-install the Push Screw.



One Point

The push screw and clamp screw can be reinforced by combining with an extra nut to form a double-nut arrangement.

[Simplified Adjustments] Z Axis Rack & Pinion - Scaled Post Unit

CAD Data

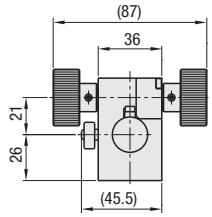
■ Long stroke adjustment units developed for height adjustments during setup changes that require long travels.

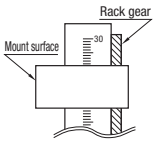
Type	Posts	Block		Handle	Rack Gear	Pinion Gears
	M Material	M Material	S Surface Treatment	M Material	M Material	M Material
ZKB	1.4301/X5CrNi18-10	EN AW-6063/AlMg0,7Si	Clear Anodize	EN AW-5056/AlMg5	1.1191/C45E	1.1191/C45E

Bracket sold separately. Product matching the mounting configuration can be selected by referring to the details in the drawings.

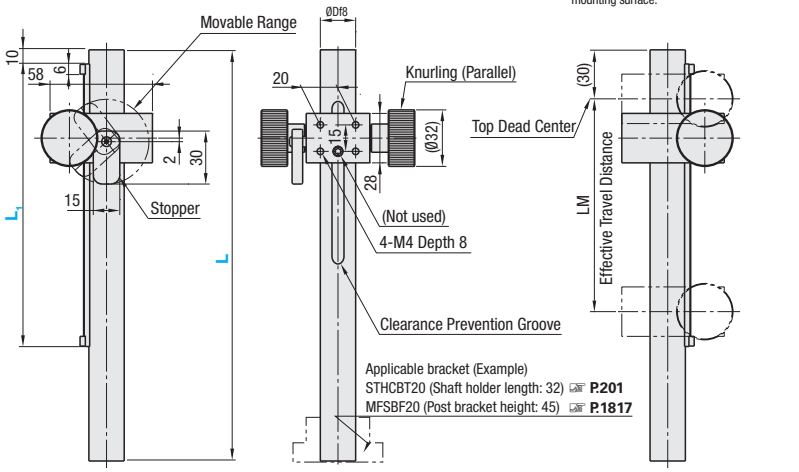
ZKB

Scale graduation is expressed in centimeters.
Use the scale as a reference only.
Scale characters are printed by laser markings. The characters may fade if wiped using volatile solvents.





The scale is placed on the right side facing the mounting surface.



Applicable bracket (Example)
STHCBT20 (Shaft holder length: 32) ☞ P.201
MFSBF20 (Post bracket height: 45) ☞ P.1817

Stages - Overview

■Overview

MISUMI stages can be utilized for various positioning tasks in inspection, assembling, and other processes. They can be used as an X-axis stage in a single axis configuration, and as an XY-axes stage in a two axes configuration. AZ Axes can be added for a height adjustment.

■Features

- Fine or rapid feeding can be selected depending on the feed mechanism.
- Travel amounts can be numerically managed with on-board scales.
- The carriages can be clamped at arbitrary positions.
- Pre-integrated XY and XZ stages are accurately aligned before they are shipped. This can save assembly steps on the customer's end.

■Selection Criteria

MISUMI has various stage products based on moving axes, positioning resolutions, and load capacities on a lineup. Please select optimum products based on your application requirements.
See the page bottom for explanations on ◎, ○, and △

■Rack & Pinion Stage Travel per handle rotation: 17~20mm: Suited for rapid feeding.

Accuracy*	10μm or less	11~100μm or less	101μm or more
Clamp Compatible	Clamp Reinforced Type	Available as options	Standard Clamp
Prices	200,00 EUR or less	200,01 EUR or more, 500,00 or less	500,01 EUR or more

*The accuracy values indicated for various stage types are as follows: Flat Bed Z-Axis Stage=Straightness, Rotary Stages=Concentricity, Goniometer Stages=Position deviation of rotation center.

Stages Technical Information (1)

About Feed Mechanisms

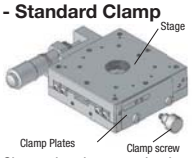
	Rack & Pinion	Feed Screws	Micrometer Heads	Coarse Fine Adjustment Handle / Micro Meter Head
Features				
	- Best when rapid feeding is needed. - Not suitable for accurate positioning	- Suitable for fine feeding - Used on many stage products since more economical than the micrometer heads.	- High resolution graduation of 0.01mm. Suitable for precise positioning. (Minimum graduation notch: 0.005mm available)	- Both coarse feed (normal feeding) and fine feed (fine feeding) can be selected depending on purpose. - Special feed mechanism is not suitable for cost sensitive applications.
Travel per Rotation	17~20mm	0.5~4.2mm	0.25~0.5mm	Coarse/ Fine Handle: 18~20mm (Coarse) 2.3~1.6mm (Fine) Coarse/ Fine Micrometer Head: 0.5mm (Coarse) 0.025mm (Fine)
Guide Structure Used	- Dovetail Slide	- Dovetail Slide - Cross Roller Slide - Linear Ball Slide	- Dovetail Slide - Cross Roller Slide - Linear Ball Slide	- Dovetail Slide (Coarse Feed Handle) - Linear Ball Slide (Coarse Fine Micrometer Head)

Linear Guidance Structures

		Structure	Features	Straightness Guideline	Prices
Dovetail		- This is a method to guide a stage by sliding interlocking male and female trapezoidal grooves.	- Sliding movement of male and female grooves realized a smooth travelling. - Economical - Large variety in combinations	[Standard] 50µm [High Precision] 30µm	[Standard] 85,00 EUR~ [High Precision] 85,00 EUR~
Cross Roller		- Rollers are alternately aligned orthogonally and placed between two grooved rails. The rolling motion of the rollers facilitates the guiding.	- Traditionally used high accuracy slide mechanism	[Standard] 30µm [High Precision] 3µm	[Standard] 115,00 EUR~ [High Precision] 190,00 EUR~
Linear Balls		- Steel balls are aligned in gothic arch grooves machined on the body of stage. The rolling balls guide a stage.	- Integrated guides make the stages low profile. - Four-point-contact guide structure is more rigid and higher in load capacity than the cross roller stages.	[High Accuracy - Motorized] 1µm	[High Precision] 130,00 EUR~ [Motorized] 741,00 EUR~

About clamp mechanism

- Standard Clamp



Clamp plate is pressed aginst the side of the stage by a clamp screw. Most inexpensive and standard way.

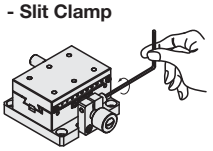
- Disc Clamp

The stage is immobilized by clamping a disc, and no load is applied on the stage surface. Position drift can be prevented when stationary.

- Opposed Clamp

The carriage is braced by a bolt from the other side of the micrometer head. The bolt is secured with a nut for vibration resistance and strong holding capacity.

- Slit Clamp



The feed handle shaft is clamped directly. Compared to the conventional model, larger retaining force can be obtained. For stationary position drifts, the conventional clamp can be used.

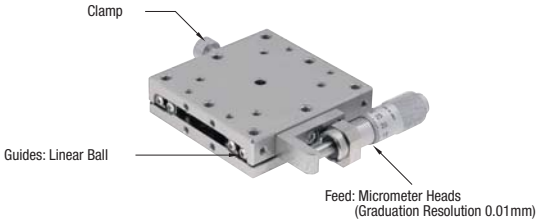
- Lever Clamp

The final tightening action of the clamp screw is managed with a lever for easy operation.

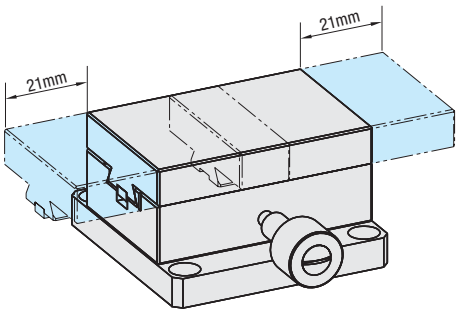
Stages Technical Information (2)

■What is a Stage?

A Stage is a combination of Guiding, Feeding, and Clamping mechanism.
(For details of each mechanism, see Technical Info. (1) on P.1610)
The available mounting surface sizes and feeding options are selected on each product page.
(Clamping methods and feed mechanism position changes can be specified as "Alterations". Some options may not be available. Refer to each product page.)



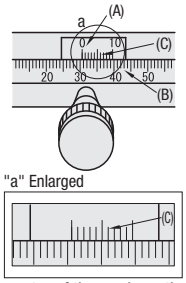
Description of available Stroke (Travel distance)
For a catalog description of "±21mm Stroke", the available stroke is a total of 42mm (21mm each to either side of the Center Position shown in the drawing).



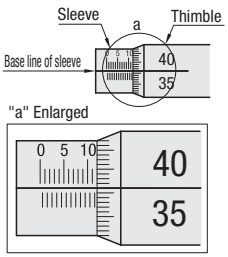
■About Position Readings

There are 3 ways of position reading options; Scale Plates, Vernier Scales and Micrometer Heads.
These position indicating options can be used as references for applications requiring positional repeatability.

<How to read Vernier scale>
(1)The scale (B) value is read at the 0 position of the sub-scale (A) in 1mm resolution.
(The right figure indicates 30mm)
(2)Look for an aligning set of division marks on (A) and (B) scales, as a 0.1mm reading.
(0.6mm in the right figure)
(3)The total of (1) and (2) is the value.
(30.6mm in the right figure)



<How to read 0.01mm Micrometer Head>
(1)Read where the position of end face of the thimble is located on the scale of sleeve by 0.5mm scale.
(11.5mm in the right figure)
(2)Read a value of the thimble on the position where the base line of sleeve coincides with the scale line of the thimble.
(0.36mm in the right figure)
(3)The total value of (1) and (2) is the current position of the stage.
(11.86mm in the right figure)



■About Load Capacity

Definition of Load Capacity

This is a load, with its center of gravity located at the center of the carriage, the stage can withstand and operate normally. The stage may malfunction if used with loads exceeding this value. The load capacity values listed on product pages assume the stages are mounted on horizontal surfaces. See "Horizontal" and "Vertical" columns for load capacity values for each case. Please note that the stages may not achieve the catalog published accuracies when mounted in vertical or inverted orientations.

Definition of Moment Load Capacity

This is a load the stages can withstand when the center of gravity of the loads are off-centered on carriages. The unit used to express this load is Nm.
When the center of gravity is away from the center of the carriage, both the Moment Load Capacity and the Load Capacity will need to be evaluated.
When this value is high, it is called High Rigidity.

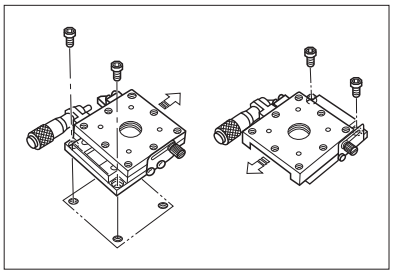
■Handling of stages

Operating Environment: **10~50°C, 20~70%RH (No condensation)**
Recommended Operating Environment: **22±5°C, 20~70%RH (No condensation)**

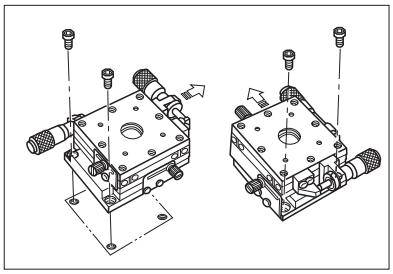
Stage Mounting

To mount the stages on base surfaces, move the carriages for mounting hole access as shown below.
When mounting in vertical orientation, note the directions of the feed mechanisms and springs. (P.1642 · 1678)

- Mounting an X Stage
Move the carriage forward and backward for screw access as illustrated.



- Mounting an XY Stage
Mount as same as the X stage.



Notes on mounting surface accuracies

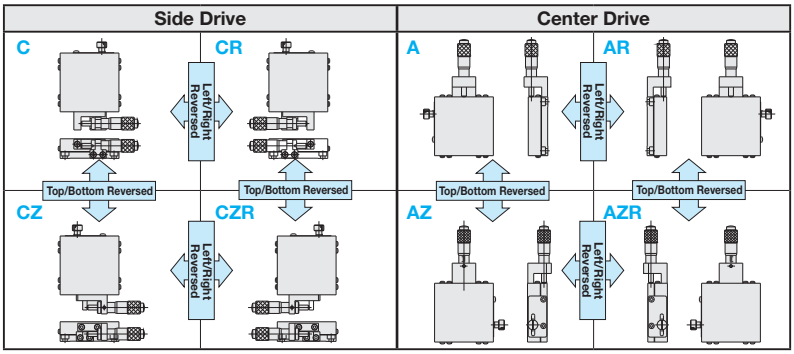
Intended product performances may not be achieved if the stage mounting surface or the carried object's mounting surface do not have sufficient flatness. (General flatness guideline: 10μm or better.)

Notes on Clamps

The XY stage clamp holds the carriage in position by frictional force generated when the clamp lever is actuated. If any external forces overcoming the clamp's frictional force is applied, the carriage will be moved out of position. Customer measures are recommended to securely immobilize the carriages. Below are the standard reinforcement alternatives we offer.
- Selecting the Reinforced Clamp Type stages.
- Change the clamp type when available as "Alteration Option" (i.e. to Opposed Clamps, Slit Type Clamp, etc.)

■Reversed Options

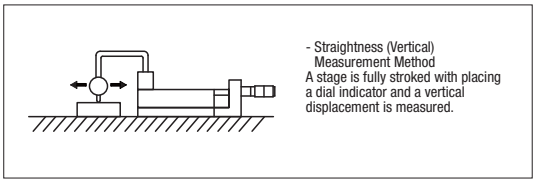
Dovetail slide stages with reversed clamp position options can be specified by adding "-R" identifier.
Others such as cross roller and linear ball stages options are listed as "Alterations" on each product page.



■About Accuracy Standards

Definition of Straightness

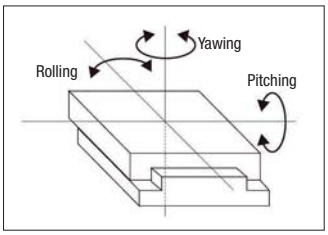
Straightness is a value represented by a maximum difference between an ideal straight line of travel and the actual travel of a carriage, over the entire stroke range of the stage. Both horizontal and vertical deviation are measured, and the largest value is taken.



- Straightness (Vertical)
  Measurement Method
A stage is fully stroked with placing a dial indicator and a vertical displacement is measured.

Definition of Pitching · Yawing · Rolling

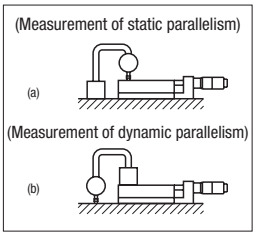
These indicate the amounts of carriage top inclinations during linear motion.
To direction of travelling
Leaning forward and back : Pitching
Rotation in a horizontal plane: Yawing
Leaning right and left : Rolling



Allowable moment capacity (see Overview page) and moment rigidity (carriage attitude in angles against these forces) are used to represent the stage's rigidness.

Definition of Parallelism

A value indicating how parallel the carriage top is in relation to the bottom surface. The illustrations on the right show how (a) Static Parallelism, and (b) Dynamic Parallelism are measured.

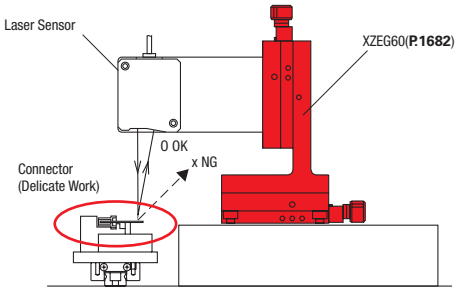


Cautions

Travel accuracy values shown are for single axis configuration.

■Stage Application Examples

Conventional slotted hole position adjustments replaced with an XY stage, eliminating position drift problems frequent when the screws are tightened down.



Unit with returning laser beam detecting work-piece defects

Scale plates on stages make adjustments requiring high repeatability easy. Setup change time can possibly be reduced from one hour to 20 minutes.

[High Accuracy] Dovetail Slide Rack & Pinion Type / Adjustable Plate
-Handle Extension-

Travel per Rotation	Small	Medium	Large
Stroke	Short	Medium	Long
Load Capacity	Light	Medium	Heavy

CAD Data

Features: Effective when feed handles are difficult to turn due to the carriage mounted objects interfere, or when the handles are hard to reach since the stage is deeply embedded inside a machine. Possible to combine knobs and etc. on the handles.

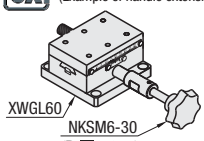
X-Axis Handle Extension

RoHS

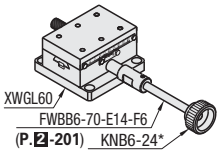
XY-Axes **P1657**
Z-Axis **P1668**

Application Example

(Example of handle extension (1))



(Example of handle extension (2))



*Apply adhesive to prevent loosening.

Handle Extending Method
Use M6 tapped hole with the depth of 14 on the handle.
The feed handle length and diameter can be modified for applications where large objects are to be mounted on carriages.

(Example (1)) Seven Lobed Knob (**P.2-1031**) NKSM6-30 can be mounted to extend the handle by 36mm.

(Example (2)) Length Specified Hex Socket Cap Screw (**P.2-201**) FWBB6-70-E14-F6 and Clamp Knob (**P.2-1025**) KNB6-24 can be combined to extend the handle further by 63mm.

10 Days

Alteration	Clamp Position Change (Left/Right Reversed)
Spec.	Code	R
Price Adder	Free of Charge

Refer to data on CAD for dimension details.

Features: No handle is required since a hex wrench is used to feed the stage, making for a space saving form factor.
Unintended position changes can be prevented since the stage cannot be operated without a hex wrench.

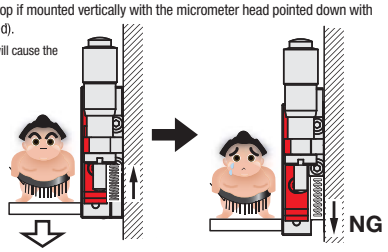
*CZ: Attach Micrometer (or Feed Screw) on the upper table (Standard Type has them attached to the bottom plate).

(?)If the Micrometer mounting positions other than the shown above are needed, please select from the "Specifications Selectable Type on (P.1679)

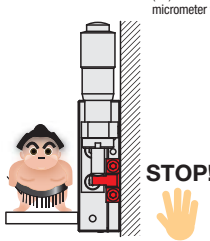
(?)One Point Advice: When using an X-Axis Stage in a vertical orientation.

(Not Good) The carriage may drop if mounted vertically with the micrometer head pointed down with XSG_ _ (or -CR, -AR, -A selected).

A load exceeding the spring pull force will cause the carriage to drop.



(OK)The carriage does not drop since the load is supported by the micrometer when XSG_ _-CZ alteration is specified.



(?)However, do not apply a load exceeding the specified vertical load capacity.

[High Precision] Linear Ball
-Opposed Clamp w/Knob-

Travel per Rotation	Small	Medium	Large
Stroke	Short	Medium	Long
Load Capacity	Light	Medium	Heavy

CAD Data

Features: Side mounted Micrometer shaft is opposed by a knobbed screw for vibration resistant position holding performance without a tool.

Travel per Rotation	Small	Medium	Large
Stroke	Short	Medium	Long
Load Capacity	Light	Medium	Heavy

CAD Data

Features

Normally, 2-axes stages are configured by stacking two normal 1-axis stages where the feed handles and clamps occupy three stage sides hindering operator access in certain installations.
This product is a combination of one Normal and one Reversed configuration stages to make 2 sides obstruction-free, enabling installations in space-savings for space saving machine designs.

[High Precision] Goniometer Stage Symmetrical Stack / Space Saving

Travel per Rotation	Small	Medium	Large
Stroke	Short	Medium	Long
Load Capacity	Light	Medium	Heavy

CAD Data

Features

Normally, 2-axes stages are configured by stacking two normal 1-axis stages where the feed handles and clamps occupy three stage sides hindering operator access in certain installations.
This product is a combination of one Normal and one Reversed configuration stages to make 2 sides obstruction-free, enabling installations in space-savings for space saving machine designs.
(Note): For dimension details, see the catalog's 1 axis stage dimension details or the CAD data.

Dovetail Goniometer Stage: DSGFWG

Mounting dimensions of micrometer head, feed screw and clamp are different from those of standard products. Refer to data on CAD for dimension details.
For Micrometer Head or Feed Screw mounted in positions other than shown below, see "Specification Selectable Type" (**P.1679**)

Alterations	Position of Micrometer and Feed Screw			Reinforced Clamp	
Spec.	Side up	Side up and right and left reversed	Side down	Disc Clamp	Opposed Clamp
			Not applicable to ZSGB and ZSCGB.	Not applicable to 25 square. A disc clamping method that does not apply loads on the stage surface. Better position holding performance than the standard clamping method.	Not applicable to ZSCG, ZSGB, and ZSCGB. Applicable only when C/CR alterations are selected with ZSG25, 40, 50, 60, and 70. The Micrometer shaft is opposed by a screw (M4x25, Pitch 0.5) from the tip end. Good vibration immunity and position holding performance. When A=25, * dimensions are applicable, and the G dimension in the table will be 6. Additionally, the Micrometer protrudes 17.5mm (±3.2) from the Z axis bracket.

[High Precision] Helicoid Screw Horizontal Surface Z-Axis Stages
-High Load Capacity-

CAD Data

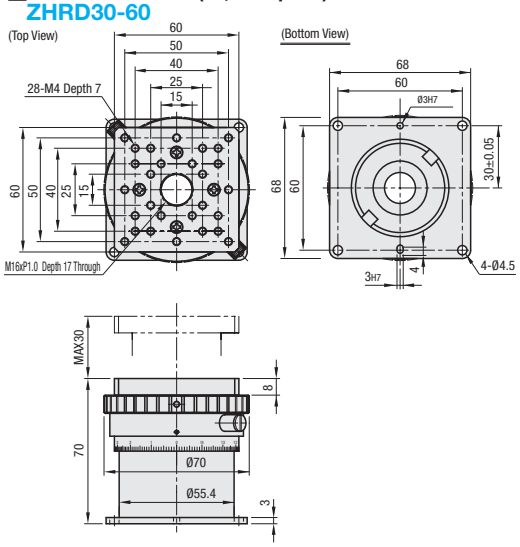
Features: Longer strokes than the Cross Roller Horizontal Surface Z-Axis stages and equivalent load capacities to the Lab Jacks. The multi-start screws used prevent plays.

Helicoid Screw Horizontal Surface Z-Axis Stage

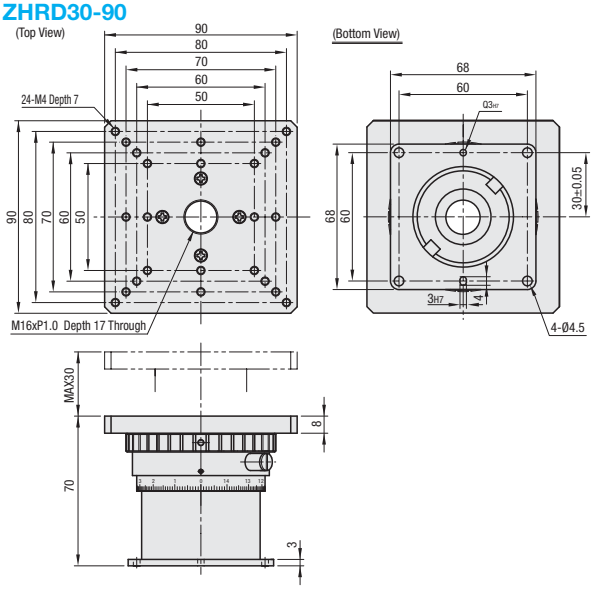
RoHS

With Mount Plates (60, 90 square)

ZHRD30-60

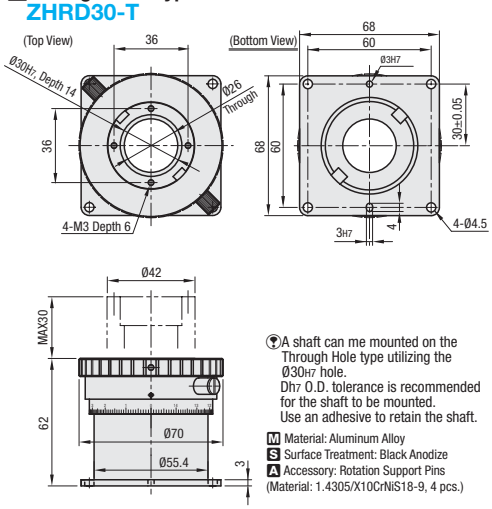


ZHRD30-90



Through Hole Type

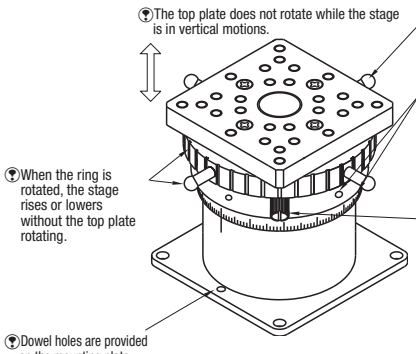
ZHRD30-T



A shaft can me mounted on the Through Hole type utilizing the Ø30H7 hole.
Dh7 O.D. tolerance is recommended for the shaft to be mounted.
Use an adhesive to retain the shaft.

M Material: Aluminum Alloy
S Surface Treatment: Black Anodize
A Accessory: Rotation Support Pins (Material: 1.4305/X10CrNiS18-9, 4 pcs.)

[Overview: Helicoid Screw Horizontal Surface Z-Axis Stage]



The top plate does not rotate while the stage is in vertical motions.

When the ring is rotated, the stage rises or lowers without the top plate rotating.

Dowel holes are provided on the mounting plate to assure installation accuracies.

The pins (4 included) are removable. The stage can be used without the pins if the surrounding space is limited.

The scale-engraved dial can be rotate.
Set a desired position as the zero position and lock the dial with the set screw.

Use the scale graduations as references.

Although two locking clamps are provided for better operability, the stage can be locked with a single clamp. (The multistart screw used is not susceptible to back-driving if used within the given load capacity.

Part Number Type	Part Number No.	Stage (mm)	Travel Distance (mm)	Travel per Rotation (mm)	Load Capacity (N)	Parallelism (µm)	Weight (kg)	Accessory (4 pcs.)	€ Unit Price Qty. 1~9
ZHRD	30-60	60x60	30	15	68.6	50µm	0.50	SCB4-8	
	30-90	90x90					0.59		
	30-T	-					0.42		

There may be some play felt when moment loads are applied on the stage.

For orders larger than indicated quantity, please request a quotation.

Knob cover HDCVR13 (Sold separately): Increases knob diameter by putting on Ø13 feed handles. P.1638

Extension cover HDEXT13 (Sold separately): Feed screw Ø13 handle can be extended. P.1638

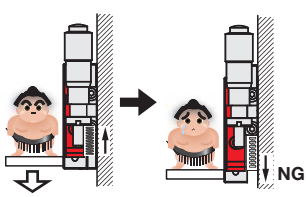
One Point: Differences of using X-Axis stages (XSG P.1641 and XPG P.1647) vertically versus the true Z-Axis stages (ZSG P.1672 and ZPG P.1673)

The true Z-Axis stages are designed and constructed with considerations given to the micrometer head/feed screw drive directions and the spring force direction to prevent the stage surfaces from falling due to the loads. (Center drive is the standard)

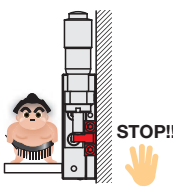
Cautions on vertical uses of X axis stages.

(NG) The stage surface may fall if XSG__ (or -CR, -A options) mounted with the micrometer tip end down.

A load exceeding the spring pull force will cause the carriage to drop.



(OK) By applying ZSG__-CU as an alteration, the micrometer supports the load and the stage surfacedoes not fall.



However, do not apply a load exceeding the specified vertical load capacity.

One Point: Lever Clamp 3D View

Some models are equipped with "Lever Clamps" as shown below. The standard clamp knobs are small in diameter and may require significant forces for sufficient clamping. The wing-shaped lever clamp can be operated with an index finger and the thumb with little effort. Please note that the actual clamping force obtained is the same as the standard clamps. The lever clamps can not be removed due to its construction.

Clamp screw	Holding Force	Features	Cautions
Standard Clamp		Economical / Space Saving	Small Knob
Lever Clamp		Good Operability	Limited to some models only

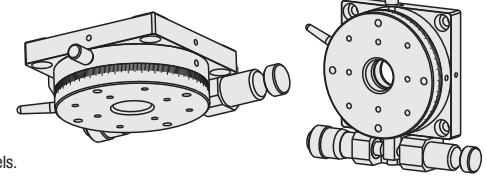
(Inverted Mounting) (Vertical Side Mounting)



One Point: About Mounting Orientation of Rotary Stages

Care must be taken for installations shown on the right.

Product	Inverted Mounting	Vertical Side Mounting
Surface Contact Slides	Δ	Δ
Cross Roller Bearing	○	Δ
High Load Capacity (RTOUGH)	○	○

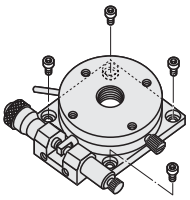
○ : Usable, though limitations apply for loads and moments.
Δ : Performance could be considerably deteriorated depending on ways of use or in some models.

One Point:About Rotary Stage Installations

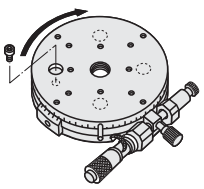
(1) Plate Type: Use the included screws with the mounting holes on the bottom plate.

(2) No Plate Type: Rotate the top plate to align the mounting holes on the bottom plate.Then mount with the included screws.

(1) Plate Type



(2) No Plate Type



[High Precision] Goniometer Stages

Motorized Stage Overview

■Advantages of Motorized Stages

- Remote Control: Stages can be remote controlled by the Handset Terminal (HDT100) or a computer. Cable length can be specified.

- High Precision: Controllable at a step of 1µm. (refer to specs of respective stages for details.) Suitable for use in applications where high precision level not achievable with a manual positioning stage is required.

- Automation: Can be programmed to reciprocate between predetermined points along coordinates (learning function; see below).

■Features

- Plug and play with only 5 minutes of setup time
  Usable by simply connecting the motorized stage controller and cable.
- Handset Terminal (HDT100) enables direct control without connecting to a PC.

■Operations of Motorized Stages

There are three major operation modes for the motorized stages.

(1) Continuous Jog Jogs while the button on the Handset Terminal (HDT100) is pressed.
⇒ Effective when the stage is not easily accessible for manual operation.

(2) Step Move Preset distance steps can be commanded to move.
⇒ Movements at fixed pitches (such as 1mm increment) is possible.

(3) Coordinate Positioning Mode Command moves from 0 (Home) to specified coordinate points.
⇒ Instruction such as "move to point C from A via B" is configurable.

Functions below are provided to support the Coordinate Positioning Mode.

- Homing Since the controller does not know the current mechanical position of the stage axis upon power-up, this mode seeks for the Home Position and initializes the controller's internal coordinate system.

- Teaching Function Moves the stage to specified registered coordinate (up to six axes).
⇒ By automating repetitive processes, reduction of cycle time can be achieved.

■Operating Environment

Operating Environment : 10~50°C, 20~70%RH* (No condensation)
Recommended Operating Environment: 22±5°C, 20~70%RH* (No condensation)
*RH represents Relative Humidity (a term used to describe the amount of water vapor in the air).

Motor	Type	5-Phase Stepping Motor 0.75A/Phase (Oriental Motor Co., Ltd.)
	Step Angle	0.72°
Connector	Part Number	HR10A-10J-12P (73) (Hirose Electric Co., LTD.)
	Compatible Receptacle Connector	HR10A-10P-12S (73) (Hirose Electric Co., LTD.)
Sensor	Limit Switch	-
	Home Sensor	Provided
	Near Home Sensor	-
	Part Number	Photomicro Sensor EE-SX4134 (OMRON Corp.)
	Power Supply Voltage	DC5~24V±10%
	Current Consumption	35mA or less
	Control Outputs	NPN Open Collector Output 5~24VDC, 8mA or less Residual Voltage 0.3V or less (When Load Current 2mA)
	Output Logic	Detecting (Dark): Output Transistor OFF (Non-Conducting)

Peripherals for Motorized Stages
-Controller / Handset Terminal / Cable

Motorized Stage Technical Support Center
Optical Scientific Technology (OST) Division Suruga Seiki Co. Ltd. (MISUMI Group)
TEL: 0120-343-559
FAX: 0120–343–588
Office Hours: From Monday through Friday (Except for Holidays)
From 9:00~12:00, 13:00~17:00

Features: Controller for the motorized stages. See our web page for MSSOFT control software.

Controller for Motorized Stages

RoHS

Part Number	€ Unit Price Qty. 1~9

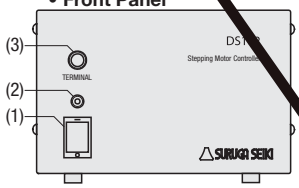
For orders larger than indicated quantity, please request a quotation.

Alterations

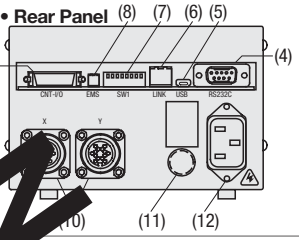
Part Number - (MS)
- MS

Alteration	Change Diver Type
Code	MS
Spec.	Changes the driver (integrated in the controller) type to a Micro Step Type. (No dimensional changes)
Price Adder	250,00

• Front Panel



• Rear Panel



(1) Power Switch
(2) POWER LED
(3)TERMINAL
(Specifications: Connector for Handset Terminal HDT100)
(4) RS232C (Specification: D-Sub 9P Male)
(5) USB connector (Mini B type)
(6) LINK connector
(7) DIP Switch
(8) EMS connector
(9) I/O connector for controller
(10) Stage connector
(11) Fuse Holder
(12) AC Plug

Basic Specifications

External Dimensions	140(W)x300(D)x[illegible](H) mm
Operating Environment	0~40°C, 20~80% RH (No Condensation)
Storage Environment	-20~60°C, 20~80% RH (No Condensation)
Input Power Supply	AC100~240V±10%, 50/60

Driver Performance Specification

Driver Type	Normal (FULL/HALF Selectable)
Rated Current	0.75A/Phase

Functions

Homing Function	1 point/axis (configurable freely within effective range)
Link	(Link cable listed on our web) can externally control up to 3 stages, up to 6 axes
Programming	8 programs (100 steps/1 program; Starts and stops by control I/O signals)
Teaching	64 points (positioning is commendable from signal I/O)
Interpolation	2-axis linear interpolation (linear interpolation between linked stages not possible)

Controller Performance Specifications

Number of Control Axes	2
Coordinate Setting Range	±99,999,999pls
Speed Setting Range	1~999,999pps
Pulse Rate Rise Setting Range	1~9,999pps
Acceleration/Deceleration Time Range	1~9,999ms
Mechanical Limits	2 for each axis CW/CCW direction (Input logic reversal is possible)
Near Home Detection	1 for each axis (Input logic reversal is possible)
Home Detection	1 for each axis, 12 routine types (Input logic reversal is possible)
External Communication I/F	RS232C: 4800~38400bps
	USB2.0: Compatible with Full/Low Speed only
	Control I/O: 9 Inputs (24VDC Opto-coupler inputs), 12 Outputs (Open Collector Outputs)
Max. Power Consumption	70W (When AC100V)
	2.2kg

Sensor power supply voltage for controller is 5VDC. 24VDC sensors cannot be operated from this controller.
(though linear semi-interpolation between the linked stages is possible)

Features: Motorized stages can be operated immediately by connecting the Pendant.

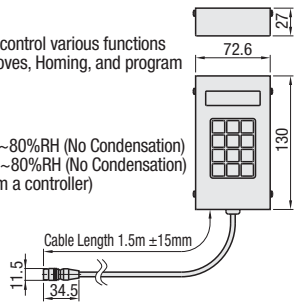
Handset Terminal

RoHS

Part Number		€ Unit Price
Type	No.	Qty. 1~9
	100	

For orders larger than indicated quantity, please request a quotation.

The Pendant enables the operator to control various functions such as Continuous Jogging, Step Moves, Homing, and program executions.
* PC required for program editing



Basic Specifications
- Operating Environment: 0~40°C, 20~80%RH (No Condensation)
- Storage Environment: -20~46°C, 20~80%RH (No Condensation)
- Power Supply: DC24V (supplied from a controller)
- Weight: 0.28kg

Features: Select cable lengths for application specific requirements.

Information

LED Lightings for Cabinetry is newly launched from 2010 Catalog. Best for Aluminum Frame device covers, etc. (**P.2-929~938**)

Product (1) The Standard Type which covers wide variety of L dimensions(**P.2-929**)
Product (2) The Low Profile Type, 8mm in thickness. This type is suitable for the devices in spaces with insufficient headroom. (**P.2-931**)
Product (3) The Embedded Type which can be mounted to the top panel and does not occupy the space. (**P.2-933**)

Macro Lenses · Objective Lenses · CCTV Lenses

-Features · How to Select-

■Types and Features of Lenses

Type	Feature
Macro Lenses	This is suitable for the observation by expansion in a narrow range. When it becomes a high magnification, the view becomes little dark..
Objective Lenses	Although generally used for microscopes, the installation to C mounting(*) is made possible with the auto extension ring. Can be used as an economical macro lens. However, the view becomes little darker in comparison with a usual macro lens due to lens characteristic difference.
CCTV Lenses	This is suitable for the observation by expansion in a wide range. Mounted adjusting screws enables adjustment of lens focus / diaphragm while observing the images. **The new type, Mega-pixel CCTV Lens, is now available. This type reproduces images with higher resolution and less distortion as well as enables close-up photography.**

(*)C Mounting: The screw standards of the optic field. M (1 inch) x P (1/32 inch)

■How to Select Lenses

(1) Macro Lens and Objective Lens(P.1709)

$$\text{Field of View (Object area)} = \frac{\text{CCD Camera Sensor Dimensions (Length x Width)}}{\text{Lens (Optics) Magnification}}$$

Calculate the appropriate lens magnification by using the Work Size and CCD Camera Pixel Dimensions. If no appropriate one is found, refer to **P.1710** to select and combine a Macro Lens.

(2) CCTV Lens(P.1711)

$$\text{Focal Distance} = \frac{\text{WD (Shooting Distance)} \times \text{CCD Camera Sensor Dimensions (Length)}}{\text{Field of View}}$$

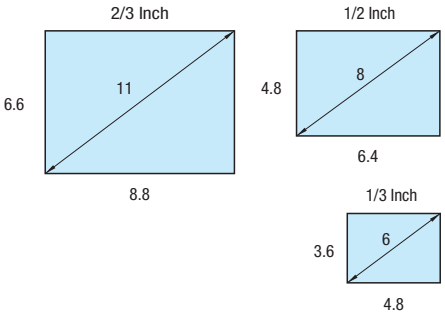
Select an appropriate focal distance from WD (Shooting Distance), Field of View and CCD Camera Sensor Dimensions (Length) selections. If no appropriate one is found, refer to **P.1712** to select and combine a Macro Lens.

(Table 1) CCD Camera Size and Field of View in Each Lens Magnification

Magnification	CCD Camera Size and Field of View (Length x Width mm)		
	2/3 Inch	1/2 Inch	1/3 Inch
0.3	22.0 x 29.3	16.0 x 21.3	12.0 x 16.0
0.5	13.2 x 17.6	9.6 x 12.8	7.2 x 9.6
0.7	9.4 x 12.5	6.8 x 9.1	5.1 x 6.9
1.0	6.6 x 8.8	4.8 x 6.4	3.6 x 4.8
2.0	3.3 x 4.4	2.4 x 3.2	1.8 x 2.4
4.0	1.7 x 2.2	1.2 x 1.6	0.9 x 1.2
6.0	1.1 x 1.5	0.8 x 1.1	0.6 x 0.8

Each field of view measure becomes 1/2 with time of the rear converter lens (x2) attached.

CCD Camera Element Dimensions



■Application of the Objective Lenses for FA Uses

Combining the objective lens which is generally used for microscope with special C Mount auto extension ring (adapter), it became possible to use it as economical image inspection lens for FA. Most suitable for cost conscious use, such as inspection of product appearance or monitoring processing, which does not require high quality image.

(1) There are wide varieties of uses ranging from low magnification to high magnification or from wide-angled view to enlarged view.
(2) It is extremely inexpensive and excellent in cost vs. performance.
(3) Compatible with any manufacturer's CCD cameras if equipped with C mounting.
(4) The structure of the camera is designed for fine adjustment of magnification by rotating the lens (frontmost section) forward (Registered Utility Model).

■Terminology

Terminology	
Field of View	The size of the object (the area) that can be observed
WD (Shooting Distance)	Working (shooting) distance between the lens and an object (Refer to each product page).
CCD Camera Size	Size of CCD device (2/3 inches, 1/2 inches etc.)
Focal Distance	The distance which initially collimated rays through a lens are brought to a focus. A lens with a shorter focal length reproduces wider field of view, while a lens with a long focal length can magnify distant images. (Refer to each product page.)
Resolution	Distinguishable minimum distance between two points (Refer to each product pages)
Depth of Field	Maximum difference of elevation for the objects / areas that can be observed without being out-of-focus (Refer to each product page).
Monitor distortion	The image distortion when an image is reproduced on a monitor. The value which represents how the length of the image distorted.

Monitor Magnification: Magnification of each lens and expansion of magnification on the monitor with the actual size of CCD camera.
Data in the above table are only for reference, which are obtained through our actual measurements using 9 inches monitor.
Note that when the monitor size is different, the value will be different because the size of monitor and monitor magnification are proportional.

CCD Camera Used: 400,000 Pixels, Resolution: 570 Pairs in TV (Horizontal Resolution)

LED Lamps for Image Processing
-Overview-

■Features of LED Lighting

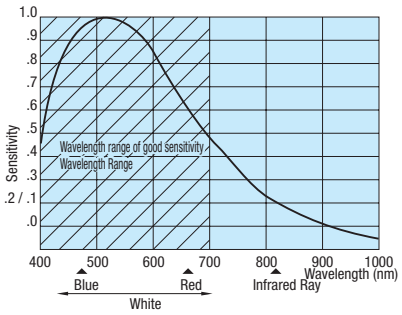
1. Long Life:
Has longer operation life than conventional halogen and fluorescent lights.
It reduces maintenance frequency requirements.

2. Quick Response:
Can be switched on/off quickly compared to halogen lights.
The response speed is about 1/1000 of the halogen lights.

3. Energy-saving:
When lit at the same brightness with the halogen light,
the LED light consumes only about 1/5 of electrical power of the halogen light.

4. Compatibility with the CCD Camera:
Due to the CCD Camera's spectral sensitivity (Fig.1) and well adoption of blue, red, and white LED wave length, it gives better images.

CCD Camera Spectral Sensitivity Characteristics



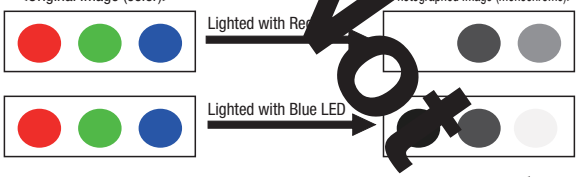
■LED Lamps Selection Tips

1. When Making Work Color Disappear or Exaggerate

<Relations between the Works' Appearance and the Lights Color (Example)>

- When using a light similar to the work color, the work shows white while using a light opposite to the work color (complementary color), work shows dark.

<Original Image (color)>



<Complementary Relationship between the Color of Work and Light>

		Color of Work		
		Blue	Green	Red
LED Color of Lighting	Blue	○	○	●
	Red	●	●	○

○ : make it white
● : make it black

<Actual Example>

-When making the work's background color white and disappear: Use similar color light.

Before Lighting
Illuminated with Red LED (Color image)
Illuminated with Red LED (Monochrome image)
Illuminated with Red LED (Binary image)

2. When Observing the Work Outside or Inside

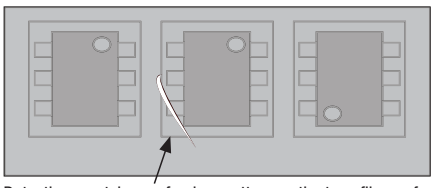
<Relations between the Works Position and the Light Color (Image)>

- Visible part of the work-piece will vary depending on lighting's wavelength..

<Nature of Wavelength>

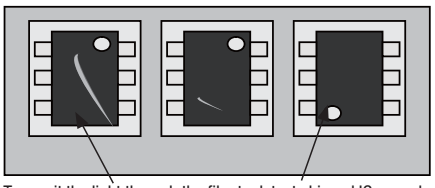
	Blue	Green	Red	Infrared Ray
Wavelength				Long
Transmittance				High
Scattering Rate				Low

(To observe the work's exterior)



Detecting scratches or foreign matters on the tape film surfaces.
→The lights with low transmittance and short wavelength are effective.

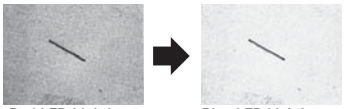
(To observe the work's interior)



Transmit the light through the film to detect chipped ICs or polarity error under the taping.
→The lights with high transmittance and long wavelength are effective.

<Actual Example>

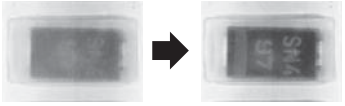
- When making the outside of work clear: Color with high scattering rate (Blue)



Red LED Lighting
Blue LED Lighting

The blue light exposes the whole plate evenly and make the contrast with scratch clear.

- When making the inside of work clear: Use light with high transmission (Red, Infrared ray)



Blue LED Lighting
Red LED Lighting

Under red illumination, clear view of the IC in the embossed tape can be obtained.

For detailed image samples, refer to **P.1716**

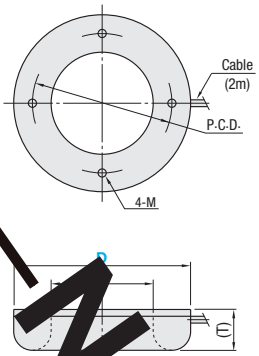
Not Available

LED Lamps for Image Processing
-Multi Lighting Type-

Feature: This structure offers the suitable contrast for image processing by only switching the distance between the light and the object as it changes the exposure angle. Image Sample **P.1716**

Multi Lighting Type

RoHS



M Material:
Polyacetal, acrylic (Emission side)
Aluminum (Boards)

Surface Treatment:
Black [illegible] (Boards)

End of the cable has a connector for the power controller.

Order Example

Part Number			Color
Type	D	-	
55		-	R

Days to Ship 10 Days

Color R: Red W: White B: Blue N: Infrared ray
Use LEDCNR1 / LEDCNRF2 for the power controller on **P.1716**
Do not use other controllers.

Features of LED Multi Lighting

1. Wide Illumination Range:
The luminance angle can be changed optionally by changing the WD (Working Distance).

2. Good Uniformity:
It is suitable for highly reflective objects as diffused light is used, and the light disperses uniformly on the objects causing less reflections.

3. Excellent Dust Resistance:
Dust can be easily wiped off since it is covered. It is most suitable for the clean rooms of semiconductor factory or food factory.

Variation of the photograph based on WD (Working Distance)

<WD (Working Distance)>

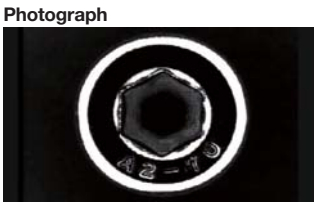
Edge Lighting

Image

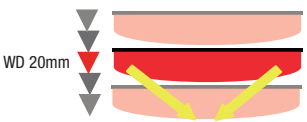
Photograph



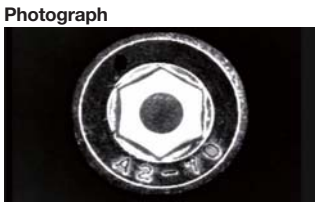
The outline of the screw's O.D. and engraved letters appear white by the edge lighting.

Oblique Lighiting

Image



Photograph

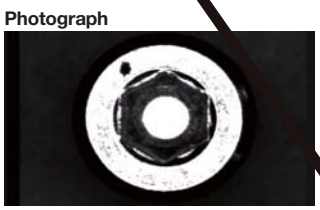


The surface of the inner hexagon of a screw appears white by the oblique lighting.

Direct Lighting

Image

Photograph



The top of the screw appears white by the almost direct irradiation. This method shows the foreign matters sharply.

Not Available

LED Lamps for Image Processing

-Direct Ring Type / Backlight Type-

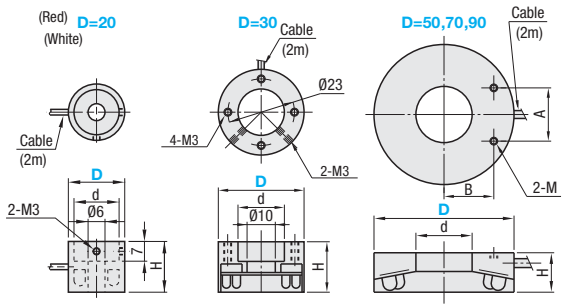
CAD Data

Feature: By illuminating from 360 deg. direction, even lighting without a shadow is obtained.

Image Sample P.1716

Direct Ring Type

RoHS



End of the cable has a connector for the power controller.

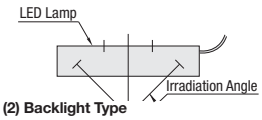
Features and Usage of LED Lighting

(1) Direct Ring Type
- By illuminating from 360° direction, even lighting without a shadow is obtained.
- As to the lighting of a wide illumination angle (80°), large amount of light can be obtained; therefore, it is suited when bright luminance is required. (a)
  However, the reflection of LED Lighting may occur in the case of the product that has gloss. In such cases, reflection can be reduced by using diffuser disc (board).
- As to the lighting of small illumination angle (25°), it is suitable to detect shallow irregularities and flaws without the reflection of LED Lighting even against gloss materials because of the low angled irradiation (b).



(2) Backlight Type
- LED Light faces and lightens directly up above, and the large amount of luminance can be obtained. Also, uniform illumination is achieved using a diffuser board.
- Do not occupy much space as it is designed to be compact (c).

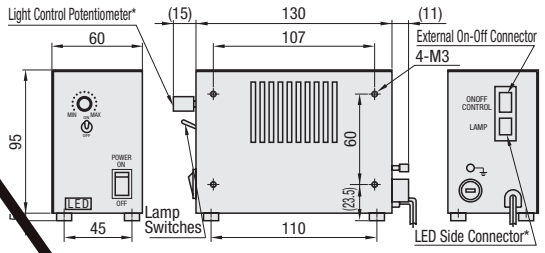
Power Controller for LED Lamps

AD Data

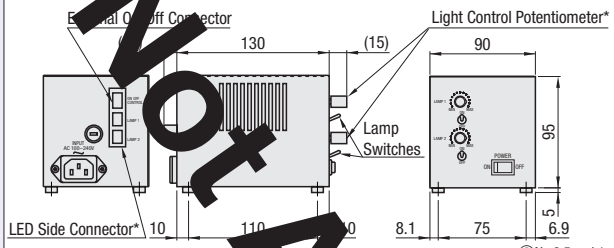
Feature: The worldwide voltage specification (F1, F2) can be used with AC100~240V.

Power Controller for LED Lamps RoHS

Japanese Specification (No.0.5, 1)



Worldwide Specification (No.F1, F2)



*Light control differs according to the model of LED lamp. For details, refer to instruction manual for individual LED lamp.

Specifications

Input Power Supply	No. 0.5 / 1 AC100V±10% 50/60Hz No.F1 / F2 AC100V-240V 50/60Hz
Operating Temp.	0~45°C
Operating Humidity	75%RH or less (No condensation)
ON / OFF Control	External Input ON/OFF Signal
Lighting Method	Constant Voltage Power (Voltage variable)
Light Control	Continuously Variable (Knob on the Panel)

No.0.5 and 1 comes with a 2m electrical cable and an external input connector.
No. F1 and F2 does not come with an electrical cable. Socket Standard: IEC60320/C14

Part Number		Specifications					€ Unit Price	Volume Discount

Operation Method

(1)Confirm that the cable, connectors, etc. are ar[illegible]ned.
(2)Turn ON the power switch.
(3)The ON/OFF of the LED lighting is operated with L[illegible]/OFF.
(4)When LED light is ON, brightness is adjusted with th[illegible]ight.
(5)The turn-off/on of the LED lighting device is facilitated by the external ON/OFF signal inputs.
Input Signal Area : Voltage Applied (VDD) = DC12V (Min.)~DC24V (Max.)
Input Current (IF) = LED lighting is turned off when input 10mA (Max.).
(6)Turn off the power switch.
*Be sure to turn off the power switch before removing or mounting the la[illegible]
[illegible]er remove or mount lamps during operation, or it may result in malfunctioning of the lighting device.

Free Guide Arms · Overview; Guide for Measuring and Examination Instruments Mounting Hardware

MISUMI offers many parts suitable for mounting measuring instruments, lenses and lights for experiments and examinations on factory floors. For example, Free Guide Arms which make easy adjustment and fixture of the mounted instruments' position, Magnetic Bases which perform as the base of Free Guide Arms Shaft and adhere to magnetic objects, and Holders for mounting Dial Gauges.

■Feature of Free Guide Arms

	Free Guide Arms			Flexible Arms	Free Angle Arms
	Fixed Arms	Flex-arm	Mechanical Locking Flex-arm		
Shape					
Feature	There are 3 movable sections. Each can be adjusted freely. By fixing only one dial, 3 movable sections can be locked simultaneously. The Fixed Arm bears large allowable load at locked state, therefore, it is suitable for mounting measuring instruments, sensors and lightings.	The arm can be adjusted into shapes freely. Not having a lock function, it is not appropriate for mounting heavy loads. However, for its easy adjustment feature, it is suitable for mounting light loads such as lenses or lights and move them frequently.	The arm can be adjusted into shapes freely. The arm can be retained in desired shapes by tightening the nuts for holding the lock lever up. As it is more flexible than the Fixed Arm and can support larger loads, it is suitable for adjusting and locking at the same time.	Although the arm can be adjusted into shapes freely, it is not suitable for mounting heavy loads as no lock function is provided. It can be mounted on various devices as the item is sold separately. Also, the length and screw diameter are selectable.	Each joint angle can be adjusted in shape as desired. The unit quantities are also selectable, so use it with the necessary length.
Page	P.1718-1719	P.1718		P.1719	P.1720

■Overview; Measuring · Examination Instruments Mounting Hardware

Product Name	Base	Mounting Clamps for Installation			Holder
		Shaft	Measument Instruments		
	Magnetic Bases	Shaft Mounts	Dial Mounts	Indicator Mounts	Dial Holders
Appearance					
Feature	Compact but generates strong attraction force by using Neodymium Iron Boron Magnets. **Small sizes as 30 Squ-ares are added.**	Mounts for adjusting angles and fixing 2 shafts. Highly efficient Spring Built-in Types are also offered.	Mounts for mounting Dial Gauges. Adjust the gauge angle and turn the knurled screw to fix it.	Mounts for mounting Indicators. The angle adjustment for the tip can be done by turning the knurled screw.	As the dial holder is fixed by tightening the spindle of the dial gauge, mounting does not damage the spindle.

Overview of Photoelectric Sensors with Built-in Amplifier

Do not use this product as a detection device for human body protection.
(For human body protection, use products compliant with the local laws and regulations such as OSHA, ANSI, and IEC)

■Features of MISUMI Photoelectric Sensors with Built-in Amplifier

High Performance, reasonably priced, and short lead time are offered in collaboration with a sensor manufacturer.
Provided one of the fastest response time (0.5ms for Through Beam Type) and detection distance (25m for Through Beam Type) in the industry. Furthermore, contributing to reduced power consumption, speeding-up, environmental friendliness and price economy.

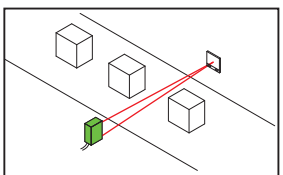
■Types of MISUMI Photoelectric Sensors with Built-in Amplifier

Type		General purpose		Laser (MZL)
		Standard (MZ)	Miniature (MT)	
Appearance				
Feature		General purpose Photoelectric Sensors with Built-in Amplifier for presence check or positioning of work piece. Various detection methods are available depending on the subject work piece or the purpose.	Less than half in thickness and 30~40% smaller outer dia. compared to the standard type. Suitable for space-savings. Also spot dia. is relatively small. Suitable for small work piece detection.	Provided with small spot dia. and high-visual laser source. Suitable for detection or positioning of small work piece. Optical axis adjustment is relatively easy.
Detection Method	Through Beam Type		○	○
	Mirror Retroreflective Type		×	○
	Diffusion Reflective Type	○	○	○
	Limited Reflective Type	○	○	×
	Wide Angle Reflective Type	○	×	×

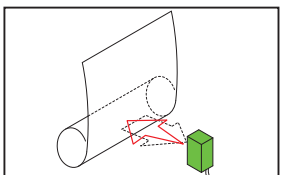
■Detection Method Types and Features

Type		Feature
Detection Method	Shape	
Through Beam Type		Use a combination of Emitter and Receiver. ON/OFF action is controlled by blocking the beam between Emitter and Receiver. - Long range detection - Large amount of light helps avoiding effects from dust. - Accurate detection of positions - Opaque objects can be detected regardless its shape, color or material.
Mirror Retroreflective Type		Use a combination of Sensor and Retroreflector. ON/OFF action is controlled by blocking beam between the Sensor and Retroreflector. - Reduced wiring procedure and steps to install compared with Through Beam Type. - Suitable for space-saving since Retroreflector is used on other side. - Optical Axis adjustment is easy. - Opaque objects can be detected regardless its shape, color or material.
Diffusion Reflective Type		ON/OFF action is operated when the light from the emitting section bounce back from the detected object to the receiving section. Space-saving design integrated Emitter and Receiver. - Installation is needed for only Sensor itself. Space saving. - No need for Optical Axis adjustment. - Transparent objects can be detected as long as the object is reflective.
Limited Reflective Type		Angled structure built into the emitting and receiving arrangement makes the detection area limited to where the two Optical Axes cross. - Affected little by the background. - Hysteresis range is short. - Small concave and convex surfaces can be detected.
Wide Angle Reflective Type		Wide opening angle allows ON/OFF action with a minimal light. Detection area is 10 times larger than Diffusion Reflective Type. - Most suitable for detection of transparent objects or work piece with clearances.

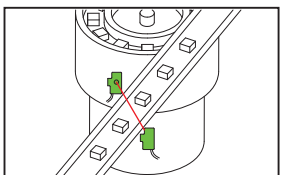
■Example of Use



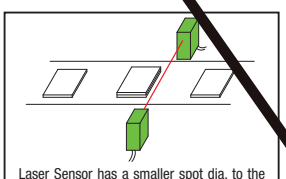
Use for presence check on work piece conveyance (MZ-R).



Wide Angle Reflective Type is provided with wide detection area. It allows film-end detections without being affected from film wrinkles or flapping (MZ-WD).



Miniature Type has a small and thin outer dia. Suitable for space-saving (MT series).



Laser Sensor has a smaller spot dia. to the standard type in order to detect thin work pieces (MZL series).

Not Available

Outline of Proximity Sensors

Do not use this product as a detection device for human body protection.
(For human body protection, use products compliant with the local laws and regulations such as OSHA, ANSI, and IEC)

■Features of Proximity Sensors

Proximity Sensors are to detect approaching objects without contacting. Non-contact detection, unlike limit switches, allows high repeatability and fast response detection without damaging the objects or sensors.

■Screw Type

Shielded · Non Shielded

Type	Product Configuration	Feature
Shield		-The side of detection coil with metal case is shielded, magnetic flux converges in front. -Sensors can be embedded into metals for installation.
Non Shield		The magnetic flux extends forward widely since the sides of the detection coil are not shielded by any metals. Surrounding metals (magnetic objects) may be attracted to the tip of detection coil instead of detected objects. Installation location must be selected carefully. Capable of Long Distance Detection than same-sized Shielded Type.

Precautions for Use

- **Mutual Interference**
  When sensors are installed side by side, operation may become inconsistent by being affected from the light of other sensors. To prevent this, refer to the following methods.
  -Keep one sensor away from another to avoid interfering with each other, referring to the Interference Range Characteristics, .
  - Through Beam Type or Mirror Retroreflective Type should be installed alternately.
- **Influences from environment luminosity and disturbance**
  Direct high-frequency fluorescent or sunlight may cause receivers to malfunction. In this case, adjust the sensor angle or install a light shield to prevent disturbing lights.
- **Other Cautions**
  - Connect Frame Ground Terminal to the ground when using Switching Regulator for power.
  - Avoid using during the power-on transitional state (approx. 100ms).
  - Avoid using with high voltage circuits or power lines in parallel or in a bundle. May cause inductive malfunction.

Precautions for Use

- Connect lead wires correctly and securely. Improper or unstable connection may damage sensor peripherals.
- Bending radius for lead wires is to be 30mm or more. Avoid bending within 30mm from exit points.
- When shutting down the power, output may turn ON or OFF for a moment. Turning off the load before shutting down the power is recommended.
- When there are big surge sources around such as motors or the sensor's own loads, insert surge absorbers such as varistors.

CAD Data

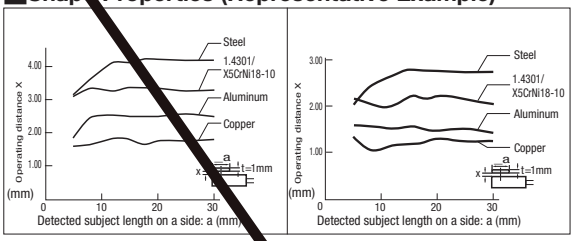
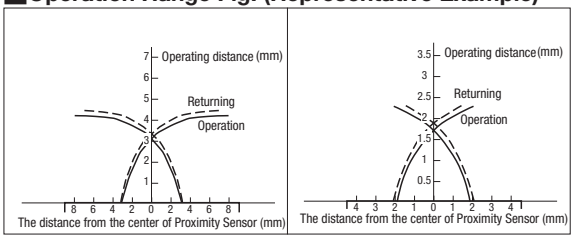
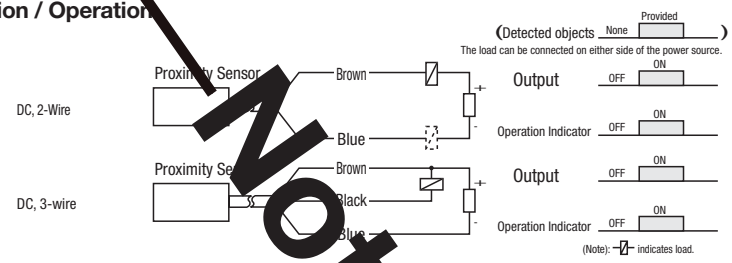
Sharp Properties (Representative Example)



Operation Range Fig. (Representative Example)



Connection / Operation



Reciprocal Interference and Same Frequency Classification

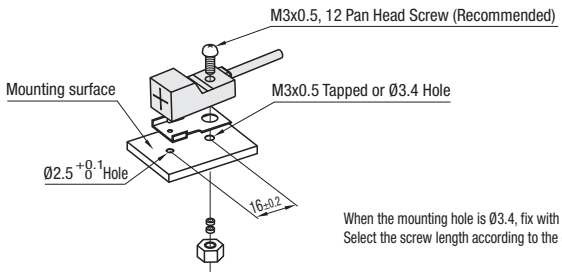
When installing 2 or more Proximity Sensors closely, the distance should be 10 times or more as far as operation distance (from center to center).
Mutual Interference may occur if the interval is inadequate.

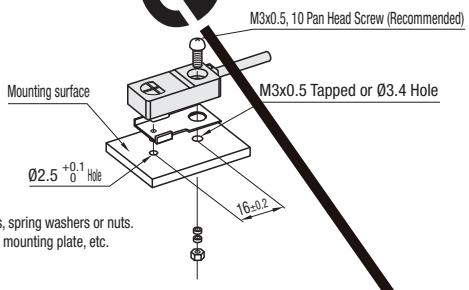
(mm)

Installation / Part Number	Infinitely Metal Surface Parallel Placement	Detection Surf. Against Metal Surf. Metal Parallel Placement	Opening Of...	Metal On Other Side	Parallel Placement	Opposed Placement Front Surface Detection Type	Opposed Placement Upper Surface Detection Type
	3.7	3.7	14	8	18	-	20
	10	7	14		18	20	-
	3.25	3.25	30		32	-	20
	20	15	30	10		20	-

* Detected subject position for Upper Surface Detection Type
·Metals around Proximity Sensors change the operation distance and make the operation unstable. Keep surrounding metals away from the sensor.
·D dimension (mm) indicates least distance from the detecting surface of Proximity Sensor to surrounding metals. Values should be beyond the value in the table above.
·When B dimension of EMX2.5-F8 = 3.7mm (Solid Installation), the detecting surface of Proximity Sensor should be located from surrounding metals more than 3mm.

Mounting (Detection distance 4mm)





When the mounting hole is Ø3.4, fix with flat washers, spring washers or nuts.
Select the screw length according to the depth of the mounting plate, etc.

Before using the products

-Note that this product may output a detection signal when the power turns on. For about 25ms when there is no object, for about 100ms when there are some objects around.

Cautions for Mounting

- When tightening by screws, ensure that the sensor is not be subjected to stressess.
  * Sensors may be damaged by tightening with over Tightening Torque 0.4Nm.

UL Recognition

When using this sensor as a UL recognized component, use the power Class2. UL recognized components are approved by UL recognition and required to use power Class2.

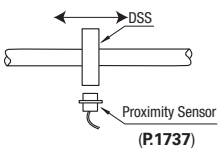
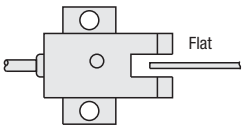


Photomicrosensors
-Overview-

Do not use this product as a detection device for human body protection.
(For human body protection, use products compliant with the local laws and regulations such as OSHA, ANSI, and IEC)

Type	Mini Type	Compact Type -Cable-	Compact Type -Connector-
Part Number			
Detection Distance	5mm (Fixed)		
Smallest Detected Subject	0.8X1.8mm Opaque objects		
Hysteresis	0.05mm or Less		
Repeatability	0.03mm or Less		
Power Supply Voltage	5~24V, DC±10%, Ripple 10% or less PTP		
Current Consumption	15mA or less		
25mA or less	NPN transistor – Open collector - Max. allowable current: 50mA - Applied voltage: 30V DC or less (Between output and 0V) - Residual voltage:0.7V or less (@50mA applied) 0.4V or less (@16mA applied)		
Output Operation	Light seen-ON / Light shielded-ON Equipped 2 Outputs		
Response Time	Light seen: 20µs or less / Light shielded 100µs or less (Frequency Response 1kHz or more) (Note 1)		
Operation Status Indicator	RED LED (ON while light seen)		
Environmental protection: Service Ambient Temperature (Note 2)	-25~+55°C (No condensations or freezing), In storage: -30~+80°C		
Environmental protection: Service Environment Humidity	35~85RH, 35~85RH in storage		
Environmental protection: Service Environment Luminosity	Fluorescent Light: 1,000ℓx or less @ lit surface		
Environmental protection: Withstand Voltage	1,000VAC, 1 min., between circuit and case		
Environmental protection: Dielectric Strength	50MΩ or higher @ 250VDC, between circuit and case		
Environmental protection: Vibration Resistance	Endurance 10~2000Hz, Full wave amplitude 1.5mm XYZ directions for 2hrs		
Environmental protection: Shock Resistance	Endurance 15,000m/s² (Approx. 1500G) XYZ directions for 3 times		
Light Emitting Elements	Infrared LED (unmodulated)		
Type	Case: PBT, Slit cover: Polycarbonate, Terminal [FPM_54 only]: Solder Plating		
Cable	0.2mm² - 4 conductor cabtyre cable 1m long		-
Cable Extension	Extendable up to 100m when 0.3mm² or larger cable used.		
Mass	Approx.3g	Approx.15g	Approx. 3g
Page	P.1745	P.1747	P.1748

(Note 1): Frequency Response is the value from rotating disc on the right.
(Note 2): Ensure to mount Mini Type to metals when using under the temperature +50°C or more.



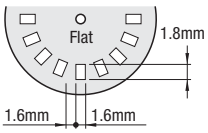


Plate Thickness = 0.2mm

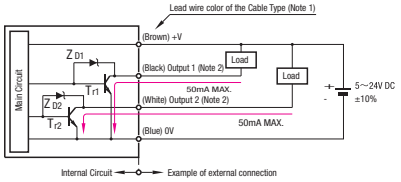
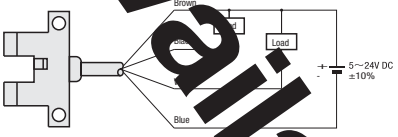
■Input · Output Schematics



(Note 1): Lead wire colors of connector type are the same.
(Note 2) Ensure to insulate unused output wires.

Codes... Z_{D1}, Z_{D2}: Zener diodes for surge protection
Tr_1, Tr_2: NPN output transistors

■Connections



Output operation

	Lead wire color	Output operation
Output 1	Black	Light seen - ON
Output 2	White	Light blocked - ON

■Cautions

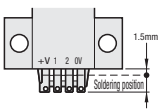
- Wiring

- Proper wiring is needed since power supply reverse polarity circuit protection or output short circuit protection are not equipped. Also ensure to insulate unused output wires.

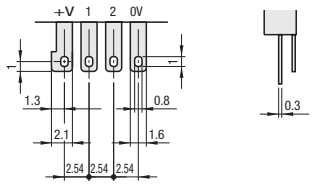
- Soldering

- When soldering to terminals directly, ensure to meet the following conditions.

Soldering temperature	260°C or less
Soldering time	3 sec. or less
Soldering position	Refer to the right fig.

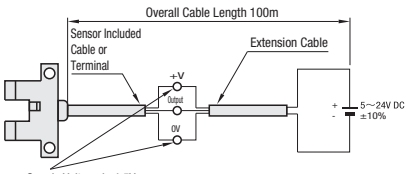


*** Terminals**



- Cable extension

- Although cables 0.3mm2 or more can be extended up to 100m long, extended cables will cause voltage drop. Ensure to maintain a proper rated voltage at the wire terminations or terminal blocks.



However, when the overall cable length including accessory cables is as described below, voltage checking would be unnecessary.

Conductor Sectional Area	Overall Cable Length
0.08~0.1mm²	Up to 5m
0.2mm²	Up to 10m
0.3mm²	Up to 20m

- Tightening Torque

	Tightening Torque
	0.15Nm
	0.5Nm

- Others

- Since this is a product for embedding, light resistant feature is not provided. Do not expose the receiving section to direct lights.

- Avoid usage during power-on transient state (50ms).

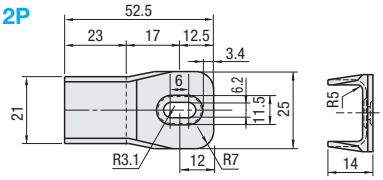
Rail Mount Fittings

RoHS

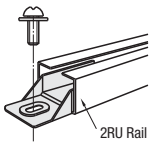
2P



M Material: 1.0320/St.22

S Surface Treatment: Trivalent Chromate

How to Attach 2P

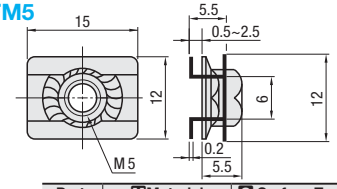


- Insert the nuts from either end of the rail. (Tap in lightly with a hammer.)
- An RFM nut can be inserted with the 2P fitting attached.

Nuts for Rail

RoHS

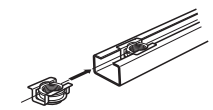
RFM5

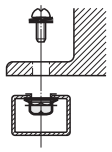


Parts	M Material	S Surface Treatment
Frame	1.4301/X5CrNi18-10-H	-
Nut	JIS SWRM10	Trivalent Chromate Plating

How to Attach RFM Nuts

- RFM and RXM nuts utilize stainless steel spring tension to prevent from falling even when installed on vertical rails.



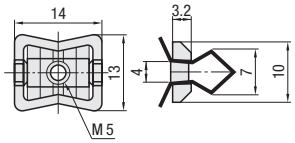


Mounting of Parts

Nuts for Rail

RoHS

RXM5



Parts	M Material	S Surface Treatment
Frame	1.4301/X5CrNi18-CSP	-
Nut	1.0038/S235JR	Trivalent Chromate Plating

How to Attach RXM Nuts

- The RXM nuts can easily be attached in the middle of a rail to facilitate convenient component additions even after the machine building has been completed.

① 

Place the RXM nut's spring tip on the rail groove and press it with fingers.

② 

Push the center and either side of the RXM nut diagonally with a fingernail.

③ 

Slightly lift the other side of the RXM nut together with its spring, and push it into the rail groove.

④ 

The RXM nut insertion completed.

(7) Material for plate thickness 4.5 and 6.0 is 1.0320/St.22. (7) A>100 can be specified when T=6.0. (7) DA can be selected only for FALAS, FALBS, FALCS and FASBS. (7) K≤NAx5 (7) When T=6.0, B or L≥20.

(7) C0.2 to C0.5, unless otherwise specified.
(7) Slotted Holes may be shaped like the right figure depending on its dimension.
(The function as a mounting hole is not affected.)

(7) No Hole Configurable (except D and DA). Specify 0 for all parameters about hole configuration.
(7) Parameters in green is optional. When the parameters in green is not specified, the hole alignment will be even against the center.
(7) Although hole deformation may occur when a hole is too close to the end face or the bent section, machining will follow the specification.

Example

Positioning Switch -Contact Type-

-Overview-

Switch Type		Signal Point Repeata-bility*1	Contact Point Accuracy Life*2	Operating Temp. Range	Page
Small Contact Switch		0.003mm	3,000,000 times	*3 0~80°C	P.1771
High Precision Touch Switch		0.0005mm			P.1772
Contact Switch		0.005mm	10,000,000 times		P.1773 ~ P.1776
with Stopper Switch		0.01mm (Except Flat Type)	10,000,000 times		P.1777 ~ P.1780
Plunger Switch					P.1782
Heat-Resisting Switch		At Ambient Temperature 0.01mm	500,000 times	0~200	P.1781

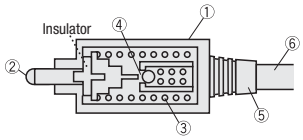
■Feature

Contacting switch that can detect position highly accurately without being affected by materials, shapes, magnetism, luminosity of the detected objects.

■Basic Structure

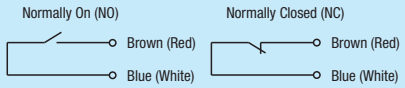
Designed to open · close with high repeatability in sync. with the contact point.

(1) Switch Enclosure
(2) Contact Point
(3) Spring
(4) Switch Contact
(5) Cable Strain Relief
(6) Cable

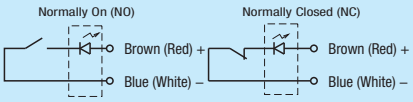


■Schematics

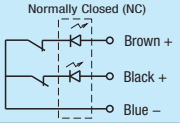
All Types



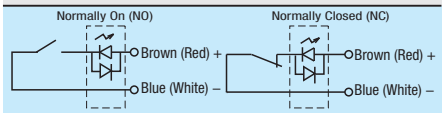
Common to all LED types



2 Signal Type w/ LEDs



High Precision Touch Switch Type



*1 Operating Speed 50~200mm/min
*2 When used at rated voltage and rated current without failure of switch caused by vibration.
*3 The encapsulated structure of the IP67 Type may cause the of returning delay in low temperatures (5°C or less).

■Mechanical Specifications

Vibrations	10~55Hz, Stroke 1.5mm in Respective X, Y, Z Direction
Impact	300m/s² in Respective X, Y, Z Direction
Allowable Operating Speed	10mm~5m/min
Cable Tensile Strength	30N or less
Cable Min. Bending Radius	R7mm

■Electrical Specifications

Contact Rating	DC5~24V 20mA (MAX) Resistive Load (10mA with LED)
Dielectric Strength	100MΩ or More DC250V Megohm-meter
Withstand Voltage	AC500V 50/60Hz, 1 min. between Each Terminal and Case

■Others

These switches are designed for low voltage and low current, and are not applicable to Export Trade Control Ordinance, CE Marking and China Compulsory Certification.

■Hazards and Warnings

1. Accident may occur with circuit damages due to abnormal generation of heat, smoke and fire in the following conditions.
   a. When switch ratings, cycle life, environment conditions and others exceed the operating range.
   b. When electric wire and connectors are used over the allowable operating current capacity.
   c. When cables are exposed near to the heat generating objects.
2. Safety measures such as redundant circuits are necessary to avoid a serious accidents resulting in injury or death or further damage caused by the failures in operation.
3. When signal output failure may cause the damage of equipment or machine, install an emergency stop.

■Design Precautions

• Degree of Protection
· Note that sealing ability may be affected by operational conditions or environment, such as cutting oil, chemicals, or existence of dust. Select machine types referring to the IP codes.
· Do not use the switches with exposed rubber boots under the environment where metal chips may fall on products, as rubber boots will be damaged.

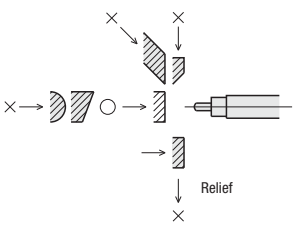
• Contact Angle
· Contacting angle of the switch to objects should be within ±3° (±1° for Deceleration Signal Type). (Excluding: Wide Contact Angle Type, Ball Contact Type, Ball Plunger Type) (Fig.1).

• Stroke
· Detected subjects should not collide with the switch housing (except switches with stoppers). Install a stopper if the risk of collision exists.(Fig.2)
(Please confirm the impact resistance of switches with stopper, referring to the relative catalog pages.)

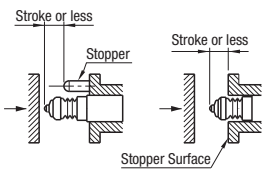
• Contact Speed
· Do not use at low speed contact (10mm/min or less). That will cause prolonged operational instability and resultant deterioration of the switch contacts.

• Effects of micro-vibration
· Do not use the switch in an environment where chattering arises from micro-vibrations.

(Fig.1)



(Fig.2)



Do not use this product as a detection device for human body protection.
(For human body protection, use products compliant with the local laws and regulations such as OSHA, ANSI, and IEC)

■Installation Precautions

• Cable Damages

· Excessive force on cable inlet and sensor body may cause wire breakage.
Do not twist or tug outer insulation of cables and conductors at 30N (3kgf) or more.
· Bending radius is to be R7 or more.
· When clamping the cable to stop from moving around, ensure to avoid excessive force on cable inlet and sensor body.
When clamping cables in a bundle, take special care not to apply excessive force on switches.

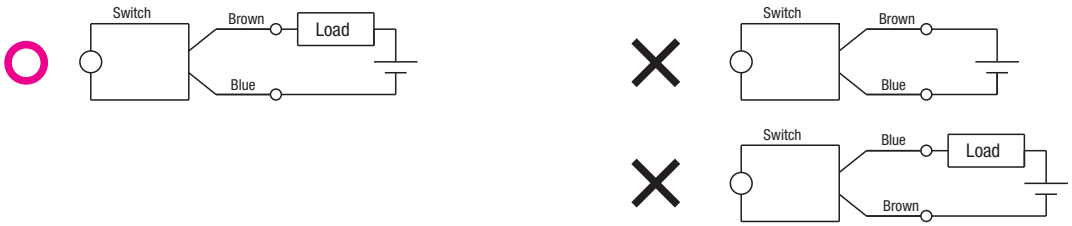
• Clamping of Knurled Head

· Clamping with tools, such as long nose pliers, may cause damages.
Tighten firmly with fingers.

■Precautions on Electrical Wiring

• Connecting to power

· Direct connection to the power will damage the switch and the internal element.
· Install correctly noting the polarity.

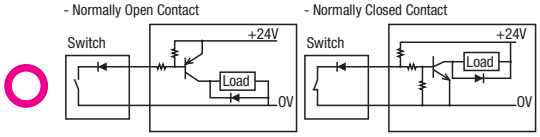


• Connection with Inductive Load

· Direct connection to an inductive load will damage the switch.
· If the switch is to be connected to an inductive load, include a drive circuit for the load.

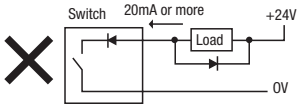
Good Example

- Normally Open Contact - Normally Closed Contact



Bad Example

Connecting as shown will damage the switch.

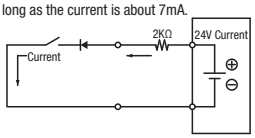


• Grounding

· When grounded the machine's DC power 0V, ensure to connect the switch on the GND side.
(If the switch is connected on + side, the switch may be damaged at the moment the – side of switch touches the body.)

• About Wiring of Switch with LED

· To prevent damage to the LED due to unexpected over current, insert a current limiting resistor.
· For load within the switch rating or installing to a PLC, current limiting resistors are not necessary as long as the current is about 7mA.



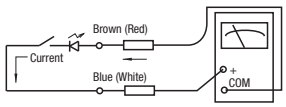
-The type with LED has polarity. The brown cable is positive (+), while the blue one is negative (–). Install correctly.

• Wiring

1. Use within the contact ratings.
2. Do not pull or twist the cable and conductor wire with excessive force. Bending radius is to be R7 or more.
3. When the machine is grounded, connect the switch to the grounded side.
4. Noises and surges may induce the over rated current and damage the switch contact. Switch wiring should be located away from power sources or noise sources.
5. When the cord is extended, use cabtyre cable with sectional areas of 0.3mm² or more.
6. When the switch drives the relay etc., use the coil current of around 10mA.

■Confirmation of Switch Action

· Correct Circuit Check Method Using Analog Multimeter



LED lights when the contact is closed.

Analog Multimeter: Confirm in Ohms Range x10

⚠Measurement of Contact Resistance Using Digital Multimeter.

Switches with LEDs cannot be measured correctly in ohms range.

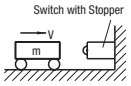
Only when there is a voltage output terminal, LED ON state can be confirmed.

■Calculation of Impact Energy

Please confirm the impact resistance of switches with stoppers, referring to the relative catalog pages.

Pure Horizontal Impact	Vertical Free Fall
$E=1/2mv^2$	$E=mgh$
E: Energy J	E: Energy J
m: Mass kg	g: Gravitational Acceleration 9.8m/s²
v: Speed m/s	h: Drop Height m

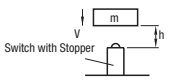
Pure Horizontal Impact



Calculation Example

m	V	1/2mv² [J]
4	0.3	0.18
5	0.4	0.4
20	0.2	0.4

Vertical Free Fall



m	H	v= $\sqrt{2gh}$	mgh [J]
0.4	0.05	1	0.2
0.4	0.1	1.4	0.4

■Changes about Cable Protector

Cable Protectors are omitted from some products for more compactness.
Please refer to product pages for details.

Positioning Switches -Non Contact- -Overview-

Do not use this product as a detection device for human body protection.
(For human body protection, use products compliant with the local laws and regulations such as OSHA, ANSI, and IEC)

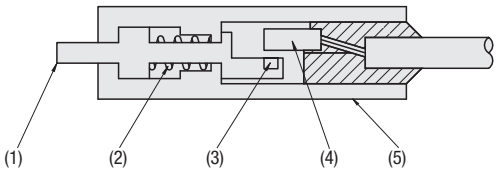
Feature

- The contact type switch can detect objects in given positions regardless of material and color.
- Non contact structure utilizing the magnet detection IC (Hall effect element).
- Able to detect with low contact force.

Basic Structure

When the contact shaft strokes, the magnet moves and the hall effect element outputs a signal.

(1) Contact Part
(2) Spring
(3) Magnet
(4) Hall Effect Element IC
(5) Housing



Specifications

Stroke	1.5/3/6
Repeatability	0.02 or less
Contact Mechanism	NO (Normally Open)
Hysteresis	0.1 or Less
Service Life*	10 Million Times or More
Frequency Response	1msec. or less
25mA or less	NPN Open Collector Without LED: MAX15mA With LED: MAX12mA

* Subject to the following conditions

Endurance Test Conditions

Operating Temp.	25°C
Vibrations	Not provided
Contact Angle	Vertical (Without declination)
Operation Frequency	1 time/sec.

Ratings and Environmental Resistance

Power supply voltage	DC5~24V
Current consumption	10mA or less
Operating Temp.	0~60
Dielectric strength	10MΩ (DC250V Based on Megohm-meter)
Withstand voltage	AC500V 50/60Hz, 1 min. between each terminal and case
Vibration resistance	10~55Hz, Stroke of 1.5mm in Respective X · Y · Z Direction

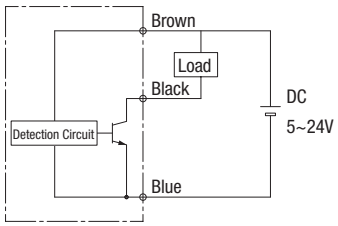
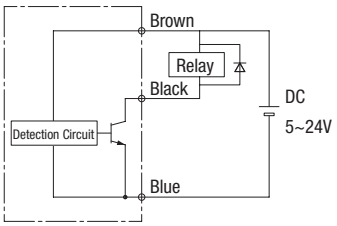
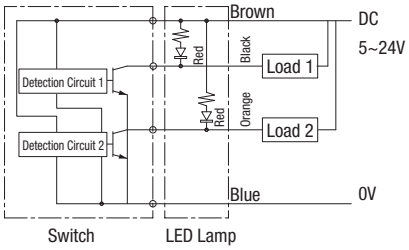
(Connected with sequencer, etc.)



(Connected with relay, etc.)



(2-Signal Type)



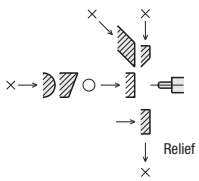
Precautions for Use

Although the switches are intended to be trouble-free, incorporate a redundant safety measure such as a duplex circuit to avoid a serious accident or spread of damage caused by a malfunction or failure of the switch.

Design Precautions

- Contact Angle
- The object contact angle to the switch should be within ±2°.

- Stroke
- Do not force the contacts beyond the end of the stroke. Provide a stopper if necessary.
- Do not apply any force that will cause rotation of the contact.



- Effects of magnetic field
- Do not use the switch in a strong magnetic field. A magnetic field over 1000 gauss will cause the switch to malfunction.

Cautions on Installation

- Cable failure at inlet
- Do not apply excessive stress to the cable inlet of the switch case, the solders of cable could be damaged resulting in signal output failures.
- If the cable is not fixed, fasten at appropriate midway points to avoid strains on cable inlet.

- Nut tightening torque
- Tighten M6 under 1Nm. Tighten M8 and M14 under 2.7N · m.

Wiring Precautions

- Reverse polarity connection prohibited
- Connect the wires correctly in accordance with the circuit diagram. Never connect the power supply in reversed polarity.

- Driving relays
- When a relay (under 12 mA) is driven, connect a reversed diode in parallel.

Contact Switches -Non Contact Point Type-

-Bolt / Flat / 2-Signal-

Order Example

Part Number	-	L	-	M	-	N
(L Dimension Selectable) LSBWRK10	-	40				
(L Dimension Configurable) LSB WF12	-	300				
(L Dimension / Thread Diameter Configurable) LSBG30	-	700	-	M20	-	N24

Alterations

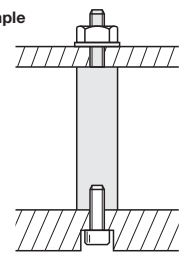
Part Number	-	L	-	M	-	N	-	(LKC / MLC)
LSBWF6	-	30					-	LKC
LSBG30	-	700	-	M20	-	N24	-	LKC-MLC20

Applicable to L Dimension Configurable Type and L Dimension, Thread Diameter Configurable Type.

Alterations	Code	Spec.	Price Adder
L Dimension Tolerance 	LKC	L Dimension tolerances are as follows. Ordering Code LKC L: 8~300 ±0.05; 300.5~600 ±0.10; 600.5~800 ±0.15	4,00
Thread Length 	MLC	Changes the thread length. ⊗Not applicable to B=5. MLC=0.1 mm Increment Mx1≤MLC<Mx1.5 Ordering Code MLC10	2,00

L Dimension Tolerances generally are
L8~300 ±0.2
L300.5~600 ±0.3
L600.5~800 ±0.4
For L≤200, ganged machining keeps L dimension variations within ±0.02 for a single order.
Except L Dimension Selectable

Example



Days to Ship

- L Dimension Selectable
  - 8 Days — Express A 3,00 EUR/piece P. 88
  - 5 Days — A Express Charge of 8,10 EUR for 3 or more identical pieces.
- L Dimension Thread Diameter Configurable (except below)-
  - 8 Days — Express A 8,00 EUR/piece P. 88
  - 5 Days — A Express Charge of 21,60 EUR for 3 or more identical pieces.
- BLSBWF / BLSBG
  - 10 Days

Hexagonal Posts with Pilot
-Pilot Selectable · Pilot Configurable-

■Base Surface (W) Wide Type has been added to B Dimensions 27, 30 and 32, respectively (e.g. B Dimension 27: W1.5; B Dimension 27W: W3.5). This Type has a wider contact area that allows plates and other objects to be stably fixed.

Posts for Stands / Device Stands / Brackets for Stands
-Overview-

MISUMI has a wide selection of products for stands for mounting various devices such as cameras and sensors.
Products such as "rotation-resistant" type and "easy setup change" type can match your needs.

■Posts for Stands The posts for stands are for device mounting.

Applicable	Feature	Round	Square
		The posts have an outer diameter g6 for device mounting strut clamps.	The posts for stands do not allow rotations of devices by preventing mounting strut clamps from turning in a rotating direction.
No Scale	Surfaces are finished. Length specifiable in 1mm increments.		
	Page	P.1814	P.1816
With Scale	Scale on surface helps setup changes.		
	Page	P.1815	P.1816

■Device Stands A set of a post for stand and a bracket for device mounting.

Mounting Direction	Vertical Mounting			Side Mounting	
	Compact	Round Flanged	Square Flanged	Compact	Standard
Brackets Shapes					
Feature	Mountable in space-savings.	General and affordable	Narrower than Round Flange Slotted hole selectable for vertical and horizontal adjustments.	Installation footprint significantly reduced compared to Standard Type.	Best for side mounting on transfer lines, etc.
Through Holes	P.1817	P.1819	P.1821	P.1823	P.1824
Slotted Hole	P.1818	-	P.1822	-	-

■Stand-up Brackets The brackets support device mounting posts.

- Round Hole Type

Mounting Direction	Vertical Mounting						Side Mounting			
Shapes	Standard		Cylindrical	Reversed Post Fastening	Square		Standard		Compact	No Flange
	Precision Casting	Cutting			Compact	Standard Fasteners Reversed	Casting	Cutting		
Appearance										
Feature	Up to 68% price reduction compared to machined Type. Best for places that do not require especially good appearances.	MISUMI Standard	No Flange Compact	Posts fixed by a screw from the back side.	Installation footprint reduced by an average 28% compared to the Standard Type.	Securely fastening square type. Reversed Type of opposite hole positions also included in product lineup.	Up to 68% price reduction compared to machined Type. Best for places that do not require especially good appearances.	MISUMI Standard	25-30% shorter in height, approximately 10% narrower in width compared to Standard Type.	Installation footprint less than half compared to Standard Type.

Strut Clamps
-Overview-

Type			Shapes		Feature	Fastening	Page	
							Round Hole	Square Hole
Perpendicular		Two Strut Clamps crossed Strut Clamps	Standard		Most common type Pitch Configurable Type included in product lineup.	Knob / Clamp Levers	P.1834	-
						Screw Fastening	P.1835 ~1839	P.1851
			Separate		Post-assemby mounting onto posts built-in structures	Screw Fastening	P.1840	-
			T-Shaped Separate		Space-saving one-sided post Post-assembly mounting possible	Screw Fastening	P.1841	-
			Rotation		Post angles adjustable	Screw Fastening	P.1843 P.1844	-
Parallel		Two parallel posts fixable	Standard		Parallel posts fixed.	Screw Fastening	P.1842	-
Female Thread	Vertical	Direct device mounting via tapped holes	Standard		Vertical device mounting on Posts	Knob / Clamp Levers	P.1845 P.1846	-
						Screw Fastening	P.1847	P.1852
			Separate		Post-assembly mounting onto posts in structures Vertical work piece mounting onto Post	Screw Fastening	P.1849	-
	Parallel		Standard		Horizontal device mounting onto Post	Knob / Clamp Levers	P.1845 P.1846	-
						Screw Fastening	P.1848	
			Separate		Post-assembly mounting onto posts in structures Horizontal work piece mounting onto Post	Screw Fastening	P.1849	-
Arm / Bar		Mounting onto perpendicular Strut Clamps as guides.	Arm		Post in circumferential rotations via arm mounted onto Strut Clamps	Screw Fastening	P.1854	-
			Bar		Round bar as conveyor guides		P.1854	-

* Products of the same shape include various sizes such as Standard Type and Compact Type.
* Strut Clamps with Knob / Clamp Lever are suitable for frequent setup changes through manual fastening.

Super Compact Strut Clamps / Strut Clamps

Example

■Precision Casting Economy Gussets are optimal for reinforcing where not visible or appearance is not important.

■**Difference between Precision Casting Gussets and Machined Gussets**
Although Precision Casting Gussets are inferior to Machined Gussets in luster, they are equal with Machined Gussets (Standard Class) in perpendicularity.

■**Material Properties of EN AC-46200 (Aluminum Alloy Casting)**
It is suitable for casting, and has high tensile strength and low rate of elongation. It is used for general purpose.

■**Comparison Table of Tensile Strength**
