Example

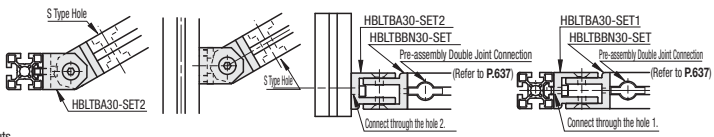
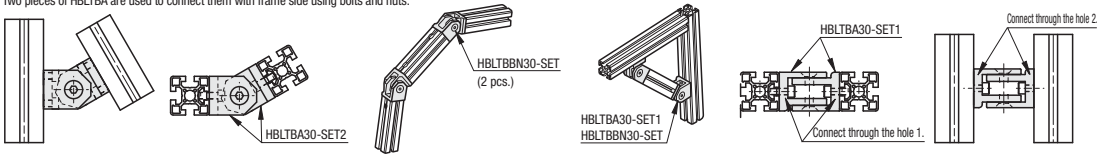
When connecting with Pre-Assy. Insertion Double Joints, S type hole machining is required on extrusions.
(Refer to P.598)
When -SET_ is specified, it is not RoHS compliant.



(1) Connection of Two End Sections

Two pieces of HBLTBBN are used to connect two end sections using Pre-Assy. Insertion Double Joints. Refer to (P.637)



(2) Connection of Two Side Faces

One piece of HBLTBA and one piece of HBLTBBN are used to connect HBLTBA with the frame side face using a screw and a nut, and to connect HBLTBBN with the frame end section using the pre-assembly double joint.

(3)Connection of Two Side Faces

Two pieces of HBLTBA are used to connect them with frame side using bolts and nuts.

Features: Sheet Metal Brackets to fix at arbitrary positions.

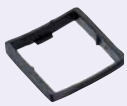
Thread Locking Type

Anti-loose agent applied inside of the tap



It is a Nut with Thread locker applied on the inside of tap. Reduce loosening caused by vibration at transportation or operation of equipment.
Thread Locking Adhesive is ---A microencapsulated anaerobic adhesive prevents thread loosening. Note that it requires a hardening time (72 hours at room temperature 25°C). The adhesive property is lost once loosened.
Resin Coating ---Resin is coated along the threads. Although the thread locking effect may be less than adhesive type, it can be used repeatedly without hardening time required.

Effect of Thread Locker (Reference)

Loosening torque values are for reference. Difference may occur depending on the clearances between bolts and nuts.

	Features	Loosening torque after tightening (1st time)	Remarks
Without Thread Locker	-	8.2 N·m	-
Thread Locking Adhesive Type	- Prevents loosening effectively. - Thread locking properties are lost once loosened. - Requires a hardening time for adhesives (72 hours at room temperature 25°C) after tightening.	11.7 N·m	Test ConditionsMeasured value (HNTTV6-6) when a bolt is loosened after drying for 72 hours at room temperature (25 °C), after tightened at 11.7N·m.
Thread Locking Resin Coating Type	- Can be used repeatedly. (Thread locking effect decreases after repeated use.) - Thread locking effect is immediately seen right after tightening.	10.0 N·m	Thread locking effect decreases after repeated use. 5th loosening torque: 9.4N·m Measurement at HNTTZ6-6

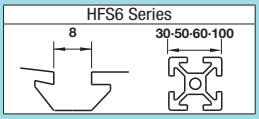
■Thread Locking Type

Anti-loose agent applied inside of the tap

It is a Nut with Thread locker applied on the inside of tap. Reduce loosening caused by vibration at transportation or operation of equipment.
Thread Locking Adhesive is ---A microencapsulated anaerobic adhesive prevents thread loosening. Note that it requires a hardening time (72 hours at room temperature 25°C). The adhesive property is lost once loosened.
Resin Coating ---Resin is coated along the threads. Although the thread locking effect may be less than adhesive type, it can be used repeatedly without hardening time required.



■Effect of Thread Locker (Reference)

Loosening torque values are for reference. Difference may occur depending on the clearances between bolts and nuts.

	Features	Loosening torque after tightening (1st time)	Remarks
Without Thread Locker	—	8.2 N·m	—
Thread Locking Adhesive Type	- Prevents loosening effectively. - Thread locking properties are lost once loosened. - Requires a hardening time for adhesives (72 hours at room temperature 25°C) after tightening.	11.7 N·m	Test ConditionsMeasured value (HNTPV6-6) when a bolt is loosened after drying for 72 hours at room temperature (25 °C), after tightened at 11.7N·m.
Thread Locking Resin Coating Type	- Can be used repeatedly. (Thread locking effect decreases after repeated use.) - Thread locking effect is immediately seen right after tightening.	9.4N·m	Thread locking effect decreases after repeated use. 5th loosening torque: 8.7N·m Measurement at HNTAZ6-6

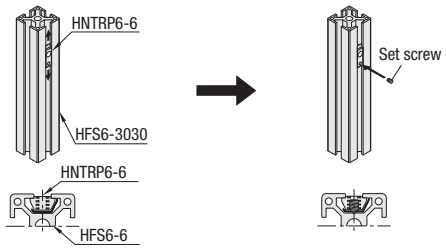
Example

■Post-Assy. Insertion Lock Nuts (HNTR)



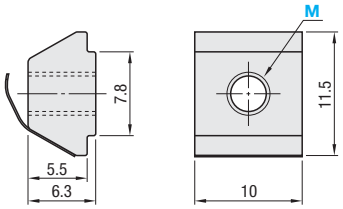
The nut can be fixed in place by itself by tightening the included set screw.

Suitable for use where high repeatability is required. Usable for use when mounting sensor or removing panels repeatedly.

■Post-Assembly Insertion Lock Nuts with Leaf Springs (HNTRP)

Welded Leaf Springs prevents nuts from slipping off even inserted into the vertically-placed extrusions, leading to easy locating.

Also, the nut can be fixed in place by tightening the included set screw.



■Post-Assembly Insertion Short Nuts

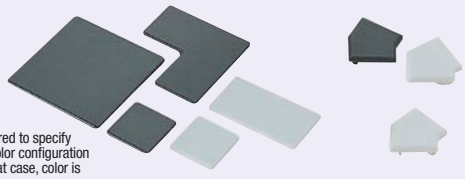
Extrusion End Caps

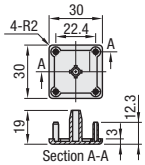


-For HFS6 Series Aluminum Frames 30 · 50 · 60 · 100 Square-

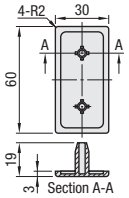
HFS6 Series

Features: Standard caps for protecting frame end faces. Alterations are not required. When the cap is hard to insert, tap with a wooden or plastic hammer.

RoHS



Some products are not required to specify colors, since there was no color configuration in the former catalogs. In that case, color is black.



The pin's shape and numbers of extrusion end caps may be changed to prevent caps from easily falling off.

HFS8 Series

Fixing Parts			Others	
Brackets	Nuts	Joints	Extrusion End Caps	Alteration
P.563 ~ P.578	P.581 ~ P.588	P.627 ~ P.640	P.589	P.645 ~ P.658

CAD Data

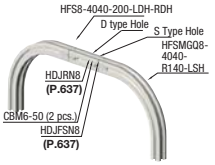
Features: Bending is applied to HFS8-4040.

Curved Aluminum Frames

RoHS

HFSMG



A and B dimensions not indicated in the price list are not available.

Bending is applied after anodizing; therefore, bent section may slightly discolor and becomes white.

For R=140, the frame slot may be deformed and becomes narrower in width at the spot where the frame is bent. Therefore, slot nut cannot be used.

M Material: EN AC-51 400/AlMgSi0,7-T5
S Surface Treatment: Anodize

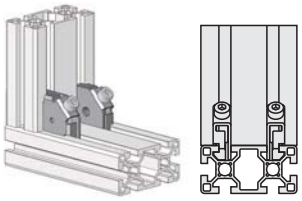
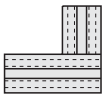
HABL8	120	Hex Socket Head Cap Screws M8x15	1	800		

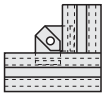


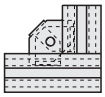
Order Example — Part Number: HABL8

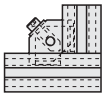
Days to Ship — 6 Days / 2 Days P.87

Example









Holes are tapped on a bracket for cover mounting.

For aluminum extrusions with 2 slots, brackets can be mounted on both sides.

Connection Method

Step	Front View	Side view	Sketch Drawing
1			 Place 2 Aluminum extrusions, and adjust the frame positions.
2			 Fit the joint bracket (2) in the slot of the aluminum extrusions.
3			 Cover the joint bracket (2) on the joint plate (1).
4			 Overtightening may cause deformation of joint plates. Tighten a hexagon socket head cap screw to fix the plate. (Reference Tightening Torque 15Nm)

Features: Brackets with twice as many screws. Extrusions can be connected more securely.

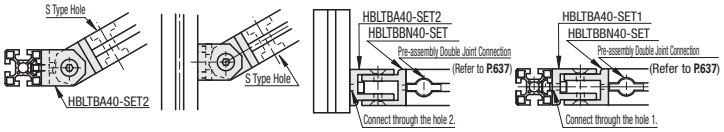
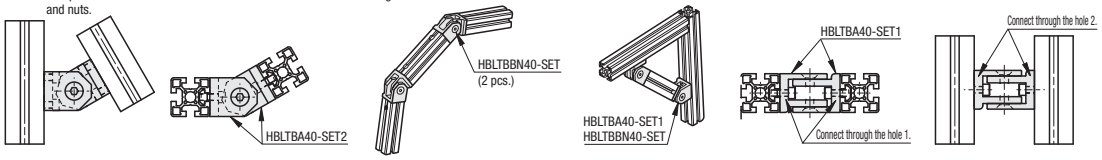
When connecting with Pre-Assy. Insertion Double Joints, S type hole machining is required on extrusions. (Refer to P.598)
When -SET_ is specified, it is not RoHS compliant.



(1) Connection of Two End Sections

Two pieces of HBLTBBN are used to connect two end sections using Pre-Assy. Insertion Double Joints. (P.637)



(2) Connection of Two Side Faces

One piece of HBLTBA and one piece of HBLTBBN are used to connect HBLTBA with the frame side face using a bolt and a nut, and to connect HBLTBBN with the frame end section using the pre-assembly double joint.

(3)Connection of Two Side Faces

Two pieces of HBLTBA are used to connect them with frame side using bolts and nuts.

Features: Sheet Metal Brackets to fix at arbitrary positions.

Thread Locking Type

Anti-loose agent applied inside of the tap

It is a Nut with Thread locker applied on the inside of tap. Reduce loosening caused by vibration at transportation or operation of equipment.
Thread Locking Adhesive is ---A microencapsulated anaerobic adhesive prevents thread loosening. Note that it requires a hardening time (72 hours at room temperature 25°C). The adhesive property is lost once loosened.
Resin Coating ---Resin is coated along the threads. Although the thread locking effect may be less than adhesive type, it can be used repeatedly without hardening time required.

Effect of Thread Locker (Reference) Loosening torque values are for reference. Difference may occur depending on the clearances between bolts and nuts.

	Features	Loosening torque after tightening (1st time)	Remarks
Without Thread Locker	-	17.9N • m	-
Thread Locking Adhesive Type	- Prevents loosening effectively. - Thread locking properties are lost once loosened. - Requires a hardening time for adhesives (72 hours at room temperature 25°C) after tightening.	25.6N • m	Test Conditions: Measured value (HNTTV8-8) when a bolt is loosened after drying for 72 hours at room temperature (25 °C), after tightened at 23.5N • m.
Thread Locking Resin Coating Type	- Can be used repeatedly. (Thread locking effect decreases after repeated use.) - Thread locking effect is immediately seen right after tightening.	21.8N • m	Thread locking effect decreases after repeated use. 5th loosening torque: 20.3N • m Measurement at HNTTZ8-8

■Thread Locking Type

Anti-loose agent applied inside of the tap

It is a Nut with Thread locker applied on the inside of tap. Reduce loosening caused by vibration at transportation or operation of equipment.

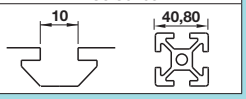
Thread Locking Adhesive is ---- A microencapsulated anaerobic adhesive prevents thread loosening. Note that it requires a hardening time (72 hours at room temperature 25°C). The adhesive property is lost once loosened.

Resin Coating ---------- Resin is coated along the threads. Although the thread locking effect may be less than adhesive type, it can be used repeatedly without hardening time required.

■Effect of Thread Locker (Reference)



Loosening torque values are for reference. Difference may occur depending on the clearances between bolts and nuts.

	Features	Loosening torque after tightening (1st time)	Remarks
Without Thread Locker	-	17.9N • m	-
Thread Locking Adhesive Type	- Prevents loosening effectively. - Thread locking properties are lost once loosened. - Requires a hardening time for adhesives (72 hours at room temperature 25°C) after tightening.	25.6N • m	Test Conditions Measured value (HNTPV8-8) when a bolt is loosened after drying for 72 hours at room temperature (25 °C), after tightened at 23.5N • m.
Thread Locking Resin Coating Type	- Can be used repeatedly. (Thread locking effect decreases after repeated use.) - Thread locking effect is immediately seen right after tightening.	20.3N • m	Thread locking effect decreases after repeated use. 5th loosening torque: 19.1N • m Measurement with HNTAZ8-8

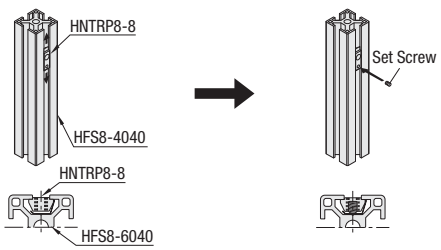
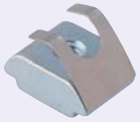
Example

■Post-Assembly Insertion Lock Nuts



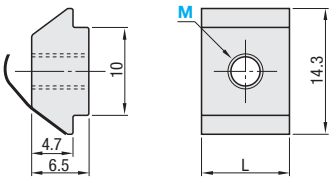
The nut can be fixed in place by itself by tightening the included set screw.

Suitable for use where high repeatability is required. Usable for use when mounting sensor or removing panels repeatedly.



■Post-Assembly Insertion Lock Nuts with Leaf Springs

Welded Leaf Springs prevents nuts from slipping off even inserted into the vertically-placed extrusions, leading to easy locating.



Also, the nut can be fixed in place by tightening the included set screw.

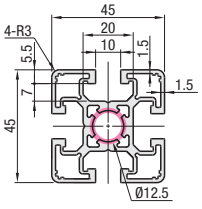
Features of Extrusions



Cross Section Shape	EFS Extrusions	New shape with the same or higher rigidity as conventional HFS series. Weight saving and price reduction realized. Migration from HFS Series extrusions realizes cost savings.
	HFS Extrusions	Standard cross section shape.
	HFSL Extrusions	Although having thin walls lowers the allowable load, excels in cost savings offered.
	GFS Extrusions	Suitable for heavier devices due to the thick walls.
Surface Treatment	Clear Anodize	Common surface treatment.
	Black Anodize	Effective in where light reflection is not desirable.

Order Example

Part Number	-	L
HFS8-5050	-	800
KHFS8-5050	-	4000

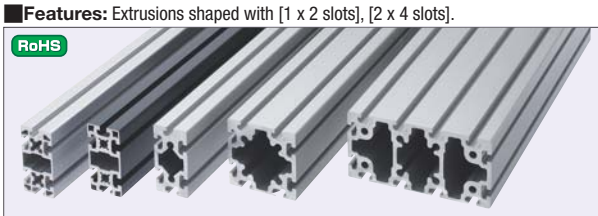
Price

When L is less than 300
Unit prices are indicated in the table regardless of the length.
ex: HFS8-5050-185=EUR 9,60
When L is 300 or more
Prices are calculated as follows:
Unit Price/m x Specified Full Length = Price
ex:HFS8-5050-500
32,20x0.5m=EUR 16,10
(Round down to ten Cent.)

Days to Ship

Configurable Length Extrusions
6 Days

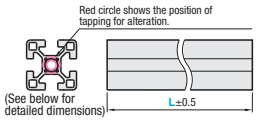
Fixed Length Extrusions (Effective Length 4000mm)
7 Days
For orders of 20 or more identical pieces, please request a quotation.
(KHFS8-5050-4000)



Alterations

Alterations are available for Configurable Length Extrusions. For details, refer to **P.645**

Aluminum Frames with 4000mm or more
Applicable to 6000mm depending on products.
Refer to Information of Special Orders (**P.97**),
and contact the person in charge of Special Orders at MISUMI QCT Center.
Some extrusions are not applicable.



CAD Data

(Round down to ten cent.)

Alterations

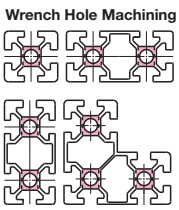
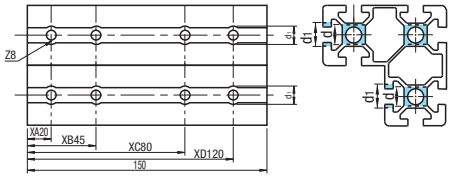
Drilling hole at a specified position can be done.
For details of tapping refer to P.645



- Nuts for Extrusion
  Please use nuts for aluminum extrusions.
  For the nuts refer to P.615~620

Alterations	Counterboring							Wrench Hole					
Code	Z Selection			XA	XB	XC	XD	XE	D Selection	AV	BV	CV	DV	EV
Spec.	Z	d	d1	Distance from The Left End Plane mm					D	Distance from The Left End Plane mm				
Specifications of Hole Size and Hole Position	6	6.5	11	7~L-7					8	7~L-7				
	8	9	14											

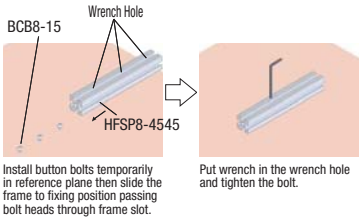
Counterboring Direction



Wrench Hole Machining Direction

*1 When the cross section is rectangle (vertical) counterboring is not available for extrusions exceeding 60mm in the longitudinal direction.
*2 When the cross section is L-shaped counterboring is only applicable to the lower section of extrusions exceeding 60mm in length direction.

Order Example



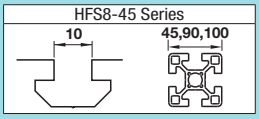
HFSP8 - 909045 - 150 - Z8 - XA20 - XB45 - XC80 - XD120
HFSP8 - 4545 - 2000 - D8 - AV100 - BV120 - CV1000 - DV1880 - EV1900
HFSP8 - 9090 - 800 - LTP

When the cross section is L-shaped select distance from left end with lower portion in front.

Example

Install button bolts temporarily in reference plane then slide the frame to fixing position passing bolt heads through frame slot.

Put wrench in the wrench hole and tighten the bolt.



Being extruded sections products can twist. It is recommended to support overall
For Aluminum Extrusion Tolerance Data refer to P.476

Example

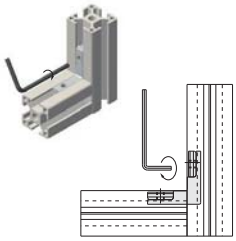
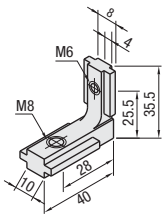
How to Use Post-Assembly Insertion Blind Brackets



(1)Fit the post-assy. insertion BB body in the slot of extrusions.

(2)Tilt two pieces of post-assy. insertion nut and fit them in both ends of post-assembly insertion BB body.

(3)Fix post-assy. insertion BB body and post-assy. insertion BB nuts with set screws.



Features: Blind Brackets to connect Extrusions 45 / 30 square.

Type	Material	Surface Treatment

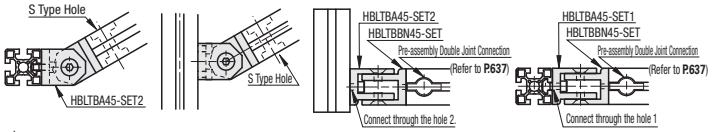
	SET5		HBLTBD		CBM6-35	4	HDJFSN8-45	2	4,30

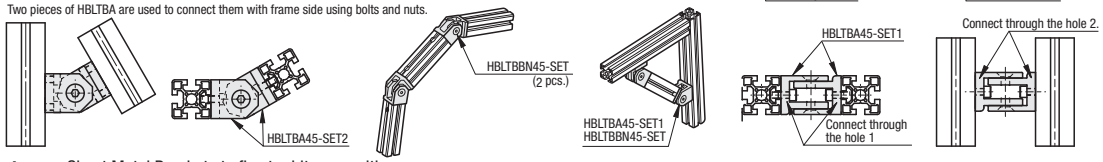
When connecting with Pre-Assy. Insertion Double Joints, S type hole machining is required on extrusions. (Refer to P.598)

When -SET_ is specified, it is not RoHS compliant.



(1) Connection of Two End Sections

Two pieces of HBLTBBN are used to connect two end sections using Pre-Assy. Insertion Double Joints. Refer to (P.637)

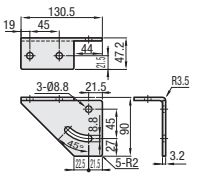


(2) Connection of Two Side Faces

One piece of HBLTBA and one piece of HBLTBBN are used to connect HBLTBA with the frame side face using a bolt and a nut, and to connect HBLTBBN with the frame end section using the pre-assembly double joint.

(3)Connection of Two Side Faces

Two pieces of HBLTBA are used to connect them with frame side using bolts and nuts.



Features: Sheet Metal Brackets to fix at arbitrary positions.

■Thread Locking Type

It is a Nut with Thread locker applied on the inside of tap. Reduce loosening caused by vibration at transportation or operation of equipment.
Thread Locking Adhesive is ---- A microencapsulated anaerobic adhesive prevents thread loosening. Note that it requires a hardening time (72 hours at room temperature 25°C). The adhesive property is lost once loosened.
Resin Coating ---------- Resin is coated along the threads. Although the thread locking effect may be less than adhesive type, it can be used repeatedly without hardening time required.

■Effect of Thread Locker (Reference)

Loosening torque values are for reference. Difference may occur depending on the clearances between bolts and nuts.

	Features	Loosening torque after tightening (1st time)	Remarks
Without Thread Locker	-	17.9N • m	-
Thread Locking Adhesive Type	- Prevents loosening effectively. - Thread locking properties are lost once loosened. - Requires a hardening time for adhesives (72 hours at room temperature 25°C) after tightening.	25.6N • m	Test Conditions Measured value (HNTTV8-8) when a bolt is loosened after drying for 72 hours at room temperature (25 °C), after tightened at 23.5N • m.
Thread Locking Resin Coating Type	- Can be used repeatedly. (Thread locking effect decreases after repeated use.) - Thread locking effect is immediately seen right after tightening.	21.8N • m	Thread locking effect decreases after repeated use. 5th loosening torque: 20.3N • m Measurement at HNTTZ8-8

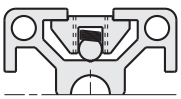
■Thread Locking Type

Anti-loose agent applied inside of the tap

It is a Nut with Thread locker applied on the inside of tap. Reduce loosening caused by vibration at transportation or operation of equipment.



Thread Locking Adhesive is ----A microencapsulated anaerobic adhesive prevents thread loosening.
Note that it requires a hardening time (72 hours at room temperature 25°C).
The adhesive property is lost once loosened.

Resin Coating ----------Resin is coated along the threads. Although the thread locking effect may be less than adhesive type, it can be used repeatedly without hardening time required.

Example

• Does not fall even if a extrusion is placed vertically.

The built-in spring prevents slips. Moves easily in the slot when pressed slightly by hand.

■Effect of Thread Locker (Reference)

	Features	Loosening torque after tightening (1st time)	Remarks
Without Thread Locker	-	17.9N • m	-
Thread Locking Adhesive Type	- Prevents loosening effectively. - Thread locking properties are lost once loosened. - Requires a hardening time for adhesives (72 hours at room temperature 25°C) after tightening.	25.6N • m	Test Conditions Measured value (HNTTV8-8) when a bolt is loosened after drying for 72 hours at room temperature (25 °C), after tightened at 23.5N • m.

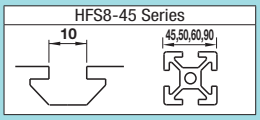
■Thread Locking Type

It is a Nut with Thread locker applied on the inside of tap. Reduce loosening caused by vibration at transportation or operation of equipment.

Thread Locking Adhesive is ---A microencapsulated anaerobic adhesive prevents thread loosening. Note that it requires a hardening time (72 hours at room temperature 25°C). The adhesive property is lost once loosened.

Resin Coating ---Resin is coated along the threads. Although the thread locking effect may be less than adhesive type, it can be used repeatedly without hardening time required.



■Effect of Thread Locker (Reference)

Loosening torque values are for reference. Difference may occur depending on the clearances between bolts and nuts.

	Features	Loosening torque after tightening (1st time)	Remarks
Without Thread Locker	-	17.9N · m	-
Thread Locking Adhesive Type	· Prevents loosening effectively. · Thread locking properties are lost once loosened. · Requires a hardening time for adhesives (72 hours at room temperature 25°C) after tightening.	25.6N · m	Test Conditions: Measured value (HNTPV8-8) when a bolt is loosened after drying for 72 hours at room temperature (25 °C), after tightened at 23.5N · m.
Thread Locking Resin Coating Type	· Can be used repeatedly. (Thread locking effect decreases after repeated use.) · Thread locking effect is immediately seen right after tightening.	20.3N · m	Thread locking effect decreases after repeated use. 5th loosening torque: 19.1N · m Measurement with HNTAZ8-8

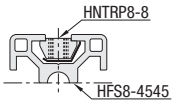
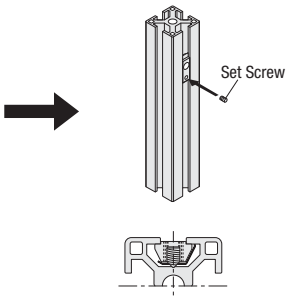
Example

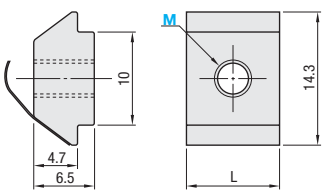


The nut can be fixed in place by itself by tightening the included set screw.



Suitable for use where high repeatability is required. Usable for use when mounting sensor or removing panels repeatedly.

Welded Leaf Springs prevents nuts from slipping off even inserted into the vertically-placed extrusions, leading to easy positioning.



Also, the nut can be fixed in place by tightening the included set screw.

How to Connect Tapping Joints (Female Thread holes are not required for extrusion connection.)

Step	1	2	3
Explanation	Tighten temporarily the tapping joint on frame end face. (Refer to appropriate tightening torque above.)	Pass the head of tapping joint through the slot of Extrusion (B), and slide it down to the bottom of (A). TJ plate goes through the slot of frame (B) too.	Pass the Torx bit through wrench hole, and tighten it by motorized screw driver.
Tapping Joints	 * Female Thread holes are not required.	 * Part below neck of HTJ8 is thinned so as to be engaged with slot width of 10 mm (HFS8 Series).

Example

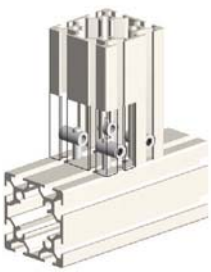
Center Joint Connection Method



Step	Front View / Side View	Standard Type	With Rotation Stopper	Explanation
1				Mount center post to extrusion (A). (For Post-Assembly Insertion Type, it can be inserted by turning from upside of the slot.) Center Post is for Standard Type and With Rotation Stopper Type.
2				Insert joint guide in the extrusion (B) with M hole (**P.656**). For standard type, adjust the through hole to be upward.
3				Move the extrusion (A) close to the extrusion (B) while putting the center post through the through hole of joint guide.
4				Tighten the set screw to the side of joint guide.
5				When the set screw is tightened against a V groove on the center post, the (ok) (A) and (B) are puled and bound together.

- Product Number for the parts shown on the above example (standard type).

- Pre-Assembly Insertion 90-Degree Reversal Type **HMJR**
  Can reverse tightening direction by 90 degrees.

- Connecting extrusions with 2 or more slots on one side.
  Insert joint guide from the both sides of M type hole, and connect and tighten it with two or more center joints.
- For extrusions with three slots, holes cannot be addeed on the center row.
  (For extrusions with four rows of slots, all slots are drilled.)

2-slotted extrusions can be connected by using two Center Joint kits.

3-slotted extrusions are connected using two outside slots only.

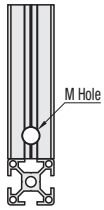
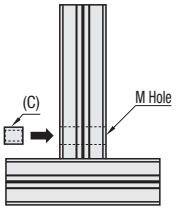
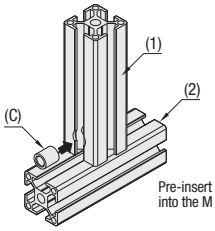
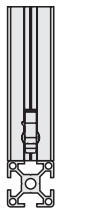
HPJN5-20	5-2020	-	Cannot be used on surfaces without slots.
HPJN5-40	5-2040 5-4040	-	
HPJN6-30	6-3030	-	
HPJN6-60	6-3060 6-6060	-	
HPJN8-40	8-4040	-	
HPJN8-80	8-4080 8-8080	-	
HPJN8-45	8-4545*	*HFSL8-4545, HFSLF8-4545 and HFSLT8-4545 cannot be used because the thickness of slot extrusion is different.	
HPJN8-90	8-4590* 8-9090	*HFSLT8-4590 cannot be used because the thickness of slot extrusion is different	

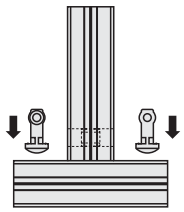
Example

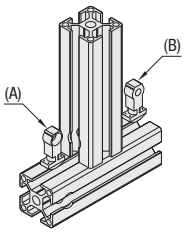


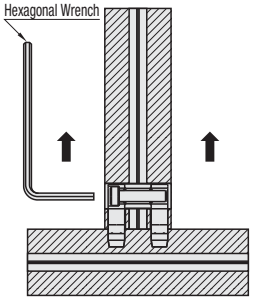


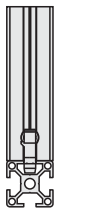


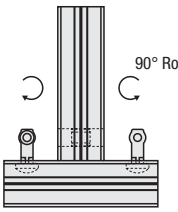


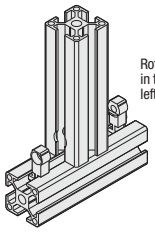


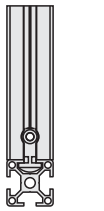


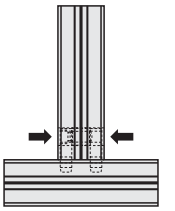


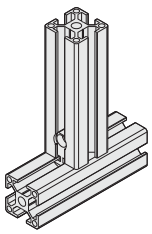


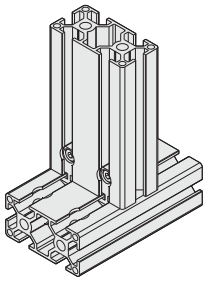


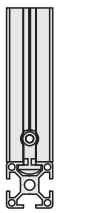


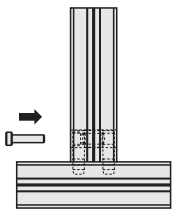


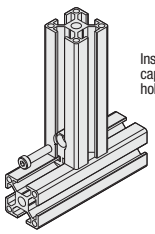


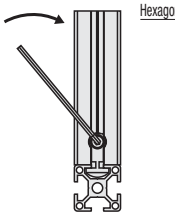


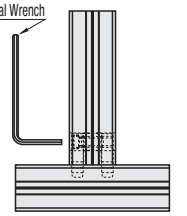


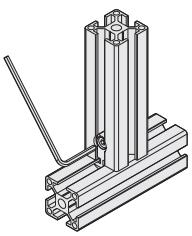


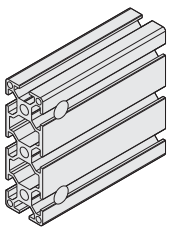












- Installation Example

Order Example Part Number HPJN6-30 Days to Ship 6 Days P.87

Example

■Post-Assembly Insertion Double Joint Connection (Connect the extrusion at the corners or the center.)

Step	Front View	Side view	Post-Assembly Insertion Double Joints	Specification Method by Part Number (30 Square as an Example)
1			 Pre-insert the joint pipe (C) into the M hole of extrusion (1).	(1) HFS6-3030-1000-LMH (2) HFS6-3030-1000 (A) Post-Assembly Insertion Double Joint A (B) Post-Assembly Insertion Double Joint B (C) Joint Pipe
2		 Insert the Post-Assembly Double Joints (A) and (B) sideways into the slot of extrusion (2).		 - When tightening the Hexagon Socket Head Cap Screw, pulling force works as illustrated above, and connects two extrusions.
3			 Rotate the joints (A) and (B) 90° in the direction as shown in the left figure.	
4		 Fit the joints (A) and (B) in the slot of the extrusion.		■ Example of Rectangle Shape Extrusion 
5			 Insert the hexagon socket head cap screw into a counterbore hole of the joint (A).	For extrusions with three rows of slots, M holes cannot be drilled on the center one. (For explanation of M hole, refer to **P.656**)
6		 Tighten the hexagon socket head cap screw with a hexagonal wrench; the extrusion (1) and (2) are lifted upward, then 2 extrusions joint together.		 ex.)HFS6-3090-1000-LMH

Blind Joint Components
-Simple Joint Kits-

Alterations necessary to use this component

Tapping →P.647

CAD Data

Features: Only end tapping is required on extrusions. Simple joints with good workability.

RoHS

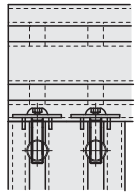
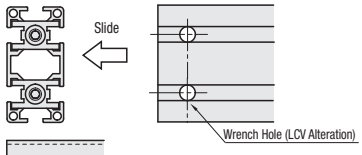
Order Example Part Number: HSJ8

Days to Ship 6 Days P.87

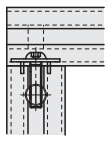


Example

•When mounting rectangular extrusions such as HFS6-3060, 8-4080 or 8-4590, refer to the below example.

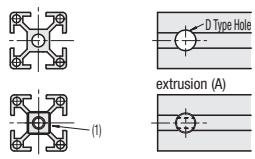


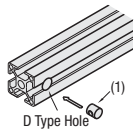
Ex. (1)

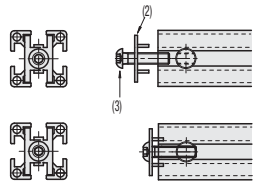


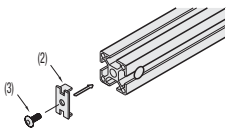
<Completed>

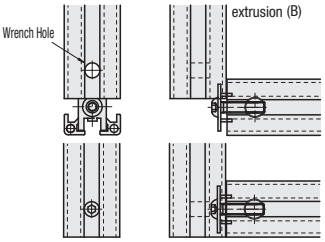
Ex. (2)

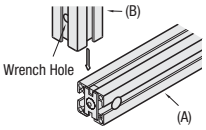


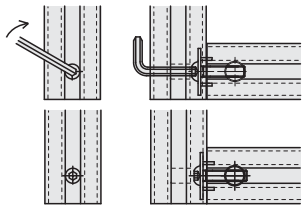


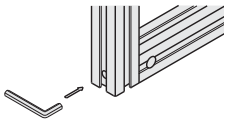












<Completed>

Example

Single Joint Connection Method (Connect the extrusions at the corners.)

Step	Front View Side View	Sketch Drawing
1		Drills D type hole in the frame.  Insert joint nut (1) in the extrusion where hole D is drilled.
2		 Put the button bolt (3) through the joint plate (2), lightly tighten it temporarily.
3		 Pass joint plate (2) through slot in the extrusion (B) where the wrench hole was drilled and slide it to bottom of (A)
4		 Tighten the button bolt (3) with a hexagonal wrench through the wrench hole.

Connection Method by Part Number(30 Square as an Example)

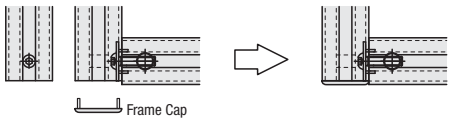
(A) **HFS6-3030-1000-LDH**

- Length (optional)
- Adds a D hole horizontally on the left side of the extrusion.

HSJNS6(Single Joint / Narrow Type)

- (1)**Stainless Steel Nut 6**
- (2)**Narrow Plate 6**
- (3)**Button Head Cap Screw Stainless Steel M6-25**

(B) **HFS6-3030-800-LCV**



- Length (optional)
- Adds a wrench hole vertically on the left side of the extrusion.

Method of Shortening the Extrusion to Compensate for the Thickness of Extrusion End Cap

(Single Joint / Narrow Type)

For normal specification, the extrusion end cap adds its thickness to the length of a frame when it is mounted. With optional specification of the extrusion and change of the single joint, extrusion end cap and extrusion can be flat. Beforehand, please specify the extrusion length 3mm shorter (one side) to compensate for the thickness of the extrusion end cap. (The length is shortened by 6mm when wrench holes are located at both ends.)

•To specify options for extrusions, see **P.651**

In this case, use HSJNS instead of HSJ or HSJS.
(As the L dimension of HSJ is long, it fits the extrusion end cap.)

Extrusions Applicable to Single Joint (Not applicable to extrusions not listed in the table.)

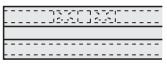
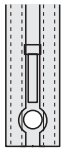
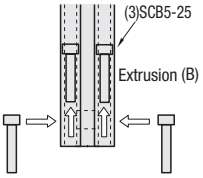
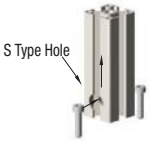
Example of Extrusion Connection

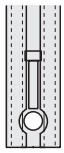
Example of Mounting to an Extrusion from the Bottom

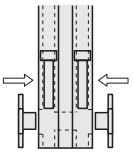


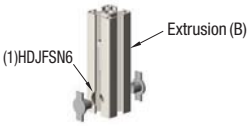


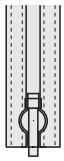


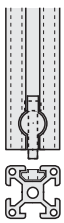


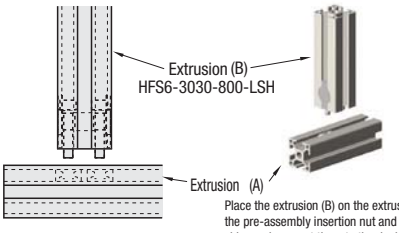


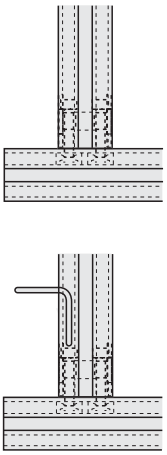




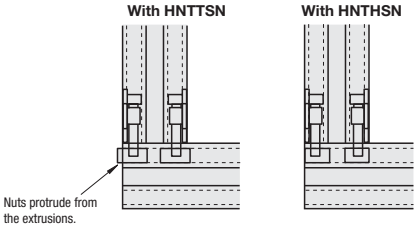






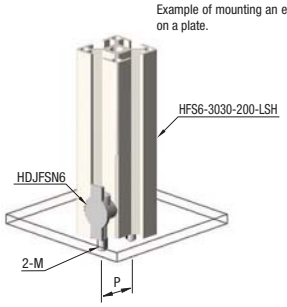


Example of Connection with Curved Extrusions



Example

■Pre-Assembly Insertion Double Joint Connection (Connect the extrusion at the center.)



Step	Front View	Side View	Sketch Drawing
1			 (2) Pre-insert the pre-assembly insertion nuts into the extrusion (A).
2			 Insert screw (3) in the extrusion (B) with S hole. Put the screw head through the S hole, then move the screw along the slot until the screw tip aligns with S hole.
3			 Insert Pre-Assembly Double Joint (1) into the extrusion (B) where the screws were inserted.
4			 Put the screw through the hole of the Pre-Assembly Double Joint in the slot of the extrusion (B).
5			Place the extrusion (B) on the extrusion (A), then slide the pre-assembly insertion nut and screw from both sides and connect them to the double joint (1).
6			 Tighten with a hexagonal wrench while adjusting the position.

- **How to Use Pre-Assembly Insertion Double Joint Connection at the Corner**

  If HNTHSN6 is used instead of (2) HNTTSN6-5, Pre-Assembly Insertion Double Joint can be used at the corner of the extrusion.

- Pre-Assembly Insertion Double Joint Kits · Eccentric Nut Type
  It is used when installing brackets with angle, truss brackets and angled extrusions.
- The allowable load is the same level as when the bracket is used.

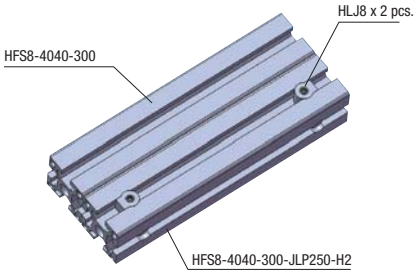
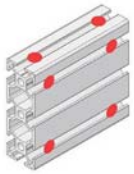
Order Example — Part Number: HLJ8



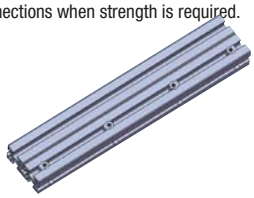
Days to Ship: 6 Days P.87

Example



Parallel Joint Connection Method

Step	Front View / Side View	Parallel Joint	Explanation
1			Mount parallel post to extrusion (A). (Post-Assembly Insertion Type can be inserted by turning from upside of slot.) Parallel Post is for Standard Type and With Rotation Stopper Type.
2			Insert a Jont Guide into the extrusion (B) with L Holes (**P.657**). Aligning of the holes is not reqired.
3			Move the plate (A) close to the plate (B) while putting the parallel post through the through hole of joint guide.
4			Tighten the set screw to the side of joint guide.
5			When the set screw is tightened against the V groove on the post, the extrusions (A) and (B) will pull together and be bound.



- Part Numbers for the parts shown on the above example.

- Connecting extrusions with 2 or more slots on one side.
  Insert joint guide from the both ends of L hole, then connect with 2 or more parallel joints.
- Connecting extrusions with 3 or more slots. L holes are added on the outside rows only.
  Not applicable on rows in the middle.

- As long as interference between each joint does not occur, multiple extrusions can be connected. Use multiple connections when strength is required.

NEW Hexagon Socket Head Cap Screws for Aluminum Frames -Single Item · Bulk-packages-

Features: Standard screws to connect various brackets for wide range of applications.

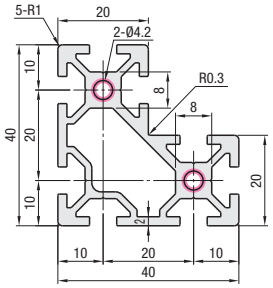
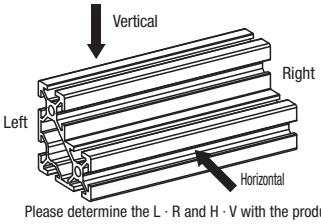
Alterations for Aluminum Frames Outline

MISUMI Aluminum Extrusion products can be utilized for structure building with highly enhanced design flexibility when available alteration options are applied. Some alterations are not applicable depending on extrusion types and sizes.
Check for the available alterations on each product page price lists.
The hyphens (-) in the price lists denote the unavailable items.



Type	Alterations	Page	Alteration Codes	Example	Contents
End Tapping	End Tapping	P.647	LTP/RTP/TPW		Adds tapped holes on extrusion ends. Blind Joints which require this alteration - Screw Joints **P.628** - Simple Joint **P.633**
Cutting Methods Change	High Precision Cut	P.648	SC		Applies High Precision Cut with an overall length tolerance of L±0.2 (Standard=L±0.5). Ⓟ Only applicable to L≤1500
	45 Degree Cut	P.648	LAT45/RAT45		Cuts with 45-degree angle.
Drill Wrench Hole	Wrench Hole in Fixed Position	P.649	LWH/RWP		Wrench access hole(s) for Blind Joints are drilled. The hole location will be aligned with the mating extrusion's tapped hole location. Blind Joints which require this alteration - Screw Joints **P.628** - Single Joints **P.635** - Tapping Joints **P.627**
	Extrusion End Caps Thickness Offset	P.650	FL/FR		Offsets the wrench access hole for the thickness of Frame Cap (3mm). The cap will be flush with the adjacent extrusion surface.
	Wrench Hole in Specified Position	P.651	AH/BH/AV/BV		Adds a wrench hole in a desired position from the left end. Use for Blind Jointing in beam sections.
Counterboring	Counterbores in Specified Position	P.653	Z6/XA100		Adds a counterbored hole in a desired position from the left end. Can be used for connecting extrusions or installing tables etc.

Type	Alterations	Page	Alteration Codes	Example	Contents
Blind Joints Dedicated Holes	D type Hole	P.654	LDH/RDV		Adds required holes for Single Joint connections. (Single Joints: Refer to **P. 635**)
	S type Hole	P.655	LSH		Adds required holes for Pre-Assy. Insertion Double Joint connections. (Pre-Assy. Insertion Double Joint: Refer to **P. 637**)
	M type Hole	P.656	LMH		Adds required holes for Post-Assy. Insertion Double Joints, Center Joint connections. (Post-Assy. Insertion Double Joints: Refer to **P. 631**)
	L type Hole	P.657	JLP		Adds required holes for Parallel Joint connections. (Parallel Joints: Refer to **P. 639**)
Special Extrusions End Plates Alterations for mounting	GFS Series End Tapping	P.658	LTS/RTS/TSW		Necessary alteration to use Ends Protection Plates for High Rigidity Aluminum Frames GFS series. (Refer to **P.552 · 590 · 624**)
	HFSR End Tapping	P.658	LTS/RTS/TSW		Necessary alteration to use Ends Protection Plates for HFSR series. (Refer to **P. 510 · 552 · 590**)
Labeling	Labeling	P.658	ZZZ		Adds a sticker with catalog No. etc. on the aluminum extrusions. Although number of characters are limited, customer's own serial number or unit number can be labeled.

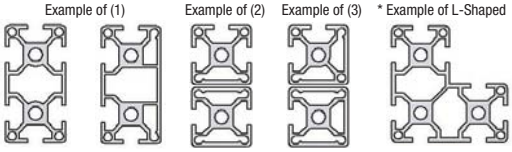


■Standard of Extrusion Position and Indications

For some hole alterations, specifying of "Which end (L or R) to apply the alterations" and "Which direction (horizontal or vertical) to apply the alterations" will be required. Using our standard specifying method for orientation (as the product drawings facing you on product pages), then L · R and H · V are determined as shown below.

Ex.: HFS5-404020

(Cross-Section View on product page)



Please determine the L · R and H · V with the product drawings facing you, on each product page.

■Standard of Extrusion Position

Placement to determine right or left of extrusions is shown as follows.
(1) On the vertical length
(2) Flat side down
(2) One flat side down and another flat side right

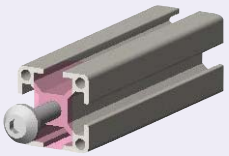
Example of (1) Example of (2) Example of (3) * Example of L-Shaped

When the extrusion is on the vertical length and also has a flat side, (1) has the priority.

LR (Left and right of extrusions):

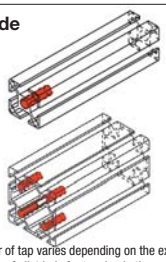
Place extrusions properly, then determine the right and left.
Since most extrusion cross sections are symmetrical and can be used in any orientation. However, please specify the L · R parameters in your orders for administrative purposes.
Extrusions (1) with different alterations applied on left and right ends, and (2) with non-symmetrical cross sections are not reversible therefore the L · R specifications will become critically important.

HVP (Horizontal / Vertical / Cross):



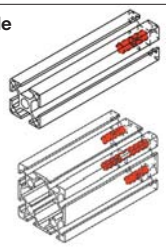
Specify the hole alterations with the extrusion properly oriented, and according to the connection method with the mating extrusion.

Tapping

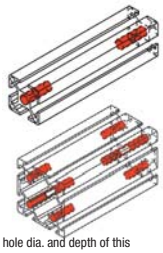


Blind Joints which require this alteration

Screw Joints →P.628 | Simple Joint →P.633



Adds tapped holes on extrusion ends.



Left Side LTP

Right Side RTP

Both Sides TPW

The number of tap varies depending on the extrusion type (the number of pilot hole for tapping in the end). See each product page for the tapping positions.

For specifying tapping hole dia. and depth of this alteration, check for the list of alteration fees.

⊗Check for the applicable extrusions and the alteration fees in the below table. Indicated with "-" in the table are not applicable.

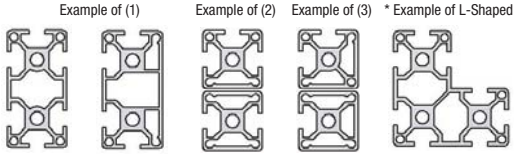
For * marked GFS series, tapping diameter is M12 Depth 36.

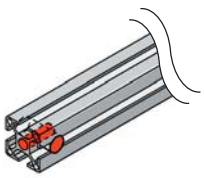


Order Example Part Number: HFS6 / HFS8 - 3030 / 4080 - 500 / 1200 - LTP / TPW

Days to Ship 7 Days

Standard of Extrusion Position

Placement to determine right or left of extrusions is shown as follows.
(1) On the vertical length
(2) Flat side down
(2) One flat side down and another flat side right

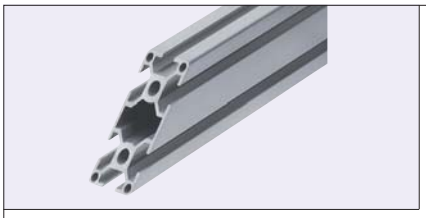


Example of (1) Example of (2) Example of (3) * Example of L-Shaped

ⓟWhen the extrusion is on the vertical length and also has a flat side, (1) has the priority.

D hole · S hole · M hole - Notes for Combination Use of Tapping Hole.

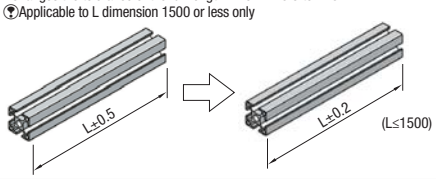
•When D, S, M holes are specified in the same direction as the tapped holes, the tap depths will be changed to avoid interferences with D, S, and M holes.



(Ex.) HFS6-3030-500-LDH-LTP

• EFS and CAF is the same as HFS series.

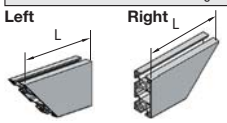
Extrusions (Series)	Standard Tap Depth	Tap depth when D type hole and S type hole are specified	Tap depth when M type hole is specified
HFS5 20, 40mm Square	15mm	-	6mm
HFS5 25mm Square	24mm		-
HFS6 30, 50, 60, 100mm square		9mm	9mm
HFS8 40mm Square	36mm	13mm	13mm
HFS8 80mm Square	24mm		
HFS8-45 45mm Square	18mm	14mm	
HFS8-45 90mm Square	24mm		
GFS8 40, 80mm square	36mm	13mm	13mm
GFS8 45, 50, 60, 90, 100mm square	36mm	14mm	13mm



Extrusion Cut

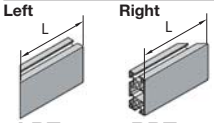
-45 Degree Cuts - High Precision Cuts-

• High Precision Cut SC



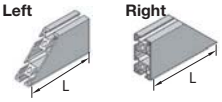
-Changes the tolerance of the full length L from L±0.5 to L±0.2.
※Applicable to L dimension 1500 or less only

• 45 Degree Cut



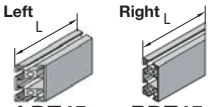
L_T45: Adds a 45 degree cut on the left end in the specified direction.
R_T45: Adds a 45 degree cut on the right end in the specified direction.

Cut with cross the section facing down



LAT45 **RAT45**

Cut with cross the section facing back



LBT45 **RBT45**

Cut with cross the section facing up

LCT45 **RCT45**

Cut with cross the section facing front

LDT45 **RDT45**

※The cut direction can be specified as four directions against the cross section.
⊗In case of angled cut, it is impossible to specify other alteration in the same direction.

⊗Check for the applicable extrusions and the alteration fees in the below table. Indicated with "-" in the table are not applicable.

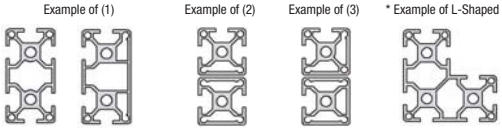
Order Example

Part Number

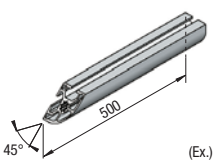


HFS8 - 4040 - 600 - SC
HFS5 - 2020 - 1000 - LAT45 - RBT45

Days to Ship: 7 Days

■Standard of Extrusion Position

Placing method of the extrusion, which is a basis to determine right and left is shown as follows.
(1) On the vertical length
(2) Flat side down
(2) One flat side down and another flat side right

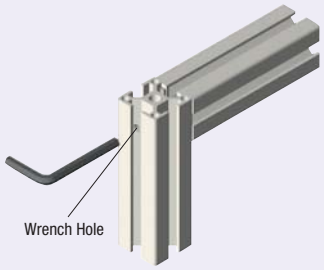


Example of (1) Example of (2) Example of (3) * Example of L-Shaped

※When the extrusion is on the vertical length and also has a flat side, (1) has the priority.

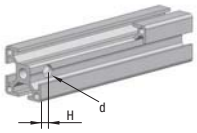
■Notes for 45 Degree Cut of HFSR Series.

- As standard, the frame is placed like the following figure for R sector like HFSR6-3030.



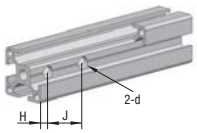
(Ex.) HFSR6-3030-500-LCT45

Fastening Location Wrench Access Hole Alterations

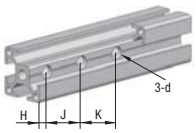


Blind Joints which require this alteration

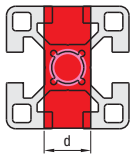
Screw Joints	Single Joint	Tapping Joints
→P.628	→P.633	→P.627



Wrench access holes used for Blind Joint connections, etc. are drilled.



1 Row (C)



2 Rows (W)

3 Rows (E)

Cross Section View

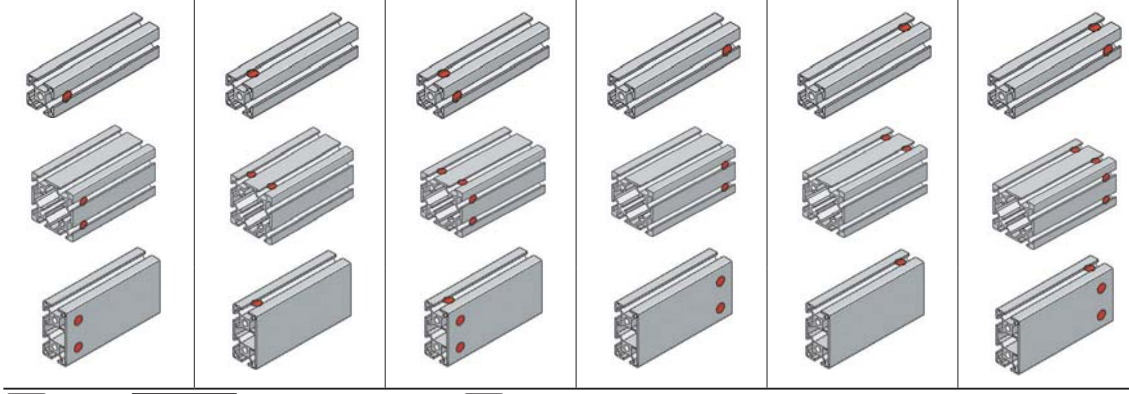
■Position and Size of Hole

Extrusion Series	H (mm)	J (mm)	K (mm)	Wrench Hole d (mm)
HFS5	10	20	20	7.35
HFS5 (25 SQ.)	12.5	25	25	
HFS6	15	30	30	8
HFS6 (50 SQ.)	15	20	20	
HFS8	20	40	40	
HFS8-45	22.5	45	45	

■Alteration Code Specifying Method

Drilling option is specifiable by combining symbols in the first, second and third column in the table.

-LWH Drills two rows of wrench holes horizontally on the left side of the extrusion.
-LWP Drills two rows of wrench holes crisscross on the left side of the extrusion.



Meaning of Option Symbols		
First	Second	Third
L (Left) **R** (Right)	**C** (Wrench Holes in Single Line) **W** (Wrench Holes in Two Lines) **E** (Wrench Holes in Three Lines)	**H** (Horizontal) **V** (Vertical) **P** (Crisscross)

* For additional explanations on various options, see Alterations Overview. (**P.645**)

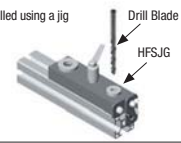
■Standard of Extrusion Position

Placing method of the extrusion, which is a basis to determine right and left is shown as follows.

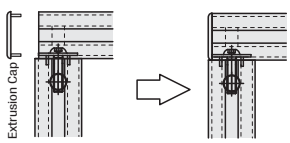
(1) On the vertical length
(2) Flat side down
(2) One flat side down and another flat side right

Example of (1) Example of (2) Example of (3) * Example of L-Shaped



⚲When the extrusion is on the vertical length and also has a flat side, (1) has the priority.

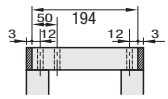
■Hole(s) on Smooth Surfaces



When the Wrench Access Hole alteration is not desirable on flat (no slot) surfaces to preserve the smooth surface esthetics, we recommend using the Blind Joint Kits (**P.633**) that require no access holes.

- Wrench access hole can be drilled using a jig on **P.748** by the customers.

■Available Alteration Combinations



Wrench access hole is moved-in by 3mm to account for the thickness of extrusion end caps. By moving-in the tightening position by 3mm, the end caps will be flush with an adjoining extrusion. (Free)

In order to make the extrusion and the extrusion end cap flat,

-FL: Shifts the wrench hole on the left side 3mm toward the left end.
-FR: Shifts the wrench hole on the right side 3mm toward the right end.

ex **Example**

For HFS6-3030-194-LCV-FL-RCV-FR ---
The wrench access holes originally to be drilled at 15mm will be moved to 12mm to take the end cap thickness in account.

⚲This must be specified as an additional modifier of the Wrench Access Hole Alteration. Adding this modifier alone to other alterations will be invalid.

Order Example

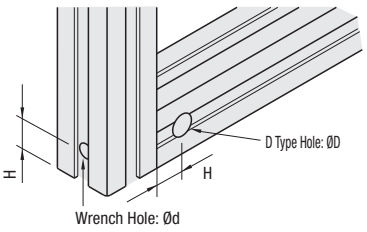
■Alterations Needed for Various Joints

Tapping Joint Drilling

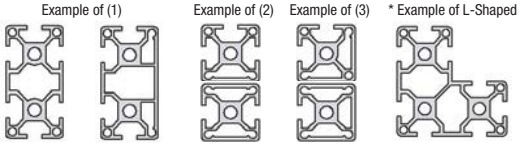


P. 627 A wrench access hole is needed for a Tapping Joint.

Screw Joint Drilling

P. 628 For a Screw Joint, a wrench access hole on one extrusion, and a hole tapping (**P. 658**) on the other extrusion are needed.

Single Joint Drilling

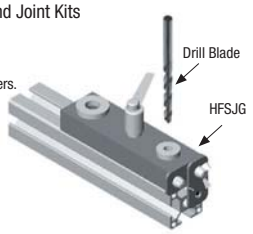


P. 635 For a Single Joint, a wrench access hole on one extrusion, and a D Hole (**P. 654**) on the other extrusion are needed.

■Standard of Extrusion Position

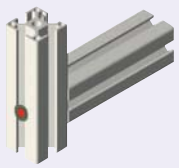
Placing method of the extrusion, which is a basis to determine right and left is shown as follows.
(1) On the vertical length
(2) Flat side downa
(2) One flat side down and another flat side right

Example of (1) Example of (2) Example of (3) * Example of L-Shaped



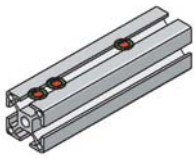
When the extrusion is on the vertical length and also has a flat side, (1) has the priority.

■Hole(s) on Smooth Surfaces

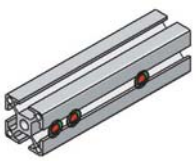


When the Wrench Access Hole alteration is not desirable on flat (no slot) surfaces to preserve the smooth surface esthetics, we recommend using the Blind Joint Kits (**P.633**) that require no access holes.

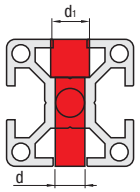
- Wrench access hole can be drilled using a jig on **P. 748** by the customers.



Counterbore Hole in Specified Position



Countrbores useable for various purposes are added at customer specified locations.

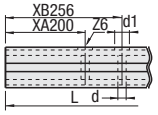


Top to Bottom (Vertical)
XA XB XC XD XE

Right to Left (Horizontal)
YA YB YC YD YE

Cross Section View

Counterbore is added on every slot for multiple slotted extrusions.



Alteration Code Specifying Method

- As for the Counterbore, it is possible to select one type of hole diameter in Z selection and specify up to five holes in one direction.
- Specify the desired hole position from the left end.

Alterations	Conterboring				
Code	Z Selection				XA XB XC XD XE YA YB YC YD YE

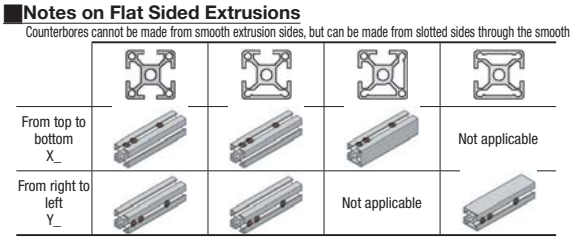
Standard of Extrusion Position

Placing method of the extrusion, which is a basis to determine right and left is shown as follows.

(1) On the vertical length
(2) Flat side down
(2) One flat side down and another flat side right

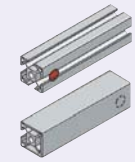


Example of (1) Example of (2) Example of (3) * Example of L-Shaped

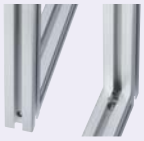
When the extrusion is on the vertical length and also has a flat side, (1) has the priority.

Notes on Flat Sided Extrusions

Counterbores cannot be made from smooth extrusion sides, but can be made from slotted sides through the smooth sides.



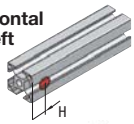
D Type Hole Alteration



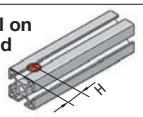
Blind Joints which require this alteration

Single Joint →P. 635

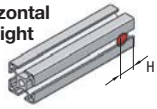
Adds D Holes for Single Joint connections.



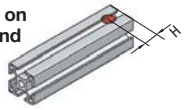
(Ref.) View of Single Jointed Corners



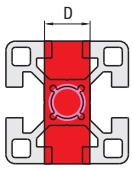
D Holes do not penetrate through the smooth sides, enabling esthetically pleasing connections.



Horizontal on Left End LDH



Vertical on Left End LDV



Horizontal on Right End RDH

Vertical on Right End RDV

Cross Section View

D Hole is added on every slot for multiple slotted extrusions.

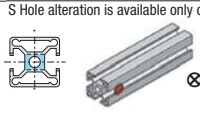
■Standard of Extrusion Position

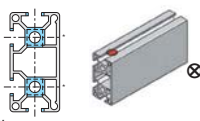
Placing method of the extrusion, which is a basis to determine right and left is shown as follows.

(1) On the vertical length

(2) Flat side down



Example of (1) Example of (2)



⊛When the extrusion is on the vertical length and also has a flat side, (1) has the priority.

■Notes on Extrusions with Flat (Smooth) Sides

S Hole alteration is available only on sides that are not smooth.

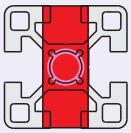
⊛Not applicable in vertical direction towards smooth surfaces.

⊛Not applicable in horizontal direction towards smooth surfaces.

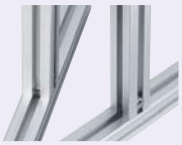
■Notes on Large Extrusions and L-sectioned Extrusions

Maximum length available for S Holes is 100mm. S Hole alteration over 100mm on the sides of larger extrusions such as 30120 is not possible.

S Hole alteration on L-sectioned extrusions is not possible, irrespective of directions.

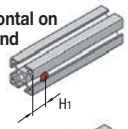


M Type Hole Alteration



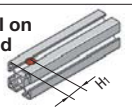
Blind Joints which require this alteration

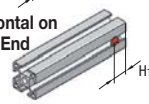
Post-Assembly Insertion Double Joints	Center Joint
→P.631	→P.629



Drilling of M Holes for Center Joint and Post Assy. Insertion Double Joint connections.

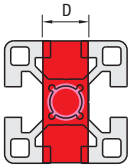
(Reference)Corners when using Center Jointing





Horizontal on Left End LMH

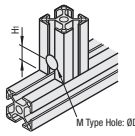
Vertical on Left End LMV



Horizontal on Right End RMH

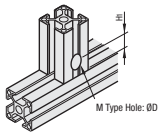
Vertical on Right End RMV

Cross Section View



M Hole is added on every slot for multiple slotted extrusions, except for the middle slot of 3-slotted extrusion.

Position and Size of Hole



Extrusion Series	H1 (mm)	M type Hole ØD (mm)
HFS5	10	7.1
HFS5 (25 Square)	-	-
HFS6	15	11.1
HFS8	20	13.1
HFS8-45	*(20.5)	

Only for 45 Square Light Type (HFSL8-45) Series, H1 dimension is 20.5.

Post-Assembly Insertion Double Joint Drilling

Center Joint Drilling

Order Example

Part Number: HFS6-3030-2000-LMH-RMH

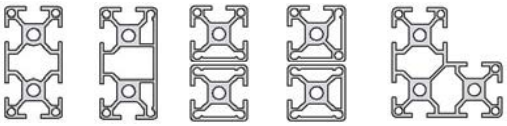
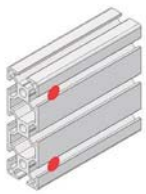
Standard of Extrusion Position



Placing method of the extrusion, which is a basis to determine right and left is shown as follows.

(1) On the vertical length

(2) Flat side down



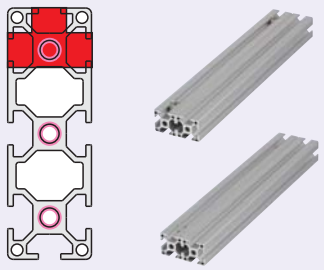
(2) One flat side down and another flat side right

Example of (1) Example of (2) Example of (3) * Example of L-Shaped

When the extrusion is on the vertical length and also has a flat side, (1) has the priority.

M Hole will be applied on the middle slot of a 3-slotted surface.

ex.)HFS6-3090-1000-LMH



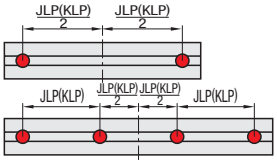
L Type Hole Alteration

Blind Joints which require this alteration

Parallel Joint → P.639

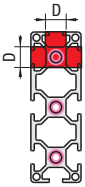
Drilling of L Holes for Parallel Joint connections.

(Reference)Parallel Joint Jointed Corners

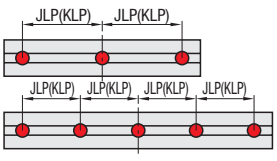


L Holes on Bottom in Cross

JLP



When 2 and 4 holes are specified, they will be symmetrically placed about a center point.



L Holes on Top in Cross

KLP

When 3 and 5 holes are specified, there will be one hole at the center and the rest will be placed symmetrically placed about the center hole.

For extrusions with multiple slots on one surface, only a slot on each end will be hole machined.

Alteration	Hole Pitch (1mm Increments)	H (Hole Qty.)	No.	D
JLP KLP	D+4.9~ $\frac{\text{L-D-10}}{\text{H-1}}$	2 3 4 5	5	7.1
			6	11.1
			8	13.1

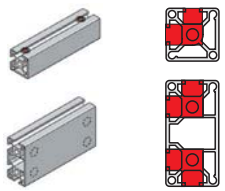
* Number of holes determines the alteration fee. (Table listed pricexHole qty.)
ex: For HFS6-3030-1200-JLP1100-H2, JPY260x2=JPY520 will be the alteration charge.

Standard of Extrusion Position

Placing method of the extrusion, which is a basis to determine right and left is shown as follows.

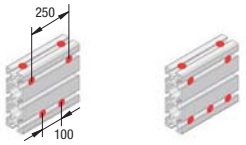
(1) On the vertical length
(2) Flat side down
(2) One flat side down and another flat side right



Example of (1) Example of (2) Example of (3) * Example of L-Shaped

When the extrusion is on the vertical length and also has a flat side, (1) has the priority.

Additional Info. on Smooth Sided Extrusions

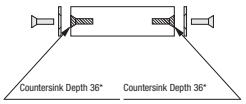


D Holes in smooth side direction are blind holes, and do not penetrate through the smooth side.

Notes on JLP/KLP Combination Use

Hole pitch on Top/Bottom can be separately specified, but the No. of holes will be equal on Top and Bottom.

- Hole pitch on Top/Bottom can be separately specified
- Uneven No. of holes cannot be specified



Other Special Alterations

■End Plates Mounting for GFS Series

Machines countersunk and tapped hole in order to mount the end plate for high rigidity aluminum extrusions.

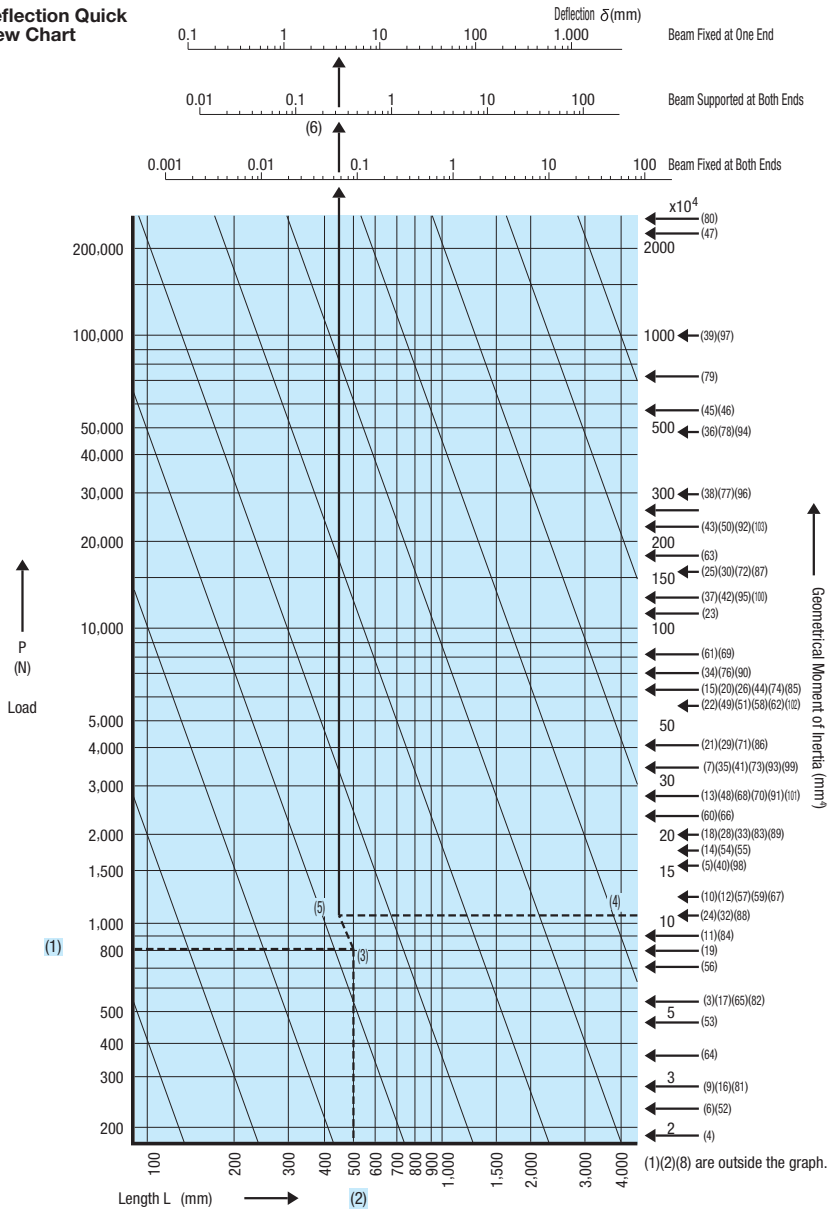
Extrusion Load Capacity Calculations

■Deflection Calculations

The following pages assist in optimum extrusion type selections by providing a quick Load vs. Deflection Chart (below) and calculation formulas (right page). In general, load calculations are typically based on beam's both ends supported for structural safety.

Selection Example

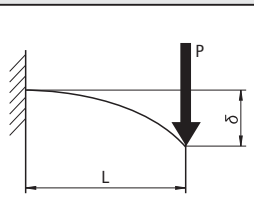


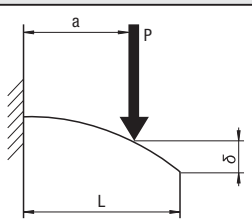
Values used for this example	
Load	800N
Extrusions	HFS8-4040
Length	500 mm

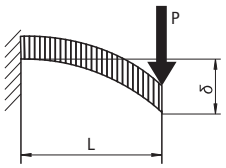
Step
(1) Find a point (1) on the Y (Load) axis for the applied load P (Unit: N).
(2) Find a point (2) on the X (Length) axis for the extrusion length.
(3) Draw a horizontal line from (1) and a vertical line from (2), and name the intersection of the two as (3).
(4) Find a point (4) on the right hand Y axis for the Cross Sectional Moment of Inertia of the extrusion used.
(5) Draw a horizontal line from (4), and draw a parallel line to the graph's diagonal lines from (3).
(6) Name the intersection of the lines as (5).
(7) Draw a line UP from (5) and locate an intersection (6) corresponding to the extrusion support method used.
Result: According to the example values used and the calculation based on the values, the deflection amount would be 0.3mm when the extrusion is supported at both ends.

*1) Conversion: 1kgf=9.80665N (Ex.) 81.6kgf=800N

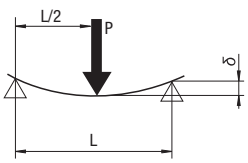
•MISUMI defines the Load Capacity (Max Allowable Load) to be a deflection 1/1000 of the extrusion length.

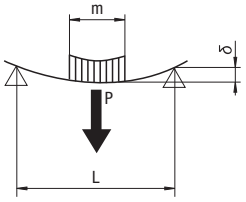


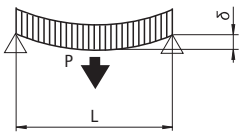


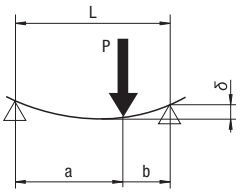


- Deflection Quick View Chart









(1): Load 800N
(2): Frame Length
(3): Intersection of (1) and (2): Applicable extrusion HSF8-4040
(5): Intersection of a parallel line from (3) and (4)

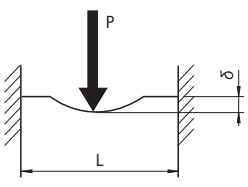
The numbers in ○ corresponds to the extrusion numbers on **P.670·671** left hand tables.

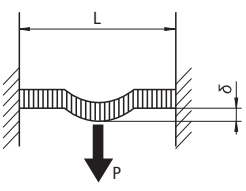
- Deflection Calculations

	1	2	3
Cantilever			
Deflection δ	$\delta = \frac{P \cdot L3}{3E \cdot I}$	$\delta = \frac{P \cdot a^3}{3E \cdot I}$	$\delta = \frac{P \cdot L^3}{8E \cdot I}$

means that the load is equally distributed.

	4	5	6	7
Both Ends Supported				
Deflection δ	$\delta = \frac{P \cdot L^3}{48E \cdot I}$	$\delta = \frac{P \cdot L^3}{(48 + \frac{29m}{I}) \cdot E \cdot I}$	$\delta = \frac{5P \cdot L^3}{384E \cdot I}$	$\delta = \frac{P \cdot a^2 \cdot b^2}{3E \cdot I \cdot L}$



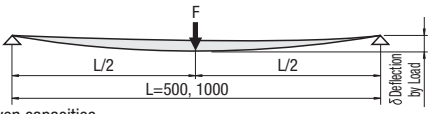


Example of No.4 as "Beam Supported on Both Ends"

P	(N)	Load
L	(mm)	Extrusion Length
E	(N/mm²)	Young's Modulus 69,972N/mm²
I	(mm⁴)	Second Moment of Inertia of Cross Section
δ	(mm)	Deflection

When the selection is calculated as "Beam Supported on Both Ends"

$$\delta = \frac{800 \times 500^3}{48 \times 69{,}972 \times 10.4 \times 10^4}$$



≈0.29 (mm)

	8	9
Both Ends Fixed		
Deflection δ	$\delta = \frac{P \cdot L^3}{192E \cdot I}$	$\delta = \frac{P \cdot L^3}{384E \cdot I}$

Aluminum Frames Load Capacity Guideline

Load Capacity Calculations

1. Calc. Conditions: Calculations are based on centralized loads on both ends supported extrusions.
2. The load capacities (allowable loads) are defined as: Load that generates a deflection amount 1/1000 of the extrusion length. These loads are the allowed maximum. Use within the given capacities.

Red Prints: Added Spec.

Part Number			Height x Width (mm)	Section Modulus x10³ (mm³)	Sectional Moment of Inertia x10⁴ (mm⁴)	For 500mm Extrusion Length Allowable Load (N)		For 1000mm Extrusion Length Allowable Load (N)

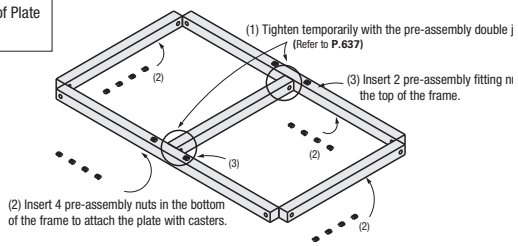
		100x 50	28385	2894	56748	5787

Centralized Load: Concentrated load is applied at the center.

Evenly Distributed Load: When the load is evenly distributed over the extrusion.

Aluminum Extrusion Frame Assembly

Prior to Beginning

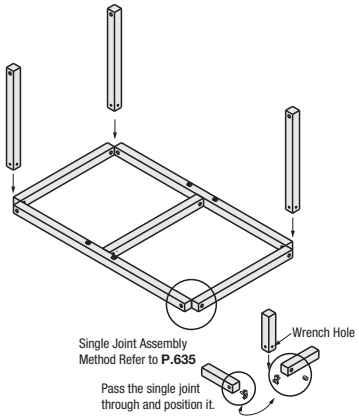


1. **Provide a large and flat work space for the assembly.**
2. **Sort the extrusions into parts and sizes.**
3. **Count and confirm the qty. of the nuts to be pre-inserted.**

*Insert any Pre Assy. nuts needed at this point if mounting a top plate and/or covers also. This assy. example also shows installation of Plate Type Adjusters and Casters.

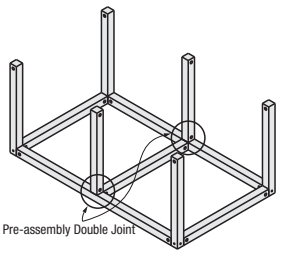
Assembly of Single Joint connected type.

1 Bottom Frame Assy.



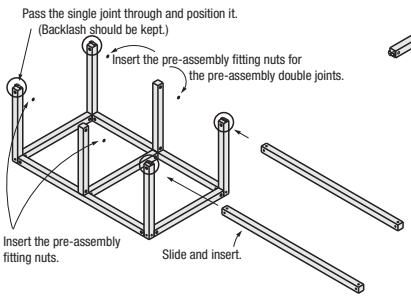
(1) Begin assembling with the Bottom Frame.
(2) Center joist is connected with Pre Assy. Ins. Double Joints.
(3) Insert the nuts prior to assembly.

* Do not forget to insert the nuts.



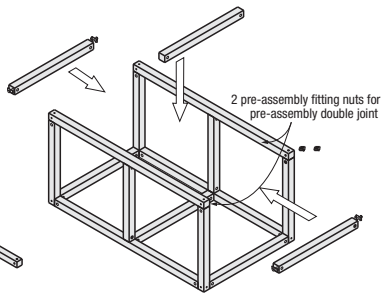
2 Mount the Posts.

Connect the corners with Single Joints,

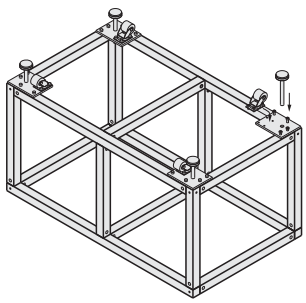


3 Mount the Middle Posts.

Connect the middle extrusions with Pre Assy. Ins. Double Joints.

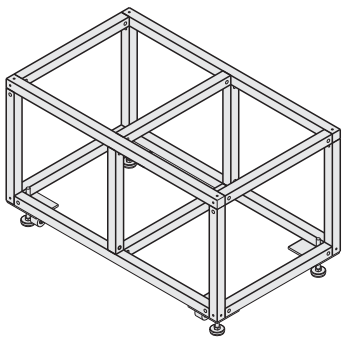


4 Top Frame Assy. (1)

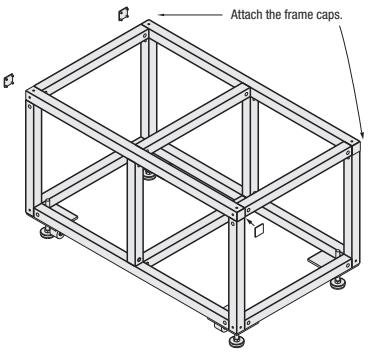


Pre-install Single Joints on the ends of four posts.

5 Top Frame Assy. (2)



6 Adjuster and Caster Mounting



Invert the unit and mount the adjusters and casters.
(Adjusters and Casters are sold separately **P.705**)

7 Final Tightening

Fully tighten while adjusting the extrusion positions.

8 Surface Cleaning

Wipe clean the surfaces with alcohol, etc. after the assy. work.

Aluminum Extrusion Q&A

Aluminum Extrusion Q&A

Q. I want to size aluminum extrusions, what's a guideline?

AMISUMI Aluminum Frames are comprised of the following product series.

Slot Width 6: HFS5 Series (20, 40mm square) for small coverings, parts racks...
Slot width 8: HFS6 Series (30, 50, 60mm square) for medium coverings, conveyor frames...
Slot Width 10:HFS8 Series (40, 80mm square), HFS8-45 Series (45, 90mm square), HFS8-50 Series (50, 100mm square), HFS8-60 (60mm square) for larger clean booths, equipment bases and structural material...
Find the weight that will apply on the extrusion frame, and select the extrusions from the tables on **P.671**

Q. I want to size some brackets, what's a guideline?

A Applicable brackets and load capacity guidelines for each extrusion type are separately listed on bracket product pages.
- If brackets interfere with panels and etc., use Blind Brackets (**P.495** etc.), Simple Joint (**P.633**), Tapping Joint (**P.627**), Screw Joint (**P.628**), Single Joint (**P.635**), Center Joint (**P.629**), Post Assy. Insertion Double joint (**P.631**), Pre Assy. Insertion Double Joint (**P.637**).

Q. What is the aluminum material used?

A EN AW-6063/AlMg0,7Si (JIS) is used. High rigidity material with more strength compared to an aluminum alloy EN AW-6063/AlMg0,7Si typically used for extrusions.
For detailed data for this material, see Alum. Extrusion Material Data. (**P.476**)
* The High Rigidity type is made with EN AW-6061/EN AW-Al--mg1SiCu-T6 with more strength.

Q. What is cutting tolerance?

A Within ±0.5mm of customer specified length.

Q. What are the surface treatment methods used?

A The extrusion surfaces are anodized (9µm or more). Cut surfaces are not treated.
* Glossy clear coated extrusions are pre-anodized (9µm or more), then clear paint coat (7µm) is applied.

Q. How are the extrusions cut?

A The extrusions are cut with carbide tipped saws for soft steel material. Use the Frame Caps (**P.509** etc.) to cover the open cut ends after assembly.

Q. What is the cut's perpendicularity?

A Since the extrusions do not have any datums, perpendicularity of cuts are not defined.

Q. Can JIS standard hex nuts and square nuts be used with the extrusions?

A No, they cannot be used. Our dedicated nuts are designed with larger seating areas to prevent aluminum from buckling under load.
* Flat Extrusions (**P.661・663**) can be used with standard nuts.

Q. The nuts fall within extrusion slots when the extrusions are vertically positioned.

A Use Pre Assy. Insertions Nuts with "Stoppers (**P.500・543・581・615**), then insert into the slots.
Post Assy. Insertion Nut and Stopper Sets (**P.503・546・584・618**) are also available.
When many nuts are required, Pre Assy. Insertion Spring Nuts (**P.501・544・582・616**) and Post Assy.
Insertion Spring Nuts (**P.504・547・585・619**) are more convenient to use.

Q. What are the proper tightening torques for the nuts and hex socket cap screws?

A See the tightening torque (Nm) references on various nut listing pages.
Post Assy. Simple Bracket →**P.485・525・565**, Pre Assy. Ins. Nuts →**P.500・543・581・615**, Post Assy. Ins. Nuts →**P.503・546・584・618**, Long Nuts →**P.507・550・588・622**, Flanged Nuts →**P.506・549・587・621**
* Conditions vary depending on bracket and washer uses. Use as approximated references.

Q. I want to mount resin panels on extrusion frames...

A There are following methods to mount resin panels. Select an applicable method specific to your application. (**P.680**)
(1) Mounting panels on brackets within the frames.
This method results in aesthetically good appearance, and makes for easy install/remove of the panels. Recommended for Safety Covers, etc.
(2) Fitting in the extrusion slots.
Requires no panel drilling or screws, and recommended for applications where designed appearance is of high priority.
(Some notching of the panels may be required depending on the type of brackets in use.)
(3) Mounting panels on the outside of the frames.
Pre-insert nuts with stoppers in the extrusion slots, and use Panel Mounting Screws (**P.641・644**) to mount the panels.
Specify M5 tap for the nuts to be used (Ex. HNTT6-5)

Q. How can I mount doors on my extrusion frame?

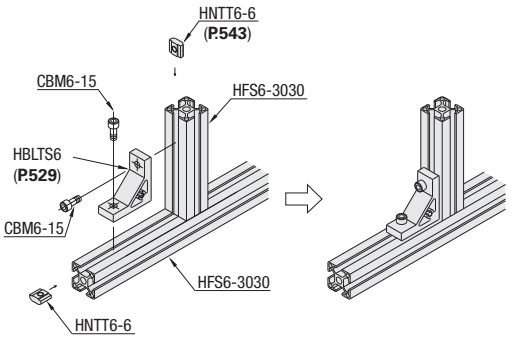
A There are following methods to mount doors. Select an applicable method specific to your application.
Resin plate doors... Hinges, Handles, etc. (**P.719**~**728**)
Extrusion frame doors... Use Cover Plates and HFS5-2020/HFS6-3030 extrusions to construct the doors.
* Extrusions for Doors HFTF Series (**P.761**) can be used in place for the HFS Series for even easier door creation.

Q. I want to mount adjusters and casters...

A Casters useable for each extrusion size are offered (**P.703**~**715**)

Q. Any precautions on the assembly?

A
- Provide a flat and ample space for the assembly work.
- For orthogonality checks and face leveling during the assembly, use plates (assembly jigs on **P.748**) for your convenience.
- We recommend that you purchase some Post Assy. Ins. Nuts prior to the assembly work as spares.
- Be sure to check the screw torques after the assembly is complete.



Q. Is Express-T for extrusions free of charge?

A Yes, and we intend on keeping it free. If a same day shipping is desired, simply specify as Express-T. There is no additional charge for the service.
(Extrusions for Brackets (**P.660**), General Purpose Extrusions (**P.667・668**), Fence Extrusions (**P.665**) are not subject to free Express-T service.)

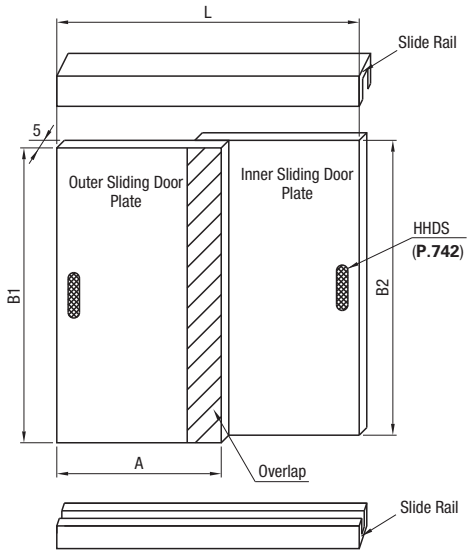
Mounting Plate Size Calculations

■Door Plate Size for Slide Rail Type

5mm thick plates are used. When both plates are assembled, they can be inserted into the slide rail.



When the slide rail width is L and the height is H (**P.694** See assy. cross section view) the size for the plates will be as follows.

Thickness T=5

Width $A = \frac{(L+20)\text{(with a 20mm overlap)}}{2}$

Height B_1=H-30 (Outer door plate height)

B_2=H-31 (Inner door plate height)

■Door Plate Size

Thickness is arbitrary.

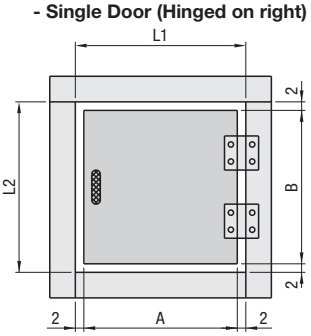
- For Single Door

  Perimeter length will be 2mm less than the frame opening on each side.

  A plate with the below size is needed.

  Width A=L_1-4

  Height B=L_2-4



- For Double Doors

  Perimeter length will be 2mm less than the frame opening on each side. There needs to be 2 plates in the following size, and a 2mm gap between the two plates.

  Width $A = \frac{(L1-6)}{2}$

  Height B=L2-4

- Single Door (Hinged on right)

- Double Door

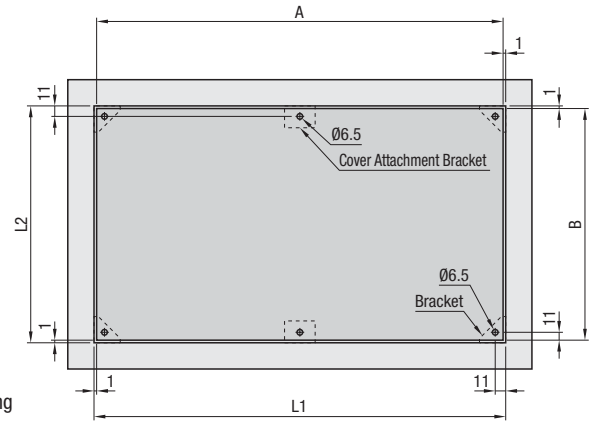
■Cover Plate Size (For bracket mounting)

The thicknesses are assumed as below.

- For M5 (HFS5 Series) extrusions: 3mm thick
- For M6 and M8 (HFS6 · HFS8(-45) extrusions: 5mm thick

Cover mounting holes will be pre-drilled (-C option) on the bracket's cover mounting side. If the bracket intervals are wide, Panel Support Brackets (**P.683**) are used in between.

Plate size is as follows.



Width A=L1-2

Height B=L2-2

Mounting holes Ø6.5 are drilled at 11mm from each corner.

(**P.683** Steel Type and Stainless Steel Type have different mounting hole locations)

(Recommended Plates: **P.865~880** Resin Plates)

Ex. When ordering an acrylic plate with A=1000, B=600, T=5, 6 mounting hole locations

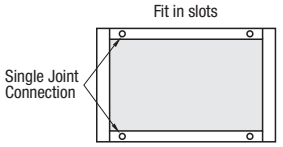
Part Number	-	A	-	B	-	T	-	F	-	G	-	Screw Nominal D.I.A. N
ACAE6H	-	1000	-	600	-	5	-	F489	-	G578	-	N6

Panel Size Calculations

There are following panel mounting methods.

- **Bracket Mounting***

  Brackets and Cover Attachment Brackets (alum. type) are used (See **P.683**)
  Tapping is specified for the brackets (Ex. HBLTS6-C)
  When mounting with Panel Support Brackets only, sheet steel or stainless steel can be selected, and the brackets are already tapped. (**P.683**)



- **Fit in slots**

  A method useable when he extrusions are connected with: Simple Joints, Screw Joints, Center Joints, Single Joints, Pre Assy. Insertion Double Joints, and Post Assy. Insertion Double Joints (**P.631**~**632**).
  (**P.687**) is reversed and inserted into the slot, then the cover is inserted.
  Notches on four corners are needed in order to insert the panel into the slots.
  (See illustration below)

- **Direct Mounting***

  Mounted to cover the entire extrusion frame.
  Screw heads will protrude.
  *Panel Mounting Screws (**P.684**) are used for panel mounting.

			Panel Mounting Method			Notes
			Bracket Mounting *1	Inserting into slots *2	Direct Mounting	
Panel Thickness (mm)	Extrusions	HFS5 Series	3,5	3,5	No limitations on panel thickness	*1 HBLFSN5 same as Direct Mounting *2 Use Slot Covers
		HFS6 Series				
		HFS8 Series	5			
		HFS8-45 Series				
Ease of panel removal			O	X	O	When removing for maintenances
Gap between panels and extrusions			Yes	No	No	-
Aesthetics			Normal	Excellent	Extrusions are covered and screw heads are more noticeable *3	*3 Use of Ultra Low Head Screws (**P.191**) makes for less noticeable.
Panel Size Calculations			Easy	Calculations for the corners needed *4	Easy	*4 See below for the calculations

Panel notching dimensions for slot fitting **P.864** **Resin Plates Standard · Anti-static grades can be specified to have notched as shown below.**

	Simple Joint Kits (P.633)	Single Joint Kits (P.635) Screw Joint Kits (P.628)		Pre Assy. Insertion Double Joint Kits (P.637)		Center Joint (P.629)	Post-Assembly Insertion Double Joints (P.631)
		Single Joint Kit Standard Type	Single Joint Kit Narrow Type Screw Joint Kits	Standard Type	Offset Nut Type		
By Joint Notching Shapes	(Ex. 1) (Ex. 2) Panel notching not needed for the case of Example 2.		ⓡIllustration is a Single Joint Kit Narrow Type			(Ex. 1) (Ex. 2)	
HFS5 Series	-	-	-	-	-	5, 1, 5, 5	5, 26, 5
HFS6 Series	8, 9, 13, 8	Portion that fits into slot. 8, 9, 13, 8	8, 2, 13, 8	8, 9, 3, 8, 31, 8	8, 9, 39, 8	8, 1, 8, 8	8, 36, 8

HFS8-45 Series	-	12, 12, 17, 12	12, 2, 17, 12	12, 13, 1, 10, 48, 12	12, 13, 58, 12	* Notching is not needed. 12, 12	Ø10.5, 15, 5.5

ⓡThe panels above have 1mm play allowances where fitting into the extrusion slots.
Resin plates have large thermal coefficient of expansion. Allow sufficient clearances.
Ex.: An acrylic plate will expand/shrink by 0.7mm per 1m length with 10°C temperature differential. If the temperature swings by 30°C, approx. 2mm allowance will be needed.

Example

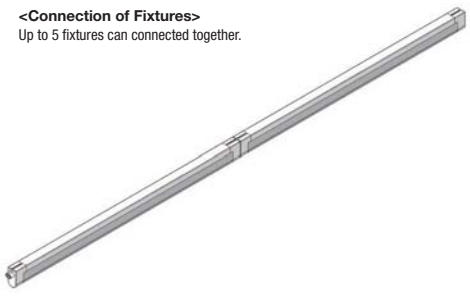
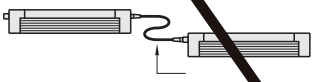
<How to Install to the Frame>



<Installation to the Panel / Top Panel>

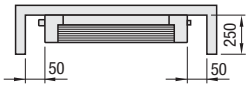
- Installable to panels on the ceiling as well as to top panels.
For resin and metal panels, use screws and nuts (for the back).
For top wooden panels, use included wooden screws and Connecting Parts B.

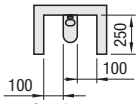
<Connection of Fixtures>
Up to 5 fixtures can connected together.



•Connecting Method (1)

Direct connection of body terminals





•Connecting Method (2)

Connection with a connecting cord

<About Install Locations>
For locations with openings, provide larger gaps than shown in the drawing.

Cautions

- This product is for indoor use only, keep within 5°C ~ 35°C.
The fluorescent lights will be hard-starting in low temperatures, and may suffer overheat damages in high temperatures.
- Not suitable for locations with water and moisture, as the product is not waterproof.
Please be aware of fire and electrocution hazards.
- Not usable in tightly closed spaces.

<Replacement of Fluorescent Light>
When Fluorescent Light does not light due to the end of its service life etc., remove the body cover and replace it.
* Fluorescent Light as a singule item is not available.

HCFY HCFYM HCFYD	6	130	130	1275	1550	CBM6-12	4	HNTT6-6	4			
						CBM6-16		HNTT8-6				

Order Example: Part Number **HCFY6-130**

Days to Ship: **6 Days** P.87

Features: When mounting on the aluminum extrusions, no need to get under the unit nor to turnover the unit for screw tightening, thus the improved productivity.
- Excellent in holding lateral load and stability due to the side plate holding mechanism.
- Quake-resistant capability can be obtained by mounting optional anchor brackets (**P995**) and anchor bolts.

Plates with Casters / Leveling Mounts

■Installation Method

Turn the hex bolt head at the lower part of wheel, (the part shown with A) then the upper thread part of screw will turn. For clamping, use the two flats shown at NB. For *marked types, install and tighten the NB part with a wrench.

* The allowable load is the value when 2 pieces are used.

■Low Particulate Hinges RoHS

HHPMGS

M Material: EN AW-6063/AlMg0,7Si-T5
Bushing : Oil Soaked Polyacetal
S Surface Treatment: Electroless Nickel Plating

Features

■Excels in friction resistance and sliding compared with conventional hinges as the sliding section resin is made from the special material (oil embedded Polyacetal) .

■The aluminum part is electroless nickel plated instead of conventional anodizing providing excellent conductivity, resulting in less static and dust.

■ When the Hinges are mounted to the panels, etc., use the recommended Hinge Nuts on **P.725**

Part Number Type	No.	* Allowable Load kg	N	Mass g	L	W	K	P	J	S	N Through	N Countersunk	E	R	Screws · Nuts Screws	Quantity	Nuts	Quantity	€ Unit Price Qty. 1~8	Volume Discount 9~

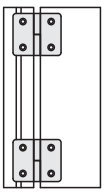
		3	40	392	266	113		56	51													6		

* The allowable load is the value when 2 pieces are used. ⓟThe applicable screws and nuts can be provided as a set.



Example

1.Remove the panel from the extrusion.

2.When re-mounting the panel on the frame, insert the lower hinge first as the Pin (the upper hinge in the above drawing) is shorter .

3.Installing and removing the panels is easy since the upper hinge is inserted after locating with the lower hinge.

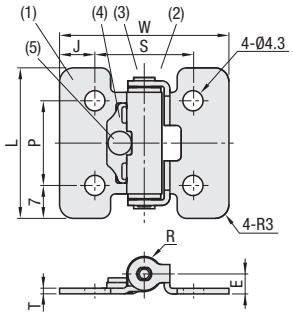
Torque Hinges



-Torque Fixed Type · Torque Adjustable Type-

CAD Data

■Torque Fixed Type RoHS

HHPT

Operating Temp. Range: -10°C~50°C
Operating Humidity Range: 90% RH or less

■Cautions on Use
- Use 2 pcs. per door (flap)
- Place the axes of 2 Hinges on a common line.
- Do not use in places where oil or grease contacts, or in the outdoors.
- Do not use for locations requiring frequent open/close.
- For its product properties, the Hinges are not designed for vertical use. Therefore, for allowable loads and the torque values at vertical use, refer to those of the products actually used.

Name of Parts	Material
(1) Wing	1.4301/X5CrNi18-10
(2) Resin Tube	Polyacetal
(3) Shaft	1.4305/X10CrNiS18-9
(4) Plate	1.4301/X5CrNi18-10
(5) Swaging Pin	1.4567/X3CrNiCu18-9-4

For Torque Hinges selection, refer to the Formula of Selection Guide on **P.1063**

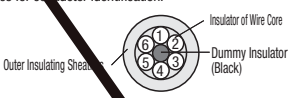
■Performance Specifications

Applicable Standards	ISO14119, EN1088, IEC60947–5–1, EN60947–5–1 (DEMKO Certification), GS-ET-15 (BG Certification), UL508 (UL Listing Certification), CSA C22.2 No.14 (c-UL Listing Certification)
Application Standards	IEC60204-1/EN60204-1
Applicable Directives	73 / 23 / EEC (Low Voltage Directive)
Standard Use Condition	Operating Ambient Temperature: –25~70°C (No condensation) Relative Humidity: 45~85% (No condensation) Storage Ambient Temperature: –40~80°C (No condensation) Operating Environment: Pollution Level 3
Impulse Withstand Voltage	4kV
Insulation Resistance	Charged part and non-charged part: 100MΩ or more (with DC 500V High Resistance Meter) Between polar charged parts: 100MΩ or more (with DC 500V mega)
Contact Resistance	Less than 300mΩ (Initial value, cable length 1m)
Appliance Class	Class II (IEC61140)
Degree of Protection	IP67 (IEC60529)
Impact Resistance	Malfunction: 300m/s2 Endurance: 1000m/s2
Vibration Resistance	Malfunction: 5~55Hz, Amplitude 0.5mm or more Endurance: 30Hz, Amplitude 1.5mm or more
Actuator Operating Speed	0.05~1.0m/s
Direct Opening Action Stroke	8mm or More
Direct Opening Force	60N or More
Operating Frequency	1200 times/h
Mechanical Durability	Over 1,000,000 Times (GS–ET–15)
Electrical Durability	Over 100,000 Times (Operating Frequency 1200 times/h, Load Condition: AC–12 250V 1.5A, DC-12 250V 0.2A)
Conditional Short-Circuit Current	50A (250V) (Note)
Body Color	Black
Cable	UL2464 No.20 AWG (6-Conductors)
Mass	About 120g (For body)

Note) Please use 250V/10A fast-blow fuse as short-circuit protection device.



■Contact Configuration & Operation Characteristics

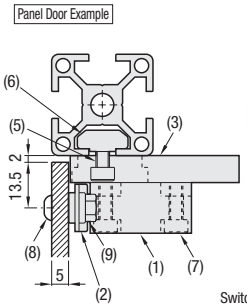
Type	Contact Configurations	Operating Characteristics
	1NC	0.8 (Actuator Installation Standards) 0 5.5 5.8 28.2 (Stroke: mm)
	3NC	(Actuator Inserted) (Actuator Pulled Out)

: Contact Point ON (Close) : Contact Point OFF (Open)

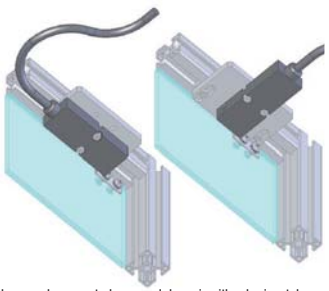
Please refer to insulation colors and white lines for conductor identification.

No.	Insulator Color	No.	Insulator Color
1	Orange / White	4	Brown
2	Blue / White	5	Blue
3	Brown / White	6	Orange

Safety Cautions



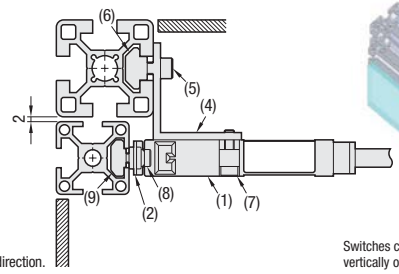
- Shut off the power before attaching, detaching, wiring, maintaining and examining. There is a possible risk of fire or electric shock.
- If a relay is to be placed between a emergency stop switch and a potentially hazardous load, use special safety relays to make the system redundant. The safety may be compromised by using non-safety relays due to fused contacts.
- Do not place a PLC between the safety switch and potentially hazardous load. PLC malfunction may compromise safety.
- Do not disassemble, modify, or interfere with the safety switch functions in any means. Malfunctions and accidents may occur.
- Mount an actuator in places where human body do not come in contact when opening and closing the door. It may injuries.



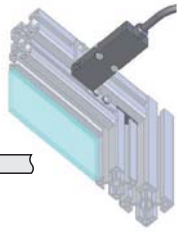
Cautions for Use

- Do not use the safety switches as a door stopper for any door type. Add a mechanical door stopper at the end of the door stroke. Protect safety switches from being overloaded.
- Do not open/close the door roughly in order to avoid causing excessive impacts on the the safety switch. An impact over 300m/s2 may cause safety switch failure.
- Prevent any foreign objects from getting inside the safety switch through actuator's insertion slot. Excess amount of foreign objects or dust in the safety switch may affect the internal mechanisms and cause failures.
- Safety switches should not be stored in dusty or wet locations, or locations witch are subject to organic gas or direct sunlight.
- Operation without an actuator designed for the safety switch may cause switch failures.

Example



Panel Door Example



Switches can be mounted on panel doors in either horizontal or vertical direction.

Example of Frame Door

Switches can only be mounted vertically on a extrusion door.

Example

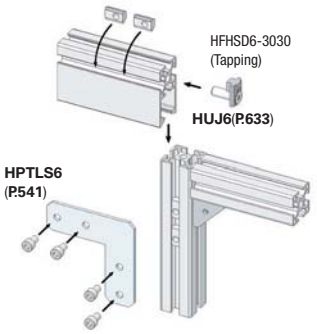
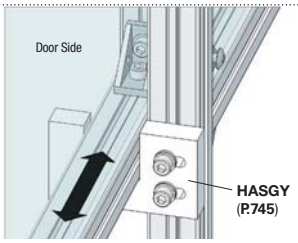
<Overall View of Sliding Door>

Use seal covers to absorb shocks caused by the door opening and closing. P.689

HSMG is usable as simplified magnet catches if attached on door frame.



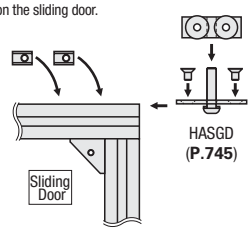
<2 dimensional View from Top>



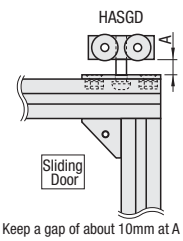
How to Install the Aluminum Frames for Sliding Door

Use Simple Joint together with Sheet Metal Plate and secure.

Use HSMG6 as necessary. Slide Locks (P.737) are also effective.

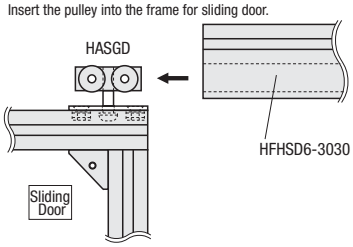


How to Mount the Guide for Sliding Doors



Mount the guide to the frame with screws and nuts.

How to Mount the Pulley for Sliding Doors

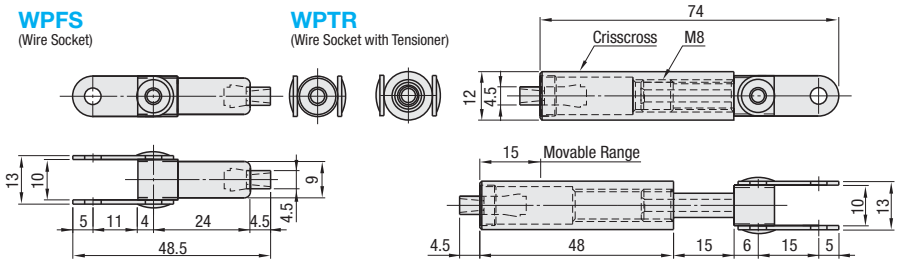


Mount the pulley on the sliding door.

Keep a gap of about 10mm at A part.

Insert the pulley into the frame for sliding door.

Tensioners for Aluminum Frames / Stainless Steel Wires

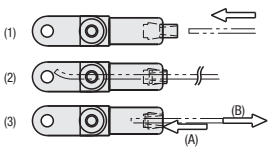


CAD Data

Accessories for Aluminum Frames Tensioner

WPFS (Wire Socket)

WPTR (Wire Socket with Tensioner)



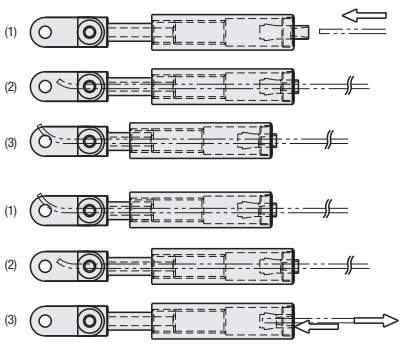
Can be mounted to HBLFSN5-C (**P.483**).

M Material: Free-Cutting Brass S Surface Treatment: Nickel Plating

Wire Sockets and Wire Sockets with Tensioner for Ø1.5 Stainless Steel Wire

Part Number Type	No.	Mass (g)	Components: Truss Screw	Quantity	Domed Cap Nut	Quantity	Unit Price
WPFS	1.5	19	M4x25	1	M4	1	
WPTR		44					

WPFS (Wire Socket)



Insert wire

Insert to the end. Cannot be pulled out in this state. (Safety load 30kg, cut-off load 80kg)

By pressing the tip (A) wire can be pulled out (B). (Must remove tension in order to press wire.)

WPTR (Wire Socket with Tensioner)

Turn and extend the tensioner.
Insert the wire.

Insert to the end.
Cannot be pulled out in this state. (Safe load 30kg, Break load 80kg)

Turn the tensioner and exert tension on the wire.
Load tension within the working range of 15mm.

The state where the tension is being exerted.

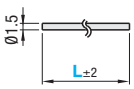
Loosen by turning the tensioner.

By pressing the tip (A) wire can be pulled out (B).
(Remove tension in order to press wire.)

Inserting Wire

Insert the wire from the pin side. While doing so, insert the wire enough into the pin. The wire will then be gripped.

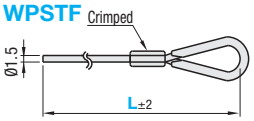
Removing Wire



When removing the wire, pull out the wire while pressing the pin.

Stainless Steel Wires

RoHS



WPS
WPSF

The cut ends of the wire are terminated to prevent fraying.

WPST
WPSTF Crimped

M Material: 1.4301/X5CrNi18-10 7x7 Strands

Wire Diameter (mm)	Wire Diameter Selection Guide * 1: Allowable Load (kg)	Tensile Load Test Result * 2: Max. Load (kgf)	Displacement (mm)
1.5Ø	30	84.8~95.7	10~11 (80kgf)

* 1 Allowable load is determined as 1/3 of the maximum static load rating. Depending on usage, consider applying safety factor up to 1/5.
* 2 These are test results by the Tokyo Metropolitan Industrial Technology Research Institute. Displacement is the value measured with 110m distance between metals.

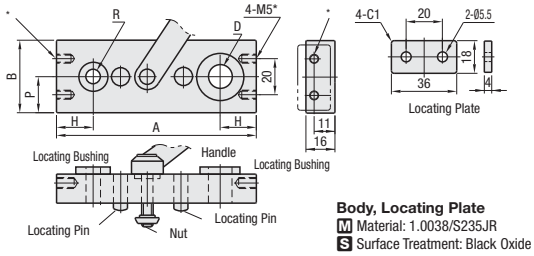
	8	HFS8	HPTSS8	1	CHOB8-15	2	HNTFSN8-8	2		
	8-45	HFS8-45	HPTSS8-45	1						

Order Example — Part Number: HFKZG6

Days to Ship: 6 Days P.87

Example

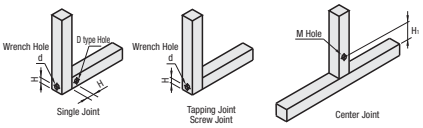


Set it over two frames. By tightening the wing screw, the plane of the frame surface of A and B is made. Then A and B are connected with angle brackets.

■Drilling Jigs -Blind Joint D Hole · Wrench Hole Machining-

HFSJG

*No hole for HFSJG5.



Body, Locating Plate
M Material: 1.0038/S235JR

HEPA · ULPA Filter Units
-Overview-

■Features of HEPA and ULPA Filter Units

- Capable of serving as HEPA filter of ISO certified class 5 to 9 or ULPA filter of class 3 to 6 in general industrial clean room equipment.
- 100V and 200V power specifications are available.
- Air outlet cleanness is ISO certified HEPA class 5 or ULPA class 3.
- Available with air volume ranging from 1, 3, 5, 10, 15, and 25m³/min for HEPA, and 2.5, 4, 7, 13, and 20m³/min for ULPA.
- Pre-filter provided as a standard equipment to catch coarse particles prolongs service life of HEPA, ULPA filters.
- Operating status of the filter can be visually checked from outside through LED at the center of the filter bottom surface. (Except Air Volume 1 Series)

■Standards of HEPA · ULPA

- The Japanese Industrial Standards specify filters capable of 99.97% collection of 0.3μm particles or better at rated flow rate with an initial pressure loss of less than 245Pa as HEPA (High Efficiency Particulate Air) filters (named high performance filter).
- Under the same standards, filters capable of 99.9995% collection of 0.15μm particles or better at rated flow rate with an initial pressure loss of less than 245 Pa are called ULPA (Ultra Low Penetration Air) filters (named ultra-high performance filters).

■HEPA · ULPA Filter Selection

- Use the followings as a guide to HEPA filter selection. (Classes in US Federal Standards are retained)
  Class 100: Unit with quantity of air volume enough for generating laminar air flow
  Class 1000: Unit with quantity of air volume enough for 300 cycles of air circulation
  Class 10000: Unit with quantity of air volume enough for 60 cycles of air circulation
  Class 100000: Unit with quantity of air volume enough for 30 cycles of air circulation
- Design with laminar air flow when selecting ULPA filters.
- The definition of cleanness class in terms of number of ventilation cycles is given as reference only. We recommend using of a particle counter (listed on HEPAC ...) for measurements.

$$\text{No. of Ventilation Cycles (Per Hour)} = \frac{\text{Air Volume (m}^3\text{/min) x 60min}}{\text{Space Volume (m}^3\text{)}}$$

■Standards for Cleanness Performance

Cleanness is defined by the number of standard sized particles per unit volume. Note that the standard particle size and standard volume are not the same on different standards. The target range for MISUMI HEPA/UPLA filter is shown in the following table. 0.1μm/ft³ is used as a standard in parts of semiconductor industry.

■JIS B 9920

Particle Size (μm)	Cleanness Class Upper Limit Concentration (pieces/m³)							
	Class 1	Class 2	Class 3	Class 4	Class 5	Class 6	Class 7	Class 8

■Mounting Example

■Functions

- Abnormality Detection Function
Circuit protector switch is used. When a current overload is detected, the switch turns "Off" immediately, and the equipment stops. At recovery stage, confirm that the safety is assured and then turn the switch on.

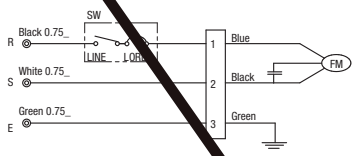
- Operations Indicating Function
When the switch is turned on, the operation indicating high-brightness LED turns on.
In case when the indication light is not desired, open the main filter and remove the fuse from the indicating light power source panel that is located at the side of the main fixture case. (Refer to the figure below)
(?)There is no indicator light for Air Volume 1 Series.

*** Cautions**
- Do not push on the indicator light strongly. The filter may be damaged.

■Maintenance · Inspection

- Exterior
- Wipe the surface with a soft cloth. (For clean room installation, use low dust emission cloth.)
- Use warm water or neutral detergent for hard stains. (For clean room installation, use purified or DI water.)
- After using the neutral detergent, wipe it thoroughly using a cloth with clean water.

Cautions!!
Do not use the following.
Solvent such as paint thinner, acid, alkaline or hot water.



- Main Filter (HEPACF P.752)
When dust accumulates in the main filter, air passages become blocked and air speed and air volume are reduced. Normal service life is defined as when the passing air volume/speed are reduced to 1/2 of the initial value. Main filter replacement periods can be confirmed by using a switch unit with a clogged filter indicator (HEPAIC – listed on MISUMI web). When not using this switch, the guideline for the main filter replacement periods are: 1 year in general room environments, and 5 years in ISO Class 7 (Class 10,000) clean rooms, with continuous operation.

- Pre-filter
Clean the pre-filter on regular basis.

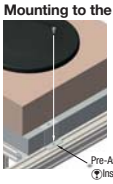
■Replacement Filters: 10 Days

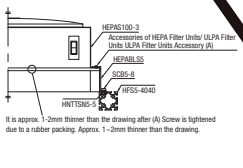
■Mounting Brackets for Filter Units: 6 Days

Example



Filter Replacement

* and have 6 Connector Receiving Parts, while and have 8 Connector Receiving Parts.



- Remove screws (4 locations) with a screwdriver and replace the filter.
- Position the connector for indicator light.

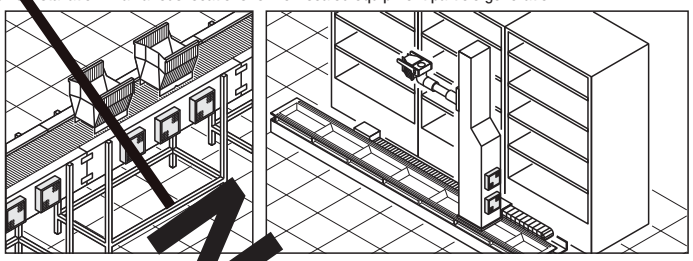
Mounting to the Aluminum Frames Units when HEPABLS is in use.

Pre-Assembly Fitting Nut HNTTSN

Insert it into the slot before assembling the extrusions.

Semi-HEPA Filter Unit for Equipment (Clean Exhaust Unit)
-Overview-

Not Available

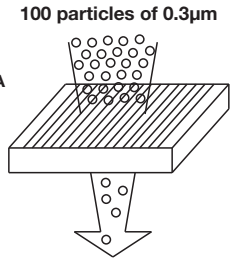


■Clean Exhaust Units

The unit reduces contamination effectively by actively exhausting particles when installed on particle generating motion mechanisms of various clean room equipment.

■Features

- A combination of a small axial flow fan and a low-loss Semi-HEPA filter has better than 95% efficiency for 0.3μm size particle collection.
- Small size allows installation in a various locations for non-sealed equipment particle generation.



Example

By installing to particle generating work transfer equipment and robots, directly exhausting to clean room without localized ducts is possible.
Replacing heat exhaust fans on control panels with Clean Exhaust Units is also an effective clean room countermeasure.

■Semi-HEPA Standards

Original standards where the filter is capable of collecting 95% of 0.3μm size particles at rated air volume is called the Semi-HEPA Filter.

■About Cleanness

Cleans the exhaust air of 0.3μm size particles to less than [illegible] of the source.
Cleanness is defined by the number of standard sized particles per unit volume, however; installing Clean Exhaust Units keeps the cleanness against the particle generation sources under 20x or less of Particle Concentrations. Note that the standard particle size and standard volume are not the same on different standards. The target range for MISUMI Clean Exhaust Units is shown in the blue cells in the following table. 0.1μm/ft³ is used as a standard in parts of semiconductor industry.

■JIS B 9920

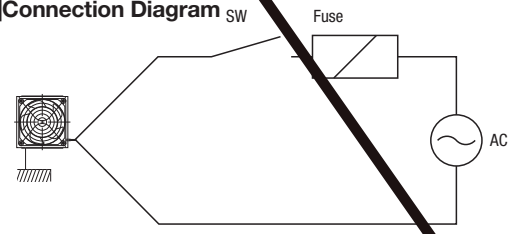
■Maintenance · Inspection

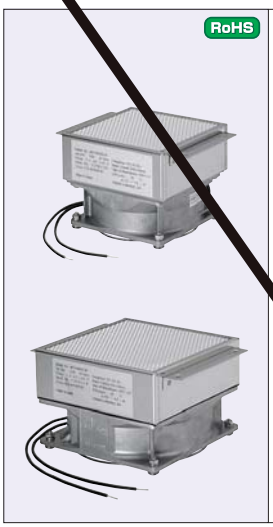


Clean Exhaust Unit consists of a semi-HEPA filter and a fan, and are both consumable components Replacements in approximately 3~5 yrs. are required.

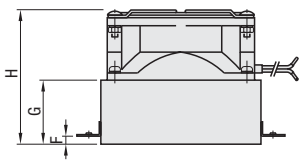
- Semi-HEPA Filter
  Service life of a filter is when the air volume/speed is reduced to 1/2 due to clogging.
  The life may be reached in less than 3 yrs. in some usage conditions.
- Fan
  Stop the fan immediately if abnormal rotations or noises are evident. The service life may have been reached.

■Name of Each Part

■Connection Diagram

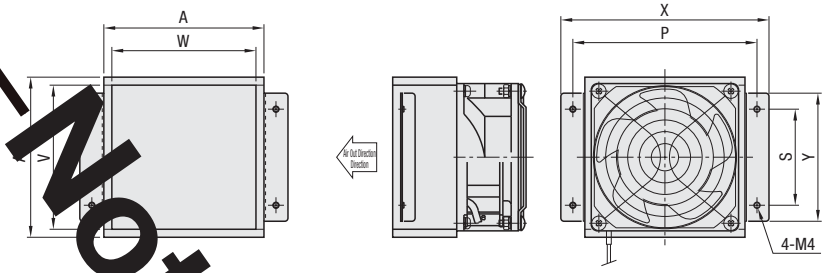


- Protect with a fuse to prevent from high voltage burnouts.
- Make a ground (earth) connection using a tap provided on the fan housing.



■Usage Environment

- Ambient Temp: -10~60°C
- Ambient Humidity: Less than 90% (No condensation)
- No direct sunlight
- No continuous vibrations or shocks
- No particles other than airborne particles



Semi-HEPA Filter Unit for Equipment (Clean Exhaust Unit)

CAD Data

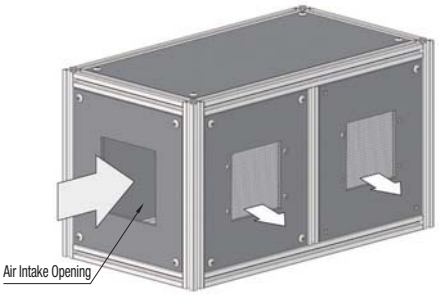
Example

Mounting screws are not included.



[illegible] Opening Dimensions

Mounting Part Machining Directions

- Clean room contamination can be reduced by installing the unit on covers surrounding particle generation motion mechanisms.
- Secure adequate air paths around the unit when designing to avoid undue resistance on intake and exhaust air flow.

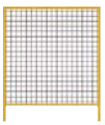
An export permit application to the Ministry of Economy, Trade and Industry required when exporting this product.

- A case to cover dust source can be constructed with aluminum frame extrusions.

Air Intake Opening Dimensions

Secure adequate air flow using the following calculations.

$$\text{Air Intake Opening Area (m}^2\text{)} = \frac{\text{Clean Exhaust Unit Air Volume (m}^3\text{/min)} \times \text{Unit Qty.}}{\text{Intake Air Speed (m/s)} \times 60\text{s}}$$



Set intake air speed to more than 0.3m/s in order to prevent dusts from being expelled from the intake opening.

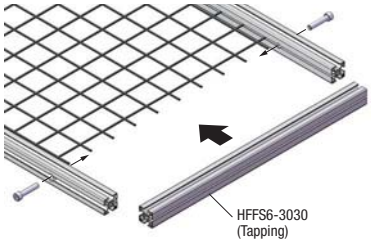
Example

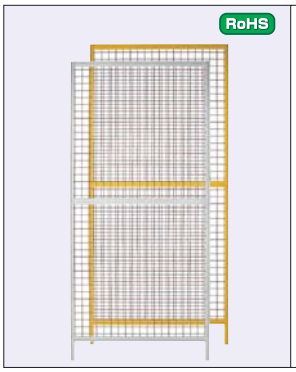
<Features of Safety Mesh Fence>

Slot profile is the same as that of aluminum extrusion HFS series except the dedicated slot for the fence mesh.
All other accessories for the HFS Series (nuts, extrusion caps, etc.) can be used.

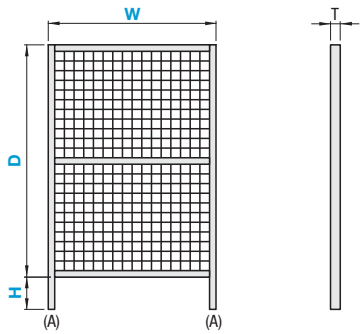


How to assemble

Step (1)
Connect frame extrusions with counterbored holes and end tapped holes using hex socket cap screws.
* Use hex socket cap screws (SCB12-60) when connecting HFFS8-4040 extrusions.



Step (2)
Insert a mesh fence into the dedicated slot for fence mesh.
The slots are sometimes slightly tight.



Step (3)
Connect the extrusions in the same manner as he Step (1), and the Mesh Fence is complete.

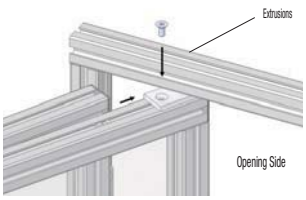
Example ■Example of folding door assembly (For left opening door)

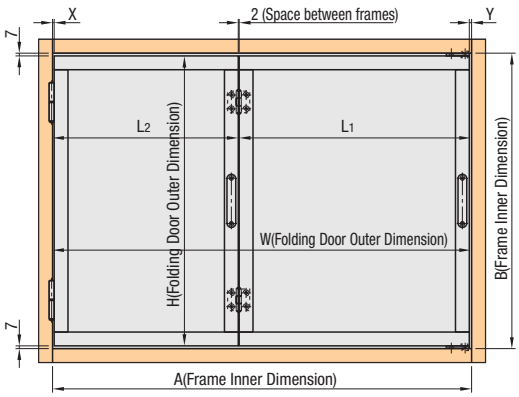
- Corners are screw-joint connected.
- About Screw-Joint connections P.628



-Inset a panel and fix it with a panel clamp. (Connection with bracket is possible)

-Combine 2 panels. Attach hinges to the reverse side, flag hinges to the left side and handle on the front face.

-Connect the outer extrusion and the folding door, and mount a slider on the upper and lower slot of the outer extrusion.



-Keep it fully open and fix the folding door body to the folding door slider.

Smoothness of the door depends on the tolerance of aluminum extrusions and accuracy of assembly. Be sure to finely adjust the position of sliders.

■Clearance between HHUA and outer frame

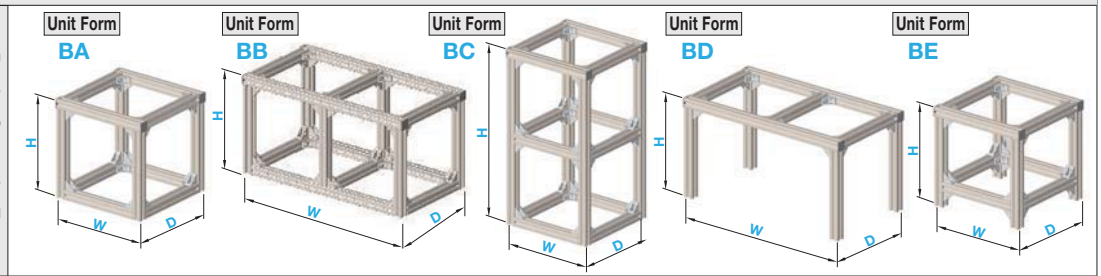
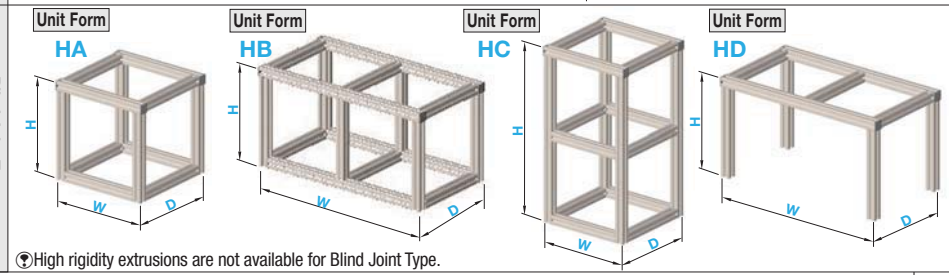
Aluminum Frames Standard Units



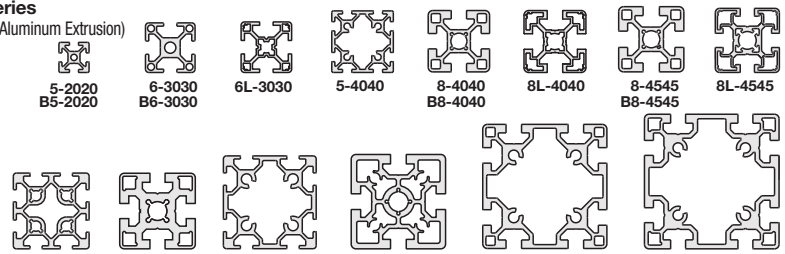
"Aluminum Frames Standard Units" is a system of ordering a complete set of components for a Extrusion Unit by customers providing only the extrusion type, width (W), depth (D), and height (H) information. Customers can build desired extrusion units just by assembling. For the components, see **P.773**
Customer assembly required. If pre-assembly is required, see **P.775**



Standard Units Using 4-Side Slotted Extrusions(HFS, GFS)

Selectable Unit Shape

Bracket Connection Type



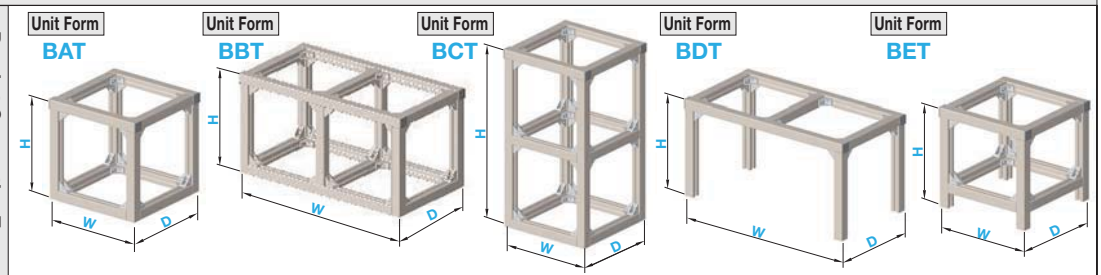
Blind Joint Type

High rigidity extrusions are not available for Blind Joint Type.

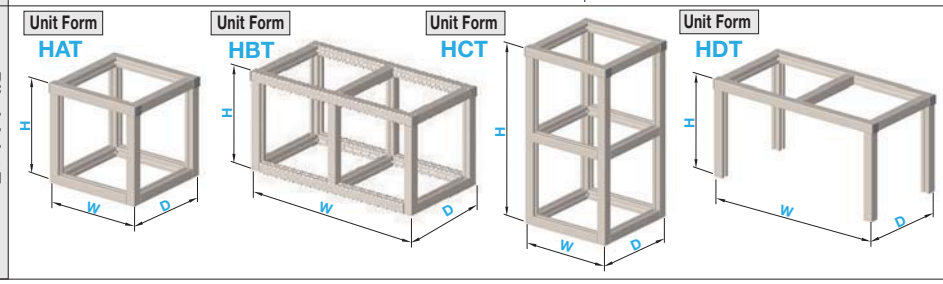
Selectable Extrusion Shape

HFS Series
(Standard Aluminum Extrusion)

*B indicates black anodized extrusion.

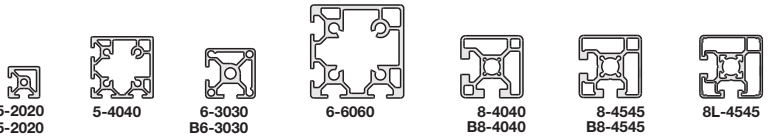


GFS Series
(High Rigidity Aluminum Extrusion)



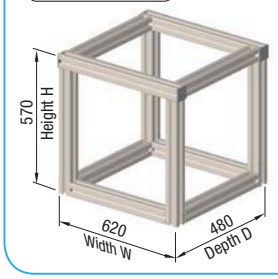
Standard Unit Using 2- Side Slotted Extrusions (HFST)

Selectable Unit Shape

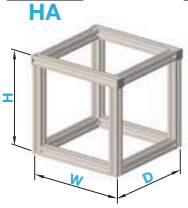


Bracket Connection Type

Blind Joint Type



Selectable Extrusion Shape

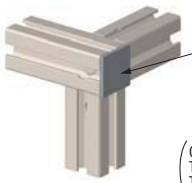


3-Side Slotted extrusions (HFSF) are used for the bottom and middle sections.
*B indicates black anodized extrusion.

How to Order

When an "HA" configuration unit W620mm, D480mm, and H570mm with HFS6-3030 extrusions is wanted

HAU	HA	6-3030-	W620-	D480-	H570
Aluminum Frames Standard Units	Unit Form	Extrusion Type	Width	Depth	Height



■The extrusions used can be changed to the new EFS Series. The EFS Series extrusions are equally rigid to the HFS Series yet lighter and more economical. Further cost reduction can be achieved with the new EFS Series extrusions.

- The extrusions denoted with a suffix (E) for the "Extrusion Type" column in the specification tables is changed from the HFS Series to the new EFS Series by placing an E on the end of the P/N. Deduct 3% from the unit prices using the HFS extrusions. (Deductions do not apply to "Alterations". For prices, see the price lists.) **P.771, 772**
- A various "Alteration Options" are provided for the Standard Unit system for customer convenience. (See→**P.769**)

■Alterations

Pre-Assembly Fitting Spring Nut	Change to Post Assembly Insertion Nuts and Stopper Set	Post-Assembly Insertion Spring Nut	Cover Mounting Hole	Tapping
SN	AN	BN	C	TP
Changes Pre-assembly Insertion Nuts (HNTT) to Pre-assembly Spring Nuts (HNTU) .	Change Pre-assembly Insertion Nuts (HNTT) to Post Assembly Insertion Nuts and Stopper Set (HNTAT)	Changes Pre-assembly Insertion Nuts (HNTT) to Post-assembly Insertion Spring Nuts (HNTP) .	Adds tap holes on the bracket for cover mounting.	Adds tapping on the bottom surface of the upright extrusions in four corners.

- For the component details comprising the unit, see **P.773**
- Customer assembly required. If pre-assembly is required, see **P.775**
- Extrusions in the middle position of BB, BC, BD and HB, HC, HD unit forms can be moved after assembly, so it is not necessary to specify the position.
- Extrusions in the middle position of HB, HC or HD unit forms are connected with Pre-Assembly Double Joints.
- For the load capacity, see **P.671**
- The types starting with G are High Rigidity Aluminum Frames.
- The types starting with B are black anodized extrusions.
- For Casters and Adjuster Pads (not specifiable in the unit construction scheme), see **P.770**

- Extrusion end cap protrudes from the extrusion ends by the cap thickness.

- G8-4040 is a Standard Unit using GFS8-4040 extrusions.
- G8-4545 is a Standard Unit using GFS8-4545 extrusions.
- 6L-3030 is a Standard Unit using HFSL6-3030 extrusions.
- 8L-4040 is a Standard Unit using HFSL8-4040 extrusions.
- 8L-4545 is a Standard Unit using HFSL8-4545 extrusions.
- B5-2020 is a Standard Unit using HFSB5-2020.
- Black anodized units are not available for 2 Side Slot Type and Blind Joint Type.

Alterations for Aluminum Extrusion Standard Units

-(Applicable also to the Temporary Assembly Service on P.775)-

■Alterations (T)Nut type change is available for Bracket Connection Type only. (T)The "Alteration" can be specified also when the extrusion is changed from HFS to EFS (See **P.768**)

Pre-Assembly Fitting Spring Nut	Change to Post Assembly Insertion Nuts and Stopper Set	Post-Assembly Insertion Spring Nut	Mounting Holes for Cover	Standard Unit Extrusions Tapping Alteration
SN	**AN**	**BN**	**C**	**TP**
Changes Pre-assembly Insertion Nuts (HNTT) to Pre-assembly Spring Nuts (HNTU) . Built-in spring prevents slips. Move easily in the groove when pressed slightly by hand. 	Change Pre-assembly Insertion Nuts (HNTT) to Post Assembly Insertion Nuts and Stopper Set (HNTAT) The Nuts and Stoppers can be used after the frame is assembled. 	Changes Pre-assembly Insertion Nuts (HNTT) to Post-assembly Insertion Spring Nuts (HNTP) .  * Will no fall if the extrusion is held vertically.	Adds tap holes on the bracket for cover mounting. (Both Sides M5 Depth 15mm)  (T)Only applicable to Bracket Connection Type (Mounting Screws **P.684**HCBM) (T)Not applicable to black anodize.	Adds tapping on the bottom surface of the upright extrusions in four corners.

Cautions on Installation			For mounting examples (1) and (3), tapping alteration TP must be specified. Attachment of the extrusion unit is not available for - marked part. The allowable load of caster is per piece.								Can be mounded without any alterations.								

Example (1) Caster direct mounting
(2) Corner angle mounting

Example (3) Caster mounted on Foot Base
Tapping option specified on a model number
HAUBA6-3030-W500-D500-H500-TP

Example (2), (4), (5), (6), (7)
Can be mounded without any alterations.

When the unit configurations are BD, HD, BDT, and HDT, the only applicable caster mounting methods are Examples (1) and (3) only, and the examples (2), (4), (5), (6), and (7) cannot be used.

Example (1) Direct mounting to an extrusion

P.709

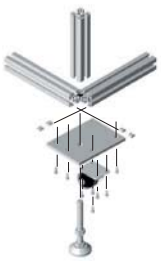
Example (2) Mounting with Corner Angle Casters

P.711

Example (3) Mounting with Foot Base

P.707

Example (4) Mounting with Plate Type Casters



P.705

Example (5) Adjuster Pads Plate mounting

P.705

Example (6) Adjuster Pads + Caster plate mounting

P.705

Example (7) Integrated Caster mounting

P.704

Aluminum Extrusion Frame Standard Units Price

Price [How to see the price list] For HAU BA 6-3030-W1000-D800-H700 unit, see the Unit Config. column to find BA, see the Extrusion Type column and find 6-3030 row and look to the right. Total the W, D and H dimensions (1000+800+700=2500) and look down the column containing 2500 to find the cross point with the 6-3030 row. The cross point value 139,00 EUR is the unit price. This price includes all the components necessary (brackets, screws, Pre-assembly Nuts, etc.). For details, see **P.773**

The extrusions denoted with a suffix (E) for the "Extrusion Type" column in the specification tables can be changed from the HFS Series to the new EFS Series (See **P.768**). Deduct 3% from HFS extrusion prices.

Components of Aluminum Frames Standard Units

[How to see the table]

Find the extrusion type from the selected unit Config. in the table.
Quantities of applicable extrusions and parts are shown in the columns to the right.

(Ex.) HAU BA 5-2020-W800-D500-H600

Extrusion Components Used

HFS5-2020: (W) 800mm 2pcs, (W-40) 760mm 2pcs., (D-40) 460mm 4pcs.
(H-20) 580mm 4pcs.
HBLTS5: 24pcs., CBM5-10: 48pcs., HNTT5-5: 48pcs., HFC5-2020-B: 4pcs.

Extrusion type can be changed from HFS to EFS Series. See **P.768** • When the extrusion type change from HFS to EFS is specified, the table column "Extrusions Used" will also change from HFS to EFS.

When alterations "SN", "AN", and "BN" are specified, the standard bracket connection type Pre-Assembly Insertion Nuts (HNTT) will be changed to: "SN"=Pre-Assembly Insertion Spring Nuts (HNTU), "AN"=Post Assembly Insertion Nuts & Stoppers Set (HNTAT), "BN"=Post Assembly Insertion Spring Nuts (HNTP), respectively. See "Alterations" on **P.769**

*1 When Black Anodized extrusions are selected, the HBL_S brackets will change to HBLTSB.
*2 When Black Anodized extrusions are selected, the CBM6-12 screws are changed to CBM6-15.
*3 When High Rigidity extrusion type is specified, the HFC Extrusion Caps will be changed to HFCD (SHFBS12-20 included) caps along with a required alteration. For alteration details, see P. **P.658**

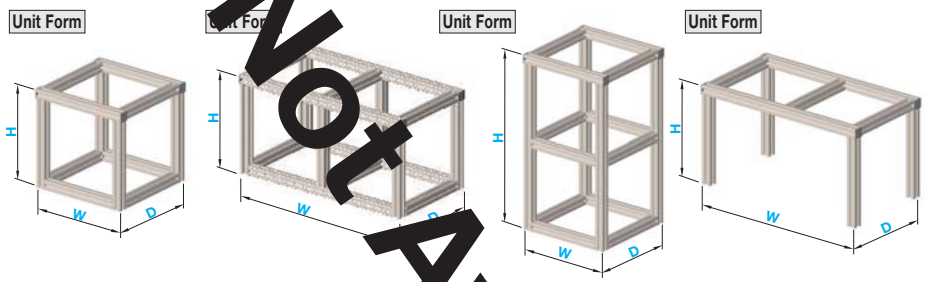
Temporary Assembly Service for Aluminum Frames

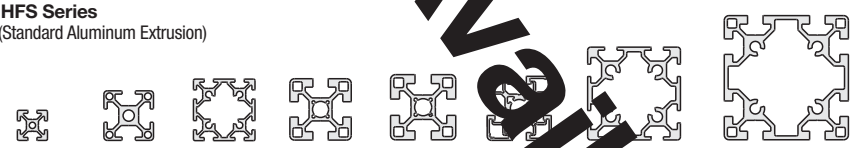
■We provide temporarily-assembled standard aluminum extrusion standard units (P.767,768)



Standard Unit Using 4-Side Slotted Extrusions

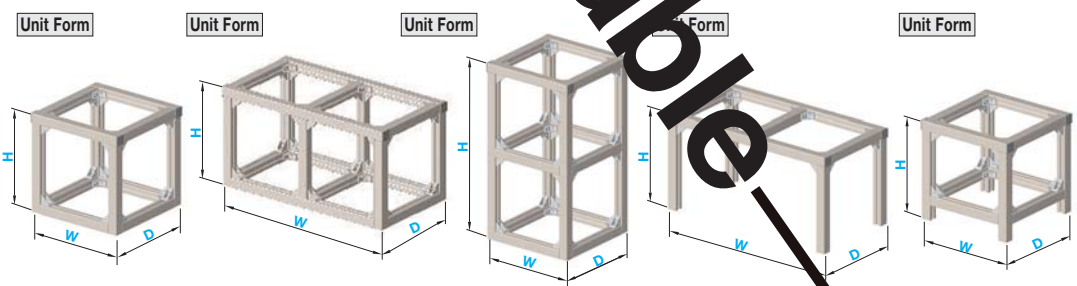
Selectable Unit Shape

Bracket Connection Type

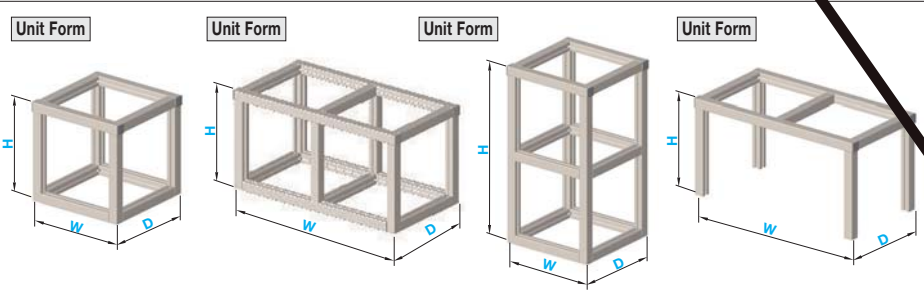


Blind Joint Type

Selectable Extrusion Shape

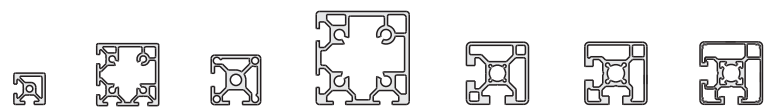


■**HFS Series**
(Standard Aluminum Extrusion)



Standard Unit Using 2-Side Slotted Extrusions (HFST)

Selectable Unit Shape



Bracket Connection Type

Blind Joint Type

Selectable Extrusion Shape

※3-Side Slotted extrusions (HFST) are used for the bottom and middle sections.

Not Available

- Available frame sizes for the Temporary Assembly Service are as shown in the table above.
  Please note that there are some differences in the modifiable sizes compared to the Standard Units on P.767,768
- Orders are accepted for the sizes within the range of W, D, H in the above table and also within the price range below.

Order Example Part Number - W - D - H
K-HAUBA6-3030 - W900 - D800 - H1200

Days to Ship 10 Days (The screws are temporarily tightened at the time of shipment. Fully tighten the screws when the product arrives.)

Price

■Temporary Assembly Service Pricing

(Example) K-HAU BA 6-3030-W900-D800-H1200

First, see the BA row of "Unit Shape" and find 6-3030 extrusion type and look to the right.
Next, select the column according to the total W+D+H value 2500. The temporary assembly price at the intersecting point is 291,90 EUR

Alterations P.769

Assembly and Shipping Service (AluNavi Assembly & Shipping Service) 1

(P.777~P.782)

Aluminum Extrusion Frame Units are designed, assembled and shipped based on customer supplied sketches and CAD drawings.
Customers not familiar with the Aluminum Extrusion products can easily make use of the system. Please utilize our system to save your assembly time resources.

[Assembly & Shipping Service Flow

Please enter the required information on an Assembly & Shipping Service Entry Sheet, and fax or e-mail to MISUMI AluNavi Center. Please attach any CAD data etc. when sending your entry sheet.
The AluNavi Center contacts the customer upon reception of the entry sheet.
An Excel data formatted entry sheet can be downloaded from: http://jp.misumi-ec.com/mech/product/al/

MISUMI's AluNavi Center creates and presents the drawings (**P.779**) and a Quotation/Order Combination Sheet (**P.780**).

Any changes on materials, etc. can be faxed or e-mailed to
us for revised Quotation/Order Combination Sheets.
(Corrections may require some time)

Please read "Notes on Delivery" and "Post order changes and cancellations" on the right page.
If the drawings we presented are acceptable, please place your order by faxing a Quotation/Order Combination Sheet with your approval signature to MISUMI AluNavi Center.

- When placing your order in your own formats, the Quotation/Order Combination Sheet will need to be attached.
- Please note that the assembly service orders are not accepted through our Web Order System (WOS).
- For details, see the Quotation/Order Combination Sheet entry example on **P.780**.

Delivered from the assembly plant.
Please provide an adequate unloading facility as the product delivery is Freight-On-Board basis.

Price
Materials Charge: As quoted
Assembly Charge: 34,00 EURxHours
Freight Charge: As quoted
(Includes packing materials and labor)

Days to Ship
As quoted
(Delivery date is unconfirmed until the Bill Of Materials is finalized)

Not Available

Design Drawings

Design drawing generation service is provided free-of-charge as a part of the Assembly & Shipping Service, and not available for components only purchases
MISUMI may not be able to fulfill customer requests in some cases.
In such cases, MISUMI would contact the customer to notify the circumstances.

-Except for the Resin Panels, the only other components available to be combined with the extrusion frame assembly service are listed on **P.477~776**
⊗We cannot accommodate custom made components, other manufacturer's products, or customer supplied parts into the designs.
-We may need to contact the customers for inquiries on dimensions, specifications delivery location information by phone or e-mail.
-Please contact MISUMI AluNavi Center if CAD data are desired. The data format for electronically provided drawings is PDF.

Drawings/Quotations Submission General Timelines

The table shown on the right assumes no design changes during a quotation process. **The timelines on the right may be influenced by seasonal/in-house workload fluctuations. Please allow ample time on the customer end when requesting for quotations.**

Production and delivery times are communicated to the customer by noting on the Quotation/Order Combination Sheets.

Number of Extrusions	2D CAD Drawing+Quotation	3D CAD Drawing+Quotation
~10	Approx. 4 days	Approx. 4 days
~30	Approx. 5 days	Approx. 5 days
~50	Approx. 6 days	Approx. 7 days
~100	Approx. 7 days	Approx. 8 days
101~	10 days or more	

* Not including Sat., Sun., and other holidays.

Notes on Delivery

[Delivery format]

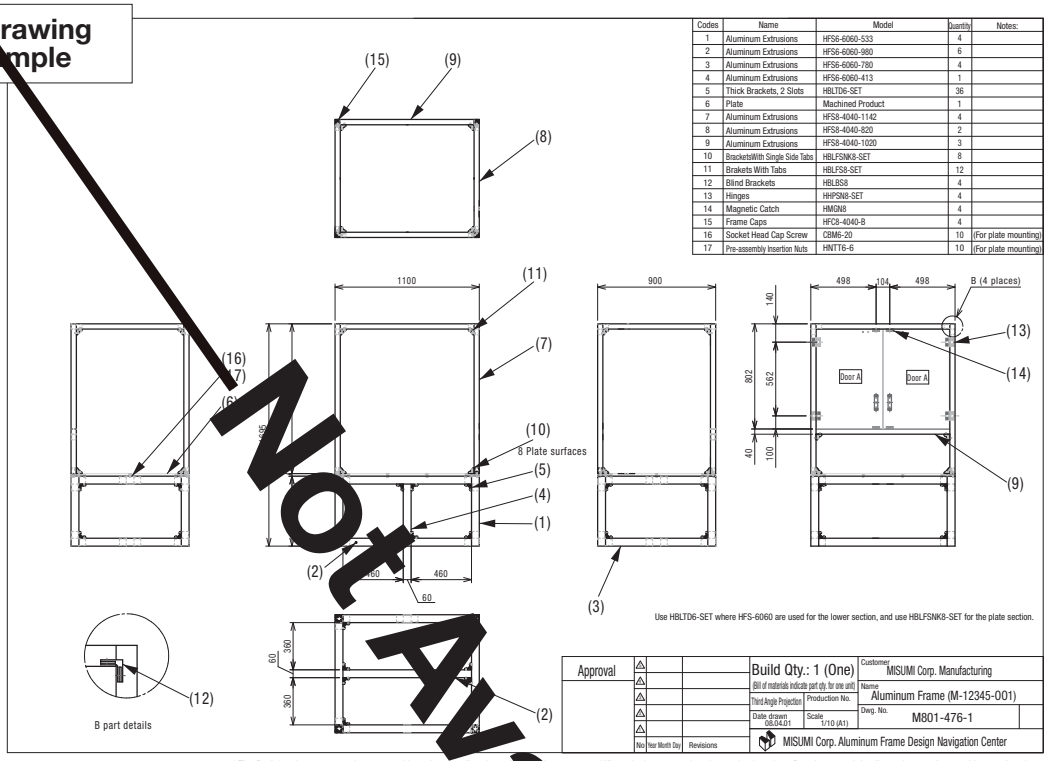
-Product delivery is Freight-On-Board basis. (Customers to unload the products)
On-site assembly service at destinations is not available.
-For unusually large items, delivery may have to be made in sections. The customers would be responsible for the final assembly.
-Packing reinforcements for the freight may be needed depending on the size of the product. Customers would be contacted with the details if needed.
-Unless otherwise specified by the customer, the lowest cost freight method would be selected including mixed freights.
If charter freights are to be used, please notify us as needed.
-Time specified deliveries are available only with chartered freights.
-If Mondays and "the day after holiday" delivery is desired, please check with us for possible Sat./Sun./Holiday freight loading charges.

[After the delivery]

-Fasteners are not fully tightened at the time of shipment. Please fully tighten all the screws after the delivery.
Fasteners may be loosened by vibrations during the shipment.

Post order changes and cancellations

Please note that changes made on materials, destinations, delivery dates, etc., and cancellations after the initial order was placed are subject to customer billing at actual costs incurred.
*The billed amounts would vary based on the nature of changes ordered since materials, assembly labor, and freight resources are finalized after the order is received.
*Delivery date postponement requested by the customer after the order is placed may incur a storage charge.



Placing repeated orders

When placing an order for a repeated item, please specify the drawing number of the past item to request for a delivery time quotation.
*Please note that the delivery time for the new order may not be the same as the previous order as delivery times vary depending on current production queue.

* Material prices and assembly charges are subject to revisions.

The second page and thereafter are detailed bill of materials.
(Unnecessary to include in your order)

A Quotation/Order Combination Sheet will be submitted to the customer from MISUMI.
Please check and confirm the drawing, delivery time, and the price.

When placing your order, please enter the required information and an approval signature in the RED box shown n the left, and fax the sheet to MISUMI.
Fax only the 1st page of the Quotation/Order Combination Sheet. (The 2nd page and after are detailed B.O.M.)

- When placing your order in your own formats, the Quotation/Order Combination Sheet will need to be attached.
- Please note that the assembly service orders are not accepted through our Web Order System (WOS).

- Name of the person ordering
- Name of the person delivered to

- Delivery address
(Not needed if same as the customer code)

- For specified delivery date, check for the actual number of working days.

- Customer's order number
- Customer's approval signature

- Freight charge will vary depending on the [illegible] transportation method.

-If your anticipated order placement date is 30 days or more from our quotation date, please kindly inform us of the expected order date for us to better manage our material and labor resources.

- Please fax your order to MISUMI AluNavi Center using a Quotation/Order Combination Sheet. Your orders are accepted upon receipt of your approved Quotation/Order Combination Sheet.

Quotation Example

- Example of delivering a unit shown on the left to Yokohama city, Kanagawa Pref.

(1) Materials Cost	778,66 EUR
(2) Assembly Charges	238,00 EUR (34,00 EURx7 Hours)
(3) Freight Charge	778,66 EUR (Includes packing materials and labor)
Total(Tax not included)	778,66 EUR

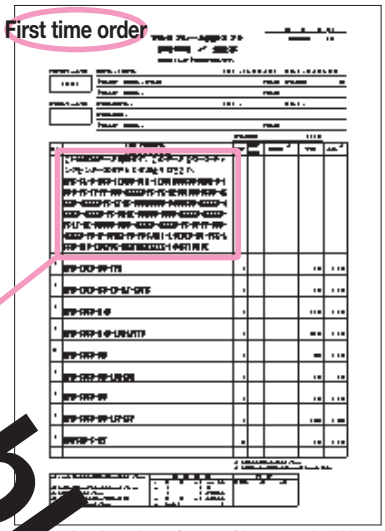
Standard Aluminum Frames Design Support (Software)

Design Support Software V2.70 (Free)

■Software Overview

Designing is easy

- Analyzes beam deflections by calculating the loads.
- Many practical shapes are provided.
- All the materials will be converted into part numbers and quantities.



Only the prominent cataloged products are selectable from the software.

- The software calculates door dimensions and panel notches.

30% OFF from your first software generated order

For your 1st time order, please notate "First Order" on the software generated order sheet.
MISUMI will take 30% OFF from your order generated with the software for the 1st time (only).
Please end the order to the Marketing Center. P.1807

If the design you generated includes any Panels, MISUMI needs the characteristic information from the order sheet generated by the software in order to manufacture them. Please attach the software generated order sheet even when ordering in your own formats or by using our WOS (Web Order System). We cannot assure to meet your requested delivery date if the software generated order sheet is not attached.

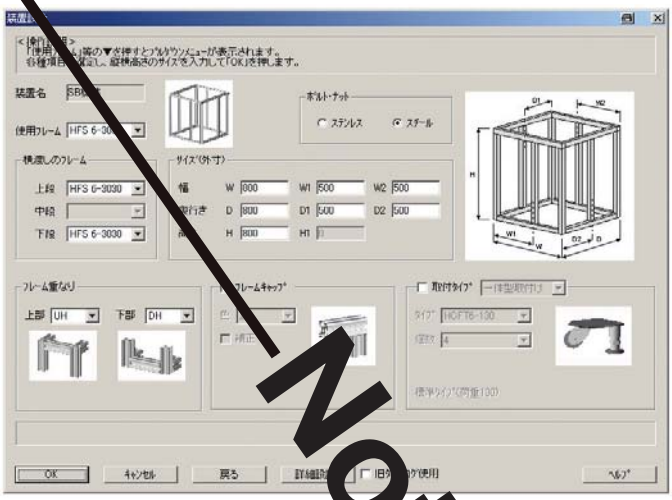
The price shown is a reference. Please note that Volume [illegible] is not reflected.

■How to obtain the software

Download the software from the following web page.
http://jp.misumi-ec.com/cad/
Your questions are answered via e-mail and phone.
E-mail: p-alumi@misumi.co.jp
Phone: 03-3647-7173

■Environment

Runs on Windows98, 2000, Me, NT, and XP platforms. (Not compatible with Windows95)



(Windows is a registered trademark of Microsoft Corporation)

■Staring the software

After unzipping, install and start "Misumi-alumi soft".

Not Available

■Introducing the Design Support Software

■Example shape selectable in the software

Many other shapes can be specified.

(1) Choose a desired configuration from Basic Configurations group.
(2) Specify: Frame Type, Size (outer dims.), and extra connection configurations.

(3) By designing via Detailed Design screens, doors and panel types can be specified.
(4) 6 drawings are generated.
(5) A bill of materials containing catalog codes, quantities, and prices is displayed as an order she
The prices displayed by the software are reference prices.
Volume discounts are not reflected on the prices.

■How to order materials

Please enter your company name and customer code on the printed order sheet and send to our Marketing Cent

P.1807

Please send your R.F.Q. (P.781) to our AluNavi Center (P.777) by filling out the entry sheet.

- Catalog codes for panels used for Alum. Extrusion products

The Design Support Software generates drawings for the panels along with the extrusion frame structural drawings.
Following catalog codes are generated for the panels with notch information and mounting hole dimensions.

		HFPAL	T	A	B	Notching data
Order Example	Design Support Software	Panel code	Thickness	Width	Height	
	Part Number		-	A	- B	- Notching data
				- 200	- 320	- OOO

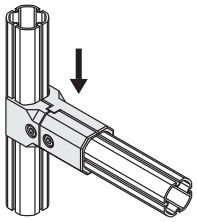
Features of Factory Frame System

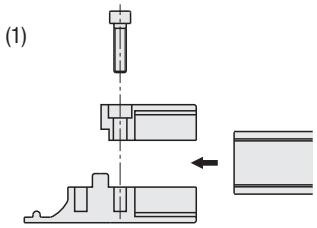
■Features of Factory Frame System



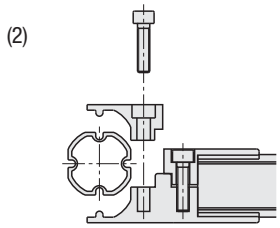
Compared with the conventional hollow frames, Aluminum hollow frames have the advantages as follows;
- Improved squareness at assembly.
- Allows fine adjustment after assembly.

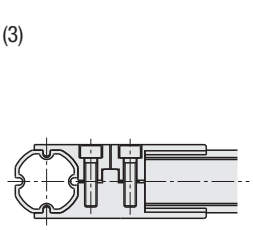
This Factory Frame System can be smoothly assembled without bothered by the frame twisting, just by setting the frame dents in the joint tabs.

■Allowable Load



- Allowable Load of Metal Joints



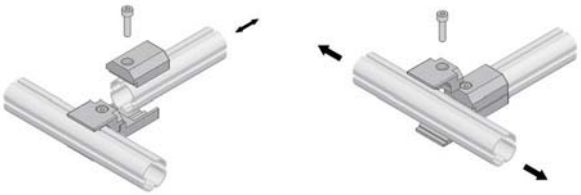


Load that doesn't cause joints misalignment
Max. Load= Approx. 80kg

Please note the maximum load is the value of the static load, and impact load may be lower than this value.

-Deflection Amount of Factory Frames
Please refer to Allowable Load of Aluminum Frames on →**P.671**

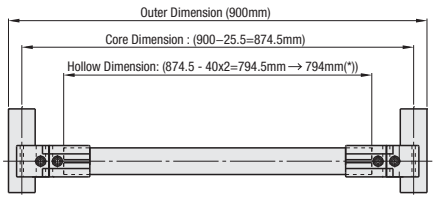
Do not use electric tools whose torque cannot be controlled such as impact drivers. Reference Tightening Torque: 6.8N/m



Frames can be assembled by tightening the screws for each frame by turns.
There is no need to fix several frames at a time, which enables easy assembly.

- **Conventional Frame Joint**

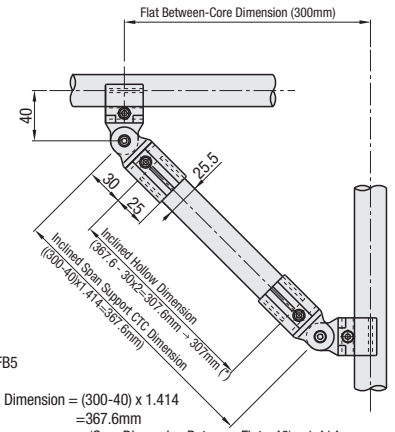
When a screw is loosened, both frames move.



- **Factory Frame System**

Separate adjustment is possible for each frame.

On conventional Frames and Joints, both frames loosened when loosening a screw to move frames. On the contrary, the Factory Frames System can loosen only the frame which needs to be moved. This feature enables frames to be arranged or adjusted after assembling.
No need to hold several frames at a time when assembling.

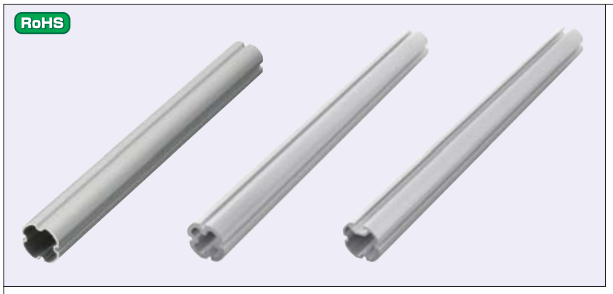


■How to Calculate Hollow Dimension

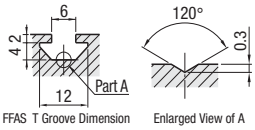
*When the dimension has the digits after decimal point, round it down to the nearest 1.

When using FFB1

Core Dimension=900-25.5=874.5mm
=Outer Diameter-Factory Frame Diameter
Hollow Dimension=874.5-40x2=794.5mm
=Core Dimension-length from the center to the tip of the hollow x 2
If the hollow dimension has the digit after decimal point, round it down to the nearest 1.
→Eventual Hollow Length=794mm



When using FFB5



Actual Inclined Dimension = (300-40) x 1.414
=367.6mm
= (Core Dimension Between Flats-40) x 1.414
Inclined Hollow Dimension (367.6-30x2=307.6mm
= The actual Inclined Dimension the Distance from the Fulcrum to the Hollow End x2
*If the hollow dimension has the digit after decimal point, round it down to the nearest 1.
→Eventual Hollow Length=307mm

Features of Hollow Frame Systems

Features of Hollow Frame Systems

MISUMI Hollow Frame System is designed to combine various shapes and sizes of hollows and joints freely and economically. We provide the system for industrial equipment that serves for streamlining of logistics and space-saving.

Joint Mechanism

There are two joining methods, metal joints and plastic joints for hollow frame systems. (Aluminum extruded hollow is applicable to metal and joints only. For Stainless Steel Hollows, please use the special metal joints.)

Metal Joints (P.802)	Plastic Joints (P.804~)
	
Features	**Features**
- Rigid - Quick jointing by screw-together assembly - Can be disassembled freely	- Economical and light weight - Needs 24 hours to bond joints and hollows by adhesives. - Once joined, cannot be disassembled.

Material Specifications

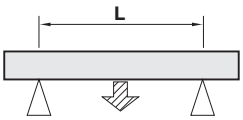
•Hollow

(1)Aluminum extruded hollow
(EN AC51400-T5, EN AW-6061-T6 Thickness 1.7mm)
(2)Hot Zinc Plating Steel Hollow
(Cold rolled steel plate 1.0330/DC01 Thickness 0.7mm)
Plastic Coating Thickness 1mm (Refer to P.799)
*Hereafter described as "Resin Coating Hollow"
(3)Stainless Steel Hollow (1.4016/X6(8)Cr17 Thickness 1.0mm)

•Metal Joint
(1)Stainless Steel (1.4301/X5CrNi18-10) Thickness 2.3mm
(2)SAPH Thickness 2.6mm Cathodic electrodeposition coating (Refer to P.802)

•Plastic Joints
AAS Resin (P.804~P.806)

Chemical Resistance (Hollows, Plastic Films, Plastic Joints)



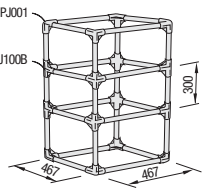
Strong resistance to inorganic acids, alkalis, salts and apolar oils.
The plastic coating may dissolve or swell when it contacts organic solvents such as ketone, ester, aromatics, hydrocarbon chlorinates.

Appearance after 7 days of immersion at room temperature

Chemicals	Appearance
Distilled Water	No change
10% Acetic Acid	No change
10% Hydrochloric Acid	No change
3% Sulfuric Acid	No change
10% Sodium Hydroxide	No change
Ethanol	No change
n-Heptane	No change
Regular Gasoline	Expansion and Whitening
Machine Oil	No change
Toluene	Dissolution
Methylethylketone	Dissolution

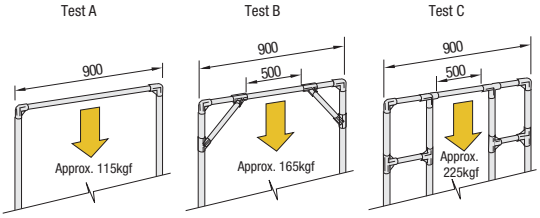
Allowable Load on Hollows

Test with product supported at both ends and concentrated load cast on the center. Use with lighter load than these test values.



L Dimension (mm)	Resin Coating Hollow Allowable Load (N) (kgf)		Stainless Steel Hollow Allowable Load (N) (kgf)	
450	1372	140	1509	154
900	686	70	755	77
1000	568	58	625	64
1100	519	53	571	58
1300	431	44	474	48
1500	382	39	420	43
1800	313	32	345	35

Compression Strength of Hollows

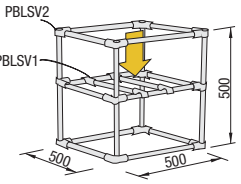


The structure below is assembled with resin coating pipes and plastic joints. When tested with uniformly-distributed load applied on upper and lower parallel plates supported by 4 posts.

Max. Compression Strength=Approx. 220 kgf

Comparison of Structure Strength

Strength comparison with concentrated load on the center

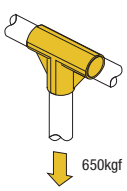


Joint strength by metal joints

Load value that may cause joint misalignment when the load is applied on the center shelf of the structure.

(1)When resin coating hollows and metal joints are used.
Max. Load= Approx. 220kgf

(2)When stainless steel hollows and metal joints for stainless steel hollows are used.
Max. Load= Approx. 160kgf

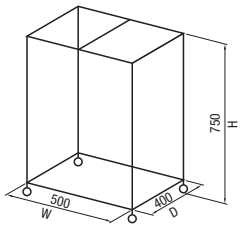


Please note the maximum load is the value of the static load, and impact load may be lower than this value.

Adhesive strength by plastic joints

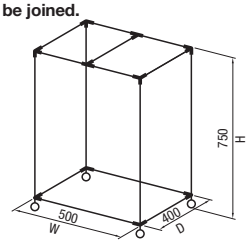
The right-hand figure shows adhesive tension strength 24 hours after PJ201B is bonded to a pipe (by adhesive).
Then measured the Tension Strength.
(Aluminum extruded hollow and stainless steel hollow cannot be bonded.)

Adhesive Strength=Approx. 650 kgf



Selection Steps for Hollow Frame

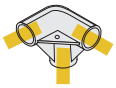
1. Selection Steps (Ex.) To assemble a "Cart" with hollow frames and plastic joints (excluding top plates).



Step (1) Rough sketch of cart shape

- Determine the dimensions for width(W), depth(D) and height(H), and whether the casters are used or not.

Ex. Width 500, Depth 400, Height 750 and 4 Casters



Step (2) Mark positions for hollows to be joined.

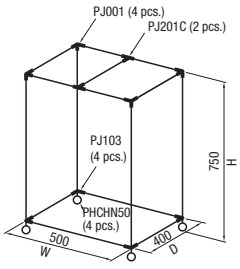
Step (3) Select joint parts.

Refer to "Selection of Plastic Joints" on **P.803.**

PJ001 (P.804)

PJ201C (P.804)

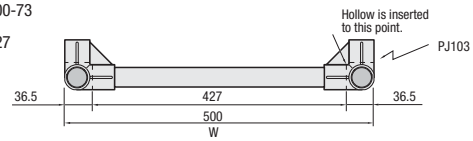
1 Direction Through



PJ103 (P.804)

1 Direction Through

PHCHN50 (P.804)



Step (4) Calculate pipe length. (P.820)

- Hollow length in W direction (Hollow length between two PJ001s or PJ103s)

=W-36.5x2

=500-73

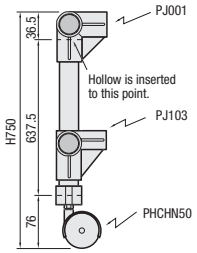
=427

- Hollow length in D direction

(Hollow length between PJ001s or PJ103s or PJ201Cs.)

=D-36.5x2

=400-73



=327

- Hollow length in H direction

(Hollow length between PJ001s or PJ103s and caster height is subtracted.)

=H-76-36.5

=750-112.5=637.5≒637

Step (5) Select color.

Select color for pipes and plastic joints. (Ex.) S (Dark Gray)

2. Make selected parts list.

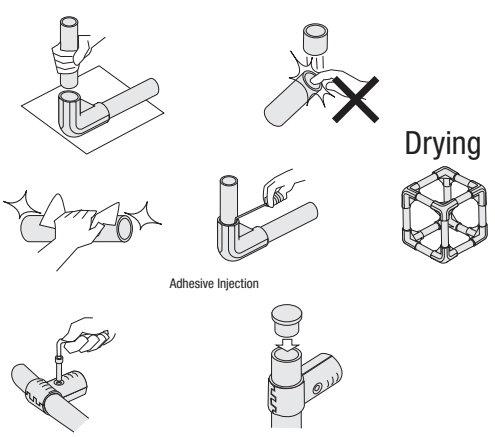
The above hollow frame cart is assembled with the following parts. Please place an order with the Part Number below.

Part Number	Pc.	Part Number	Pc.
PFS28-S-427	4	**PJ201C-S**	2
PFS28-S-327	5	**PJ103-S**	4
PFS28-S-637	4	**PHCHN50**	4
PJ001-S	4	(**PFBONDN1000**	1)

If no adhesive is available at hand (**P.803**)

3. Notes for Assembly

(1) Temporary Assembly



(1) During the temporary assembly, insert hollows completely.
(2) Please be careful not to cut your hands by sharp ends of the cut hollows.

(2) Plastic Joints

(1) Adhesive should be applied on Joints and Hollows after the temporary assembly, since they can't be disjoined once bonded.
(2) Clean the bond surface before applying adhesive.
(3) Apply adhesive on a flat table.
(4) Apply adhesive twice to make sure it is completed.
(5) Liquid adhesive should be injected evenly not spill over.
(6) Do not move the Joints and Hollows for 24 hours after adhesive application.

(3) Metal Joints

(1) Metal joints may become damaged if clamped insufficiently.
(2) Tighten the screws with a hexagonal wrench.
(3) Attach PJ503 (inner cap) on the hollow ends with adhesive.

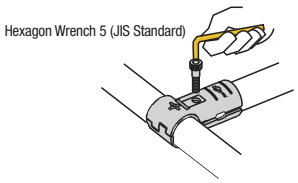
For cutters for Hollow Frames and Aluminum Hollow Frames, see P.819 (This cutter cannot cut reinforced aluminum hollow frames.)

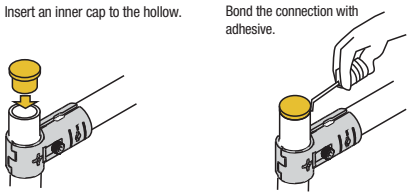
Metal Joints Selection

■Metal Joints

(1) A screw hole has been provided to allow the metal joint to be firmly connected to a hollow.

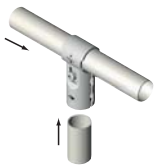


(2) Material and coating is selectable according to the purpose of use.



Part Number	Material	Plating
PBLSN, PBLS	SAPH	Cathodic Electrodeposition Coating
PBLSNC		Nickel Plating
PBLSNS	1.4301/X5CrNi18-10	-

■How to Use Metal Joints



(1) Use a hexagon wrench 5 (JIS standard) for tightening.

(2) When using Metal / Joints, bond an inner cap (PJ503) to the end of hollow with adhesives.
(No inner cap is required for aluminum hollows.)

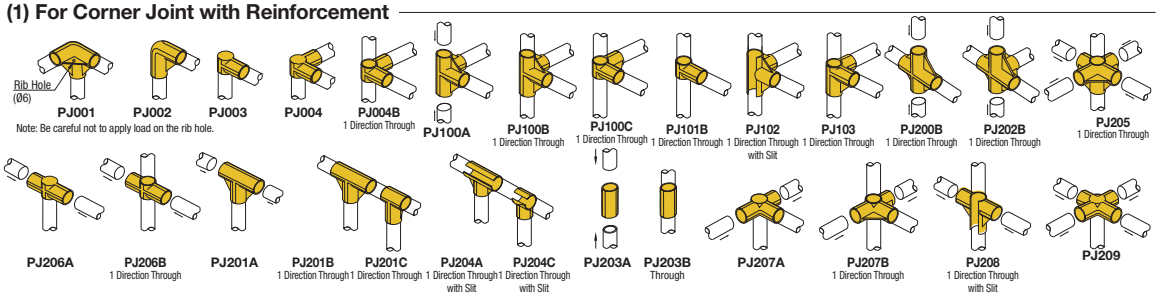
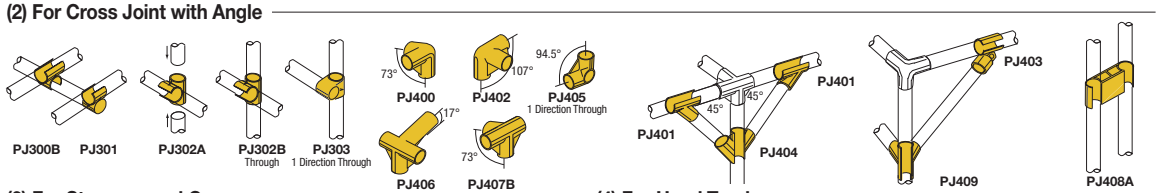
Plastic Joints Selection · Adhesives



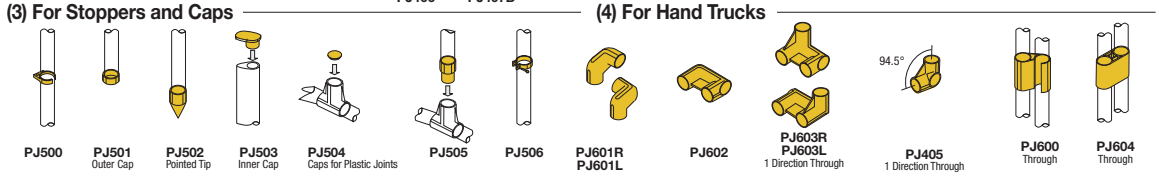
Plastic joints must be connected using adhesives. Therefore do not use in sections that require disassembly.

(1) Comparison by Strength When higher strength is required, select the appropriate joint based on the following chart.



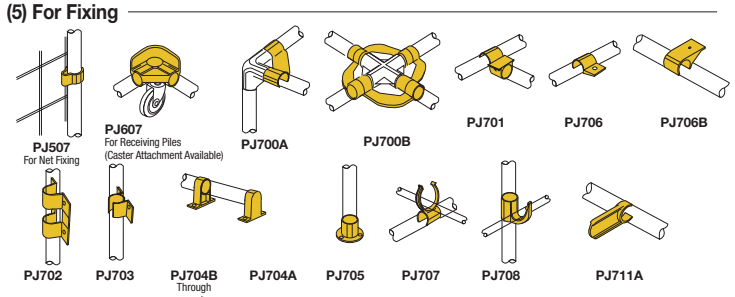
(2) Comparison by Applications Plastic joint can be selected to the shapes of pipes to join.

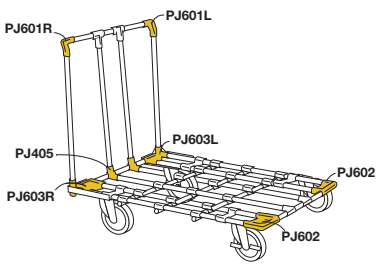
(1) For Corner Joint with Reinforcement



Note: 6 directional joint assembly is difficult. (Ex.PJ205) It is recommended to use PJ200B and PJ302B first and install side hollow later.

(2) For Cross Joint with Angle





(3) For Stoppers and Caps

(4) For Hand Trucks

(5) For Fixing

Adhesives

RoHS

Not hazardous according to Japanese Fire Defense Law.

	Ⓜ(Component)
Adhesives	Organic Solvent Naphthenic Hydrocarbon Isoparaffinic Hydrocarbon Methylene Chloride
Syringe	Polyethylene

Part Number Type	No.	Volume mℓ	Accessories	€ Unit Price
	300	300	Syringe 1 Pc.	
	1000	1000	Syringe 2 Pcs.	

Order Example — Part Number

Days to Ship — 8 Days

How to Use

- Wipe dust, moisture and oil from the joining surface in advance.
- Proper pouring amount of adhesive is approximately 0.3~0.8mℓ for one joint.
- Pour evenly on the joining surface.
- Ensure that it does not spill out since it dissolves plastic joints and pipes.
- Do not move for at least 10~15 minutes after liquid adhesive is injected. (Adhesive strength will be approximately 80% after 24 hours at normal temperature.)
- Once joined, it cannot be removed.
- Not available for Aluminum Extruded Hollows, Skid Hollows and Stainless Steel Hollow.

Notes on handling liquid adhesive

Warning

1. It is harmful to human health. Do not swallow or inhale directly.
2. Keep away from fire.
3. Wash off with water immediately in contact with eye.
4. Do not let the adhesive come in contact with skin directly. Wash with soap and warm water immediately if came in contact with skin.
5. Sufficient room ventilation is needed.
6. Because it may dissolve plastics, be sure that it does not contact eyeglasses, plastics, or clothes.
7. Do not point the syringe injection tube toward people. It is dangerous if the liquid splatters.
8. Close the cap tightly after use, because the quick-dry solvent is used.
9. Do not mix with other solvents such as thinner.
10. Store in cool and dry room.
11. Contents may gel when in temperature change. In this case, open the cap slowly.

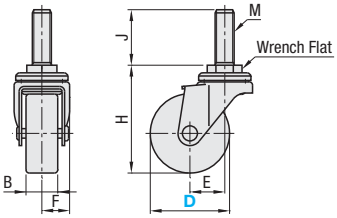
Accessory Parts for Stainless Hollow



The size of the Stainless Hollow Frame is different from that of conventional Resin Coating Hollow Frame and Aluminum Extruded Hollow Frame. So some conventional accessory parts, in case they are intended to be set in inside of the hollow frames, cannot be used.
For Metal Joints, Casters, Adjustment Bolt Set, Insert Nuts and Inner Caps, use the following products.

RoHS

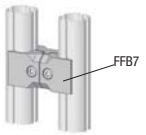
Part Number	-	W	-	H	- (SPN · GA · ABM)	10 Days
PFUCS	-	W900	-	H1350	- GA-ABM2	

Alteration	Code	Spec.	Price Adder
Wrenches for mounting casters	SPN	Adds wrench for mounting casters.	1,35
Contact Component Change 	GA	Replaces casters with rubber feet. PFUC_→JBS402 (**P.809**) FFUC→FFS204 (**P.792**)	-15,00

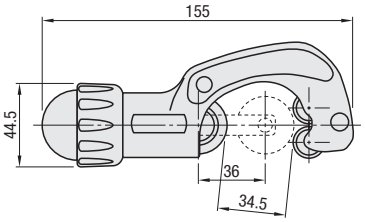


Alteration	Code	Spec.	Price Adder
Additional Horizontal Frames	ABM	Adds horizontal frames or joints. ■Components List - PFUC_ (1) PFS28-Color-(W-103) 1 pc. (2) PBLSN1 2 Pcs. - FFUC (1) FFA28- (W-106) 1 pc. (2) FFB1 2 Pcs. Ordering Code 1 pc. → ABM1 2 pcs. → ABM2	PFUC_ 9,40 EUR/pc. FFUC 8,40 EUR/pc.

Example

-For panel mounting, use FFB6 (**P.789**) or PBLSN701 (**P.802**)

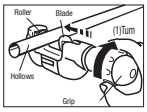
-When FFB7 (**P.789**) or PBLSN11 (**P.802**) are used, partitions can be easily connected.

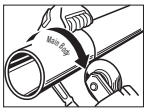


Adjust frame back and forth when a caster interferes.

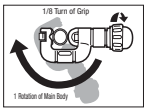
Cutters, Spare Cutter Blades, Deburring Tools, Spare Deburring Blades

■Hollow Cutters





PFCAT
PFCATS



Remodeled in May 2009. Functions are the same as those of the old model.
Reinforced aluminum hollow frames and factory frames cannot be cut with this cutter.

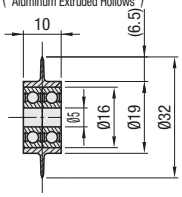
Part Number	Applicable pipe	Mass (g)	€ Unit Price 1~9 pcs.	Volume Discount 10~19
PFCAT	Aluminum Extruded Hollow, Resin Coating Hollow	350		
PFCATS	Stainless Steel Hollow	356		

⚠CAUTION

- If the cutter is used to cut the unspecified objects or for the unspecified purpose except cutting, which may damage the cutter or cause the accidents.
- Be sure to inspect the cutter before use. Do not use until it is repaired or replaced when it is out of order.
- Do not touch blade while cutting. Fingers may get caught between the blade and the pipe, or it may cause other accidents or injury.
- Be careful of falling while carrying or operating.
- Wipe water off when the cutter gets wet. Water entrance into bearing may cause rust and may stop moving.

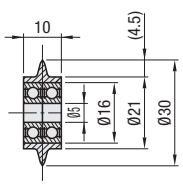
■How to Use

1. Turn the grip to grasp pipe between the roller and cutter blade. Hollow end should come out at least a little more than the roller width.
2. Rotate the grip till the point where the cutter hits the pipe, then further rotate it by around 90 degrees in the direction of the arrow (1) in the figure. Then, rotate the body 360 degrees to make incision on whole the circumference.
3. Then turn the grip slowly (approx. 1/8 turn per each main body rotation) to cut gradually deeper and turn the main body to completely cut the pipe.



*If the cutting speed is too fast, it may cause pipe deformation, or shorten the blade's lifetime.

RoHS



■Spare Cutter Blades

PFCATH (For Resin Coated Hollows, Aluminum Extruded Hollows)

PFCATHS (For Stainless Steel Hollow)

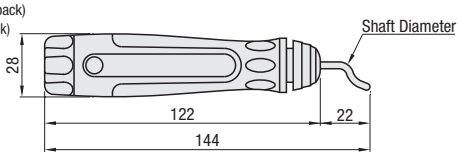
A Accessories: Retaining Ring of E Type 1 pc.

Part Number		Mass (g)	€ Unit Price 1~9 pcs.	Volume Discount 10~19
PFCATH	(For Resin Coated Hollows, Aluminum Extruded Hollows)	19		
PFCATHS	(For Stainless Steel Hollow)	25		

Please request a quotation for orders larger than indicated quantity.

How to Replace Spare Blades: Remove the retaining ring E Type of the cutter main body, then pull installation pin for replacement.

Order Example — Part Number: PFCAT, PFCATH



Days to Ship: 6 Days P.87

RoHS

■Deburring Tools / Spare Blades

M-NG1000-F (Deburring Tool: PFREMH-BS1010x1 pc.)
M-NG1000-S (Deburring Tool: PFREMH-BS1018x1 pc.)
PFREMH-BS1010 (Spare Blades, 10 pcs./pack)
PFREMH-BS2010 (Spare Blades, 10 pcs./pack)
PFREMH-BS1018 (Spare Blades, 10 pcs./pack)

M Material: Handle: Plastic+Rubber

■Deburring Tools

Part Number	Mass (g)	€ Unit Price Qty.1~9	Volume Discount 10~29
M-NG1000-F	31		
M-NG1000-S	31		

Please request a quotation for orders larger than indicated quantity.

■Spare Cutter Blades

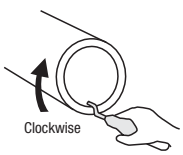
Part Number Type	Part Number No.	Features	€ Unit Price* Qty.1~9	Volume Discount* 10~29
PFREMH	BS1010	For heavy steel and aluminum. One blade in clockwise direction. Black		
	BS2010	For cast, brass and plastic. Two blades in either direction. Silver		
	BS1018	For hard to cut material such as stainless steel. One blade in clockwise direction. Silver		

*One pack contains 10 pieces.

Please request a quotation for orders larger than indicated quantity.

Order Example — Part Number: M-NG1000-F, PFREMH-BS1010

• Deburring Tools: 6 Days P.87



• Spare Blades: 8 Days

■How to Use

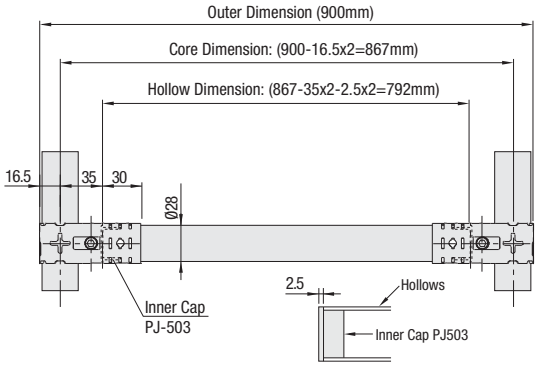
1. Hold the grip and apply the blade to the inside of the pipe.
2. Turn at least one full turn while keeping the blade in the direction of the pipe.

⚠CAUTION

- Using for purposes other than deburring after pipe frame cut may cause damages or accidents.
- Be sure to check the burr remover before use. Do not use until it is repaired or replaced when it is out of order.
- Do not touch blade section during operation. It may cause accidents or injury.
- The Part Number for the conventional product PFREM has changed to M-NG1000-F. Some modification has made handle shape, but it doesn't affect mechanical function.

How to Calculate Hollow Dimension

-Metal Joint / Plastic Joint-



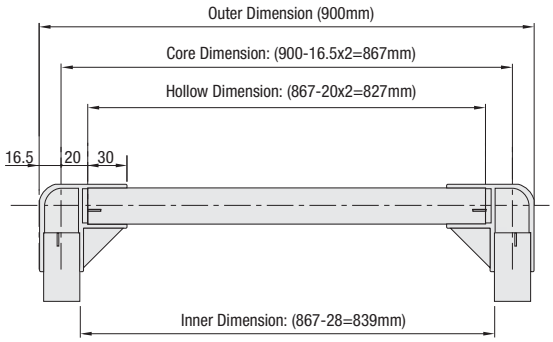
■Example of Metal Joint Calculation

When using PBLSN1

Core Dimension=900-16.5x2=867
=Outer Dimension-Metal Joint Radiusx2

Hollow Dimension=867-35x2-2.5x2=792
=Core Dimension - Length From Metal Joint Center to Hollow End

*Hollow will be shorter (2.5x2) when inner cap is attached for rust prevention.
No inner cap is required for aluminum extruded pipes.

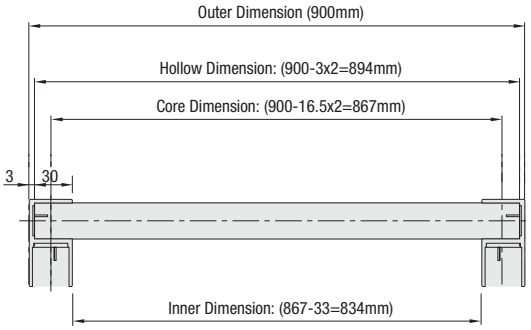


■Example of Plastic Joint Calculation

(Aluminum extruded pipes and stainless steel pipes should not be combined with plastic joints.)

When using PJ002

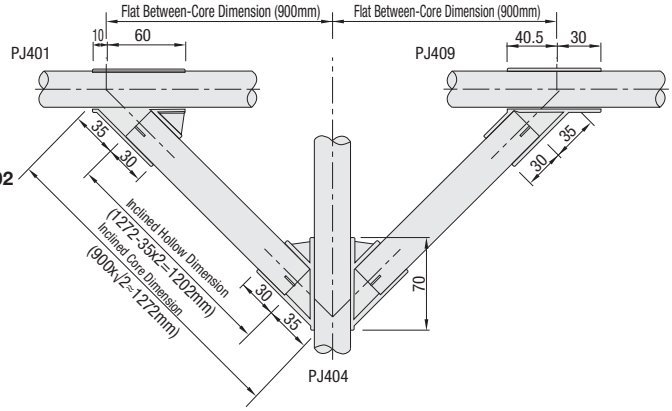
Core Dimension=900-16.5x2=867
=Outer Dimension-Metal Joint Radiusx2



Hollow Dimension=867-20x2=827
=Core Dimension - Length from Plastic Joint Center to Hollow End

When using PJ003

Core Dimension=900-16.5x2=867
=Outer Dimension-Metal Joint Radiusx2



Hollow Dimension=900-3x2=894
=Outer Dimension - Length From Plastic Joint End to Hollow End

When using PJ401 , PJ404 , PJ409

Inclined Core Dimension=900x√2≈1272
=Core Dimension Between Flatsx√2

Inclined Hollow Dimension=1272-35x2=1202
=Inclined Core Dimension - Length from Plastic Joint Center to Hollow End

8H			

The price of Hole Type is found by adding the Standard Type unit price to the hole machining charge.

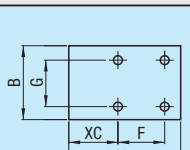
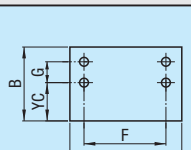
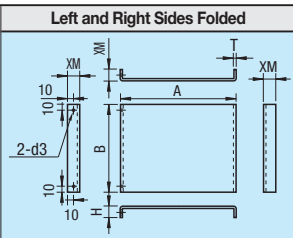
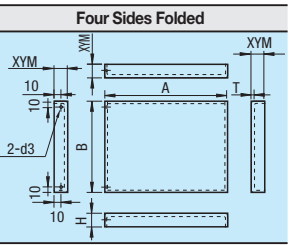
(Ex.) Part Number: PDSPHC4H - 500 - 400 - 1.2 - F400 - G300 - N6 - U2280D









(Standard Type € Unit Price) +(Hole Machining Charge) = Hole Type Price

(20,70 EUR x1.0) + 4,00 EUR = 24,70 EUR

(Standard Type € Unit Price) + (Hole Machining Charge) = Hole Type Price
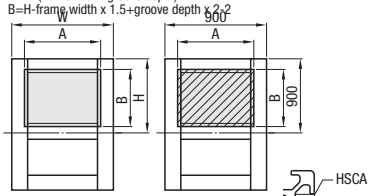
81,80 EUR + 4,00 EUR = 85,80 EUR

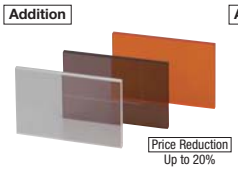
■Installation of Non Framed Expanded Metals



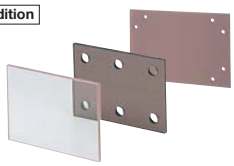
-Putting into Aluminum Frame Grooves-
When putting expanded metal Folding Nets into aluminum frame grooves, insert slot cover (HSCA) inside out as a holder. **P.687**

-Connection of Aluminum Frames-
When forming a frame with aluminum frames, use Single Joint Kit Narrow Type (**P.635**) for Blind Joint as junctions. Brackets, single / double joint for blind joint may become as obstacles for installation of slot covers and Folding Net.

-Size Specification-
When putting expanded metal Folding Nets into grooves in aluminum frames whose outer dimension is WxH, the dimension of the metal mesh AxB can be calculated by the following equation.
A=W-(frame width-groove depth) x 2-2
B=H-frame width x 1.5+groove depth x 2-2



Ex.) In the case where outer dimension is W (900), H (900)
- For slot width 8, 30 square type:
  A=900-(30-8)x2-2=854
  B=900-30x1.5+8x2-2=869
- For slot width 10, 40 square type:
  A=900-(40-11.5)x2-2=841
  B=900-40x1.5+11.5x2-2=861
- For slot width 10, 45 square type:
  A=900-(45-12)x2-2=832
  B=900-45x1.5+11.5x2-2=853.5
  ≈ 853



Groove depth when slot cover is installed

Resin Plate Characteristics I

-Epoxy Glass · Bakelite and Ceramics-

For Heat Insulation Plates, see **P.1559~1574.**

Characteristics of Epoxy Glass, Bakelite and Ceramics

- Characteristics of Epoxy Glass Plate

Compared with paper based bakelite plates and fabric based bakelite plates, MISUMI's epoxy glass plates have high strength (mechanical strength), excellent heat resistance and moisture resistance.

High Temperature Type has an excellent antistatic property.

- Characteristics of Bakelite Plate

MISUMI's Bakelite Plates are products which can be used as insulating plates for switch board, controller and breaker.

Paper Type is available in natural color and black, and strong Fabric Type is also available.

Bakelite Color (Natural Color) may vary depending on production lot, but does not affect quality.

- Characteristics of Ceramics

Alumina 96 : Ceramics (Alumina 96/99) are excellent in abrasion resistance · insulation · heat resistance, and used for insulating · heat resisting parts in electricity, semiconductors and the other areas. In addition, it has equal or higher bending strength, compared with the common steel, and little elastic deformation.

Steatite : Ceramics Steatite are excellent in insulation and high frequency characteristic and are used as general insulation parts. It is a relatively low-cost material.

Machinable : Excellent machinability. Can be machined into complex forms. Precision finishing.Provides an excellent electric and thermal insulation.

Resin Plates Characteristics II

-General-purpose Engineered Plastic Plates-

■Characteristics of MC Nylon · Polyacetal · Ultra High-molecular-weight Polyethylene · Fluororesin · PEEK · PPS · ABS · PBT and Free-cutting Resin

MISUMI's general-purpose Engineered Plastic plates have superior properties of lightweight, noise reduction and corrosion resistance and can be used as a replacement for metal plates.
Selectable from nine types of materials and several grades for various purposes.

· MC Nylon : Having better abrasion resistance than that of polyacetal plates, MC nylon is generally used for slide guide plates. The product lineup are as follows: Sliding Grade with highly-improved sliding performance; High Strength Grade with excellent strength; three types of Conductive Grade effective for antistatic purposes; and Weather Resistance Grade superior in strength deterioration.

· Polyacetal : Widely used in wheels, rollers and gears, because of its excellent mechanical strength. MISUMI's polyacetal plates have two types of color: white and black. In addition, Sliding Grade with highly-improved sliding performance and Conductive Grade effective for antistatic purposes are also available.

· Ultra High-molecular-weight Polyethylene : It excels in abrasion resistance and sliding properties, and is used for carrier rollers and guide rails. In addition to Standard Grade, Conductive Grade effective for antistatic purposes is also available.

* For material colors or features, see **P.861**

* Comply with Food Sanitation Laws (MC Nylon · Standard · Sliding Grade and High Strength Grade: After boiling for 1.5hrs; Conductive CDR2 · CDR6 and CDR9: After boiling for 2hrs) ⓘListed values are not guaranteed values but representative values.

· Fluorine Resin : It can be used for sheet packing and electric insulator since it has excellent impact strength as well as chemical stability and electric property. In addition to Standard Grade, Conductive Grade is also available.
· PEEK : Super Engineered Plastic with high heat and chemical resistance. It excels in mechanical characteristics under high temperature. In addition to Standard Grade, Conductive Grade effective for antistatic measures is also available.
· PPS : It excels in heat resistance, rigidity, flame resistance and dimension stability. It also excels in chemical resistance at ambient temperature and is used for parts of semiconductor and liquid crystal manufacturing equipment and inspection device.
· ABS : Excels in machinability and coating. Widely used as a material which coating on plastic body is possible.
· PBT : It excels in insulation, machinability, low water absorption and long term heat stability, and is used for auto electric parts.
· Free-cutting Resin (Unilate®) : It excels in insulation, low water absorption and rigidity, and is easy to machine and cut.

* For material colors or features, see **P.861**

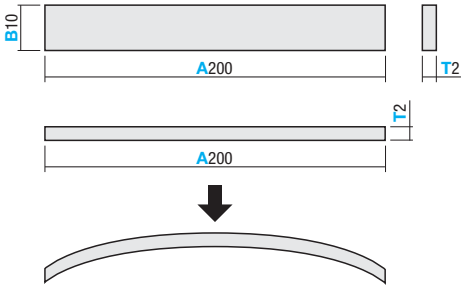
Line-ups and Characteristics of Engineered Plastics

Page	Materials	Color Sample	Grade	Color	Generic Name	Properties: Electric Property Properties	Properties: Continuous Use	Properties: Dimension Stability	Properties: Abrasion Resistance	Properties: Sliding Properties	Features
P.893	Epoxy Glass		Standard	Green	Glass Epoxy	Insulation	Normal Temperature ~ 155°C	○ ~ ◎	X ~ Δ	X ~ Δ	[Features]Excels in heat resistance, heat insulation and electrical insulation. [Appearance]Upper and lower surfaces are glossy and smooth. Cut surfaces appear whitish. [Machinability]Because made of laminated glass fiber and epoxy resin, drilling or cutting in the direction of lamination may cause cracks.
			Electric Conductivity	Black	-	Antistatic	Normal Temperature ~ 260°C	○ ~ ◎	X ~ Δ	X ~ Δ	[Features]Excels in heat resistance, heat insulation and antistatic effect. [Appearance]Upper and lower surfaces are not glossy but smooth. [Machinability]Same as Standard Type.
P.895	Bakelite Paper Type		Paper Bakelite	Natural Color	Laminated phenol formaldehyde resin w/paper base	Insulation	-50°C ~ 100°C	○	X ~ Δ	X ~ Δ	[Features]General material for various purposes such as insulation and heat resistance. Paper based materials are more inexpensive than fabric based materials. [Appearance]Upper and lower surfaces are glossy and smooth. Natural color tone vary per production lot. Color becomes darker due to oxidation over time. However, it does not affect properties. Paper-based black color does not change. [Machinability]Good machinability but dust scatters when machined.
			Paper Bakelite	Black	Laminated phenol formaldehyde resin w/paper base	Insulation	-50°C ~ 100°C	0	X ~ Δ	X ~ Δ	
			Cloth Bakelite	Natural Color	Laminated phenol formaldehyde resin w/cloth base	Insulation	-50°C ~ 100°C	○	X ~ Δ	X ~ Δ	[Features]General material for various purposes such as insulation and heat resistance. Cloth-based materials have higher strength than paper-based materials. [Appearance]Upper and lower surfaces are smooth and have grains. [Machinability]Good machinability but dust scatters when machined. Fabric based materials have less machinability than paper based materials due to lamination.
P.901	MC Nylon		Standard	Blue	MC901	Insulation	-40°C ~ 120°C	Δ	○	○	[Features]MC Nylon® of Nippon Polypenco Ltd. is the most general material in engineered plastics and used for various industrial purposes. Excels in mechanical strength and abrasion resistance, but not in dimension stability due to high water absorption. [Appearance]Stripes on upper and lower surfaces of materials are developed from production process. Colors may have lot variations but it does not affect the physical properties. [Machinability]Machinability is good but less than that of Polyacetal due to special stickiness.
			Standard	Ivory	MC901NC	Insulation	-40°C ~ 120°C	Δ	0	0	
			Sliding	Purple	MC703HL	Insulation	-40°C ~ 120°C	Δ	◎	◎	[Features]Dynamic Friction Coefficient is low. Excels in sliding properties, abrasion resistance and mechanical strength. [Appearance]Stripes on upper and lower surfaces of materials are developed from production process. Feel rough due to the special additive. [Machinability]Same as Standard Type. [Caution]Do not use for processing of food oils and fats.
			High Strength	Dark Brown	MC602ST	Insulation	Normal Temperature ~ 150°C	Δ	○	○	[Features]Upper temperature limit is higher than that of Standard Type and excels in mechanical strength. [Appearance]Stripes on upper and lower surfaces of materials are developed from production process. [Machinability]Same as Standard Type. Material is harder than that of Standard Type.
			Weather Resistance	Dark Gray	MC801	Insulation	Normal Temperature ~ 120°C	Δ	◎	○	[Features]Excels in weather resistance and abrasion resistance. Can be used outdoors over a long period of time. [Appearance]Stripes on upper and lower surfaces of materials are developed from production process. [Machinability]Same as Standard Type.
			Electric Conductivity CDR2	Black	MC501CDR2	Conductive	Normal Temperature ~ 120°C	Δ	Δ	○	[Features]Conductivity CDR2:Has the highest conductivity in MC Nylon® of conductive grade. Suitable where quick conductivity is required. Conductivity CDR6:Electric property is between conductive and antistatic. The most general and economical in MC Nylon® of conductive grade. Conductivity CDR9:Electric property is antistatic. Has the highest heat resistance in MC Nylon® of conductive grade. [Appearance]Marks are printed with "R2" (white), "R6" (yellow) and "R9" (green) markers on upper and lower surfaces of the material to distinguish the conductive grades. Stripes on upper and lower surfaces of materials are developed from production process. [Machinability]Same as Standard Type. Material contains carbons and is harder than that of Standard Type. [Caution]Do not use as heating elements or electric parts such as contact points or terminals.
			Electric Conductivity CDR6	Black	MC501CDR6	Antistatic	Normal Temperature ~ 120°C	Δ	Δ	○	
			Electric Conductivity CDR9	Black	MC501CDR9	Antistatic	Normal Temperature ~ 150°C	Δ	○	○	
P.905	Polyacetal		Standard	White	POM Duracon	Insulation	-45°C ~ 95°C	○	Δ	○	[Features]General Engineered Plastics for various industrial purposes. Equal to Duracon®. Has low water absorption and excels in dimension stability. Inferior to MC Nylon® in heat resistance and abrasion resistance. [Appearance]Upper and lower surfaces look and feel smooth. Weld line (resin flow mark) is developed from production process. [Machinability]Good machinability.
			Standard	Black	POM Duracon	Insulation	-45°C ~ 95°C	○	Δ	○	
			Sliding	White	-	Insulation	-45°C ~ 95°C	○	◎	◎	[Features]Only small friction heat is generated when sliding and therefore small power is required for operation. Excels in abrasion resistance and dimension stability. [Appearance]Same as Standard Type. [Machinability]Same as Standard Type.
			Electric Conductivity	Ocher	-	Antistatic	Normal Temperature ~ 80°C	Δ	○	○	[Features]No-carbon antistatic material is used and effective for antistatic. [Appearance]Unlike Standard Type, weld line (resin flow) is not highly visible. [Machinability]Same as Standard Type.
P.909	Ultra High-molecular-weight Polyethylene		Standard	Milky White	UHPE UHMWPE New Lite(R)	Insulation	-100°C ~ 80°C	Δ	◎	◎	[Features]Standard:Has low specific gravity and is lightweight. Excels in abrasion resistance and sliding properties. New Lite® of Saxin Corporation is used for the standard type of ultra-high molecular weight polyethylene. Electric Conductivity: Excels in sliding property and abrasion resistance at ambient temperature with low load. Also excels in conductivity. [Appearance]Clear white for Standard Type. Pullout marks are left at the extruded direction. Surfaces feel smooth. [Machinability]Hard to machine as they are soft. Be careful of the way to fix. [Caution]Storing them against the wall causes warpage. Be sure to lay them out flat. Do not use Conductive Type as heating elements or electric parts such as contact points or terminals.
			Electric Conductivity	Black	-	Conductive	-100°C ~ 80°C	Δ	○	○	
P.911	Fluorine		Standard	White	Teflon PTFE	Insulation	-40°C ~ 250°C	X ~ Δ	○	◎	[Features]Standard:Excels in heat resistance and chemical resistance. Fluorine resin is Polytetrafluoroethylene resin (equal to teflon). Electric Conductivity: Excels in heat resistance, chemical resistance and sliding property. No-carbon antistatic material is used and effective for antistatic. [Appearance]Standard:Upper and lower surfaces look and feel very smooth. Electric Conductivity: Feel less smooth than Standard Type, but excels in sliding property. [Machinability]Hard to machine as they are soft and become swollen. [Caution]Storing them against the wall causes warpage. Be sure to lay them out flat. Do not use Conductive Type as heating elements or electric parts such as contact points or terminals.
			Electric Conductivity	White	-	Antistatic	Normal Temperature ~ 260°C	Δ	○	○	

Page	Materials	Color Sample	Grade	Color	Generic Name	Properties: Electric Property Properties	Properties: Continuous Use	Properties: Dimension Stability	Properties: Abrasion Resistance	Properties: Sliding Properties	Features
P.913	PEEK		Standard	Ash Brown	PEEK	Insulation	-50°C ~ 250°C	○	○	○	[Features]Standard:Well balanced in heat resistance, insulation, dimension stability, chemical resistance, abrasion resistance and machinability. Sliding: In addition to the features of Standard Type, it excels in mechanical characteristics and sliding property at high temperature. Conductivity: In addition to the features of Standard Type, Specific Volume Resistivity is low and excels in conductivity. [Appearance]Upper and lower surfaces of the material are glossy. Weld line (resin flow mark) is developed from production process. It can be removed by milled surface finishing. [Machinability]Machinability is good, however, they may be chipped off at the direction of the milling cutter pulled out. Beware of the milling speed. When drilling a hole, the reference feeding speed when going through is 0.1mm per rotation. [Caution]Do not use Sliding Type and Conductive Type as heating elements or electric parts such as contact points or terminals.
			Sliding	Black	-	Insulation / Conductive Mixed Not measurable.	Normal Temperature ~ 250°C	○	○	○	
			Conductive	Black	-	Conductive	Normal Temperature ~ 250°C	○	○	○	
P.917			Standard	Natural Color		Insulation	Normal Temperature ~ 190°C	○	Δ	Δ	[Features]Standard: Excels in heat resistance, chemical resistance and dimension stability. More economical than PEEK. Abrasion Resistance: Superior in abrasion resistance and sliding property, especially in dimension stability to Standard Type. [Appearance]Upper and lower surfaces of the material are glossy. Weld line (resin flow mark) is developed from production process. It can be removed by milled surface finishing. [Machinability]Machinability is good, however, they may be chipped off at the direction of the milling cutter pulled out.Beware of the milling speed. When drilling a hole, the reference feeding speed when going through is 0.1mm per rotation. [Caution]PPS generates an oxide film on the surface and the color turns to brown when it is exposed to light and heat (direct sunlight, fluorescent light, mercury lamp and high-temperature atmosphere) for long hours. However, it changes little in mechanical properties and physical properties. * Unlike Standard Type, discoloration doesn't occur due to the addition of color.
			Abrasion Resistance	Blue	-	Antistatic	Normal Temperature ~ 220°C	◎	◎	○	
P.917	ABS		Standard	Natural Color	ABS	Insulation	Normal Temperature ~ 50°C	◎	Δ	Δ	[Features]Excels in machinability and adhesion is possible. The material is often used for prototypes. [Appearance]Upper and lower surfaces are glossy and smooth by the size up to 10mm. [Machinability]Good machinability.
P.919	PBT		Standard	White	PBT	Insulation	Normal Temperature ~ 120°C	○	Δ	Δ ~ ○	[Features] Excels in heat resistance, electric property, dimension stability and insulation. [Appearance]Marks of machining on upper and lower surfaces are developed from production process. [Machinability]Good machinability.
P.919	Unilate®		Standard	Natural Brown	Unilate®	Insulation	Normal Temperature ~ 120°C	○	Δ	Δ	[Features]Unilate® excels in heat resistance, voltage resistance, strength and machinability. Unilate® of Unitica Ltd., not annealed material, is used. [Appearance]Upper and lower surfaces are very smooth. [Machinability]Laminated plate with relatively good machinability.

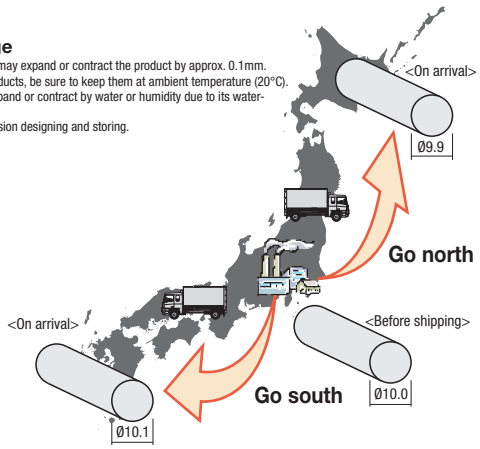
Reference Values of Specific Volume Resistivity and Heat Resistance

(For physical properties, see P.858~P.860)



Designing of Resin Products

Resin, unlike metals, can be easily distorted, expanded or contracted due to temperature and humidity.
See note below for designing.



(1)Shape Distortion

Avoid long and thin shapes when possible. These shapes cause more distortion.
It is recommended to split the dimension or place bolts to fasten.

(2)Dimension Change

1°C change of the temperature may expand or contract the product by approx. 0.1mm.
When storing the purchased products, be sure to keep them at ambient temperature (20°C).
MC Nylon especially tends to expand or contract by water or humidity due to its water-absorbing property.
Pay extra attention to the dimension designing and storing.

Ⓣ Distorted parts can be fixed to a certain extent with weight on them for 24 hours or so.

Ⓣ Dimension change of the parts will be back to a certain extent after leaving them at ambient temperature.

Resin Plates Characteristics III

-Transparent Resin Plate-

■Characteristics of PET · Antistatic PVC · Acrylic and Polycarbonate

MISUMI provides four types of clear plates with superior transparency. In addition to the standard grade, antistatic grade with antistatic function is available.
4 colors, transparent, smoke brown, smoke grey and orange, are available.

- PET
  It has approx. 4 times stronger impact resistance than that of acrylic. Moreover it is an environment-friendly material, which generates no poisonous gas when burned. It is also cost effective.
- Antistatic PVC
  Excels in chemical resistance and flame resistance, and superior in cost-effectiveness among anti-static materials.
- Acrylic
  Excels in transparency, weather resistance and machinability, and is used widely for indoor and outdoor purposes, such as covers for industrial machinery, art display cases and signboards.
- Polycarbonate
  The level of impact strength is ranked as the highest among the transparent resin materials (approx. 30 times higher than that of acrylic plates).
  It excels in resistance against high and low temperatures, and is widely used.

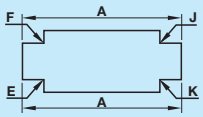
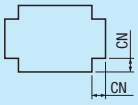
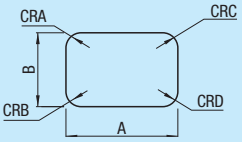
■Characteristics of Acrylic Cast Plates and Extruded Plates

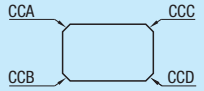
As for Acrylic Plates, cast plates made by cell-cast method and extruded plates are available.
Cast plates have better heat resistance and stronger mechanical strength than extruded plates.
Extruded plates are more inexpensive than cast plates.

When extruded plates have contact with vaporizing liquid such as methanol and methylene chloride after they are thermal-processed such as laser machining, they may have cracks. Also, extruded plates may have deflection at high temperature.









Transparent Resin Plates

MISUMI provides clear plate of four materials superior in transparency.
In addition to the standard grade, antistatic grade with antistatic function is available.
4 colors, transparent, smoke brown, smoke grey and orange, are available.
Often used as a cover, and variety of options for mounting hole alterations are available.
Use MISUMI Transparent Resin Plates.

For how to select panels, refer to **P.679 · 680**
Dimensions above include a margin of 1mm at the groove part.
Make the margin larger for resin plate and etc., because it expands or shrinks largely by the temperature fluctuation.
Ex.) For Acrylic Plate Economy Type of 1 m length with the temperature difference of 10°C, it expands and contracts 0.7 mm. The margin of approx. 2 mm is necessary in the case of temperature difference of 30°C.

Acrylic Plates
-Cast Plate-

■MISUMI Acrylic Plates have two types: cast plates and extrusion plates. Sides Milled is now available for cast plates.
■Features Cast Plates: Excels in heat resistance and mechanical strength. Extruded Plates on **P.885**: More inexpensive than cast plates. For details of cast plates and extruded plates, refer to **P.863**

Acrylic Plates Economy

-Extruded Plates-

■MISUMI Acrylic Plates have two types: cast plates and extrusion plates.

■Features: Extruded plates: More inexpensive than cast plates. Cast Plates on **P. 871**: Excels in heat resistance and mechanical strength. For details of cast plates and extruded plates, refer to **P.863**

The panel is fixed by mounting panel clamps (P.685) into the grooves.

Please note not to insert the panel clamp to the spot where the frame is bent.

Polycarbonate Plates

■The level of impact strength is ranked as the highest among the transparent resin materials (30 times stronger than Acrylic) and also excellent in heat-resistance and cold-resistance.

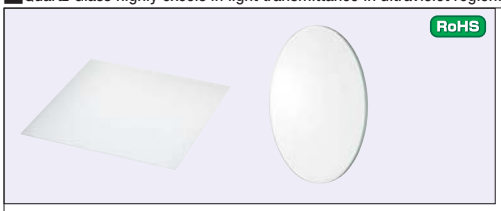
■Seals of With Adhesive Type

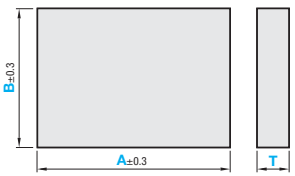


For easy attachment, the size of double-faced adhesive tape is smaller than that of the mirror. (Approx. 5mm~10mm)
Seals are not attached to mirrors for shipping.
Seal thickness is 2mm.

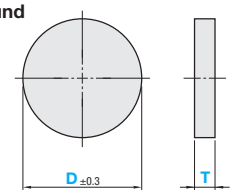
It may fall due to its own weight depending on its size. Avoid mounting only by the adhesive sheets.

Avoid use in the areas splashed with water, which may cause dirt and tarnishing on mirrors.

Fused Silica Plates Square · Round



■Quartz Glass highly excels in light transmittance in ultraviolet region. Can be specified in 1mm increments.



Type	Shape	Material	Heat-resistant Temperature	
			Continuous Use	Max.
FGLKS	Square	Fused Transparent Quartz Glass	1000°C	1200 °C
FGLMS	Round			

Heat resistant temperature will be largely depending on the operating condition. Values are not guaranteed.

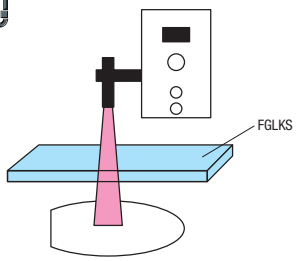
■Optical Transparency of Quartz Glass

Ultraviolet - Visible Spectrum

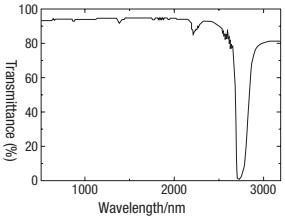
■Features of Quartz Glass



Transparent quartz glass highly excels in light transmittance at all wavelengths as compared to other general glasses (silicate glasses).

In the infrared region, it has better transmission and transparency range than normal glasses except for special glasses for the infrared.

In ultraviolet region, especially short wavelength ultraviolet region, it shows excellent transparency.



- Features of Oxy-hydrogen Fused Transparent Quartz Glass
Quartz glasses made by melting crystals with Oxyhydrogen flame.
It has high purity and little air bubbles.
Best suited as the material for tools for semiconductor manufacturing and physicochemical equipments.

Example

As a cover for the UV irradiation device

Visible - Infrared Spectrum

■Mechanical characteristics of Quartz Glass

Purity (%)	≥99.9
OH (ppm)	200
Density (gcm³)	2.2
Vickers Hardness (Mpa)	8900
Young's Modulus (Gpa)	74
Rigidity Modulus (Gpa)	31
Poisson ratio	0.17
Bending Strength (Mpa)	94.3
Compression Strength (Mpa)	1130
Tensile Strength (Mpa)	49
Torsion Strength (Mpa)	29

■Precaution for Use

- Make sure that plates are clean before use.
- Transparent quartz glasses have to be kept away from water and impurities.
Do not place them in high-temperature atmosphere if they are wet.
When using in high temperature, dry them well before use.
- Note that the glasses may be devitrified depending on the operating atmosphere.
- More resistant to quick heating and cooling and 10 times stronger than normal glasses. However, not resistant to extreme temperature changes.
- Has low thermal conductivity and may have cracks due to local, quick heating or cooling. The heat and impact resistance becomes lower as glasses get thicker.
- If temperature increases (decreases) with other objects attached to the quartz glasses, they may break due to thermal expansion differentials. Be careful when increasing (decreasing) temperature with other objects attached.
- If quartz glasses are used at high temperature for a long period of time, they may be deformed little by little due to their own weight or other loads. Their life span may become longer if support methods or conditions of use are designed specific to the application.

Square Glass Plates

Reduced Delivery Time

■Float Transparent Glass excels in smoothness and has little distortion. Heat Resistant Glass (TEMPAX Float®) excels in heat and impact resistance. Reinforced Glass has 3 to 5 times higher static strength compared to general glass with the same thickness.

■Vacuum Resistance of Glass

As GLMF(float transparent glass) is fragile, do not use it under vacuum pressure. The table includes the summary of calculating long-term edge allowable stress and max. deflection by the formula on the right, as to GLMH (heat resistant glass) and GLMK (reinforced glass).

If vacuum pressure is applied, be sure to keep within allowable range for vacuum-proof pressure, and take the max. deflection into account.

Do not use in ultrahigh vacuum atmosphere.

(Unit: MPa)

	GLMF Float Transparent Glass	GLMH Heat Resistant Glass	GLMK Reinforced Glass
Long-term Edge Allowable Stress	6.9	25	68.6

See the in-plane allowable stress of GLMH, not edge allowable force.

- Max. Deflection: $\delta C=0.756\frac{wa^4}{Et^3}$ E=Young's modulus of glass (7.16×10^4MPa)

Unit: mm

■Formula of Glass Strength

To calculate max. bending stress (edge allowable stress) and max. deflection at a circumference simple-supported circular plate under uniformly-distributed load.

* a = Glass Radius (mm), t = Glass Thickness (mm),

w = Uniform Load (N)

- Max. Bending Stress: $\delta C=1.212\frac{wa^2}{t^2}$: (Mpa)

Max. Bending Stress: $\sigma C <$ long-term edge allowable stress of each glass→

* Calculation Summary

D \ T	GLMH 3.3 Vacuum Resistance	GLMH 3.3 Max. Deflection	GLMH 5 Vacuum Resistance	GLMH 5 Max. Deflection	GLMH 10 Vacuum Resistance	GLMH 10 Max. Deflection	GLMK 3 Vacuum Resistance	GLMK 3 Max. Deflection	GLMK 5 Vacuum Resistance	GLMK 5 Max. Deflection	GLMK 8 Vacuum Resistance	GLMK 8 Max. Deflection

■Hole Charge

Drilling Type	Hole Charge N(Through hole)	Z(Counterbore Hole)	M(Thread Insert)
2H · 2HL			
4H			
6H			

The product price is the price shown in the table multiplied by the material rate. (Round down to ten Cent.)

(Ex.) Part Number - A - B - T | (Price in the table) x (Material Rate) = Standard Type € Unit Price

EPXAR - 300 - 200 - 10 | 63,10 x 3.0 = 189,30 EUR

■Price calculation method for Pre-drilled type

(Ex.) Part Number - A - B - T - F - G - Bolt Nominal Diameter

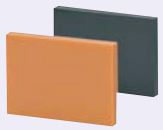
EPXA4H - 300 - 200 - 10 - F240 - G160 - Z6

(Standard Type € Unit Price) + (Hole Charge) = Pre-drilled Price

+ 8,00 = 71,10 EUR

Part Number - A - B - T - F - G - Bolt Nominal Diameter - L

EPXA6H - 700 - 300 - 10 - F200 - G200 - M5 - L5

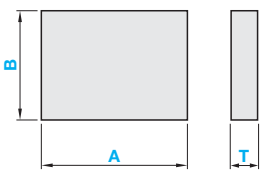


(Standard Type € Unit Price) + (Thread Insert Charge) = Thread Insert Type € Unit Price

+ 15,40 = 269,80 EUR

Bakelite Plates
-Paper Type · Fabric Type-

■Bakelite excels in insulation and heat resistance. Paper based materials are less expensive · and fabric based materials are stronger. New finish variations are now available in addition to the conventional saw cut.
* Details of color samples and features · see **P.861**



■Standard Type RoHS

■Price calculation method for Standard Type

Price calculation methods are as follows:

- Saw Cut =Standard Price
- Saw Cut 90° Guaranteed =Standard Type € Unit Price + Charge for Saw Cut 90° Guaranteed
- Sides Milled =Standard Type € Unit Price + Sides Milled Charge
- All Surfaces Milled =Standard Type € Unit Price + All Surfaces Milled Charge
- Top / Bottom Milled =Standard Type € Unit Price + Top / Bottom Milled Charge

■Price calculation method for Pre-drilled type

Pre-drilled Type Price = Standard Type Price + Hole Charge

- Saw Cut
  Pre-drilled Type Price = Standard Type Price + Hole Charge
- Top / Bottom Milled
  Pre-drilled Type Price = Standard Type Price + Finishing Charge of Top / Bottom Milled + Hole Charge

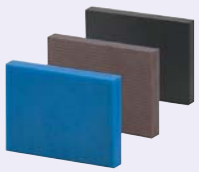
MC Nylon® Plates



-Standard / Sliding / High Strength / Conductivity / Weather Resistance Grades-

■ MC Nylon® is the most versatile material among Engineered Plastics and used for various industrial purposes.
New finish variations are now available in addition to the conventional Saw Cut.

* Details of color samples and features, see P.861

NEW

Polyacetal Plates

-Standard / Sliding / Conductivity Grades-

■Polyacetal (equal to Duracone®) is a general Engineered Plastic used for various industrial purposes.
Conductivity Grade is made from non-carbon antistatic materials. New types of finishing are available for saw cut.

* Details of color samples and features, see P.861

■Standard Type

  Pre-drilled Type Price = Standard Type € Unit Price x Material Rate + Hole Charge
- Top / Bottom Milled
  Pre-drilled Type Price = Standard Type € Unit Price x Material Rate + Top / Bottom Milled Charge + Hole Charge

Ultra High-molecular-weight Polyethylene Plates
-Standard / Conductive-

■Ultra High-molecular-weight Polyethylene is light in specific gravity and weight.
Excels in abrasion resistance and sliding property. In addition to Standard Type, Conductive Grade for antistatic is also available.

* Details of color samples and features, see P.861

Fluororesin Plates
-Standard / Conductive-

■Fluororesin (equal to Teflon) excels in heat resistance and chemical resistance.
Conductivity Grade is made from non-carbon antistatic materials. In addition to Standard Type, Conductive Grade for antistatic is also available.

■Price calculation method for Standard Type

Price calculation methods are as follows: (💡)Round down to ten Cent.

- Saw Cut = Standard Type € Unit Price x Material Rate
- Saw Cut 90° Guaranteed = Standard Type € Unit Price x Material Rate + Charge for Saw Cut 90° Guaranteed
- Sides Milled = Standard Type € Unit Price x Material Rate + Sides Milled Charge
- All Surfaces Milled = Standard Type € Unit Price x Material Rate + All Surfaces Milled Charge
- Top / Bottom Milled = Standard Type € Unit Price x Material Rate + Top / Bottom Milled Charge

■Price calculation method for Pre-drilled type (💡)Round down to ten Cent.

Price of Pre-drilled Type = Standard Type € Unit Price x Material Rate + Finishing Charge + Hole Charge

- Saw Cut
  Pre-drilled Type Price = Standard Type € Unit Price x Material Rate + Hole Charge
- Top / Bottom Milled
  Pre-drilled Type Price = Standard Type € Unit Price x Material Rate + Top / Bottom Milled Charge + Hole Charge

ABS Plates / PPS Plates

–Standard · Abrasion Resistance Grade–

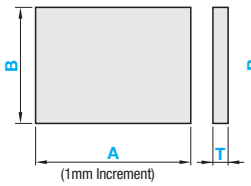
■ABS excels in machinability and adhesion is possible.
■PPS excels in heat resistance, dimension stability and chemical resistance, and more inexpensive than PEEK.

* Details of color samples and features, see P.861

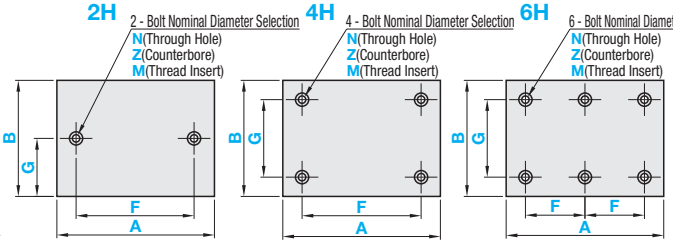
■ABS Plates

■PPS Plates (Standard Grade)

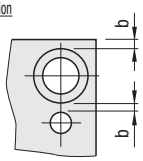
■PPS Plates (Abrasion Resistance Grade) RoHS



Properties P.860



Type	Material / Grade	Color	Operating Ambient Temperature
NABS	ABS	Natural Color	Ambient Temperature ~ 50°C
NPPS	PPS / Standard	Natural Color	Ambient Temperature ~ 190°C
NPMS	PPS / Abrasion Resistance Grade - Sliding	Blue	Ambient Temperature ~ 220°C



PPS Standard Type generates an oxide film on the surface and the color turns to brown when it is exposed to light and heat (direct sunlight, fluorescent light, mercury lamp and high-temperature atmosphere) for long hours. However, it changes little in mechanical properties and physical properties.

■Standard Type

■Pre-drilled Type

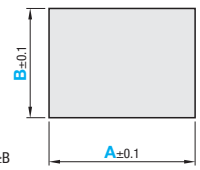
Ceramics Plates

-Alumina 96 · Steatite · Machinable Ceramics-

■Alumina 96: Excels in abrasion resistance, insulation and heat resistance.
■Steatite: Excels in insulation and high frequency characteristic.
■Machinable Ceramics: Excels in insulation, heat insulation and machinability. Can be machined into complex shapes or finished with precision.

■Ceramics Plates



RoHS

Properties P.858

■Features of MISUMI Lighting for cabinetry.

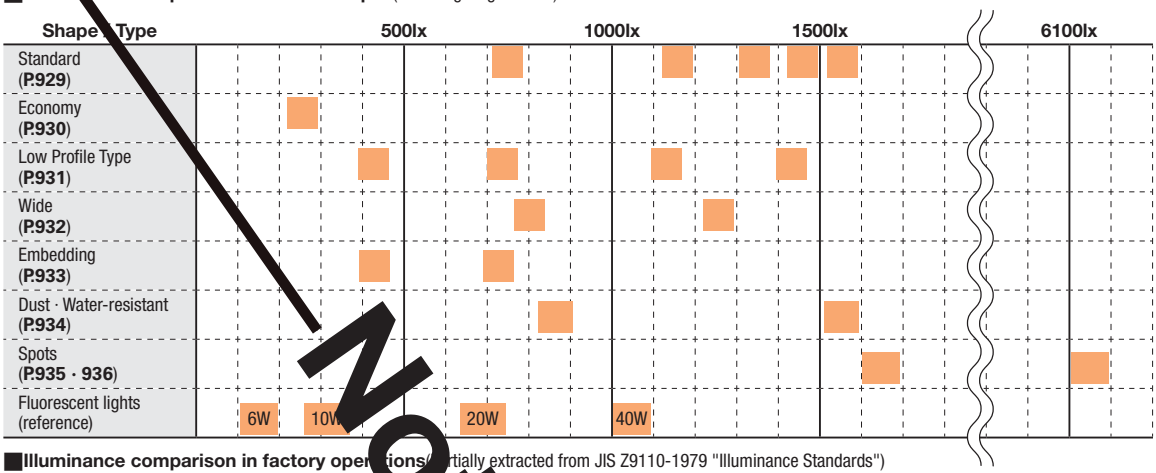
Features (1)
Advanced design not offered by other companies!

Features (2)
Economical, of course!

Features (3)
Various shape patterns for installing to devises!

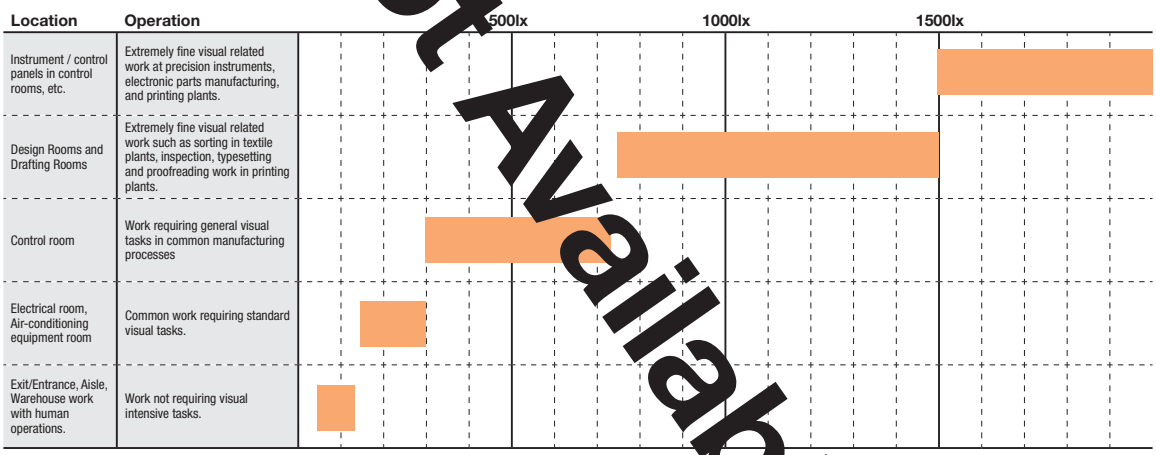
Features (4)
Applied Flicker-free Cover to prevent eye strains!
(Some items are excluded.)

Various advantages are afforded by using the LED lights.



Item	Contents	Advantages	Benefit Cases
Long Life	life is approx. 40000 h. Approx. 13 years of life with 8hrs. of daily use (Lifetime is assumed to be the time until the light flux decreases to 70% of initial value.)	Replacement labor reduction.	Installation in high places or hazardous areas.
Lighting performance	Rarely not light suddenly. Less flickering similar to fluorescent lights	Replacement labor reduction.	Inspection process and work tables.
Vibration resistance.	Strong vibration resistance since there is no filament.	Labor reduction for replacing failed parts.	Transfer machines, vibration generating equipment, and machinery transportation uses.
Power Conservation	30 ~ 70% reduced power consumption.	Cost reduction	Effective not only for power-conserving machines but for various operational occasions.
Compact	Compact envelope does not occupy spaces as fluorescent lights.	Space saving	Space limited machines, installation inside compact cabinets.
RoHS-compliant	Fluorescent lights contain hazardous material such as mercury, but LED contains less than RoHS restricted mercury and lead.	Item selection time and design cost reduction	Export Machinery
Unlikely To Break	Surface is covered with resin, not with glass.	Hard to break compared to fluorescent lights.	Food processing machinery, medical machinery
Ultraviolet	LED light contains no ultraviolet.	UV photopolymer safe, insect repellent	Clean room, food processing machinery, medical equipment.

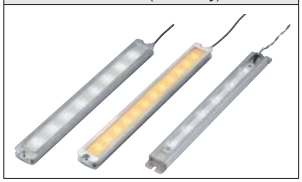
More LED lighting product variations will be expanded hereafter. Customer comments and requests are welcome.



Not Available

LED Lighting for Cabinetry Selection Guideline

■Illuminance comparison based on shapes(Mounting height: 0.5m)



■Illuminance comparison in factory operations(Partially extracted from JIS Z9110-1979 "Illuminance Standards")

*Use twice the brightness for hazardous work.

■Features of Each Type

Standard (Economy)

As lighting devices, these types are sufficiently water and dust-resistant for uses in general environment.
The Standard Type in various sizes, and the Economy Type are offered..
General-purpose type compatible with MISUMI aluminum frame products.
☞P.929 · 930

Low Profile Type

Space saving low profile type in pursuant for its thinness. Best for space-savings and spots with limited headroom.
General-purpose type compatible with MISUMI aluminum frame products.
☞P.931

Embedding

Embed-mounting type for ceiling boards and walls.
As the power cable exits the housing's backside, unexposed cable designs are possible.
☞P.933

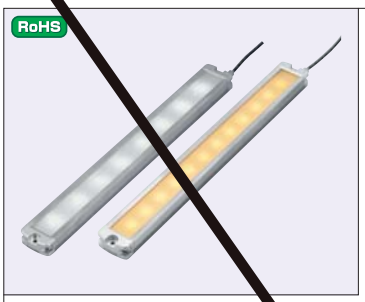
Wide

This type has a wide emission surface.
Effective in illuminating a localized wide area.
Compatible with MISUMI aluminum frame products.
☞P.932

Water-resistant Hard Glass-tube Type

Useable in harsh environments where water or oil splashes such as inside cleaning equipment or machine tools. Impact resistance is also in consideration with the use of hard glass tubes.
☞P.934

Spots (Large / Small)



Type for illuminating parts of machinery and tips of work in machine tools. They can be used in harsh environments with water or oil splash.
Two types in different brightness are offered.
☞P.935, 936

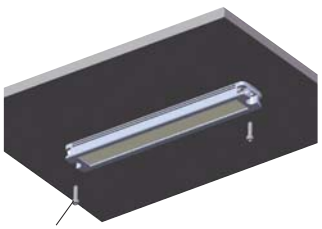
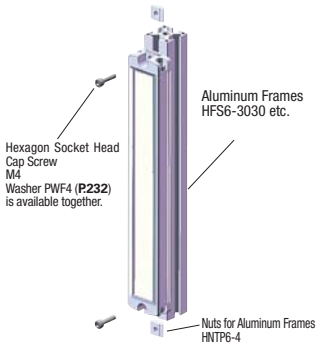
For details of each item, refer to the glossaries of **P.937**.
For details of the wavelengths of luminous colors, refer to **P.938**
For order and installation, confirm "About using" section on **P.938**
As the LED elements vary on their luminous colors and luminance, they may be slightly different in their colors and brightness, though they are of the same Part Numbers.

Illuminance Distribtion



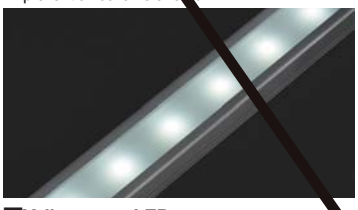
Order Example: Part Number - Color

Days to Ship: 6 Days P.88



Example

■Mounting example to boards



Apply tapping on the board side.
When machining through holes, provide nuts on the backside of the board.

■Mounting example to Aluminum Frames

■Flicker-prevention cover

To reduce the eyestrain of the operators, Flicker-prevention cover is offered.

■Yellow-type LED

Yellow-type LED does not include an optic wavelength range less than 500nm. Therefore, this type of LED is optimum for a clean room, for example, semiconductor factory using high-sensitive materials.
It is also effective to use this LED to prevent the insects from flying in as the wavelength that insects prefer is 500nm or less.

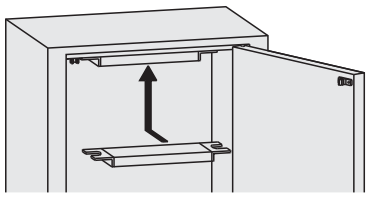
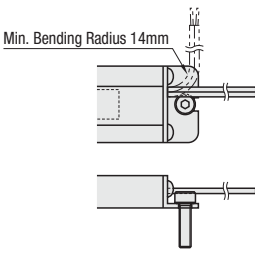
Illuminance Distribution



Order Example: Part Number - Color - W

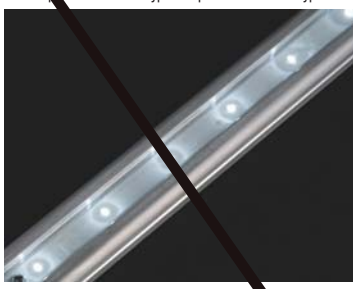
Days to Ship: 6 Days P.88



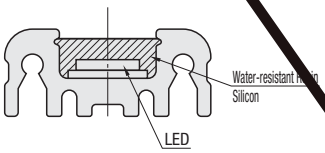
Example

■Suitable Locations

Suitable for tabletop device covers and small boxes. IP67 rating of the product renders applicable in small machinery environment where water splashes are present.



■Installation Example



As the head of M4 screw interferers with the cable, avoid the cable while tightening the screws.

■About Emission Surface of the Economy Type

In order to improve the degree of protection (IP Rating) the LED Emission Side is molded with water-proof resin (silicon). This is a unique feature of this type compared to the other types.

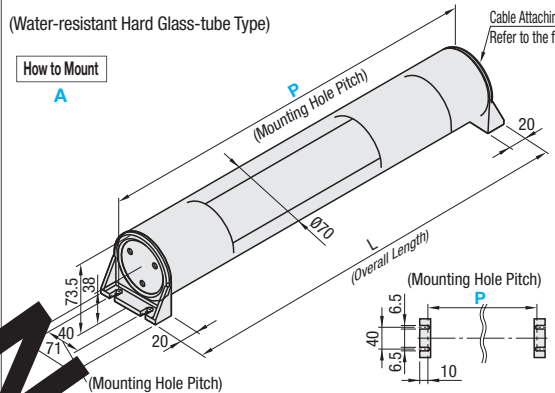
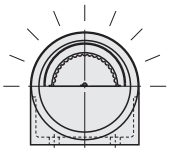
-Water-resistant Hard Glass-tube Type-

CAD Data

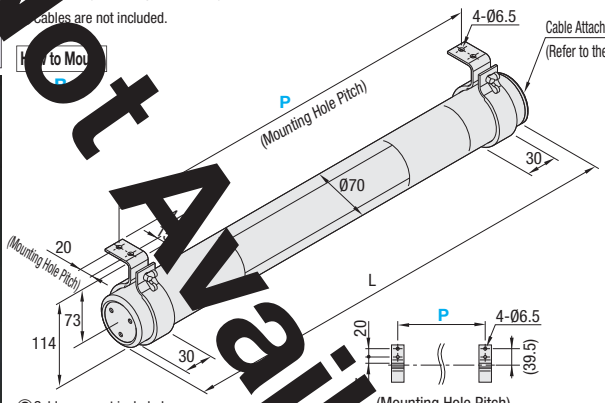


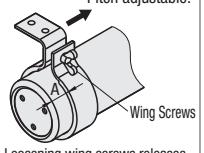
RoHS



(Water-resistant Hard Glass-tube Type)

How to Mount A



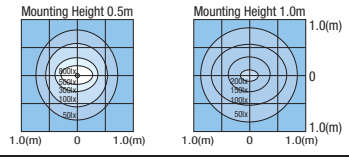


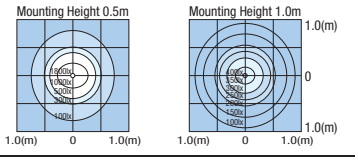
For mounting method A, the emission side is the reverse of the installation side.
When using mounting method B, the body can be rotated and fixed at the position desired, by loosening the wing screws for mounting brackets.

Cables are not included.

How to Mount B

Cables are not included.





Loosening wing screws releases the mounting brackets from clamped state so the mounting pitch can be adjusted.
Give at least 20mm clearance for A.
When the mounting brackets is fixed within 20mm from the end, the load is applied to the glass tube ends and may cause breakage.

Part Number / Type	How to Mount	P	L	Color	Illuminance (Lux)lx lx/0.5m	lx/1m	Luminous Flux (Lumen, lm)	Input Voltage (V)	Input Current (mA)	Consumption Electric Power (W)	Temperature Range (°C)	Color Temperature (Kelvin)	Degree of Protection (IP)	Lighting Angle	Applicable Cable Diameter	Mass (g)	€ Unit Price Qty. 1~4	Volume Discount 5~9	10~

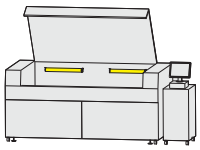
	B	435 (equal to or less than)	515		870	221	800		700	10						2700			
		620 (equal to or less than)	700		1555	418	1600		1400	20						4000			

For details of each item, refer to the glossaries of **P.937**.
For details of the wavelengths of the luminous colors, refer to P.
For order and installation, confirm "About using" section on **P.938**
As the LED elements vary on their luminous colors and luminance, they may be slightly different in their colors and brightness, though they are the same Part Numbers.

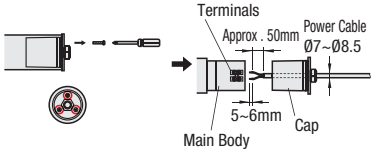
Illuminance Distribtion



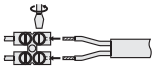
Order Example: Part Number - How to Mount - P - A - 720

Days to Ship: 6 Days P.88

Example

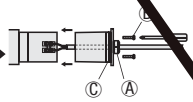


■Example of Application with Machine Tools



■Example of Installing Cables

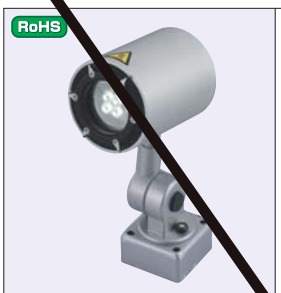
Take off 3 screws marked with red circles.



Take off the cap and thread the power cable. Pull out the LED assembly from the glass tube until the terminals come out.

Insert the leads into the terminal. Then tighten them with a flat-head screwdriver. (Fix the leads as not to come off when hand pulled lightly.)

Step (1)
Internal structure of the hexagon nut (A) is a gasket seal, and the nut clamps on the power cable Ø7 to Ø8.5 dia. when it is tightened.
Step (2)
Return the LED assembly back to the glass tube and then fit the cap to the glass tube.
Step (3)
Use 3 screws (B) to assemble back to the original condition. Be sure to tighten the screws (B) until it is secure when hand pulled.



Too much tightening of screws (B) may cause break the glass tube.
Tighten moderately as the O-Ring (C) squashes about 3mm.

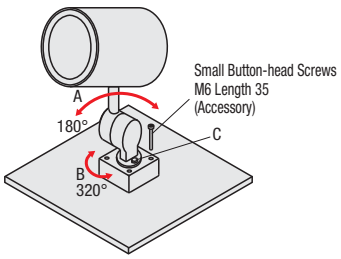
As the LED elements vary on their luminous colors and luminance, they may be slightly different in luminous colors and brightness, though they are of the same Part Numbers.

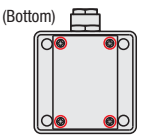
Illuminance Distribtion



Order Example: Part Number

Days to Ship: 6 Days P.88

Example

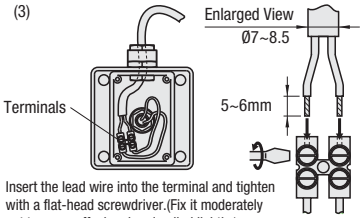


■Swiveling / Installing Method

- Swiveling in A direction can be facilitated by a firm push of a hand. The light stays at the position where the hand is released.
- Loosen a hexagonal nut at C to swivel the light in direction B.
- For fixing to mating materials, use the screws included or hexagon socket cap screws provided by customers.

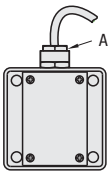
■Example of Installing Cables

(1)



Take off 4 screws marked with red circles as shown on the bottom to open the cover.
(The cover has a gasket on the backside. Be sure not lose the gasket.)

(2)



Thread the power cable of Ø7~Ø8.5.

(3)

Insert the lead wire into the terminal and tighten with a flat-head screwdriver.(Fix it moderately not to come off when hand pulled lightly.)

(4)

Inside of the hexagon nut (A) is of a gasket structure, and the nut clamps the power cable Ø7 to Ø8.5 dia. when tightened. Water-resistant feature is achieved by this clamping.
Step (2) Close the cover and tighten 4 screws.

LED

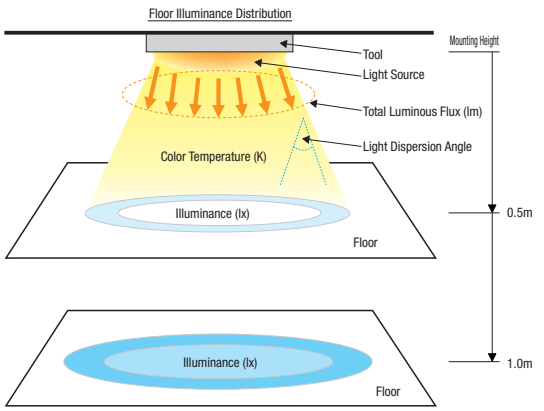
LED (Light Emitting Diode) is a type of semiconductor element which illuminates when a electrical current is applied.
LED is recently used as lights for traffic signals, large vision displays, and illuminations. LED consumes less power, approx. 1/3 ~1/10 and has longer life approx. 10 ~20 times, compared to incandescent lamps. LEDs are ideally suited for power conservation and replacement labor reduction schemes. Abbreviation for Light Emitting Diode

Illuminance

It indicates the brightness of the surface lit by the light source.
Larger the value, the brighter the area.
Illuminance value varies depending on the mounting height. The catalog lists two measurements of mounting heights, 0.5m and 1.0m. Use them for reference.
The unit is Lux (lx).

Total Luminous Flux

This represents the amount of light emitted from the light source to all directions. Larger the value, the brighter the light.
The unit is Lumens (lm).



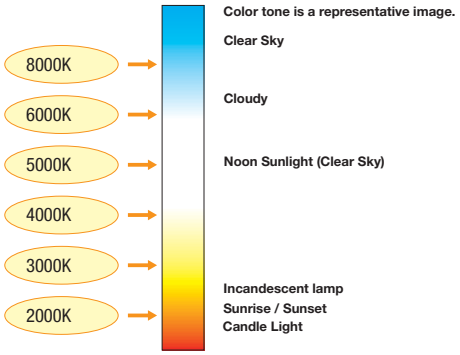
Light Distribution Angle

This is the angle of light spread emitted from the light source.
Larger the value, the wider the area of illumination.
Smaller the value, the narrower the range of illumination while the illuminance will be higher.
The light source with narrower light distribution angle is best for spot lighting tool blade tips.

Illuminance Distribution

It indicates the brightness spread of the surface lit by the light source.
The area directly below is bright, and the brightness gradually decreases as the distance increases. Refer to check for the brightness of the light spread.
The brightness may be felt variably by the eyes, depending on the mounting height or conditions of use.

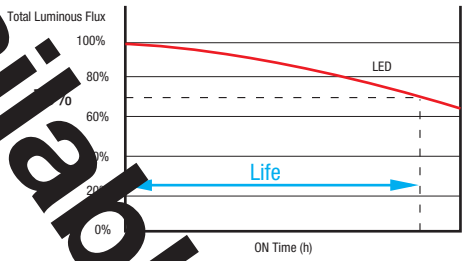
Illuminance Distribution Image



Light Emission Spectrum

This represents the wavelength component and light strength emitted from the light source.
See next page for details.

Color Temperature



This is a quantitative measure of visible light color that the light source emits. Use as a reference for expressing the light colors.
The unit is Kelvin (K).

Color Temperature Diagram

Operating Life

LED will not suffer filament burnouts as incandescent lamps, but its light outputs will gradually decrease due to degradation of material used.
The life is defined as a time it takes for the Total Luminous Flux to decreases to 70% of the initial value.

Degree of Protection IP Code

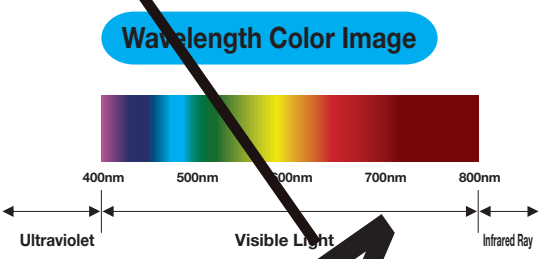
The IP is an abbreviation for "International Protection". This is the degree of protection of electrical equipment against ingress of water and solid foreign objects (dust) established by International Electrotechnical Commission (IEC.)

International Protection **IP**

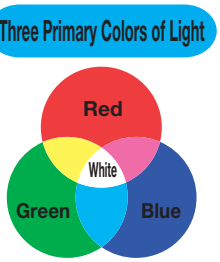
The Second Character
(Degree of Protection 0~8 against Ingress of Water)

The First Character
(Degree of Protection 0~6 against Ingress of Solid Foreign Objects)

The First Character	Contents
0	Non-Protected
1	Protected against solid objects 50mm or more in size
2	Protected against solid objects 12.5mm or more in size
3	Protected against solid objects 2.5mm or more in size
4	Protected against solid objects 1.0mm or more in size
5	Ingress of some dust does not impede satisfactory operations of the equipment.
6	Dust will not ingress.



The Second Character	Contents
0	Non-Protected
1	Dripping water (vertically falling drops) shall have no harmful effect.
2	Vertically dripping water shall have no harmful effect when the enclosure is tilted at an angle up to 15° from its normal position.
3	Water falling as a spray at any angle up to 60° from the vertical shall have no harmful effect.
4	Water splashing against the enclosure from any direction shall have no harmful effect.
5	Water projected by a nozzle against enclosure from any direction shall have no harmful effects.
6	Water projected in powerful jets against the enclosure from any direction shall have no harmful effects.
7	Submerged in water at specified pressure and duration shall have no ill-effects.
8	The equipment is suitable for continuous submersion in water.

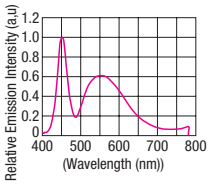


Technical Data

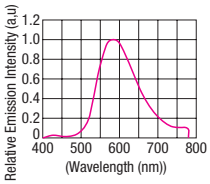
-Wavelength of Lights and Radiation Spectrum / Notes-

Basic Information on Wavelength of Light

The light (electromagnetic wave) wavelengths are visualized in the following color/frequency spectrum images.
The wavelength which human eyes can see (visible light) ranges in approx. 400~800nm.
The visible spectrum is composed of the three primary colors (red / green / blue). Human eyes sense the light as white as the three primary colors are compounded.



The following MISUMI LED Lighting product based emission spectrum graphs show the emitted wavelengths and intensities.
Refer to the data to avoid undesired effects in environments.



List of Emission Spectrums of Products

- LED lights does not contain harmful ultraviolet (less than 400nm) or near-ultraviolet materials and human bodies.
- The yellow LED containing the ideal 595nm for clean room applications does not contain wavelengths of 500nm or less.
- For the Standard Type, select a LED color depending on the purpose.

Notes on Usage

⚠ Warning

- Do not connect to devices with light varying adjustments or power supply. (Cause for breakages and burnouts)
- Be sure to turn off power when mounting, removing or cleaning. (Cause for electrical shocks)
- Do not cover with paper or cloth. (Cause for fire)
- Never disassemble or modify the fixture. (Cause for fire and electrical shocks)

⚠ Note

- Do not touch while the fixture is ON, and just after turning off. (Cause for burns)
- Do not look directly at the light emitter while the fixture is ON. (Cause for eye damages)
- Do not apply impacts or scratches. (Cause for breakages)
- Use in locations which fulfill environmental usage conditions. (Cause for breakages)
- Be sure to mount the light securely. (Cause of fall)
- If soiled, wipe off with a dry cloth. Do not use volatile organic solvents such as paint thinner, alcohol and benzene. (Cause for breaks and color changes)
- Do not use in the environment with exposure to volatile organic solvents and corrosive gases. (Cause for breakages)

Cautions For Use

- The LED elements may vary on their colors and brightness, though they are of the same Part Numbers.
- Illuminance, total luminous flux and illuminance distribution values are actual meaturements as tested, and not guaranteed by the manufacturer. Use them only for reference only.
- Color temperature is only for reference.
- Mount the fixtures to metal objects with good heat dissipation efficiency, such as aluminum frames or steel walls.
- For wiring, be sure to turn the power off before work and avoid miswiring.
- Be sure to connect correctly as the power supply has polarity (+ and -). The white cable is connected to + side, while black cable is connected to - side.
- Input voltage and current must be within the range of specifications.
- The temperature and humidity of the environment must be within the range of specifications.

Features	Natural rubber SBR, BR etc. are combined in the ideal formulas and are the most standard type as general wheels.	Excellent in abrasion and oil resistance. Low starting and running resistance.	Excellent in oil resistance and load resistance. Low starting and running resistance.	Excellent in oil resistance and water resistance. Low starting and running resistance.	Excellent in oil, heat and load resistance. Low starting resistance.	Wider footprint than conventional wheels, and suitable for heavy loads. Relatively low cost.	SBR rubber compounded with a larger amount of carbon black content, which works as earthing.	Antistatic grease is sealed. Ideal for environments where dust adhesion is prohibited.	Excellent in heat resistance. Available for use at high temperature.	Excellent in abrasion, heat and corrosion resistance.

■Cautions on Caster Use

1. Allowable Load

The allowable loads shown in the tables in the catalog indicate the limit load that can be transported by human power on a flat surface. Calculate loaded weight, then select a caster with proper allowable load. Even when 4 casters are used, total load might be supported at 3 points, therefore limit of total load is generally calculated by the following formula.

(Ex.) Using 4 Casters
Limit of Total Load=Allowable Load of One Caster x 4 pcs. X 0.8
Caution When different sizes of casters are used in combination, the calculation should be based on the caster with the lowest load capacity.

2. Operating Speed

Operating speed should be walking speed or slower in intermittent usage. Avoid powered pulling (except for some casters) and continuous operation that may cause heat generation.

Wheel Diameter	Operating Speed
75mm or less	2km/h or less
100mm or less	4km/h or less

3. Stoppers

Note that the performance may degrade without user attention due to wear and damages from long-term operation.
In general, braking power depends on material of wheel.
To ensure safe use, use wheel stops, floor stoppers etc.

4. Operating Environment

It is assumed that the casters are used in normal temperature.(except some casters)
Avoid unusual environment that might be affected by high temperature, low temperature, high humidity, acidic, alkaline, salt, solvent, oil, seawater and chemical products, etc.

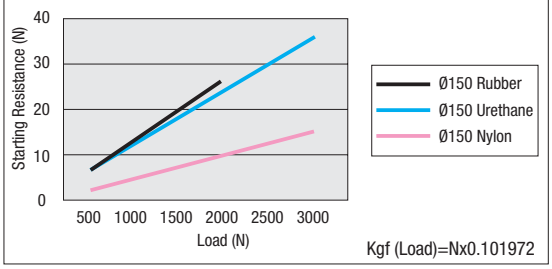
5. How to Mount

(1) Please install so that the mounting plane becomes horizontal.
(2) For swivel type, please install with its turning axle vertical.
(3) For fixed casters, install them so that they become parallel mutually.
(4) Mount firmly with proper bolts and nuts.
(5)To install screwed-on casters, tighten the screw's hexagon part with the proper torque. Excessive torque may strain and damage the axis.
(Reference: Proper Torque for Thread Dia. 12mm is 20 ~ 50N•m)

6. Points of Casters Selection

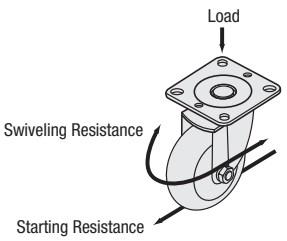
Load : Selection must be based on loading weight.

Wheel Diameter : The bigger, the more movable. Good for traveling on roughness or deference in level.



Wheel Material : Selection must be based on material properties.

Rubber Wheels — The most general wheel material. Soft operational feel and smooth running. Economical, not oil resistant, and the black rubber wheels may stain floor surfaces.



Urethane Wheels — Compared with rubber, higher hardness with good starting property. Oil resistant. Does not stain the floor.

Nylon Wheels — High hardness and smooth movement with no deflection. Disadvantages are floor scratching, noise, and due to its minimal deflection, larger moving resistance on rough surface.

Comparison of Swiveling-starting Resistance for Different Wheel Materials (Road Surface: Measured on Steel Plate)

Features

- Weight savings

- Mounting Height (Lower Profile)

- Lower profile than casters of the same specs.
- Same in load capacity.

Heavy Load Caster mass generally becomes greater due to its thick plates.
-Thinner special steel-made plates (half the conventional product thickness) contribute to weight saving, compared with the conventional types on **P.951**
- Low Profile Casters contribute to reducing product overall weight down from conventional Heavy Load Casters.

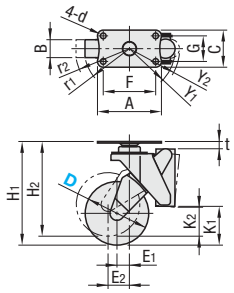
Vibration Insulating Casters

CAD Data



Features: Vibration Damper (Spring with Built-in Urethane) absorbs vibration generated when the caster is traveling over steps and grating surfaces.
Able to protect conveyed works and expected to improve yields because of a decrease in particulate generation volume in a clean room.

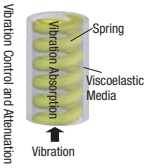
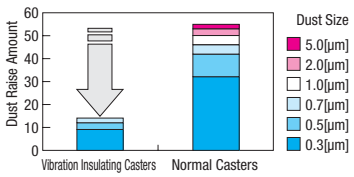
Yield problems expected with the conventional wheels

(1) Particulate generation of a conveyor machine due to vibration transmission
When work is being conveyed into a clean room, casters are travelling over steps or grating surfaces and vibrations from the floor are transmitted to the cart. Vibrations not only cause dusts from the casters and the cart but possibly transmitting impacts on important work.
(2) Particles generated due to vibrations
Vibrations by casters traveling lift dusts around the floor surface and down flow air system may not be able to control the particle amounts.
(3) Anti-static Countermeasures
Dusts adhering to the rubber / urethane wheels of conventional casters, which accumulates static electricity generated by friction between wheels and the floor and may cause a spark discharge.



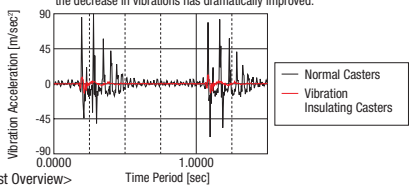
Feature of Vibration Dampers

-Protects transported equipment by absorbing and damping vibrations from the floor .
-Controls particulate generation caused by vibrations, and improves production yields.
-Prevents static electricity from generated by the floor with antistatic wheels.



Basic Structure of Vibration Damper

The damper is of a double layer structure of a spring within a viscoelastic member. Shocks received by the caster while going over stepped terrain are absorbed by the spring, then dampened by the viscoelastic member.
New mechanism provides solutions for conventional spring-loaded casters with insufficient vibration damping, and urethane type with degradation-inducing durability losses. Also excellent in safety with no damping gas leaks.



Particulate Generation Comparison

Particle volume is reduced to one-fourth1/4.

Effect of Vibration Absorption

Compared with normal casters, the decrease in vibrations has dramatically improved.

Antistatic Urethane (OCTRON) Wheel Properties

- Because of the antistatic effect, sparks and high-frequency noises are prevented.
- Conventional anti-static caster wheels may exhibit varying electrical resistivity depending on measured location on wheels, but the OCTRON urethane wheels have uniform resistivity regardless of the measured location, being effective in a wide voltage range.
- Due to lower hardness than ordinary urethane wheels (shore A67), vibration and noise on grating floor decreases.
- Because carbon black is not used, there is no contamination to the floor or dispersion of carbon to products.

Product Name:LG2 (made by NSK) with less particle generation is suitable for clean environments. Also, excellent in corrosion resistance.

‹Evaluation Test Outline›

<Evaluation Conditions>

Casters	CMGN75-R (General Caster + Rubber Wheel Type) CHEPA75-S (Clean Caster + Antistatic Wheel Type)
Running Time	2km/hr
Ambience	Inside Clean Booths (Class10)
Temperature	23°C
Humidity	40%
Particle Counter	Made by Rion Co. Ltd. 237B (Laser Type)

<Test Overview>

<Structure of thrust bearing>

As opposed to the standard casters with a simplified structure with ball bearings in grooves, the Trailer Use Type has preloading thrust bearings for better swiveling characteristics, and can be towed by powered tractor devices.

Features

- Compared with iron casters, excellent in durability, and can be used to move heavy objects in severe conditions.

Operating Environment

- Washing with water or soaking in seawater may result in oxidation and corrosion.
- Exposure to acid, salt, alkali and other chemicals or oil may cause deterioration.
- Please use within the temperature range of -5 ~ 60°C.

Caution

- The maximum load cannot be sustained if the road surface is severely uneven.
- Avoid traction by motor power (except for Trailer Use Type).
- The caster should be fastened firmly to prevent rattling.
  Ex.) When thread diameter is M12, the proper torque is 220 ~ 500Kgf/cm.
- Load must be applied vertical to the caster.

Monomer Casting Nylon
In comparison with conventional nylon etc., it is superior in molecular weight and crystallinity, and excels in mechanical properties, friction and chemical resistance.

Not compatible with Screw-in type casters (CMGN and CMGNS).
*: Only for RVA 75, collars (2 pieces) are included with the shaft part.

■Features

- Carriage firmly grips floor and is locked in place with spring force.
- New product FLOCK has a less-protruded pedal and saves space, compared with FLOK.
- New product FLOCKZ has the industry's first height-adjuster, and allows mounting height adjustments within certain ranges.

■Cautions

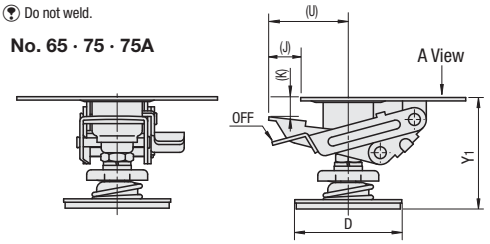
-This product alone is not designed to lift carriages and supported objects.
For carried loads, please refer to the allowable load of casters used with.

Example

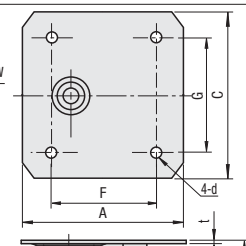
CFSK31 was discontinued in April 2010. FLOCK150 is provided as an alternative.

CAD Data

RoHS

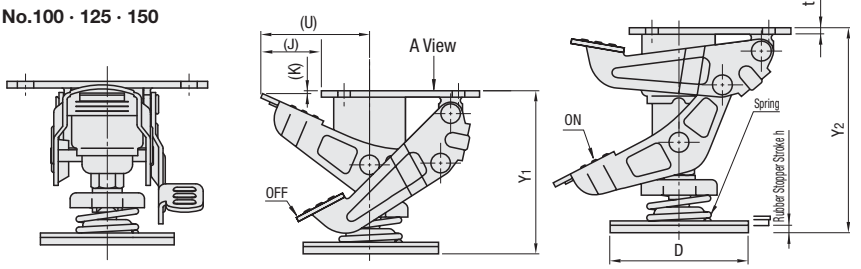


Type	Material	Surface Treatment	Built-in Spring
FLOK	1.0320/St.22	Trivalent Chromate	JIS SWP-B ~1.0600
FLOKS	1.4301/X5CrNi18-10	-	1.4301/X5CrNi18-10-WPB



Load

Regardless of the carrier's weight or load, the spring cushion built in the stopper firmly grips floor with a constant force. For movable load, please refer to the allowable load of the caster. Carriages cannot be off the ground.



Do not weld.

Type	Material	Surface Treatment	Built-in Spring	Pad
FLOR	1.0320/St.22	Trivalent Chromate	JIS SWP-B ~1.0600	EPDM
FLORS	1.4301	-		Conductive Rubber

ex Example

- Stepping on the pedal unlocks to allow stroke adjustments.
- Pushing the upper pad down to floor activates instant-locking.
- In "unlocked" state, mount it with 25 ~ 30mm of space between the floor and the lower pad.
- Choose any one of mounting holes to be firmly fixed in place with bolts, etc.

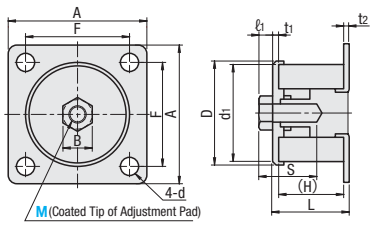
Antivibration Effect

This product antivibration effects (vibration transmissibility) heavily depend on applied loads and frequency of supported objects (natural frequency). The graph on the right shows anticipated antivibration effects of this product calculated from frequencies of supported objects.

How to Select

(1)Calculations of Applied Load per Unit
Ex) When an object of 2000 kg is supported by 4 points, 2000/4=500(kgf)
(2) Natural Frequency of the Object is investigated. Frequency=Number of Vibrations per Second
Ex) When motor speed is 7200rpm, 7200(rpm)/60(s)=120(Hz)
(1)With data obtained (1) and (2) plotted on the graph, applicable screw diameter (M) and vibration transmissibility under the condition are found.



Nominal Tr (vibration transmissibility)
M10 1/30 M12 1/3
M10 1/10 M16 1/30
M10 1/3 M16 1/10
M12 1/30 M16 1/3
M12 1/10

Ex. If FJFNV10 is selected with 500kgf per-foot supported load, 125Hz or more vibration transmissibility is reduced to thirtieth at most.

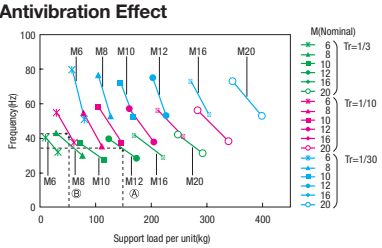
Features



- Suitable for vibration countermeasures for vibratory equipment and machinery.
- Can be used as general leveling mounts up to 5° inclination.
- Damper will not stain floor since not in contact with the floor.

How to Select

Antivibration effects of antivibration material (vibration transmissibility) heavily depend on applied loads and frequency of supported objects (natural frequency). The graph on the right shows anticipated antivibration effects of products calculated from frequencies of supported objects.

(1)Calculations of Applied Load per Attachment
Ex) When an object of 600 kg is supported by 4 attachments
600/4=150 (kgf)
(2)Natural Frequency of the Object is evaluated.
Frequency=Number of Vibrations per Second
Ex) When the motor speed is 1800rpm
1800 (rpm)/60 (s)=30 (Hz)
With data obtained (1) and (2) plotted on the graph, appropriate type of the attachment and vibration transmissibility under above condition are found.
