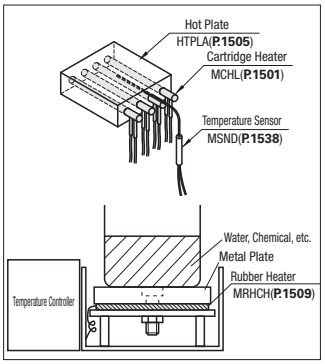
Heaters · Heating Items · Insulating Plates -Guide-

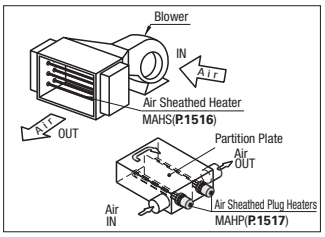
Guide

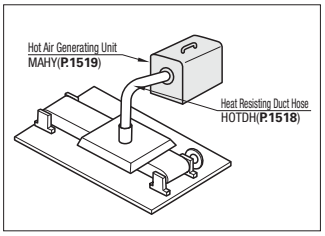
MISUMI offers variety of heaters specialized in FA application.
Temperature Sensors and Temperature Controller which are required to control heaters can be selected from the catalog at the same time.

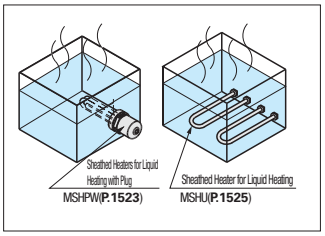
Basic Components (Example)

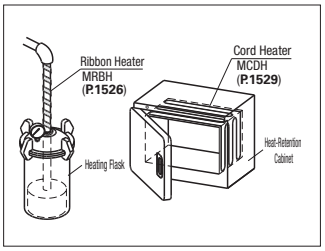
-Heaters can be used in combination with Temperature Sensor and Temperature Control Unit.











Products

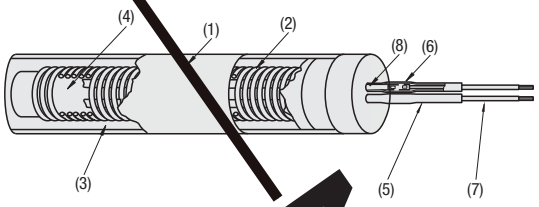
- Parts for safety measures, heat insulating plates and cooling related products are also available as well as parts introduced in the basic structure.

Heaters	Temperature Sensors	Temperature Controllers
		
Cartridge Heaters (P.1487~1504) Rubber Heaters (P.1508~1510) Air Sheathed Heaters (P.1515- 1516) Plug Heaters for air (P.1523) Hot Air Generating Units (P.1519- 1520) ...etc.	Sheath Thermocouple (P.1538~1543) Temperature Measuring Resistor (P.1538) Screw Mount Type (P.1545) Terminal Mount Type (P.1544) Surface Temperature Measuring Type (P.1546) ...etc.	Temperature Controller (P.1553- 1554) Temperature Controller (P.1558) Relays (P.1556) SSR (P.1555) ...etc.

Devices for Safety Measure	Heat Insulating Plates	Cooling related products
These devices avoid unanticipated accidents by preventing over-heat and idle running. 	It prevents heat-retention of a heated object and burning of workers. 	Suitable for use when a rapid cooling is required. 
Thermostats (P.1549) Bimetal Thermostats (P.1548) Electromagnetic Contactor (P.1550) ...etc.	Standard Grade (P.1561) Special Heat Resistant Grade (P.1561) High Strength Grade (P.1563) High Temperature Insulating Grade (P.1565) ...etc.	Jet Air Coolers (P.1535) Peltier Cooling Unit (P.1533) Finned Hollows (P.1516) ...etc.

Heater Selection Chart

Purpose		Type of Heater	Usage of example
Heat the metal	Heating by inserting into plates	**Cartridge Heaters (P.1487~1504)**	
	Heating from the surface of plates	**Rubber Heaters (P.1508~1510)**	
		Plate Heaters (P.1511)	
Heating of the air	Want to select according to the equipment I'm using	**Air Sheathed Heaters (P.1515- 1516)**	
		Air Sheathed Plug Heaters (P.1517)	
	Want to use an easy unit product	**Small Hot Air Generators (P.1517)**	
		Hot Air Generating Units (P.1519- 1520)	
Heat-retention and heating of liquid	Need to heat fluids directly	**Sheathed Heaters for Liquid Heating with Plug (P.1523)**	
		Sheathed Heaters for Liquid Heating (P.1525)	
	Need to heat indirectly from the outside	**Cord Heaters (P.1529) Ribbon Heaters (P.1526) Band Heaters (P.1531)**	
Need to heat objects without contacting		**Quartz Far Infrared Heaters (P.1531)**	



Cartridge Heaters -Guide-

■Features

· This heater has long-life and high-power density, which is perfect for heating metal plates.
· For the maximum operating temperature, refer to specification of each product.
A High Temperature Type whose maximum operating temperature is up to 900˚C is available.

■Basic Structure

Compression type heater with ceramic core of high temperature property wrapped with Nickel-chrome wires and isolated by magnesium oxide.

(1)Stainless Steel Sheath (Incoloy for High Temperature Type)
(2)Heating Coil (Nickel-chrome Wire)
(3)Insulation Powder (Magnesium Oxide)
(4)Ceramic Core
(5)Silicon (Insulation) Tube
(6)Crimp Terminal
(7)Lead Wire Film
(8)Nickel Pin

* Outer diameter of Lead Wire is approximately in the range of Ø2~Ø4, depending on the voltage and the amount of electric power.

■Mounting Method

· The clearance of the mounting hole of heater and metal block should be as small as possible.
Recommended clearance of hole machining is 0.05 or less (one side).
* The degree of adherence between a heated object and heater product affects the life of heater. Also, a large clearance increases the time needed to raise the temperature and creates a slow response speed for temperature control. When the temperature of heating product is 300˚C or less, work with drill holes, but reamer holes (H7) for the mounting hole of all heaters are recommend.
* The life span of the heater largely depends on the operating environment. Wires might be broken in a short time depending on the operating temperature and the adjustment of the temperature. Preparing new cartridge heaters for replacement is recommended.

■Precautions for Use

(1)Do not let heater be in idle running in the atmosphere.
Breaking of wire and ignition may occur by abnormal heat if the heater is operated in the condition the heat-generating part is even partly out of heated object.
(2)Prevent the lead wire of the heater from getting wet. It may cause leakage or short.
(3)Remove machine oil and grease used at the time of hole machining of heated parts. it may carbonize and can be a cause of abnormal heating.
(4)When the ON-OFF cycle is extraordinarily short, it affects the life of heater. Use of PID control is recommended.
(5)When the nickel pin is bent many times, it may be broken.
(6)Do not use over the rated voltage (V).
(7)When the heater is removed from the heat generating body, make sure that the power is turned off.
In addition, do not touch the heater immediately after the power is turned off.
(8) Keep the temperature around the lead wire exit at 130°C or less.
(9) Keep the temperature around the flange at 180°C or less when using Flanged Type.
(10) Do not use in a vacuum.
* Refer to Cautions of each type of heaters and ensure a proper and safety use of the heaters.

	Lead wire protection	Flexible Hose Type (P.1495) Knurled Flanged Lead Wire Protection (P.1499)		L-shaped Reinforcement (P.1503)
	Sensor embedded	With Sensor (P.1496)		
	Usage at high temperature (800°C or more)	High Temperature Configurable L & W (P.1491)		
	The temperature on the heated object will be more uniform	Uniform Heating (P.1500)		
	Warms the tip only	Heat Generating Part & Length Configurable (P.1504)		

■Selection Method

(1) Determine the calories(W) required for the heater.

Calculate with the following formula, by using the weight of heating product, the specific heat of heating product, the increased temperature, and the heating time until the setting temperature.

$$\text{Calories Required for The Heater (kW)} = \frac{\text{Weight of Heating Product (kg)} \times \text{Specific heat of Heating Product (kcal/kg°C)} \times \text{Increased Temperature (°C)}}{860 \times \text{Heating Time (h)} \times \text{Efficiency } \eta}$$

It is difficult to calculate the efficiency η precisely because it varies by heat-retention, insulation, arrangement of heaters but the suitable value is generally about 0.2~0.5.

· Specific Gravity and Specific Heat of Major Materials

Materials	Specific Gravity (g/cm³)	Specific Heat (kcal/kg°C)
Aluminum (EN AW-7075/AlZn5,5MgCu P Type)	2.80	0.230
Steel	7.9	0.113
Stainless Steel	7.82	0.110
Brass	8.70	0.100

Ex.) When the heater block of around 8kg, 200x100x50 (mm) stainless steel, is heated to 180°C.
(It is assumed that the temperature of the heater block is 20°C, and the heating time until the setting temperature is 30 minutes.)

$$\text{Calories Required for The Heater (kW)} = \frac{8 \times 0.11 \times (180-20)}{860 \times 0.5 \times 0.3} = 1.1 \text{ (kW)} = 1100 \text{ (W)}$$

* Efficiency is assumed to be 0.3 as the standard.
* Refer to Actual Measurement Data: Temperature Rise Time / Electrical Power (Electrical Power Density)

(2) Determine the number of heaters and the quantity of heat (W) per one heater.

Determine the number of heaters based on the size of heated product, and total calories (W) to be the quantity of heat required for heating product.

Ex.) Using 2 heaters of 550(W) (Total 1100W)

· Selection of Cartridge Heater (P. 1487 ~ 1489)

(1) Determine the diameter and length of the heater.
Ex.) MCHS12-200
(D) (L)

(2) Determine the voltage (V) to use.
Ex.) MCHS12-200-V200
(V)

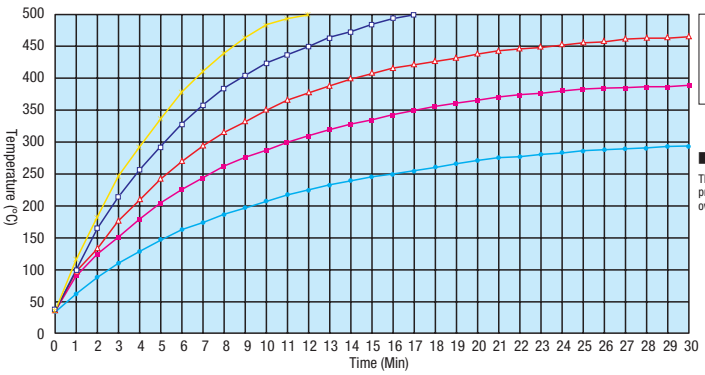
(3) Determine the calories (W) required for the heating product.
Ex.) MCHS12-200-V200-W550
(D) (L) (V) (W)

(4)Check if required heater diameter (D), length (L), voltage (V) and calories (W) are available in L dimension - W (Electrical Power) Fixed Type (**P.1487**) and High Temperature Type (**P.1489**).
Caution: Select the larger electric power (W) than the required for L dimension - W (electrical power) Fixed Type.

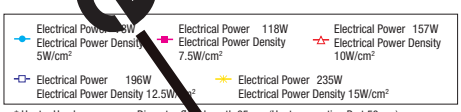
Ex.) MCHS12-200-V200-W550 L Dimension, Calories (Electrical Power) Type is Not Available (Go to (5)
(D) (L) (V) (W)

(5) Available to produce when the electrical power density (W/cm2) of heat-generating part is between 5 and 15 (W/cm2).

$$\text{Electrical Power Density (W/cm}^2\text{)} = \frac{\text{Electrical Power (W)}}{\pi(3.14) \times \text{Heater Diameter (cm)} \times (*)\text{Length of Heat-Generating Part (cm)}}$$



$$\text{Ex.) Electrical Power Density (W/cm}^2\text{)} = \frac{550}{3.14 \times 1.2 \times (20-1.5)} = 7.9$$

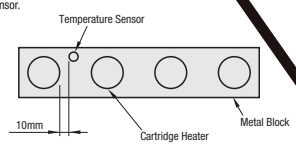


→ Available to produce *Length of Heat-Generator Part = L/10-1.5(cm)

(6) Determine the length of lead wires.
Ex.) MCHS12-200-V200-W550-F500
(D) (L) (V) (W) (F)

* When the electrical power density (W/cm²) is not more than 2: 1) Reduce the heater diameter, 2) Shorten the heater length, 3) Reduce the number of heaters to use.
* When the electrical power density (W/cm²) is not 15 or less: 1) Increase the heater diameter, 2) Increase the heater length, 3) Increase the number of heaters to use.
* The electrical power density (W/cm²) of heater should be as low as possible, which enables a long-life and stable control.

· Actual Measurement Data: Temperature Rise Time / Electrical Power (Electrical Power Density)



* Heater Used: Diameter Ø12 Length 65mm (Heat-generating Part 50mm)
* Heated Object : Aluminum (60×80×20)
* The temperature is of the central surface temperature of aluminum.

■Temperature Control

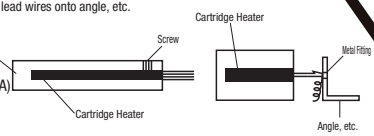
The position of the temperature sensor is determined by the setting conditions of the heated product (metal block), however, it is recommended to place near the heater to prevent heater overheating.

* Generally, around 10mm suitable for the distance between the heater and the temperature sensor.

· Temperature Controllers

All cartridge heaters are single-phase. Select temperature controllers (**P.1558**) for single-phase (MTCS · MTCD and MTCRM). For the possible numbers of cartridge heaters to connect one controller, refer to the example below.

(Ex.)When connecting MTCS (Max. allowable electric current: 20A) to MCHK12-150-V100-W300

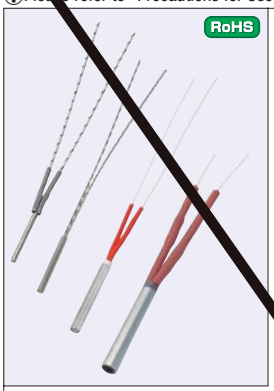


The electric current which streams in one cartridge heater: $\text{Electrical Current (A)} = \frac{\text{Electrical Power (W)}}{\text{Voltage (V)}} = \frac{300 \text{ (W)}}{100 \text{ (V)}} = 3 \text{ (A)}$

The possible numbers (N) of cartridge heaters to connect one temperature controller (MTCS): $N = \frac{20 \text{ (A)}}{3 \text{ (A)}} = 6.7 \rightarrow 6 \text{ pcs.}$

(However, only 2 cartridge heaters can be connected to a terminal. Please use terminal blocks (**P.1556**) for branching.)

■Fixation of Cartridge Heater



In order to prevent the cartridge heater from falling off
(1) Fix the sheath with screw.
(2) Fix the lead wires onto angle, etc.

Not Available

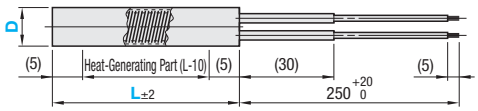
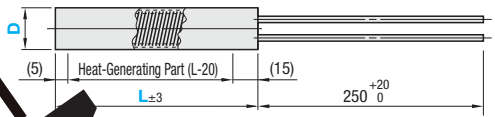
-Standard / Configurable L & W-



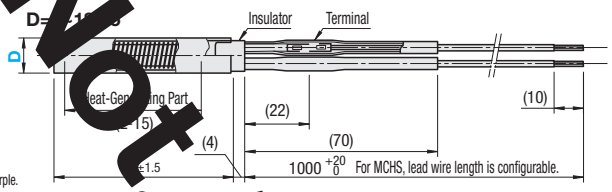
Please refer to "Precautions for Use" in the Cartridge Heaters Overview on **P.1485**



RoHS

[Standard] [Configurable L & W]

D=3.1



D=4

The heater has nickel lead wire wrapped with "heat-resistant insulation tape" of polyimide film. That is wrapped with glass fiber which is braided with glass. Please peel off the light yellow "heat-resistance insulation tape" before actual use.

D=5~18.95

D=3.1

Material:
Heater : 1.4301/X5CrNi18-10
Lead Wire : Glass Braid + Copper Wire
Lead Wire Heat Resistance Temperature: 180°C

D=4

Material:
Heater : 1.4301/X5CrNi18-10
Lead Wire : Nickel + Glass Braid + Polyimide Film
Lead Wire Heat Resistance Temperature: 250°C

D=5~18.95

Material:
Heater : 1.4541/X6CrNiTi18-10
Terminal : Copper
Lead Wire : Nickel (N)
Lead Wire Film : Glass Braid
Lead Wire Heat Resistance Temperature: 180°C

D Tolerance *The tolerance is the value of heat generator part.

D	Tolerance
3.1	+0.05 -0.1
4	0 -0.08
5 6 8 10 12 14 16 18	-0.02 -0.08
6.25 9.42 12.6 15.77 18.95	+0.05 0

The color of insulation at the root of the wire is white or purple.

When D = 5, there is no dimension of (4) on the end surface of the stainless steel sheath. For D5, 6, 6.25, 8, 9.42, 12.6, 15.77, 18.95, position of the terminal (22) is 17 and 37 with shifting two terminals.

Maximum Operation Temperature: 600°C

■Anti-seize Agent RoHS

A Accessory: Working Gloves

Part Number Type	No.	Volume	Heat Resistance Temperature	Specific Gravity	Color	Main Components	€ Unit Price
	30	30g	600°C	1.4	Black	Molybdenum	

- By applying to cartridge heaters, gaps will be filled and prevent seizing.
- Please remove leaks in installation before actual use.
- It also works as anti-baking agent for parts surrounding of heat source such as set screws and flanges.
- Wear a pair of working gloves when applying the grease.

■Thermally Conductive Grease RoHS

A Accessory: Working Gloves

Part Number Type	No.	Volume	Heat Resistance Temperature	Conditions of Thermal Conduction	Color	Main Components	€ Unit Price
	50	50g	200°C	0.96W/m-K	White	Silicon	

- By applying to a cartridge heater, heat can be effectively transferred to metal plates.
- Grease may outflow when heat reaches around 200°C. Wipe off the out-flowed grease and then use the heater.
- Wear a pair of working gloves when applying the grease.

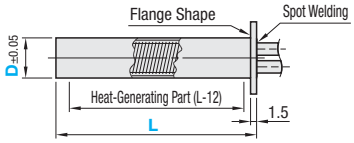
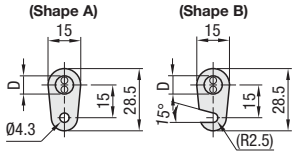
Cartridge Heaters
-High Temperature Type-



Please refer to "Precautions for Use" in the Cartridge Heaters Overview on **P.1485** Part number has changed to . (No change has been made to the performance and the standard.)



(No Flange)

(Flange Shape A)
(Flange Shape B)

L Tolerance

L	Tolerance
101.6 or Less	±2.4
127.0 or More	L dimension ±2%

Maximum operating temperature: 871°C. (Heater Surface Temperature)
The color of insulation tube is white or red.

Material: Heater: Incoloy
Lead Wire: Glass Braid Lead (Heat Resistance Temperature: 200°C)

Features of the Cartridge Heater -High Temperature Type-

This cartridge heater has higher electrical power density and efficiency compared with conventional products.
Maximum operating temperature: 871°C. (Heater Surface Temperature)
Sheath part, made of Incoloy that excels in heat-resistance, long operation life.

Precautions for Use

Do not let heater run exposed in the atmosphere. Operating the heater when heat-generating part is out of heated products, the wire may break or ignite due to abnormal heating.
Pay attention to insulation tube as it is easy to fall off.
Keep the temperature around the lead wire exit at 130°C or less.

Y	Crimp Terminal -Y-Shaped -	M4

Flanged Type Dimension

D	Shape C D1
8	14
10	16
12	18

Precautions for Use

- Do not let heater run exposed in the atmosphere. Operating the heater with the heat-generating part out of heated products may cause the wire to break or ignite due to abnormal heating.
- Keep the temperature around the lead wire exit at 250°C or less.
- Because the ceramic beads are very fragile, be sure to follow the bend dimensions on the right. Do not apply strong impacts.

D	R	A
8	12	20
10		
12	18	25

Features

- High temperature resistant heater with max. operating temperature of 900°C.
- Maintains high insulation even at high-temperature region of 700°C to 900°C, and presents long-life.

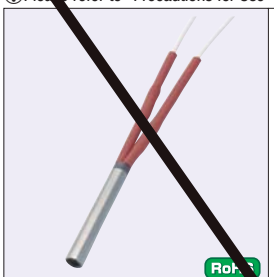
Type of Terminal

Symbols	Type of Terminal	Nominal Size of Screw
N	No Crimp Terminal	-
M	Crimp Terminal -Round Type-	M4
Y	Crimp Terminal -Y-Shaped -	M4

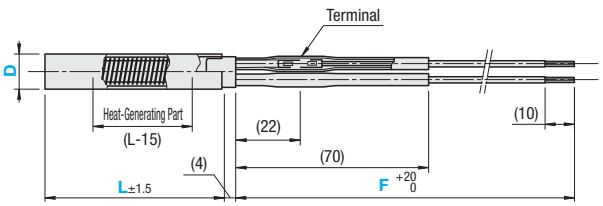
Features

- Heat generating wire and lead wire are connected in stainless steel sheath.
- Since crimp terminal is not exposed, it has stronger structure against breakage due to bending and vibration.

Basic Structure



Precautions for Use



- Do not let heater run idle in the atmosphere. Operating the heater when heat-generating part is out of heated products, the wire may break due to abnormal heating.
- Keep the temperature around the lead wire exit at 180° C or less.
  Cartridge Heater with protective spring is recommended for a use at a moving part.

■Type of Terminal

Symbols	Type of Terminal	Nominal Size of Screw
N	No Crimp Terminal	-
M	Crimp Terminal -Round Type-	M4
Y	Crimp Terminal -Y-Shaped -	M4

■Features

- The lead wire is covered with flexible hose made of stainless steel for external impacts.
- As the product has a protection cover at the base, the lead wire is not pulled directly when the heater is being pulled out.
- The flexible hose prevents the lead wire from damages due to metal fatigue.

■Precautions for Use

Do not let heater run exposed in the atmosphere. Operating the heater when heat-generating part is out of heated products, the wire may break or ignite due to abnormal heating.
Operating the heater with the heat-generating part out of heated products may cause the wire to break or ignite due to abnormal heating.
The flexible hose is not water resistant. Use it away from water.
Cartridge Heaters cannot be used in water.

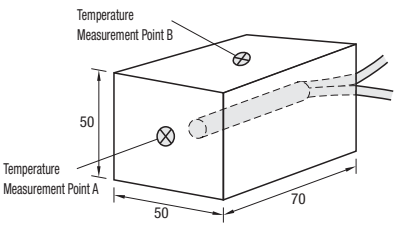
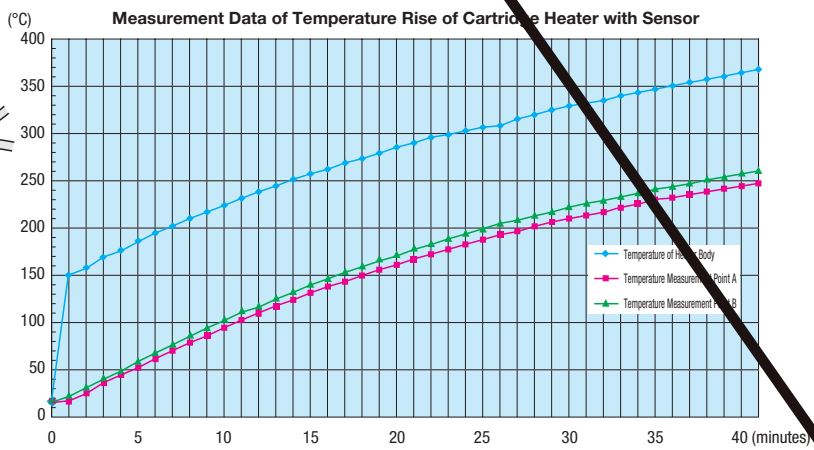
Example



Features

- This unit contains the Cartridge Heater with built-in K Type Thermocouple.
- As the temperature sensor is integrated into the heater, the heater can be used in smaller space.
- The heater has a function to prevent the rise in temperature of the heater itself. Accurate temperature control of the heater can be made.

Precautions for Use



(?)Do not let heater run idle in the atmosphere. Operating the heater with the heat-generating part out of heated products may cause the wire to break or ignite due to abnormal heating.
(?)The temperature measured by the Thermocouple is the temperature of the heater.
(?)To measure the temperature of the heated object, separate sensor needs to be installed.

• Measurement Data of Temperature Rise of Cartridge Heater with Sensor

Heater Used : MCHSSS8-60-V100-W130 (Electrical Power Density10W/cm²)
Heated Object : 1.0038/S235JR (50x50x70)
Point of temperature measurement : Center part of each surface of block

Measurement Data of Temperature Rise of Cartridge Heater with Sensor

■Features of Cartridge Heaters -Break Resistant - Internal Connection-
- The wires are less prone to breakage.

-The cartridge heater (break resistant internal connection type) employs a connection with heat-generating wire and nickel stranded wire in the sheath and a connection with nickel stranded wire and lead wire outside the sheath.
- As the nickel pins are not exposed, the heater is more resistant against bending.

■Basic Structure

Example

■Precautions for Use

Do not let heater run exposed in the atmosphere. Operating the heater when heat-generating part is out of heated products, the wire may break or ignite due to abnormal heating.
Do not repeatedly bend the connection part between the nickel stranded wire and the lead wire. (Forcibly pulling on it could result in breakage.)
Do not pull the connection part between the nickel stranded wire and the lead wire. (Forcibly pulling on it could result in breakage.)
Keep the temperature around the lead wire exit at 130°C or less.

[IMPORTANT]
(1) Forcibly pulling on it could result in breakage.
(2)When bending the wire, be careful not to expose the stranded wire.
(3)Do not apply any load to the insulator.

12									

Features

- This heater has different winding ratio of Nickel-chrome wire in one cartridge heater from conventional ones.
- Compared with conventional cartridge heater, the temperature on the heated object will be more uniform.

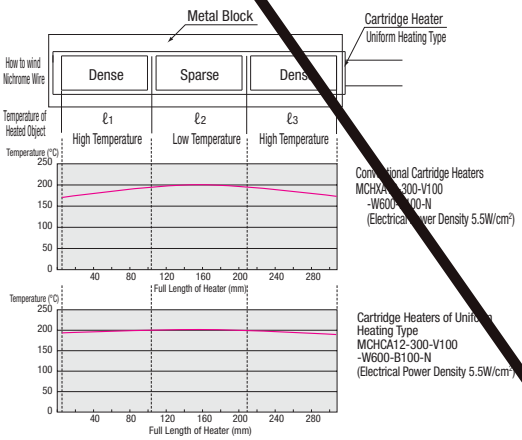
- Comparison with Conventional Cartridge Heaters

	Conventional Cartridge Heaters	Cartridge Heaters Uniform Heating Type (MCHC)
Winding Method of the Nickel-chrome Wire of Heater on Each Part	Uniform	Low winding turns on the center part (ℓ2).
Heat Capacity Distribution	Uniform	Low capacity on the center part (ℓ2).
Temperature Distribution of Heated Object	The temperature of the center of the heater may be relatively high (temperature unevenness).*	Better balance of temperature distribution (uniform heating effect) than conventional heaters.

*The temperature of the center part increases easily because radiation is hard and the heat may accumulate.

-This heater is more effective than conventional ones when higher uniform heating is required.
(Ex.) Heating board for welding seal, engraving heating, roller heating and heating board of rubber welding machine, etc.

Selection Point



-Calculate the total wattage required for heating metal block. Refer to P.1486
-Select the distribution ratio of Nickel-chrome wire from A or B Type.
A Type: Improving the temperature consistency of heated object.
B Type: Temperature on the both ends of heated object is low obviously.
The temperature consistency may not be improved even if either type is used.

Precautions for Use

- Do not let heater run idle in the atmosphere. Operating the heater when heat-generating part is out of heated products, the wire may break due to abnormal heating.
- Although the temperature uniformity improves compared to the conventional cartridge heaters, completely uniform heating is not guaranteed. Uniform heating may not go into effect depending on the operating condition.
- Because the uniform heating effect varies depending on slight difference of the operating condition (such as the shape, size of the heated object and the air flow, etc.), even for the products of the same type, the stability of the uniform heating effect cannot be guaranteed.
- Keep the temperature around the lead wire end at 130°C or below.

Actual Measurements of Temperature Distribution of Cartridge Heater Uniform Heating Type

- The heat-generating part is divided into three parts and winding method of Nickel-chrome wire for each part is different.
- The balance of the temperature distribution improves because the temperature of ℓ2 becomes low compared to the conventional cartridge heaters.

Conventional Cartridge Heaters MCHA12-300-V100 -W600-B100-N (Electrical Power Density 5.5W/cm²)

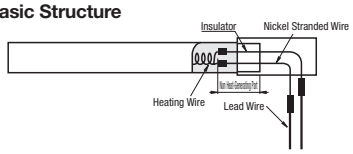
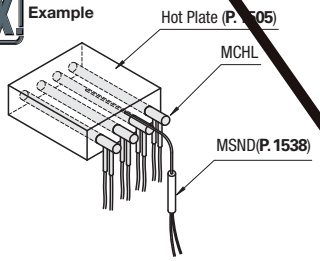
■Precautions for Use

- Do not let heater run exposed in the atmosphere. Operating the heater when heat-generating part is out of heated products, the wire may break or ignite due to abnormal heating.
- Keep the temperature around the collar at 180°C or below.
- Keep the temperature around the lead wire exit at 130°C or less.



■Cartridge Heaters Features of L-shaped Type

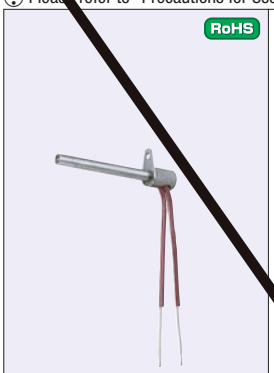
- Space-saving
  Saves space by bending the lead wire in L-shape at the exit point.
- Lead wire selection
  Lead wire can be selected depending on the operating ambient temperature.



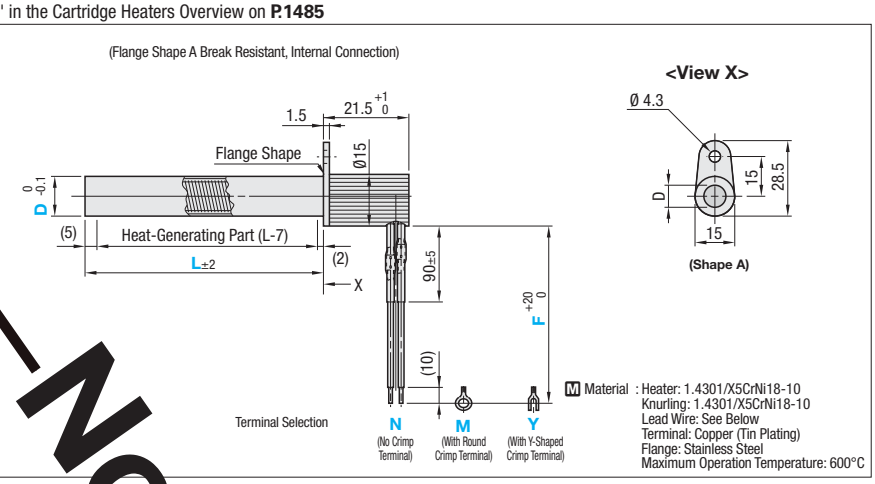
■Features of Cartridge Heaters -Break Resistant - Internal Connection-

- Heater wires are less prone to breakage
  Break Resistant Internal Connection Type employs a connection with heat-generating wire and nickel stranded wire in the sheath and a connection with nickel stranded wire and lead wire outside the sheath. As the nickel pins are not exposed, the heater has more resistance against bending.

■Basic Structure



Example



Cartridge Heaters
-L-shaped Knurled Flanged-

CAD Data

Please refer to "Precautions for Use" in the Cartridge Heaters Overview on **P.1485**

RoHS

M Material : Heater: 1.4301/X5CrNi18-10
Knurling: 1.4301/X5CrNi18-10
Lead Wire: See Below
Terminal: Copper (Tin Plating)
Flange: Stainless Steel
Maximum Operation Temperature: 600°C

Precautions for Use

Do not let heater run exposed in the atmosphere.
Operating the heater when heat-generating part is out of heated products, the wire may break or ignite due to abnormal heating.
(Completely hide heat-generating part of a heater in a metal block with 5mm gap on both ends, ensuring that the heat generating part is not exposed to air.)

Keep the temperature around the lead wire exit at 130°C or less.

Example

Usable when heating only tip portion such as spot sealing work.

Rubber Heaters -Guide-

Feature

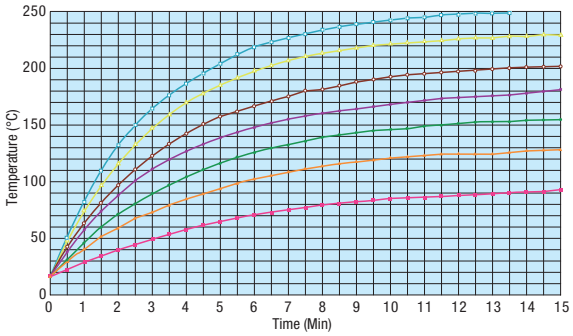
- Flexible and thin silicon rubber, which fits the heating plane firmly, is used.
- They are suitable for generating uniform heating over the heating plane.
- The Maximum Operation Temperature is 220˚C (250˚C for High Temperature Type)

Basic Structure

A resistance element is placed between two top and bottom sheets, and internal air is removed before the compression process, and the structure is formed from assembled thin sheet.

Mounting Method

(1) Clamp (Metal Retainer) : Sandwiches the rubber heater between a metal plate and a heating product. Allowable pressure against the heater plate is 1.47MPa {15kgf/cm²}.



(2) Silicon Adhesive : Applies the special silicon adhesive to rubber heater and bonds with the heated object. Maximum operating temperature is 180°C.

(3) Tape Adhesive : Attaches the double-stick tapes to the rear surface of the rubber heater, and bonds with the heating product. Maximum operating temperature is 150°C.

Precautions for Use

- Do not let heater be in idle running in the atmosphere of inflammable gas or float against the heater surface, they may cause ignitions. However, idle running is available in the ordinary temperature atmosphere, when the electric density is 0.5W/cm² or less.
- When sandwiching the rubber heater between a metal plate and a heating product, prevent lead wires and lead wire retaining sheets from touching the metal plate.
- Avoid use in the atmospheres such as in steam, water and oil, or in corrosive gas.
- Not applicable for to machine holes and not usable when the rubber is damaged.
- Do not bend the heater. The minimum bending angle R (radius) is 2mm.
- Do not use over the rated voltage (V).
- When the heater is removed from the heat generating body, make sure that the power is turned off. In addition, do not touch the heater immediately after the power is turned off.
- If a gap between heated object and a heater is large, the temperature will increase abnormally. Be very careful about heater setting.
- Keep the lead wire retaining sheets free from pressure.

• Actual Measurement Data: Temperature Rise Time / Electrical Power (Electrical Power Density)

Electrical Power 60W — Electrical Power Density 0.2W/cm²
Electrical Power 90W — Electrical Power Density 0.3W/cm²
Electrical Power 120W — Electrical Power Density 0.4W/cm²
Electrical Power 150W — Electrical Power Density 0.5W/cm²
Electrical Power 180W — Electrical Power Density 0.6W/cm²
Electrical Power 210W — Electrical Power Density 0.7W/cm²
Electrical Power 240W — Electrical Power Density 0.8W/cm²

Heater Size: MRHSS (200x150)
Heated Object: Aluminum (210x150x1.5)
Heater Mounting Method: Bonds both sides with adhesives for rubber heater.
Point of temperature measurement: Measured by K thermocouple at the center of aluminum surface.
Ambient Temperature: Room Temperature 15°C

Selection Method

(1) Determine the calories(W) required for the heater.

Calculate with the following formula by using the weight of heating product, the specific heat of heating product, the increased temperature, and the heating time until the setting temperature.

$$\text{Calories Required for The Heater (kW)} = \frac{\text{Weight of Heating Product (kg)} \times \text{Specific heat of Heating Product (kcal/kg°C)} \times \text{Increased Temperature (°C)}}{860 \times \text{Heating Time (h)} \times \text{Efficiency (}\eta\text{)}}$$

It is difficult to calculate the Efficiency (η) precisely because it varies by heat retention, insulation, arrangement of heater but suitable value is generally about 0.2~0.5.

• Specific Gravity and Specific Heat of Major Materials

Materials	Specific Gravity (g/cm³)	Specific Heat (kcal/kg°C)
Aluminum (EN AW-7075/ AlZn5,5MgCu P Type)	2.80	0.230
Steel	7.85	0.113
Stainless Steel	7.82	0.110
Brass	8.70	0.100

Ex.)When the heater block of around 0.2kg, 100x100x3 (mm) is heated to 150˚C stainless steel
(It is assumed that the temperature of the heater block is 20°C, and the increasing time until the set temperature is 15 minutes.)

$$\text{Calories Required for The Heater (kW)} = \frac{0.2 \times 0.11 \times (150-20)}{860 \times 0.25 \times 0.3} = 0.04 \text{ (kW)} = 40 \text{ (W)}$$

* Efficiency is assumed to be 0.3.
*See above for data. Measurement Data: Time of Increasing Temperature for each Electrical Power (electrical power density)

• Selection of Rubber Heater

(1) Determine the shape and size of heaters.

Ex.) MRHSS - 100 (A) - 100 (B)

(2) Determine the voltage (V) to use.

Ex.) MRHSS - 100 (A) - 100 (B) - V200 (V)

(3) Determine the calories (W) required for the heating product.

Ex.) MRHSS - 100 (A) - 100 (B) - V200 (V) - W40 (W)

(4) Available when the calories (W) / the size of a heater (cm²) is between 0.2 and 0.8 (W/cm²).

$$\text{* electrical power density (W/cm2)} = \frac{\text{Electric Power (W)}}{\text{Surface Area of Rubber (cm}^2\text{)}}$$

$$\text{Ex.) electrical power density (W/cm2)} = \frac{40}{10 \times 10} = 0.4 \rightarrow \text{Available to produce}$$

(5) Determine the length of lead wires.
* Lead wire length is 1000 for square type with thermostats (**P. 1510**).

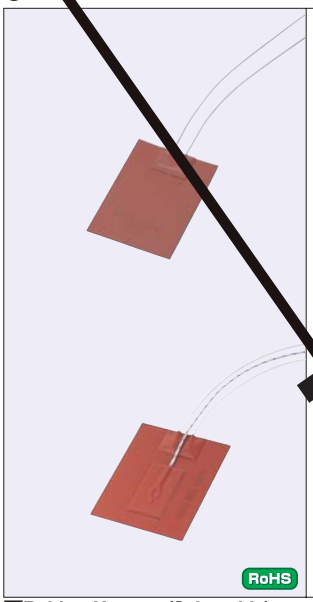
Ex.) MRHSS - 100 (A) - 100 (B) - V200 (V) - W40 (W) - F700 (F)

• Temperature Controllers

All Rubber Heaters are single-phase. Select temperature controllers (**P.1558**) for single-phase (MTCS · MTCD and MTCRM).
For the possible numbers of cartridge heaters to connect one controller, refer to the example below.
(Ex.)When connecting MTCS (Max. allowable electric current: 20A) to MRHSS-200-200-V100-W210-F1000

The electric current which streams in one cartridge heater: $\text{Electric Current (A)} = \frac{\text{Electric Power (W)}}{\text{Voltage (V)}} = \frac{210 \text{ (W)}}{100 \text{ (V)}} = 2.1 \text{ (A)}$

The possible numbers (N) of cartridge heaters to connect one temperature controller (MTCS): $N = \frac{20 \text{ (A)}}{2.1 \text{ (A)}} = 9.5 \rightarrow 9 \text{ pcs.}$



(However, only 2 cartridge heaters can be connected to a terminal. Please use terminal blocks (**P.1556**) for branching.)

Rubber Heaters / Cast-in Heaters
-Square (Thermostat Type)-

CAD Data

Please refer to "Precautions for Use" in the Rubber Heaters Guide on **P.1507**

Rubber Heaters (Square Type) RoHS

Material :
Heater : Silicon Rubber
Lead Wire: Nickel (Ni)
Lead Wire Film: Teflon
Maximum Operation Temperature: 220°C

- Thermostats
Heater: Ceramic (Steatite Type)
Cap: Aluminum
Bimetal: Disk Bimetal

Thermostat Operation Temp. Rating

S Thermostats Op. Temp. (°C)	ON Point	OFF Point
80	(65±5)°C	(80±4)°C
120	(100±8)°C	(120±6)°C
150	(125±15)°C	(150±7)°C
180	(160±15)°C	(180±8)°C

It energizes (NC) when the power is turned on and the contact point shuts off when it reaches to the operation temperature rate (OFF) and electricity is turned off. It will automatically recover when it becomes below the operation temperature rate (ON).

(Ex.)When a thermostat operation temperature (°C) 80, contact point shuts off at (80±4)°C after electricity is supplied. It will automatically recover when it becomes (65±5)°C. In temperature adjustment, set it lower than the temperature of OFF point tolerance. (when 80°C: 80–4=76°C or lower)

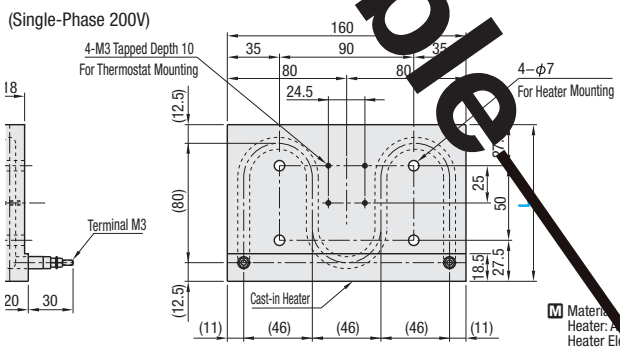
Features

- The bimetal thermostat with automatic recovery system prevents overheating of rubber heaters.

(Features of Thermostats)
Principle of Operation:
Bimetal Non-energizing Type Single Pole Single Throw Operation Temperature One Point Fixed Type
Operating Method: OFF when temperature rises, and ON when temperature drops
(Electric Rating)
Resistance Load AC125V/15AAC250V/7.5A(Minimum Current: 0.1A)
(Contact Resistance)
50mΩ or less according to minute current ohmmeter (DC6V/0.1A) (initial value)
(Insulation Resistance)
10MΩ or more with DC500V mega in the charge part and non-charge part
(Insulation Resistance)
AC1500V/min or AC1800V/sec in the charge part and non-charge part (Leakage current: 10mA)
(ON/OFF life span)
The thermal ON / OFF operation is done approx. 10,000 times or less at the load of rated current and voltage.
Insulation resistance: 50M ; Contact resistance: 100m or less

Mounting Method



Apply Rubber Heater (left page) and attach to the heated object.

Precautions for Use

- A thermostat should not be used for temperature adjustment. Please use it as overheat protector.
- Do not apply force to thermostat.
- There are temperature gaps (about 10~40°C) between thermostat operating temperature and heat surface temperature, and between thermostat and heated object. Please check before actual use.
- Part of used terminal of thermostat is exposed. Please pay attention to short circuit.
- Do not use in inflammable atmospheres.
- To avoid burns, do not touch the heater when the power supply is on or immediately after use.

Cast-in Heaters RoHS

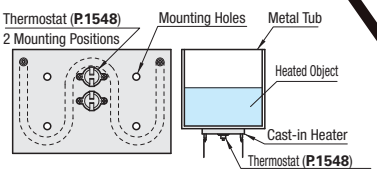
For orders larger than indicated quantity, please request a quotation.

Feature



Heat will be evenly distributed since this is made of aluminum casting.
Suitable to use for heating on a flat place.

Precautions for Use

Mount it closely to heated object. If there is a gap, it might cause combustion loss or disconnection.

Connection

When use the heater alone, connect to 200V single-phase.
When use Heater by 3-phase power supply, delta connection can be applied.

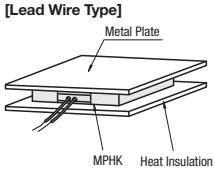
Order Example

Part Number	-	A	-	B	-	V	-	W
	-	100	-	20	-	V200	-	W80

Features of the Plate Heater

This plate type heater uses heat-resistant metal plate (430 Stainless Steel) which covers a resistance ribbon wire which is insulated with mica.
Max Operation Temperature: 300°C

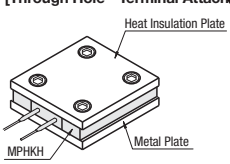
Basic Structure of the Plate Heater



No.	Name	Material
(1)	Cover of the Heater	1.4016/X6(8)Cr17
(2)	Mica for Insulation	Synthetic Mica
(3)	Nickel-chrome Wire	Nickel-chrome Ribbon Wire
(4)	Lead Wire	Nickel Copper Glass Fiber Coated Wire
(5)	Tube	Glass Fiber

Precautions for Use

- Never operate the heater when it is empty. Doing so may result in damage to the unit.
- Apply electric power under the condition in which an object such as metal to be heated is attached to the heater.
- Attach the object so that the heater comes into close contact with the surface to be heated.
  A gap will cause premature breakage of wire.
- Make sure that the lead wire is not touching the metal plates when the heater is sandwiched between them.
- The heater is not waterproof.
  Never expose the heater to water or any other liquids.
- Do not use over the rated voltage (V).
- Use the temperature adjustment controller to ensure safe use.

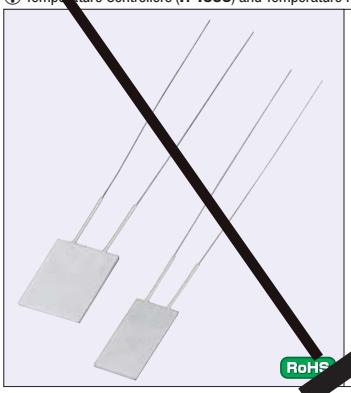


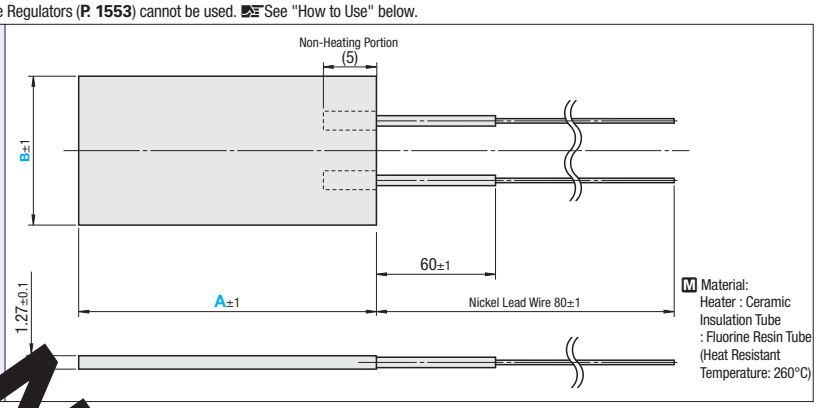
Mounting Method

[Lead Wire Type]

Sandwich it with metal plate and insulation plate.

[Through Hole - Terminal Attached Type]



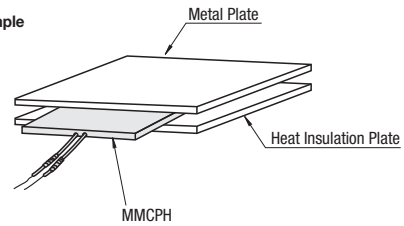


Fix the heater with screws.

Small-Size Ceramic Plate Heaters

CAD Data

Temperature Controllers (**P. 1558**) and Temperature Regulators (**P. 1553**) cannot be used. See "How to Use" below.



M Material:
Heater : Ceramic
Insulation Tube
: Fluorine Resin Tube
(Heat Resistant
Temperature: 260°C)

RoHS

Part Number Type	A	B	V (Voltage)	W (Electric Pow	Maximum Operation Temperature (°C)	€ Unit Price
	15	10	15~45	6~21		
		15	10~40	5~19		
	20	10	15~80	4~26		
		15	10~60	3~25		

Example

The heaters can be used within the range of the above operating voltage (V) and operating electric power (W), but please note that rapid application or temperature rise could cause damage to the heaters.

Do not use the heater at a temperature exceeding the maximum operating temperature.

[IMPORTANT]
When sandwiching the heater, be sure that the non-heating portion is protruded, by 5 mm, through the surface.

For orders larger than indicated quantity, please request a quotation.

Features of the Small-size Ceramic Heater

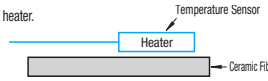
Misumi's small-size ceramic plate heaters are made of ceramic, which has excellent heat resistance and insulation characteristics. The heater is made of a ceramic sheet incorporating tungsten resistors.
- This small, thin plate-shaped heater can be operated in a small space.
- As the ceramic plate heater is plate-shaped, it can provide uniform heating.
- The speed at which the heater temperature changes is quite fast.
  Maximum operating temperature: 500°C
  (Never exceed the maximum operating temperature.)
- Available for both direct current and alternate current.

Basic Structure

The ceramic plate heater is composed of highly heat-resistant tungsten resistors attached to a ceramic sheet.

(1) Tungsten Resistors
(2) Ceramic
(3) Insulation Tube
(4) Nickel Lead Wire

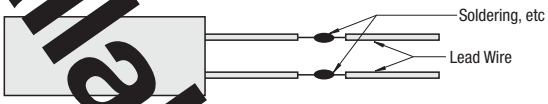
Selection Method



(1) Calculate the amount of heat (W) required to heat the object.
P.1486 Refer to "Selection method to determine the amount of heat required for the heater".
(2) Select the size of heater depending on the required amount of heat (W) and the size of the object, and determine the operating voltage (V) using the Table of Temperature Characteristics as a reference.

How to use

Maintain the operating voltage of the selected heater by using the following method.
(1) Operate the heater at a constant voltage by using a step-down transformer.
(2) Control the temperature by using a variable voltage transformer.
(3) Conduct precise temperature control by using a phase controller.



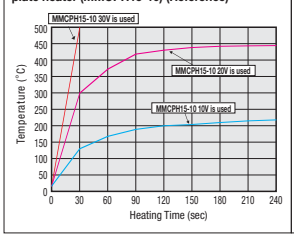
Measurement Conditions (Environmental temperature of measurement: Atmospheric temperature at 16°C in natural atmosphere)

- Surface temperature should be measured at the center of the heater.
- One side of the ceramic fiber should be insulated from heat.
Small ceramic heater is bonded on a 30x30xt10 ceramic fiber strip by Aron Ceramic adhesive.
* Please note that the temperature-rise characteristic differs significantly depending on the size of the object to be heated.

Connection Method

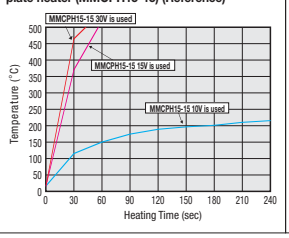
Attach the lead wire to the two terminals and firmly connect them by soldering, etc.

(2) After connection of the lead wire, protect them by firmly wrapping them with insulation tape.



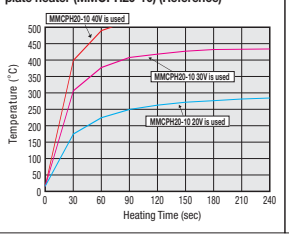
Mounting Method

Use the heater in a position sandwiched between the metal block to be heated and the insulation board. The clearance between the block and the insulation board should be as small as possible.
* The degree of contact between the heater and the object to be heated will affect the life of the heater. A large clearance will delay the temperature rise time and create a delayed response to temperature adjustments.

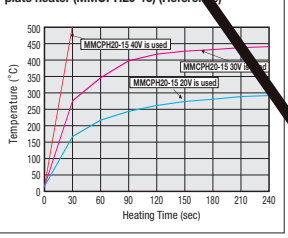


Precautions for Use

- Do not use the heater at a temperature exceeding the maximum operating temperature of 500°C.
- Never operate the heater when it is empty. Doing so may result in damage to the unit.
- Apply electric power under the condition in which an object such as metal to be heated is attached to the heater.
- Attach the object so that the heater comes into close contact with the surface to be heated. A gap will cause premature breakage of wire.
- Make sure that the lead wire is not touching the metal plates when the heater is sandwiched between them.
- Do not forcibly insert the heater between the metal plates. Doing so will cause the heater to crack.
- The heater is not waterproof. Never expose the heater to water or any other liquids.
- Use the temperature-rise data as a reference and do not heat too rapidly. Doing so will definitely result in breakage of wire.
- Do not exceed the operating voltage (V) shown below. Doing so will cause breakage of the wire in the heater.
- Do not bend fluorine resin tubes.



Temperature rise properties of small-size ceramic plate heater (MMCPH15-10) (Reference)



Temperature rise properties of small-size ceramic plate heater (MMCPH15-15) (Reference)

Temperature rise properties of small-size ceramic plate heater (MMCPH20-10) (Reference)

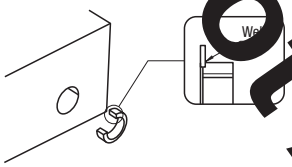
Air Sheathed Heaters -Guide-

■Features

- As all the areas exposed to air are made of stainless steel (1.4404/X2CrNiMo17-12-2, 1.4541/X6CrNiTi18-10, 1.4301/X5CrNi18-10), it is excellent for corrosion resistance.
- The maximum operating temperature is 160°C (Ambient temperature).

■Basic Structure

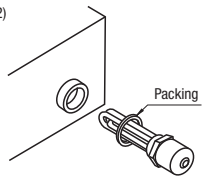
- In the center of the metal pipe is the heater, which is made of spiral heat generating body filled with high insulating material.



(1) Stainless Steel Hollow
(2) Heat Generator (Nickel-chrome Wire)
(3) Insulation Powder (Magnesia)
(4) Insulation Seal Material
(5) Insulation Sealing on Terminal
(6) Insulating Material on Terminal (Ceramics)
(7) Washer
(8) Nut
(9)Terminal Block

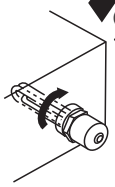
■Mounting Method

- Mounting of Plug Heaters (**P.1517**)



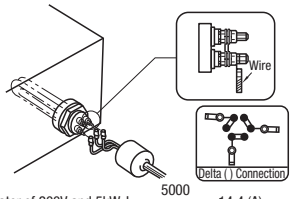
(1) Decide the location of mounting the heater, and drill a hole of Ø70~71.
(2) Insert the socket for plug heater mounting (**P.15** duct number: MSHTS) into the mounting hole, and weld it. (Fig. 1) (Commercial socket ing are also usable.)

(Fig. 1)



(3) Insert the included gasket into the thread part catch the hexagonal part with pl ch and screw the theater into the tank. (Fig. 2-Fig. 3)

(Fig. 2)

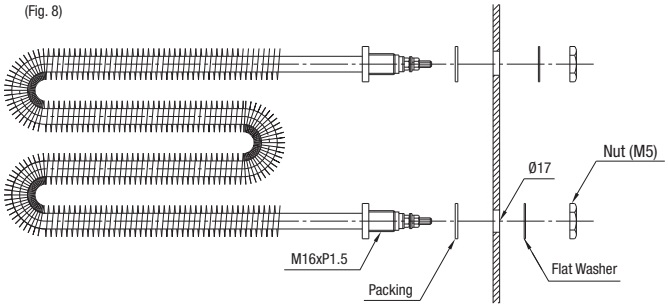


(Fig.

* After tightening it, check it for liquid leaks.

(4) **Connection Method** Connect wires with three terminals. (Fig. 4)

(Fig. 4)



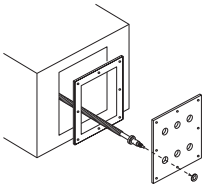
(Ex.) For Plug Heater of 200V and 5kW, $I = \frac{5000}{\sqrt{3}x200} = 14.4$ (A)

- Mounting of U, M and S Type Fin Heaters (**P.1515**- **1516**)

(1) Drill a heater-mounting hole (Ø17) on the heater mounting plate and install the heater. For every type fin heater, drill the hole with proper pitch.

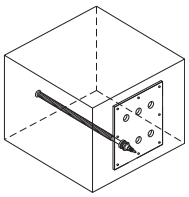
(2) Insert the included gasket and washers onto the screw section, and then insert them into the mounting hole. Secure the heater with the included nuts from the other side of the heater mounting plate. (Fig. 8)

(Fig. 8)



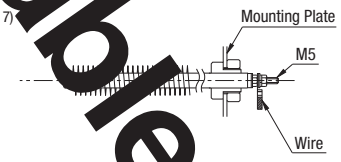
- Mounting of S Type Fin Heaters (Fixed Type)

* Refer to **P.1515** for S-shaped Configurable Type.



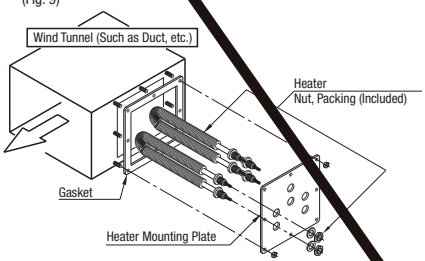
(1) Decide the location of mounting the heater, and drill a hole of Ø21.
(2) Place the bushing on the end of the heater. Insert the heater into the mounting hole and hold with a nut (Fig. 5).

(Fig. 5)



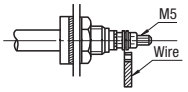
(3) Place a bushing on the other end of the heater. Insert the heater into the mounting hole and fix with a nut. (Fig. 6)

(Fig. 6)



(4) **Connection Method** Connect wires with both terminals. (Fig. 7)

(Fig. 7)



(3) Install the heater mounting plate onto the duct, etc. (Fig. 9)

(Fig. 9)

(4) **Connection Method:** Connect wires on two terminals. (Fig. 10)

(Fig. 10)

* After tightening it, check it for liquid leaks.

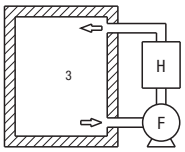
The heater with two terminals is single-phase. Current (I) is $I = \frac{W}{V}$

Ex.) For the heater of 100V and 500W, $I = \frac{500}{100} = 5$ (A)

Not Available

■Precautions for Use

- Avoid water splashes on the heater's wiring terminals. Electrical leakages and shorts may result.
- Make the wiring terminal connections securely while noting for the contacting conditions.
- Do not use over the rated voltage (V).
- Disconnect the power source before removing the heater unit from the heated object. Do not touch the heater immediately after the removal.
- Use the temperature controller for safety.
- The heaters will expand slightly due to heat. Design with ample space surrounding the heater to accommodate this expansion.



■Selection Method

(1) When heating a uniform volume of air (Fig. 11)

$$\text{Calories Required for The Heater (kW)} = \frac{\text{Volume of Air (m}^3\text{)} \times \text{Specific Gravity (kg/m}^3\text{)} \times \text{Specific Heat (kcal/kg°C)} \times \text{Increased Temperature (°C)}}{860 \times \text{Heating Time (h)} \times \text{Efficiency } (\eta)}$$

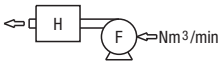
It is difficult to calculate the Efficiency precisely because it varies by heat retention, insulation, arrangement of heater but the suitable value is generally about 0.2~0.5.

(Fig. 11)
When heating a uniform volume of air
(Heating room or furnace)

m³ Volume of Air
H Heater
F Fan

Ex.1)When 5m³ of air is heated to a temperature of 60°C
(Assuming the air temperature is 20°C, and the time to reach the preset temperature to be 60 minutes.)

$$\text{Calories Required for The Heater (kW)} = \frac{5 \times 1.16 \times 0.24 \times (120-20)}{860 \times 1 \times 0.3} = 0.54 \text{ (kW)}$$



* Efficiency is assumed to be 0.3.

(2) When heating flowing air (Fig. 12)

$$\text{Calories Required for The Heater (kW)} = \frac{\text{Flow Volume of Air (Nm3/hr)} \times \text{Specific Gravity (kg/m}^3\text{)} \times \text{Specific Heat (kcal/kg°C)} \times \text{Increased Temperature (°C)}}{860 \times \text{Efficiency } (\eta)}$$

It is difficult to calculate the Efficiency precisely because it varies by heat retention, insulation, arrangement of heater but the suitable value is generally about 0.2~0.5.

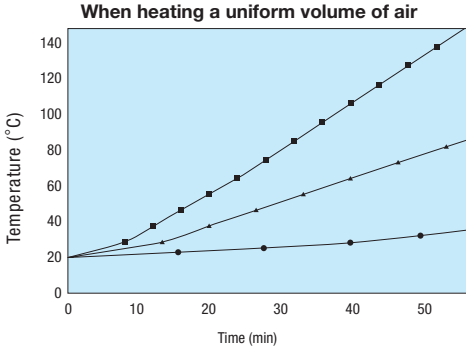
(Fig. 12)
When heating flowing air
(Hot air generator etc.)

Nm³/min Air Volume
H Heater
F Fan

Ex.2)When air flowing at 2Nm³/min is heated to a temperature of 70°C
(Temperature is assumed to be 20°C)

* In the example below, convert the time unit from minute (min) to hour (hr). 2Nm³/minx60min=120Nm³/hr

$$\text{Calories Required for The Heater (kW)} = \frac{120 \times 1.16 \times 0.24 \times (70-20)}{860 \times 0.5} = 3.9 \text{ (kW)}$$

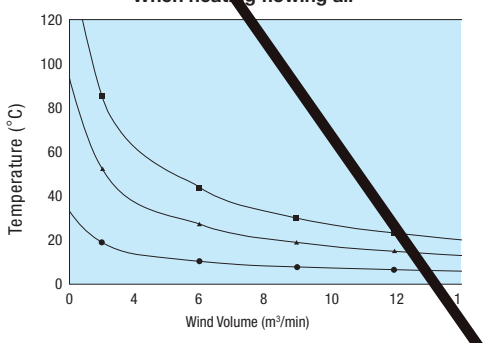


* Efficiency is assumed to be 0.5.

- Specific Heat and Specific Gravity of Air

Substance	Specific Gravity (kg/m³)	Specific Heat (kcal/kg°C)
Air	1.16	0.24

- Actual Measurement Data: Time of Increasing / Decreasing Temperature for Each Electrical Power



When heating a uniform volume of air

Electrical Power 1kW Electrical Power Density 2.5W/cm²
Electrical Power 2kW Electrical Power Density 2.5W/cm²
Electrical Power 3kW Electrical Power Density 2.5W/cm²

* Used Heater: MAHP
* Volume of Air: 100m³

When heating flowing air

Electrical Power 1kW Electrical Power Density 2.5W/cm²
Electrical Power 3kW Electrical Power Density 2.5W/cm²
Electrical Power 5kW Electrical Power Density 2.5W/cm²

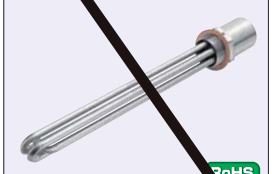
<Selecting Method>
1.Obtain the quantity of heat radiation (kcal/Hr) per piece.
Quantity of heat radiation (kcal/Hr) = Effective area(m²/1m) x Length of effective heat radiation range (m) x 6.15 (Natural radiation transmission coefficient kcal/m² - Hr - °C) x (Steam saturated temperature (°C) - Set temperature (°C))
* The difference between the steam saturated temperature (°C) and the set temperature (°C) must be 15°C or more.
2. Obtain the heat quantity required to raise the temperature to the set temperature.
Required heat quantity (kcal/Hr) = 0.05 (Natural air volume m³/min) x 60 (min) x 1.2 (Specific gravity of air kg/m³) x 0.24 (Specific heat of air kcal/kg - °C) x 12 (Natural ventilation frequency/Hr) x Volume of drying chamber(m³) x Temperature rise (°C)
* The natural ventilation frequency is generally 10 to 12 times per hour.
3. Obtain the required number of pipes.
Pcs=Required heat quantity (kcal/Hr) /Radiation quantity per pc (kcal/Hr).
* This is a case in which the temperature is to be raised to the set level in one hour. If raising it in 30 minutes, double the number of pipes.



<Selection Example>
When raising the temperature of a drying chamber with a volume of 27m³ by using FINPS25A-25-P9.5-L500.
Assume that the operating steam pressure is 1kgf/cm²G (Steam saturated temperature 119.6°C).
1. Obtain the quantity of heat radiation (kcal/Hr) per piece.
Quantity of heat radiation (kcal/Hr)=1.08x0.5x6.15x (119.6°C-50°C)=231.1 (kcal/Hr)
2. Obtain the heat quantity required to raise the temperature to the set temperature.
Required Heat Quantity kcal/Hr)=0.05x60x1.2x0.24x12x27x (50-20)=8398 (kcal/Hr)
3. Obtain the required number of pipes.
Required Number of Hollows=8398/231.1=36Pcs.
[Reference] Operating Steam Pressure And Steam Saturated Temperature
1kgf/cm²G :119.6°C 2kgf/cm²G :132.9°C 3kgf/cm²G :142.9°C
4kgf/cm²G : 151.1°C 5kgf/cm²G : 158.1°C

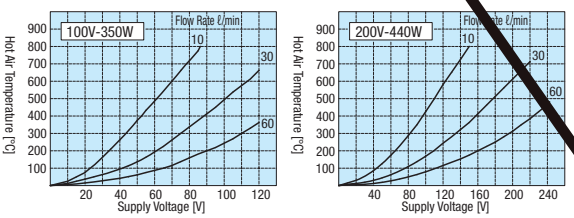
■Features
MISUMI's small hot air generators employ quartz glass which excels in heat-resistance on the body and ceramic processed special elements on the heat generator. Compact ,safe, and clean hot air can be obtained.

■Usage
- Spot drying after workpiece cleaning
- Welding of resin products
- Soldering of electronic parts such as IC chips
- Cap Seal Shrinkage (Shrink Packaging)
- Cutting (heat cutting) of resin film etc.
- Shrinkage of Hollow Wrapping Tubes

■Usage Procedure
(1) Introduce compressed air before turning on small hot air generator.
(2) Confirm the compressed air is flowing and apply a voltage to it.
(3) Put the nozzle toward the object, and start heating.
* Temperature Regulators (**P.1553**) and Temperature Controllers (**P.1558**) cannot be used.



■Calculation of Hot Air Temperature
Use the following formula to estimate hot air temperature.

$$\text{Hot Air Temperature [°C]} \simeq \frac{50 \times \text{Power Consumption [W]}}{\text{Flow Rate of Compressed Air [ℓ/min]}}$$

Power consumption should be smaller than W (electric power) of each type. The above formula is for reference. If hot air temperature is high while flow rate is small, heat efficiency may decrease.
Hot air temperature must be set lower than 800°C.

- Flow Rate - Supply Voltage - Hot Air Temperature Characteristics

■Applicable / Not Applicable Gases
The list below is for reference only. Not a guarantee of the product.

Gas	Applicable or Not	Cautions / Others
Air / Oxygen	OO	Avoid large amounts of oil mist or water.
Nitrogen / Argon	△	All inert gases are applicable, but they will decrease the life span of the product.
Hydrogen	O	Igniting occurs if the gas is exposed in the air at temperature 600°C or more.
Water Vapor	△ ~ X	Letting the heat generator wet will cause breakage.
Town Gas / LPG	X	After thermal decomposition, carbon adheres to a heat generator.

[IMPORTANT] Cautions
- Check the air blasting before applying a voltage. Do not use without air blasting.
- After turning off the small hot air generator, please keep the compressed airflow for 3 min or more for the sake of safety. Then stop air blasting when the temperature of the hot air is lower than 50°C.
- Quartz glass is used on the body. Do not apply an impact.
- The body and case get high temperature during the operation. Do not touch them.It will cause burn injury.
- Voltage and electric power should be set lower than the rated values.
- Do not exceed max operating temperature (800°C).

Features and use of HOTDS (For Fixed Piping)

HOTDS is elastic, and can be fixed at any angle or in any direction.
(Avoid repeated expansion and contraction.)
The aluminum glass cloth has superior flame resistance.
(Disaster prevention Class 1 accepted product)
The hose is not airtight.

Features and use of HOTD (Free Piping)

Flexible and easy to store and transport.
The special coated glass cloth has superior flexibility and flame resistance.
(Disaster prevention Class 1 accepted product)
The hose is not airtight.

Features and use of HOTDH (For Fixed Piping)

Although designed for fixed piping, this can be used for making a curved portion.
(Avoid repeated expansion and contraction.)
The hose is not airtight.

Features and use of HOTDA (For Fixed Piping)

Thermal insulation after fixing is unnecessary. It shortens the work period.

Order Example Part Number: HOTDS50 - Hose Length: 4.3

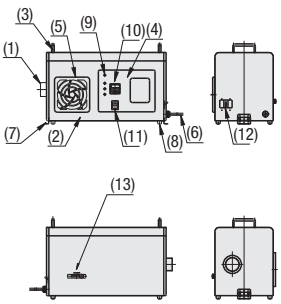
Features



The MISUMI's Hot Air Generating Unit is a compact heater unit, incorporating a blower and a temperature controller with a built-in sheath heater for air heating. PID control method is employed for temperature controllers, which enables effective temperature control. (For details of temperature controllers, refer to **P.1551**)

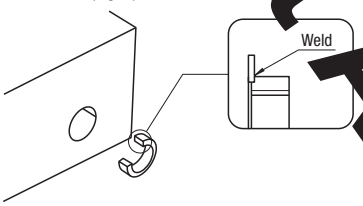
(2) Heating Element (Nickel-chrome Wire)
(3) Insulation Powder (Magnesia)
(4) Insulation Seal Material
(5) Terminal Section Isolation Material (ceramic)
(6) Washer
(7) Nut
(8) Terminal

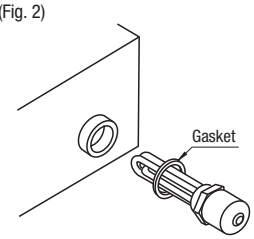
■Mounting Method



• Mounting of Sheathed Heaters for Heating Liquid (Plug (PF Thread or PT Thread) Heater, Flanged Type)

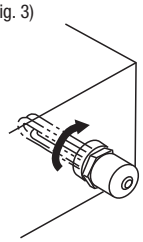
■Plug Type (PF Thread)

* For PT Thread Type, refer to **P.1523**



(1) Determine the mounting position of the heater on the water tank and open the hole of Ø70~71.
(2) Insert the socket for plug heater mounting (product number: HTS) into the mounting hole, and weld it. (Fig. 1)

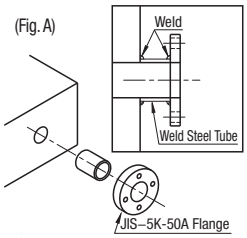
(Fig. 1)



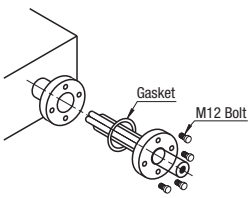
(3) Insert the included gasket onto the thread part, catch the hexagonal part with the wrench and screw the heater into the tank. (Fig.2, 3)

(Fig. 2)

(Fig. 3)



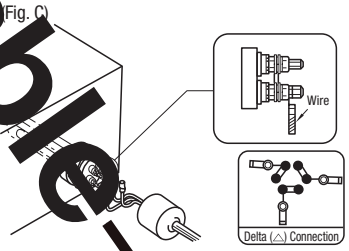
* Confirm that there is no liquid leakage after tightening.



■Flanged Type

(1) Determine the mounting position of the heater on the water tank.
(2) Attach the JIS-5K-50A steel pipe inserting welding flange to 50A socket and weld it to water tank. (Fig. A)

(Fig. A)

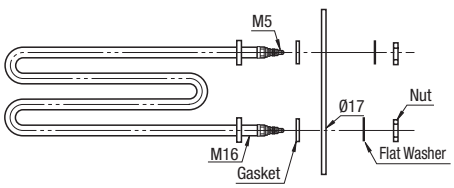


(Fig. B)

(3) Insert the included gasket into the sheathed part, and tighten the flange with M12 bolt and nut. (Fig. B)
(4) Confirm that there is no liquid leakage after tightening.
(5) Connect the wires with three terminals. (Fig. 4) (Fig. C)

(Fig. C)

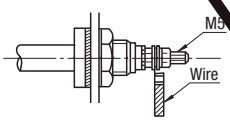
The current (I) of the delta (△) connection is $I=\frac{W}{\sqrt{3}xV}$



Ex.) Plug Heater of 200V and 10kW, $=\frac{10000}{\sqrt{3}x200}=28.9$ (A)

• Mounting of Heaters of Respective Shapes

(1) Determine the mounting position of the heater on the water tank, and drill Ø17 holes with proper pitch at two places.



(2) Insert the included gasket and washers onto the screw section, and then insert them into the mounting hole.
Fix the heater with included nuts from outside of the tank. (Fig. 5)

(Fig. 5)

(3) Connection Method: Connect wires with two terminals. (Fig. 6)

(Fig. 6)

* Confirm that there is no liquid leakage after tightening.

The heater with two terminals is single-phase. Current (I) is $I=\frac{W}{V}$

Ex.) For the heater of 100V and 500W, $I=\frac{500}{100}=5$ (A)

Not Available

■Precautions for Use

- Do not let the heaters run in open air, for that will cause fires and heater element damages.
- Avoid water splashes on the heater's wiring terminals. Electrical leakages and shorts may result.
- Heater surfaces collect mineral and carbon deposits from prolonged usage. Clean the surfaces periodically to avoid corrosions and element damages.
- Make the wiring terminal connections securely while noting for the contacting conditions.
- Use heat resistant wire.
- Do not use over the rated voltage (V).
- Disconnect the power source before removing the heater unit from the heated object. Do not touch the heater immediately after the removal.
- The heaters will expand slightly due to heat. Design with ample space surrounding the heater to accommodate this expansion.

■Selection Method

(1) Determine the heat quantity (W) required for the heater. Calculate with the following formula by using the weight of heating product, the specific heat of heating product, the increased temperature, and the time to reach the preset temperature.

$$\text{Calories Required for The Heater (kW)} = \frac{\text{Weight of Heating Product (kg)} \times \text{Specific heat of Heating Product (kcal/kg°C)} \times \text{Increased temperature (°C)}}{860 \times \text{Heating Time (h)} \times \text{Efficiency } (\eta)}$$

It is difficult to calculate the Efficiency (η) precisely because it varies by heat retention, insulation, arrangement of heater but the suitable value is generally about 0.2~0.5.

• Specific Gravity and Specific Heat of Water and Oil

Substance	Specific Gravity (Kg/ℓ)	Specific Heat (kcal/kg°C)
Water	1.00	1.00
Lubricant	0.87	0.46
Spindle Oil	0.85	0.46
Olive Oil	0.91	0.40

The values of oils are at 40°C.

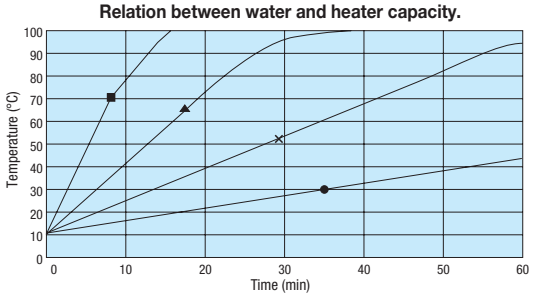
Ex.) When 50ℓ water is heated to a temperature of 50°C.
(Assuming the water temperature is 20°C, and the time to reach the preset temperature to be 60 minutes.)

$$\text{Calories Required for The Heater (kW)} = \frac{50 \times 1.00 \times (50-20)}{860 \times 1.00 \times 0.5} = 3.5 \text{ (kW)}$$

* Efficiency is assumed to be 0.5.
- Actual Measurement Data: Time of Increasing Temperature for Each Electrical Power (Electrical Power Density) Insulation Tube

(2) Determine the number of heaters and the quantity of heat (W) per one heater
Determine how to mount the heater, and the number of heaters and calories per one heater when total calories is the required calorie for the heating products.

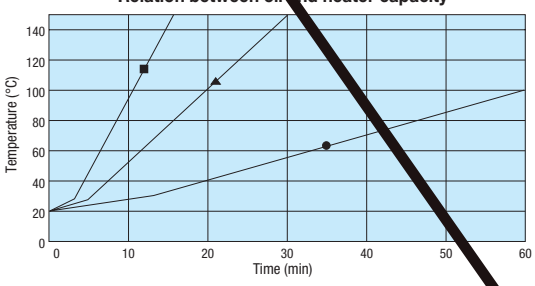
• Selection of Sheathed Heater



Ex.1) Use one Plug Type Heater (For Water Heating).
→MSHPW4 (4000W)

Ex.2) Use two M Type Heaters for water heating.
→MSHM2 (2000W×2=4000W)

In this case, because it is difficult to calculate the efficiency (η) precisely, select the heater that has larger calories (W) than the calculated value.
(Check that the length of the heater (L dimension) and the operating voltage (V) are appropriate.)



• Actual Measurement Data: Temperature Rise Time / Electrical Power (Electrical Power Density)

Relation between water and heater capacity.

* Used Heater: MSHPW
* Heated Object: Water (15ℓ)

Relation between oil and heater capacity

* Used Heater: MSHPL
* Heated Object: Olive Oil (20ℓ)

■Part Name

No.	Name	No.	Name
(1)	Protection tube for a Bimetal Thermostat	(3)	Power Supply Export (NBR)
(2)	Bimetal Thermostat	(4)	Insertion Type Connecting Terminal

■Features

This heater has both protection pipe and bimetal thermostat. It prevents overheating of a heated object.

Connecting Diagram (△)

■Precautions for Use

- Ensure a thermostat is fixed in the protection pipe before using. When it exceeds rating, use an assistant relay.
- This product is designed to prevent overheating of liquids. The thermostat does not function under dry-running condition after the liquid is gone, and it may invite unexpected trouble. Use with a monitoring system including a float switch to monitor the liquid level for boil-dry protection.
- Bimetal thermostat of water temperature plus 20°C or above is recommended.

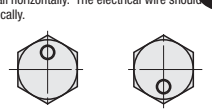
■Features

· These switches are designed as alarms or signal of water-level for liquids such as water and oil.
· By combining with a power supply, external circuit, etc., can be used as safety circuit to prevent liquid heaters from dry-running.

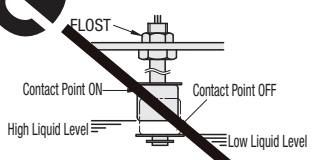


■Principle of Operation(FLOST)

The float moves according to changes in the liquid level. When the magnet comes close to the reed switch (high liquid level), the reed switch will be activated. When the liquid level falls, the contact point will be off again.

■Cautions on Installation (FLOSK)

Install horizontally. The electrical wire should vertically.



On when liquid level falls (Electronic wire at upper position)

On when liquid level rises (Electronic wire at lower position)

· Confirm that there is no liquid leakage before use.
· Avoid installing in places where the float cannot move smoothly.
· When pouring liquid, do not splash it on the body of this product.
· After the wires are connected, observe the liquid level with eyes and confirm the output before actual use.

■Cautions on Installation (FLOST)

...at may not move properly when mounted ...ontally.

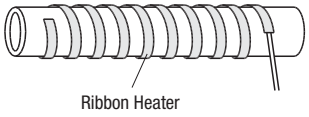
■**Features:** Belt-shaped heaters easily attachable to piping and tanks.

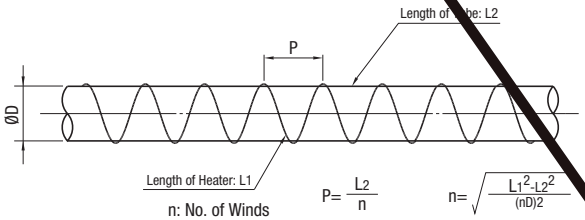
- Standard Type
- Excels in heat resistance as the sheathing of the heater is glass cloth.
- Maximum operating Temperature is 350°C.



- Fluorine Coating Type
- As the fluorine coating has been applied on the glass cloth sheathing, dust raise is controlled.
- Maximum operating temperature is 200°C.

■**Basic Structure**
- This is a heater that has glass cloth covering the heat generating body. As for the fluorine coating type, the heating body is covered with glass cloth by fluorine coating.

■**Basic Structure Diagram**



■**Mounting Method**
- After winding over a pipe, fasten the heater with the mounting strap.

■**Precautions for Use**
- Do not let the heater run in open air, for that will cause fires and heater element damages. Ensure the heater is closely contacted with a heated object when using.
- Prevent the use of heaters from getting wet by water, oil or humidity, as the surface is glass cloth sheathing.
- Do not install by overlapping the heater.
- Make the wiring terminal connections securely while noting for the contacting conditions.
- Do not use over the rated voltage (V).
- Disconnect the power source before removing the heater unit from the heated object. Do not touch the heater immediately after the removal.
- Use the temperature controller for safety.

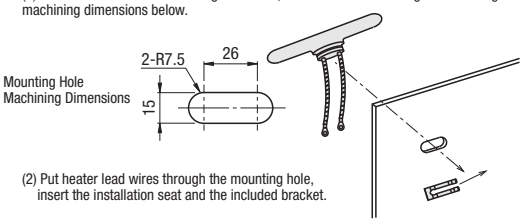
Features

- MISUMI's ceramic plate heaters are highly-efficient far infrared heaters.
- The far infrared ray uniformly heats the surface and interior of the object.
- There is little deterioration with time and remain highly-efficient for a long time.
- Lightweight, clean with no particle generation, and excels in thermal response.

- Heat Insulating Highly-efficient Type

Heat insulating material is embedded in conventional ceramic plate heaters. Heat insulation effect by air and heat insulating material enables less heat transfer and conduction to the backside of the heater, which enhances heat emission from heater surfaces. (Increased Temperature Properties Graph)

- Heat Insulating Highly-efficient Type with Built-in Temperature Sensor



K Thermocouple is attached to measure the heater surface temperature. Suitable when the heater temperature control is required.

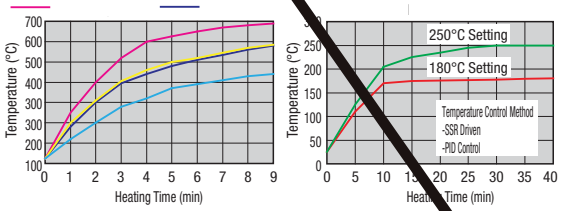
- Far Infrared Plate Heaters

Large plate heater of 400x300 enables uniform heating of large area surfaces.
Temperature unevenness will be smaller compared to combining conventional ceramic plate heaters.

Mounting Method (Far Infrared Ceramic Plate Heaters)

(1) Decide the location of mounting the heater, and drill a hole following the mounting hole machining dimensions below.

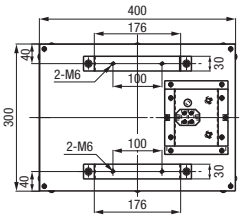
(2) Put heater lead wires through the mounting hole, insert the installation seat and the included bracket.



Mounting plate thickness should be within 1~2mm.

Usage

Suitable for clean heating as follows: LED industry, semiconductor industry, food industry, biotechnology industry and heating, forming, drying, softening, preheating, hardening, aging, heat retention of the plastic molding process.



Temperature Rise Charcteristics of Far Infrared Ceramic Plate Heaters and Plate Heaters

*Temperature at 25°C in natural atmosphere

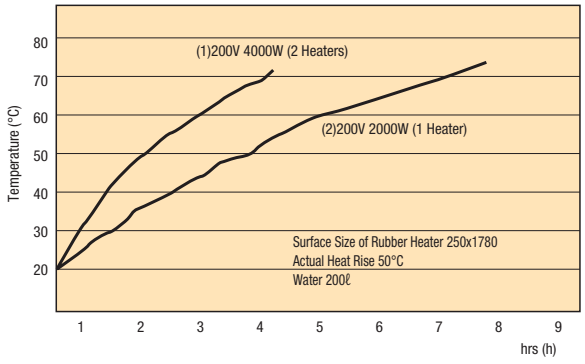
* The setting range of the thermostat is at 30°C ~ 110°C.

Order Example | Part Number | Days to Ship | 6 Days | P.87

■Features



Drum Heaters are the silicon rubber heaters for drums, pails and 18 liter metal cans. Liquid viscosity and the temperature can be properly controlled by the equipped temperature controller (liquid expansion type). It is lightweight, and can be installed and removed by a single person.
Available for material preheating, viscosity control for high viscosity fluid and freeze prevention for liquid.

■Precautions for Use

(1) Do not use it in flammable atmospheres.
(2) Install the heater below the fluid level. (Installation at the bottom of the drum is recommended.)
(3) To avoid burn injury, do not touch the heater when the power supply is on or immediately after the use.
(4) Do not use in places with rain fall.

Standardized thermostat (30°C ~ 110°C) and thermal fuse (184°C) prevents unexpected accidents.

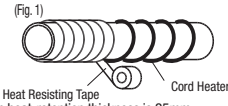
Features
- Excels in heat resistance as the sheathing of the heater is silicon rubber.
- As the heater is cord shape, it can be fitted in any type of shape.
- Maximum Operation Temperature is 180°C.



Basic Structure
- This is a heater integrating a heat generating body with the silicon rubber.

Basic Structure Diagram

Mounting Method
- Install directly onto piping.
- As an example to secure the heater, heat resistant aluminum tape can be used.

(Fig.1)

Precautions for Use
- Do not use the heater run in open air, for that will cause fires and heater element damages. Ensure the heater is closely contacted with a heated object when using.
- Do not install [illegible] the heater.
- Make the [illegible] connections securely while noting for the contacting conditions.
- Do not use over the rated voltage.
- Disconnect the power [illegible] before removing the heater unit from the heated object. Do not touch the heater immediately after the removal.

Method to Determine the Number of Winding
P.1526

Selection Method (Cord Heaters and Silicon Belt Heaters)
Calculate with the following formula by using the heat insulating thickness, size of piping, temperature of [illegible] and temperature difference with the external atmospheric temperature (refer to Fig. 2, Table 1 and 2)

Heat Quantity Required for The Heater(W)=Watts per [illegible] of Tube(W/m) × Length of Tube(m)

Ex.) For piping size 15A (1/4B) and length 1m to be 30°C (Heat-insulation thickness is 25mm and external atmospheric temperature is [illegible]
From Table 1, when the insulation thickness is 25mm, tube size is 15A (1/4B) and the temperature difference between tube temperature (30°C) and external atmospheric temperature (20°C) is 10°C, the wattage [illegible] (W/m). Therefore

Heat Quantity Required for The Heater (W)=4.0 (W/m)x1 (m)=[illegible]

(Fig. 2)

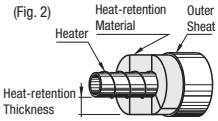


Table 1 When heat-retention thickness is 25mm — Unit: W/m (Watts per 1m of Tube)

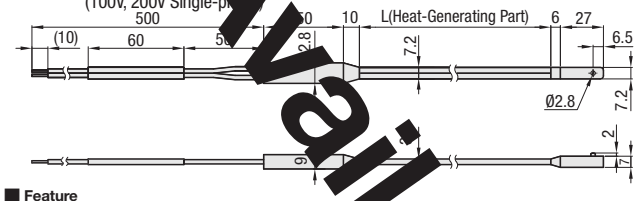
		200	800	3800				2.8	

Example

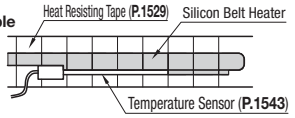


Structure
Insulating powers and a heat generator are hermetic-sealed and enclosed within sheath in the same manner as common thermocouple.

Features
The tube of the heater is extremely thin. This makes it usable for narrow and complicated places.
Enhanced flexibility enables you to change shapes as you want.
Minimum bending radius should be up to 3 times of D dimension.

Precautions for Use
Do not cross the sheath part or contact to the part.
Be sure to use Temperature Control Unit since heat tends to stay by covering with material of low thermal conductivity such as heat insulation material.

Silicon Belt Heaters

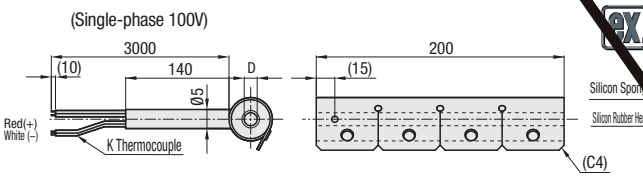


Feature
- Belt type heater with Nickel-chrome wire molded with silicon rubber
- The belt type structure enables to stick to the object closely and
- For Selection Method, refer to **P.1526**

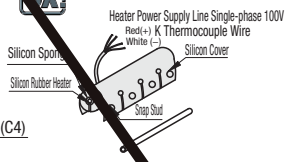
Selection Method: Left Page

Material:
Heat Generator: Nickel-chrome Wire
Coating Material: Silicon Rubber
Lead Wire: Silicon Rubber Film Tin Plated Annealed Copper Wire
Operation Temperature: -50°C ~ 180°C

Part Number Type	No.	L (Heat-generating Part)	V (Voltage)	W (Electrical Power)	Electrical Power Density (W/cm²)	€ Unit Price
	1050	1000	100	50	0.7	
	2050	2000	200	50	0.35	
	3100	3000	200	100	0.5	



Example



Precautions for Use
- Do not let the heaters run in open air, for that will cause fires and heater element damages.
- Do not install by overlapping the heater.
- Do not use over the rated voltage (V).
- This product is not water-proof. Do not use in places where water splashes or humidity is high.
- Wrap with heat resistant tape from top to use.
- Disconnect the power source before removing the heater unit from the heated object. Do not touch the heater immediately after the removal.
- Use Temperature Control Unit or a Temperature Controller for safety.

Silicon Rubber Heaters for Tubes

Example

Feature
- This silicon rubber heater can be wrapped directly to tubes.
- By wrapping tubes with sheet type silicon heater, the surface of tubes can be heated uniformly.
- Effective to fix the viscosity of fluid by heating the tube and retain the heat, and to prevent dust which sticks to tube surfaces.

Material:
Heat Generator: Silicon Rubber
HeaterCoating Material: Silicon Rubber
Maximum Operation Temperature: 200°C

Part Number Type	No.	D Applicable Hollow Outer Diameter Inch (mm)	V (Voltage)	W (Electrical Power)	€ Unit Price
	6A	1/8 (10.5)	100	23	
	10A	3/8 (17.3)		35	
	15A	1/2 (21.7)		38	

Precautions for Use
- Do not let the heaters run in open air, for that will cause fires and heater element damages.
- Do not use over the rated voltage (V).
- This product is not water-proof. Do not use in places where water splashes or humidity is high.
- Disconnect the power source before removing the heater unit from the heated object. Do not touch the heater immediately after the removal.

Features

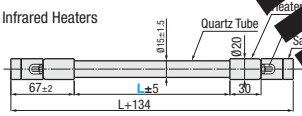
- The band heater is a thin cylinder heater, coated with stainless steel plate, whose nickel-chrome wire is insulated with the heat-resistant mica board.
- One-piece type and two-piece type are available for different diameters of the heated object.
  One-piece Type: Suitable for the cylinder of small diameter. 1 unit (2 pcs.) of terminals are included.
  Two-piece Type: Suitable for the cylinders of relatively large diameter. 2 units (4 pcs.) of terminals are included.
- Max Operation Temperature: 300°C

Usage

-Band heater can be used for cylinder shaped heated objects (work).
-Principal usages are: Heating of hot nozzles, pipes and cylinder shaped metal plates

Precautions for Use

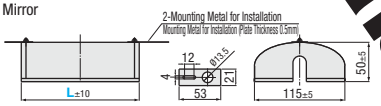
- Do not let the heaters run in open air, for that will cause fires and heater element damages.
- Apply electric power under the condition in which an object such as metal to be heated is attached to the heater.
- Attach the object so that the heater comes into close contact with the surface to be heated. A gap will cause premature breakage of wire.
- After installation, energize it for several minutes, and tighten them once more after heated. At that time, take care not to be burnt.
- The heater is not waterproof. Avoid water splashes on the heaters.
- Do not use over the rated voltage (V).
- Use the temperature controller for safety.
- Do not mount One-piece Type flat. (Put the heated object through the heater.)



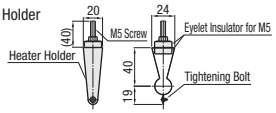
Quartz Far Infrared Heaters

RoHS

(Quartz Far Infrared Heater + Reflection Mirror + Mounting Holder 2 pcs.) Single-phase 100V/200V
(Quartz Far Infrared Heater) Single-phase 100V/200V



- Quartz Far Infrared Heaters



- Quartz Far Infrared Heaters
  M Materials:
  Quartz Tube : Quartz Glass
  Heater Cap : Brass + Nickel
  Plating Terminal : 1.4305/X10CrNiS18-9

- Reflection Mirror
  M Materials:
  Reflection Mirror: A1050
  Side Plate: A1050
  Holder Mounting Metal Fitting: 1.0038/S235JR + Ni Chrome Plating

- Reflection Mirror

- Mounting Holder

The customer should assemble the MPHHS (set), which is a set of quartz far infrared heater, reflection mirror and mounting holder.

How to Mount

(1) Fix the "mounting holder" to the "mounting metal" installed on the reflection mirror.
(2) Fix the reflection mirror and mounting holder to the designated place by using the screw for mounting holder or by drilling holes on reflection mirror body.
(3) Fix the "mounting holder" of quartz far infrared heater by "mounting holder". Do not fix it by "quartz tube" or "safety insulator".

Caution on Installation

- After heating, tighten the nuts once more. (By heat expansion, it may be loosened.)
- Additional tightening of the tightening bolt is recommended to only one side as Quarts Far Infrared Heater may be broken due to the different coefficient of heat expansion.

Part Number Type	L (Effective Length) 10mm Increment	V (Voltage) Selection	W (Electrical Power)	€ Unit Price

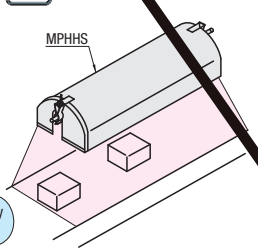
Quantity	1~10	11~15	16~20
Rate	€ Unit Price	5%	10%

For orders larger than indicated quantity, please request a quotation.

Features

- The quartz far infrared heater has Nickel-chrome wires wrapped inside the quartz glass tube, which irradiate far infrared ray to the heated objects.
- Although its function is similar to that of far infrared ceramic heaters, compared with ceramic heater it has the features as follows: (1) Rise/Drop in temperature are quick after the power is supplied (2)Relatively broad heat distribution (3) Irradiated heat direction is easily controllable
- The far infrared ray uniformly heats the surface and interior of the object.
- The temperature adjustment can be done by adjusting the distance to the heated object.
- This is a clean heater with little dust scattering. The used quartz tube has excellent chemical resistance.
- By using the reflection mirror, the irradiation direction of far infrared ray can be controlled, and more effective heat radiation can be obtained.

Notes on Use



- These products are made of glass. Be extremely careful with handling, since it is easy to break. Turn off the power immediately when broke during operation.
- These products are for horizontal (lateral) use. Not usable in position of vertical (standing positioned) and slant (oblique positioned).
- This heater becomes very hot. It may result in burn injury if touched while light is on or immediately after lights-out.
- The cap part (insulators on both ends of quartz tube) should be used at the temperature lower than 100°C.
- Do not touch the glass tube by bare hand. Sodium from sweat decreases the mech. strength of quarts tubes.

Usage

- Desiccation of the Base and Material
- Baking Finish and Desiccation of the Coat
- Baking (Processing), Dehydration and Desiccation of Food

Because infrared ray heats the object directly through no air, it is more efficient.

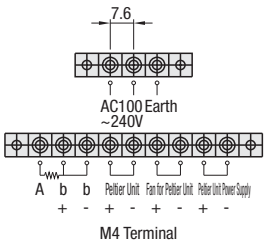
In	Thermocouples (K · J · R · T · N · S · B) Temperature Measuring Resistor(Pt100 JPt100)
Co l Method	With auto tuning PID control, with self tuning PID control, ON/OFF control
Indication Ac (Thermocouple)	The bigger one of ±0.3% of specified value + 1 digit or ±2 Degrees (Celsius)
Indication uracy (Temp. Measuring Resistor)	The bigger one of ±0.3% of specified value +1 digit or ±0.9 Degrees (Celsius)
Indication ccuracy Maintenance Temp. Range	Ambient Temperature: 23±10°C
Display Breakdown Capabili	0.1° (Celsius)
Range of Set T ure	-30° (Celsius) ~ 120° (Celsius)
Proportional Control (	0.1~200%
Integration Time (I)	0 ~ 3,600 sec.
Derivative Time(D)	0 ~ 3,600 sec.
Peltier Driving Method	PWM driving
Power Supply	Supplied externally (DC9 ~ 24V)
Consumption Current	15VA
Peltier Driving Capability	DC24V 7A (maximum in regular time)
Operating Environment	Indoors
Operating Temp. Range	+10 ~ 40°C
Operating Humidity Range	85% or less (No condensation)
Sampling Frequency	500mS
Storage Element	EEPROM
Power Supply Voltage	00 ~ 240V (Allowable voltage change range 85 ~ 264V)
Power Consumption	15VA (maximum)
Mass	Approx. 2.7kg



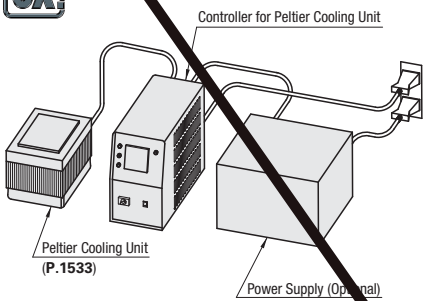
Overview

Peltier Cooling Unit (**P.1533**) Temperature adjustment controllers capable of heating/cooling control o ling Units. Suitable for not only small chiller and experiment machine but also building into device owing to the compact design specialized in control fun . (Power source needs to be obtained by customer.)

Circuit

Connection

Precautions for Use



Only one Peltier Cooling Unit (**P.1533**) can be connected to one con ller.

DC power source or power plug is not included.

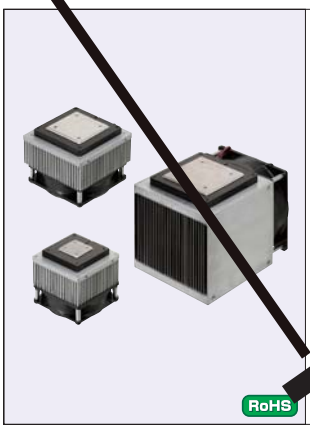
Warranty

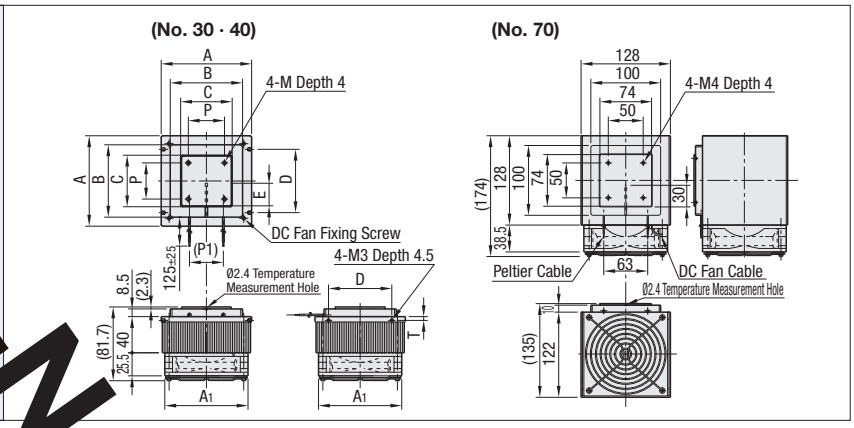
Warranty Period: One year from the shipping date

Warranty Condition: Please present the guarantee card included at the time of delivery.

Coverage of Warranty: Problems or damages arising through the normal usage in compliance with the instruction manual included at the time of delivery. If trouble occurs during the warranty period even though the unit has been operated in the normal manner, we will recover and repair or replace the unit.



In the following cases, repairs are for consideration. We will recover the product and make an quotation.



(1) When the damage caused by the factors out of warranty range and the product is repairable.

(2) When the damage has occurred beyond the warranty period and the product is repairable.

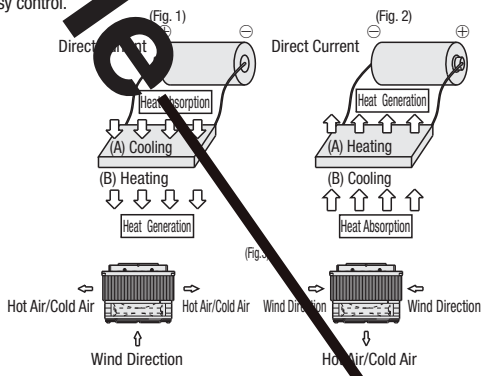
Order Example: Part Number

Days to Ship: 6 Days P.87

Specification

No.	30	40	70
Cooling Capacity [W]	18	35	[illegible]
Max. Temperature Gaps [°C]	48	45	[illegible]
Peltier Heat Resistance Temperature [°C]	120		
DC fan Allowable Temperature [°C]	70		
Heating Capacity [W]	36	70	14[illegible]
Rated Voltage [V]	12	12	24
Starting Current [A]	4	6.3	6.5
Noise [dB]	35	37	39
Allowable Load [N]	200	300	500
Operating Ambient Temperature Range [°C]	-20~+70		
Operating Ambient Humidity [%RH]	85 or Less		

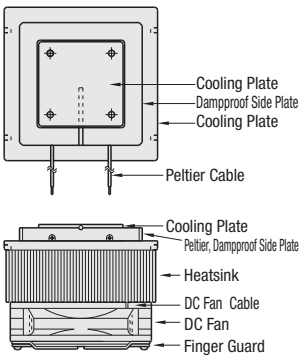
(Terminology)
- Cooling capability...The amount of heat it can remove (cool) at full capacity. Please choose Unit No. so that the heat amount is at cooling capability or less. (Refer to how to select on the right page.)
- Maximum temperature difference...It is temperature difference between room temperature and the cooled surface. It might vary depending on the room temperature.
  Ex.: With No. 30, and at room temperature 25°C the maximum controllable operation temperature is 25-48= -23°C



(P) The values are representative values and not guaranteed.
(P) Allowable load is a value when load is applied evenly.
Do not apply unbalanced load.
(P) When the upper temperature limit for the Peltier itself is 120°C, be sure to operate at the temperature which does not exceed the allowable temperature (70°C: temperature for continuous use) for DC fan.

Features

- A unit product has brought ease of use of a Peltier device which simultaneously provides cooling and heating by direct-current.
- Using in combination with a controller designed for Peltier Cooling Unit (**P. 1532**) enables easy control.



Principle

With a DC current, temperature difference occurs on the Peltier element, and A side will be cooled, and B side will be heated (Drawing 1). If the electrical polarity is reversed, A side will be heated and B side will be cooled. (Fig. 2)

Basic Structure

A unit product with DC fan and heat sink assembled in a Peltier device.

Parts	Material
Peltier	Semiconductor device having Bismuth Telluride as chief material packaged with ceramic
Heat sink	EN AW-6063/AlMg0,7Si
DC fan	ABS - PBT Synthetic-resin
Cooling plates	EN AW-5052/AlMg2,5

As for direction of the wind, as Figure 3 shows, it can be used from any direction. (heat efficiency is same.)

Precautions for Use

(P) Please do NOT stop heat radiation fan while using Peltier Cooling Units. It might cause damage because of the rise of temperature of Peltier element.
(P) Please ensure to connect power source to correct polarity. Observe the voltage remains within the rated value. If it is below the standard, the heat radiation fan might stop.
Combination use with Misumi's Cooling Peltier controller (**P. 1532**) is recommended for safety use.
(P) Be sure that impact or excess load is not applied to the Peltier device. (Please refer to allowable load of below specifications.)
(P) Apply insulation to cooling surface to prevent due condensation. Wipe off water droplet when condensation occurs. Continuous use might cause inside erosion because of the water infiltration into Peltier element.
(P) Please insert temperature sensor into Ø2.4 hole for temperature measurement and fix it with silicon adhesive bond or similar things.

Not Available

Selection Method: This is a calculation when most appropriate heat exchanger is used at a cooling side. Values change depending on performance of heat exchanger.

Ex.) To lower current temperature (Tr) = 25°C to achieving temperature inside the cooling box (Tc) = 5°C

1)Obtain the surface area S(m^2) of the box to cool.
Ex.) For a box with inner dimensions of 270x210x420(mm)
S(m^2)=(0.27x0.21+0.42x0.21+0.42x0.27)x2=0.52(m^2)

2)Calculate the heat Q_1(W) that comes in via heat insulating material by the following formula.

$$Q_1(W)=\frac{\text{(Current Temperature T(r°C) - Achieving Temperature Tc (°C)) x Heat Conductivity K (W/m-K) x Surface Area S (m}^2\text{)}}{\text{Thickness of Insulating Plate T (m)}}$$

Ex.) Urethane form used as insulator. Thermal conductivity (K) = 0.03 (W/m - K), thickness (T) = 30 (mm) = 0.03 (m).

$$Q1(W)=\frac{(25(°C)-5(°C)x0.03(W/m-K)x0.52(m^2)}{0.03(m)}$$

=10.4≈10(W)

3)Determine the heat generated by the stirring fan and the amount of loss from heat exchange Q_2(W).
Ex.) Q_2=10(W)
(Though it is difficult to obtain precise figures as these differ depending on fan type or insulating property, general value range is 5 ~ 15(W). When fan speed is decreased value of Q_2 is reduced.)

4)Determine the heat generated by the heat source in the IC Q_3(W).
Ex.) Q_3=5(W) when a motor generating 5 watts of heat is in the box.
(Applicable only when there is a heat source such as a motor or IC board. When the box is empty Q_3=0(W))

5)Calculate the total heat amount U(W). (Appropriate safety coefficient is 0.6 ~ 0.8.)

$$U(W)=\frac{(Q_1+Q_2+Q_3)}{\text{Safety factor}}=\frac{(10+10+5)}{0.7}$$

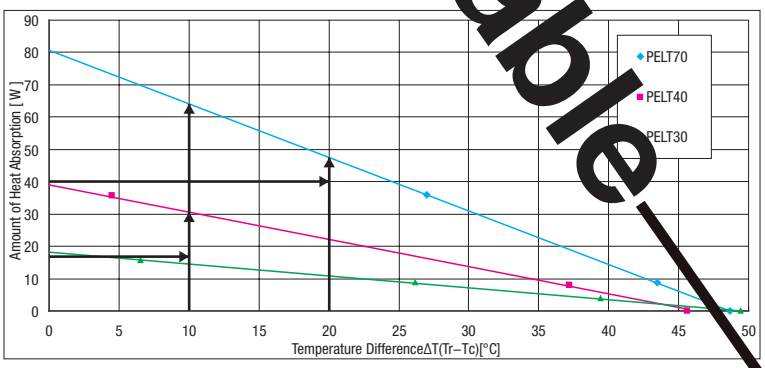
=35.7≈36(W)

6)Choose the best unit from the heat absorption property of the unit in the graph.
Ex.)Choose No.70 whose heat absorption capacity beyond 40W on the ΔT (Tr-Tc) = 20°C line.

$$Q1(W)=\frac{(25(°C)-15(°C)x0.03(W/m-K)x0.031(m^2)}{0.03(m)}$$

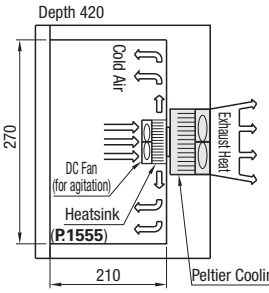
=0.31(W)≈0.3(W)

3)Determine the heat generated by the stirring pump and the amount of loss from heat exchange Q_2(W).
Ex.) Q_2=10(W)
(Though it is difficult to obtain precise figures as these differ depending on fan type or insulating property, general value range is 5 ~ 15(W). The values of Q2 is also lowered by decreasing the pump output.)



4)Determine the heat generated by the heat source in the water tank Q_3(W).
Ex.) When the water tank is empty Q_3=0(W)
(When heat source is in the water tank define its calorific value as Q_3(W).)

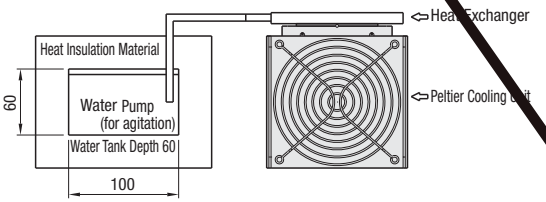
5)Calculate the total heat amount U(W). (Appropriate safety coefficient is 0.6 ~ 0.8.)



$$U(W)=\frac{(Q_1+Q_2+Q_3)}{\text{Safety factor}}=\frac{(0.3+10+0)}{0.6}$$

=17.2≈17(W)

6)Choose the best unit from the heat absorption property of the unit in the graph.
Ex.)Choose No.40 whose heat absorption capacity beyond 15W on the ΔT (Tr-Tc) = 10°C line.



Example

(Example at the time of cooling)

*DC fan (for agitation) shall be provided at customer's end.

* Heat Exchanger will be provided at customer's end.

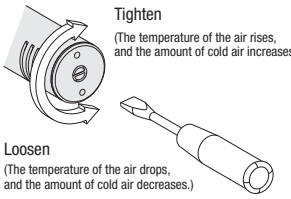
■Features

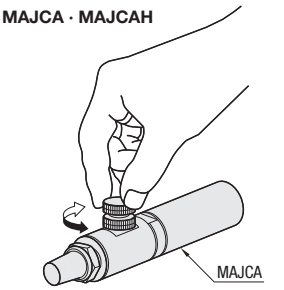
- The jet air cooler is a cool air generating device without moving part, which applies the principle of vortex theory.
- Supplied compressed air jets out air which is up to 40°C in MAJC and up to 60°C in MAJCA cooler than the temperature of the supplied air.
- Neither refrigerant nor electricity is used.

■Precautions for Use

- In air supply, use the air filter and reducing valve.
- Use an air dryer to avoid from freezing when using at low temperature. Pay attention to the surrounding components when condensation on the tip of the hose occurs water droplet.
- Adjusting Hose Type should be used at temperature -20°C or higher.
- Please read the manual and use the product correctly.



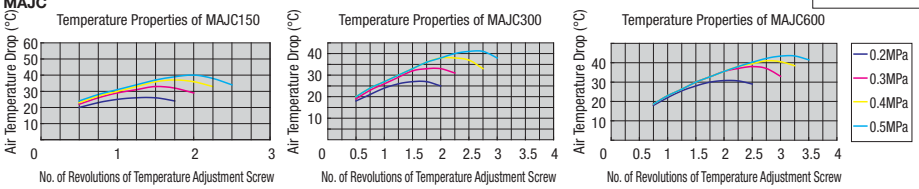
* Especially for MAJCA and MAJCAH, the temperature of parts marked with mesh may rise up to 70°C, depending on conditions of use, when air temperature at the entrance is 20°C. Be sure to avoid burn injury.



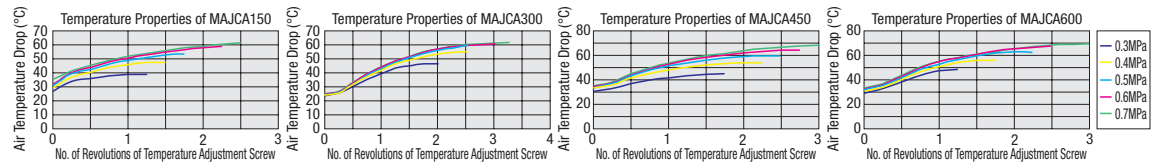
■Usage

- Forced cooling of solder
- Forced cooling of resin casting
- Cooling on plastic processing.

■Temperature Adjustment Method MAJC · MAJCH



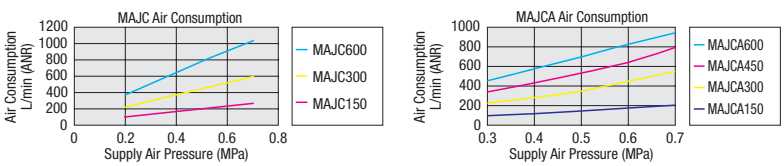
MAJCA · MAJCAH



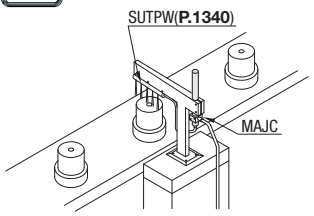
■Temperature Property

* The air descent temperature is the descent temperature against the air temperature at the entrance.

MAJC



MAJCA



No. of Revolutions of Temperature Adjustment Screw is obtained by turning a screw from the clockwise end to the counterclockwise end.

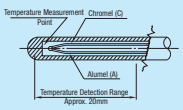
Example

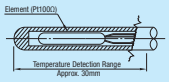
Temperature Sensor Guide / Connecting parts for Temperature Sensor

■Overview

In Misumi's Temperature Sensor line, we offer thermocouples (K Thermocouple and J Thermocouple) and temperature measuring resistors by shape and application. Refer to the following abridged temperature sensor selection list when selecting your heater.

[Abridged Table for Temperature Sensor Selection]

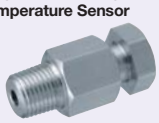




Shape - Application	Type
Sheath / Protection Tube	Standard (**P.1538**)
	Compact / Tapered Thread (**P. 1541**)
	Flange (**P. 1542**)
	Configurable Sheath · Protection Tube (**P. 1541**)
Use for a moving part	Lead Wire Protection (**P. 1540**)
	Sheath Type for Moving Parts (**P. 1542**)
	Ring Type for Moving Parts (**P. 1544**)
	Screw Mount Type for Moving Parts (**P. 1545**)

Usage	Type
For space-saving	L-shaped (**P. 1540**) / Screw Mount Type (**P. 1545**)
	With Tongue Terminals - Ring Type / Spade Type (**P. 1544**)
For specific environments	Heat Resistant Type (**P. 1540**) / Chemical Resistant Type (**P. 1543**)
For easy replacing at the time of wire breakage	Connector Type (**P. 1543**)
To take 2 temperature signals from temperature measuring point	Double Element Type (**P. 1543**)
For measuring cylindrical works	Band Type (**P. 1545**)
For close contact to a temperature measuring part	Spring Pressure Welded Type (**P. 1546**)
For measuring temperature of work surface	Surface Temperature Measurement Type / Magnet Type (**P. 1546**)

⚠Precautions for Use



- (Bending of Sheath/Protection Tube Type) Sheath type can be bent (min. bending radius: sheath dia. x 5). However, temperature detecting part (20mm from the tip) cannot be bent. Protection Hollow Type cannot be bent. Bending prevents it from accurate temperature measurement.
- Compensation wire (**P.1547**) must be used to extend lead wires of thermocouple. For Temperature Measuring Resistor, use the same three lead wires in diameter, length and material.
- Be sure to use each part within its heat resisting temperature listed on product pages. Note that the wire might be broken if the temperature exceeds its heat resisting temperature even if it has higher maximum measurement temperature.
- Do not apply large external forces and vibrations.
- Be sure to use sleeve, silicon tube and connector within respective allowable temperatures.

- Comparison of Thermocouple and Temperature Measuring Resistor

	K Thermocouple (J Thermocouple)	Temperature Measuring Resistor
Advantage	- Excellent in heat reaction - Strong against vibrations and impacts - A wide range of measurable temperature	- High accuracy of temperature measuring - Connectable to regular wires
Disadvantage	- Accuracy of measurement temperature is slightly lower. - Compensation wire must be used.	- Expensive - Weak against vibrations and impacts
Precision	(For Class 2 (JIS)) -40°C~Less than 333°C : ±2.5°C 333°C or more : ±0.75°C (Refer to each product page for the range of temperature measurement.)	±0.3°C or ±0.5%

MSPL MSNFG	1.0		
	1.6		
	2.3		
	3.2		
	4.8		

Example

Cut the 1/8 R (PT) thread in the heated object, fix the (1), and insert the sensor after tightening the (2) and (3) temporarily. Tighten (3), and fix (2) and (3).
*Because (2) and (3) are unified after fixing, they cannot be removed and reused after tightening.
*When air-tightness is necessary, use Taper Screw Type on **P.1541**

Highly suitable for changing the position of sensor according to the situation.

Volume discount rate is applicable to the price of sensor body only.

The upper limit temperature for measurement is the value at the temperature measurement point (the tip of sheath). When measuring, keep the sleeve temperature at or below the heat resistance temperature (80°C.) If the sleeve temperature exceeds 80°C, the thermally-expanded inside of sleeve may break the wire. Especially when a heated object temperature exceeds 100°C, a long type of sheath L length is recommended, which is used to put maximum distance between the sleeve and the heated object, or Temperature Sensor, Heat Resistant Type (**P. 1540**) is recommended.

The upper limit temperature for measurement is the value at the temperature measurement point (the tip of sheath). When measuring, keep the sleeve temperature at or below the heat resistance temperature (80°C.) It might cause disconnection because of the swell caused by heat inside the sleeve.
Especially when a heated object temperature exceeds 100°C, a long type of sheath L length is recommended, which is used to put maximum distance between the sleeve and the heated object, or Temperature Sensor, Heat Resistant Type (**P. 1540**) is recommended.

Temperature Regulators Guide

■Example of connecting temperature controlling products

General example of connecting heaters is shown below.

*) Difference between Relay and SSR

	Contact Point	Advantages	Disadvantages
Relays	Contact Point	Low Price	Short Life Span
SSR	No Contact	Long Life Span	Expensive, Generates heat

Temperature controller is the unit of a temperature regulator and SSR.
Temperature regulators are recommended for wall-mounting, and temperature controllers are recommended for easy use as a unit.

■Overview

MISUMI's Temperature Regulator is a compact multifunctional unit permitting the selection of input types according to the sensor to be used. By operating the front face key of the regulator, the input types of the thermocouple and temperature measuring resistance can be switched. Also in conformity to "IP66".

■Features

- Self-tuning PID

Self-tuning function enables a temperature controller to automatically tunes, corrects PID constant and converge (stabilize) fluctuation of control value occurred by outer interference or when changing the setting value.

- PID with overshoot restricting function

The overshoot (a rise exceeding the set value) occurred at the start of control, or at the time of changing the setting, is restricted for stable control.

- With Upper and lower limit alarm function.

- The alarm operation can be selected from the eight kinds according to the usage. Since the controller is provided with the delay timer function (setting range: 0 to 9999 sec.), it is also possible to set the alarm operation timing.
- Utilizing EV1 and EV2, two-step alarm setting is possible.
- MTCTRD / MTCTSD has the function of breakage detection for heaters when connected to the included CT (current transformer).

■Precautions on Wire Connection

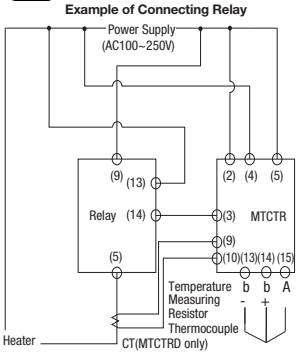
- When connecting wires, make sure to turn off the power supply in advance, or electric shock may result.
- This unit does not perform control operation for approx. 4 seconds after turning on the power. Be careful when using it as an interlock circuit since the output etc. does not function.
- Use the Crimp Terminal for wire connection that fits M3.5 thread. (Tighten the wire directly at the center portion.)
- Wire material of the wire connecting Temperature Measuring Resistor and Temperature Controller should be 5Ω or less wire resistance (per wire), wire material of the wire connecting Thermocouple and Temperature Controller should be the specified compensation lead wire or an element wire.
- When using the unit in the vicinity of a noise source, use shielded wire. Do not lay input and output lines together in the same duct or conduit tube.
- Separate the input and output signal lines 50cm or more from the power supply line and load line.

■Warranty

Warranty Period: One year from the shipping date
Warranty Condition: Please present the guarantee card included at the time of delivery.

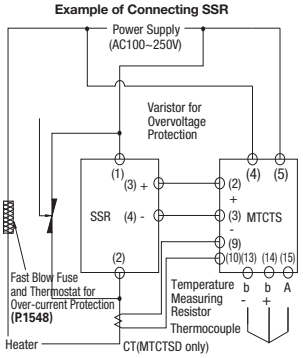
Coverage of Warranty: Problems or damages arising through the normal usage in compliance with the instruction manual included at the time of delivery.
If trouble occurs during the warranty period even though the unit has been operated in the normal manner, we will recover and repair or replace the unit.

In the following cases, repairs are for consideration. We will recover the product and make an quotation.
(1) When the damage caused by the factors out of warranty range and the product is repairable.
(2) When the damage has occurred beyond the warranty period and the product is repairable.



■Operating Environment

Never use in the environments with following conditions.
(1)Explosive gases, inflammable gases or corrosive gases.
(2)Either sunshine or ambient temperature (above 50°C) remarkably increases.
(3)Extremely low ambient temperature (below 0°C), such as outdoors in cold areas.
(4)Extremely high humidity (85%RH or higher).
(5)Splashing of water or chemicals.
(6)Severe vibration or shocks.
(7)Large volume of dust, iron power or black smoke.
(8)External noise, induction trouble, vibration, large shocks, and others such that can have damaging effects to the electric circuit.
(9)Violent temperature change.

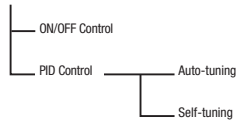


Example

Example of Connecting Temperature Regulator and Universal Relay/SSR (when 48x48)

Example of Connecting Relay

Example of Connecting SSR



This is an example of connection reference only. Not that this connection method guarantees the each product.

Temperature Regulators / Temperature Controllers Q&A

Q1: What are the advantage and disadvantage of each temperature controlling method?

A: The following ways of temperature controlling are available.

	Advantages	Disadvantages
ON/OFF Control	Quick temperature raise	Easily overshoot
PID Control	Restrains overshooting	Slow temperature raise

	Advantages	Disadvantages
Auto-tuning	Reach to an optimum setting value for control after running.	Tuning is required when the operating condition has changed.
Self-tuning	Auto-tuning is conducted when disturbance occurs.	Does not recognize a slight change as a disturbance and the optimal control setting is not always performed.

Confirm the advantage and disadvantage of each type before selecting products. For Temperature controllers (**P.1558**), the initial value is set at PID Control with Self-tuning. However, as stated above, it doesn't always perform the optimal setting. In that case, please follow Q5 and conduct the auto-tuning.

Q2: Can we connect heaters from other manufacturers to MISUMI temperature regulators and controllers?

A: No problem at all. Beware of the rated voltage (V) and the allowable current (A).

Q3: Which temperature controller should be used?

A:Use the controller for single-phase (MTCS/MTCRM/MTCD) for single-phase heaters. Use the controller for 3-phase (MTCH) for 3-phase heaters. Cartridge heaters and rubber heaters are all single-phase. For other heaters, see the information in the diagram for each product.

Q4: Is it possible to control several heaters with one temperature controller?

A:Possible. Be sure to use them under the allowable current of the temperature controller. Up to two terminals of the heater are possible to connect to one terminal. When using 3 or more terminals, use terminal blocks on **P.1556.** For calculation examples, refer to "Temperature Controllers" on **P.1486**

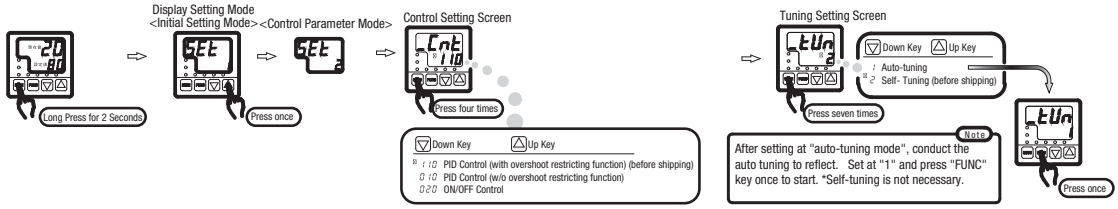
Q5: The temperature ascends very slowly. Controlling is not stable.

A:For PID Control with Self-Tuning, temperature is controlled by the value of P (Proportion), I (Integral Time) and D (Derivative Time). It could cause problems when each value is not optimal for the operating environment. Please conduct self-tuning by following the procedure below. *Tuning may take from a few minutes to more than one hour. (Heat-resisting jigs may take longer because the temperature doesn't descend soon.)

1. Switching of Display

Press "MODE" key for 2 seconds to change displays.

2. Change of Display Setting Mode



When Display Setting Mode is shown, press UP key and change from "Initial Setting Mode" to "Control Parameter Mode".

3. Setting of PID (Before shipping), ON/OFF

Set at Control Parameter Mode, press MODE key four times and the control setting screen will be on display. Use UP/DOWN keys.

4. Setting of Self-tuning (Before shipping) and Auto-tuning

Set at Control Parameter Mode, press MODE key seven times and thetuning setting screen will be on display. Use UP/DOWN keys.

Q6: We use several controllers and cannot have the same temperature.

A: Theoretically, each controller of PID control method should have the same temperature when the same value of P, I and D are input. When they have different temperatures, it might be the individual difference or malfunction of the sensor.

Q7: I cannot input the temperature higher than a certain degree.

A : Setting temperature could be limited.
(After turning the power on, press "MODE" for 2 seconds <Set 1 Screen> → press "▲" once → <Set 2 Screen> → press "MODE" once → <SLH display> is shown. The temperature shown below is set as the upper limit temperature. Press "▲" and raise the temperature.)

Q8: Temperature error is large.

A: Make sure if the distance between the sensor and the heated object is not too far. When the sensor and the power line are placed near, the sensor might be affected by the noise. Place the sensor away from the power line. Other two possibilities are as follows:

1. Make sure the type of the temperature sensor (K/J Thermocouple, Temperature Measuring Resistor, etc.) and the setting of the temperature regulator is correct.
(After turning the power on, press "MODE" for 2 seconds → <Set 1 screen> → press "MODE" once → select the type of parameter depending on the type of the temperature sensor from the followings. K Thermocouple: 00, J Thermocouple: 01, Temperature Measuring Resistor Pt100Ω: 10
2. Check whether input correction value is set.
(After turning the power on, press "MODE" for 2 seconds → <Set 1 screen> → press "MODE" three times → on <PV adjustment at 0 point screen>, set the adjustment value at "0".)

Q9: Temperature remains high and doesn't descend.

A:SSR inside of the temperature controller might be damaged. Stop using the controller immediately. Contact us at the following for repairs and send us the product. We will check if the repair is possible and inform you of the price and the days to ship.

MISUMI Corporation, Fluid Control Business Division, Fluid Control Business Team

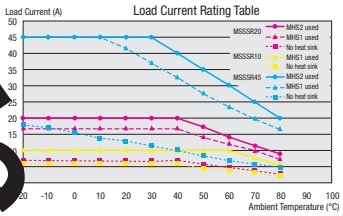
Input Signal of SSR

1) [illegible] correctly without altering the polarity (+, - or terminal numb[illegible]
2) For inp[illegible]e, ap[illegible] the normal starting voltage.
3) The in[illegible]pow[illegible] (signal) should be direct current. When co[illegible]ut[illegible]wn AC p[illegible]put the smoothing circuit with[illegible] and r[illegible]e the ripple so that each voltage of th[illegible] ripple[illegible]e with[illegible] operating voltage range.
4) Note that the noise near[illegible]put terminal may cause the malfunction.
5) When input line receives t[illegible]uctan[illegible]e easily, use shielded wire.

Operating Environ[illegible]

Because the SSR molding is [illegible]compl[illegible]ight, long term use in high humidity e[illegible]ent into the deterioration of SSR interior or ma[illegible]ctioning, will cause troubles from leakage betwee[illegible]e cha[illegible]parts etc
Examine the damp-proof measures as the syste[illegible]

Notes on Heat Sink Use

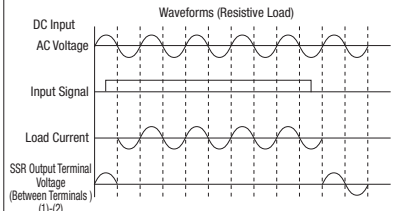


To enhance the heat radiation effect of SSR, debu[illegible]th smooth the surface of SSR, then lightly apply silic[illegible] compound. If not applied, the heat will accumulate SSR may break.

Cautions on Installation

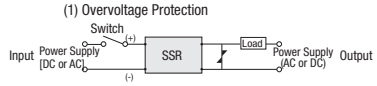
When the ambient temperature is high, it is necessary to decrease the load current.
Please pay attention to the relation of the mounting place and the load current.
Tighten the mounting screws firmly, so that they should not be loosened from vibration, impact and etc.

Notes on Wiring



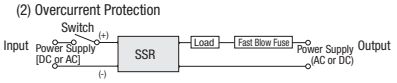
It is recommended to use round or Y-shaped crimping terminals to wire more securely, although single or stranded wires can be connected directly.

Cautions on Operation Wave and Use



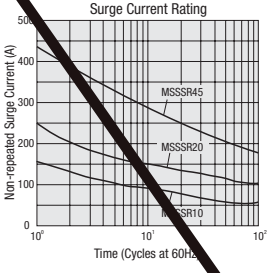
- Operation Wave

- In case of resistance load
Although the input voltage is applied near the AC power voltage, the current doesn't flow to the output side load of SSR at once, due to the effect of zero cross circuit.
When the AC power voltage decreases gradually till about zero voltage, the output side enters ON state.
And when it is not turned off immediately even though the input signal disappears and output current decreases close to zero, the effect of SSR internal element will turn it off.
When the load current reaches zero, power supply voltage appears between the terminals (1)-(2) of TRIAC.



- In case of inductive load
The voltage starts quickly (Magnetic field off voltage increase rate dv/dt is large at the commutation), and it is likely to cause malfunction, when the inductive load of reactance is especially large.

(1) Overvoltage Protection



It is likely to malfunction if the noise environment on the power supply side is bad and the big surge voltage is applied to SSR. In such a case, connect varistor as figure shown above.
For varistor voltage, it is recommended to use 200 to 300V for power supply voltage 110V, and 350 to 450V for power supply voltage 220V.

(2) Overcurrent Protection

For SSR, there is a provided over-current rating. It may result in permanent breakage of SSR if current over the rated current flows. Therefore, use of fast fuse is recommended to protect SSR from surge current, when there is a possibility that a load may be short-circuited or abnormal current may flow for some causes.

Surge Current Rating

(3) Parallel Connection
SSR cannot be used by connected in parallel to increase the current. However, it can be connected in parallel to compensate the trouble of open mode.
[Important] Malfunction
It is usually in the short mode in many cases when the element of SSR is destroyed by over-voltage or over-current, although two failure modes of the open mode and the short mode may occur.
Do not use it exceeding the maximum rating even just for a moment.
Avoid SSR malfunction by taking the measure such as circuit protection.
It is recommended to use in combination of SSR protection and fail safe (safety measures for malfunction).

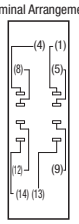
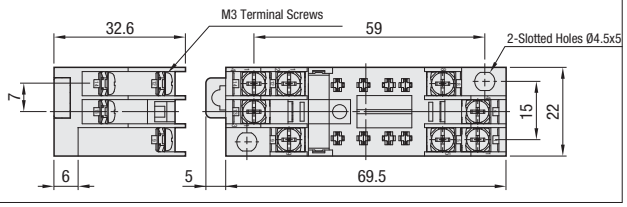
■Universal Relays-soldered Terminal-





RoHS

A Accessories: Socket for Relay 1pc.
Spring Fitting 2pcs.

■Cautions for Safety

- Shut off the power before attaching, detaching, wiring, maintaining and examining. There is a possible risk of fire or electric shock.
- Comply with the rated specification range and the specification. There is a potential risk of fire or electric shock.
- Use wires suitable for the applied voltage and current. Tighten the terminal screws using appropriate torque.

Part Number		Rated Coil *1				Contact Rating					€ Unit Price	Vol. Discount

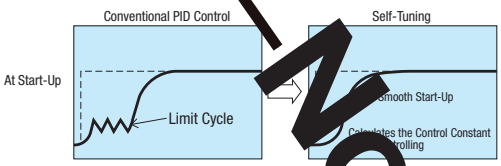
Temperature Controllers

Please refer to FAQ on **P.1552.**



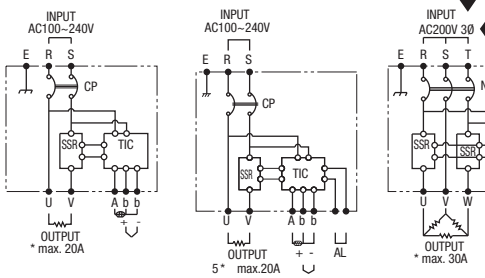
Temperature Controllers -Guide-

Misumi's Temperature Controllers can operate up to 20A in 100/200V on single phase or up to 30A in 200V on three-phase. Universal Type Temperature sensor selectable, is available, for a simple and compact line up of three kinds, such as compact, dual and high current type. And a new product "Universal and Compact Type with Alarm Function" have alarm output terminals. Specification of alarm output is same as the temperature controller (**P. 1553**).

■Features

Various types of temperature sensors and various types of input ranges can be set, therefore precise temperature control is possible. Also the control value has some fluctuations due to interference, the regulator can tune automatically and converge (stabilize) the fluctuation of control value because it has specific self-tuning function.
Moreover, when thermocouple or temperature measurement resistance burns out, protection circuit may work and prevent over-heating.

- Difference between Conventional PID Control and Self-tuning

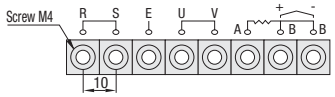


■Specification

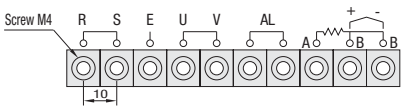
Control PID Control (With Self-turning Function)
Rating MTCS / MTCRM AC100V/200V 1Ø *20A
MTCD AC100V/200V 1Ø *20A x 2 Circuits
MTCH AC200V 3Ø *30A
* Resistance load without inrush current (Max. Value)

Input Type Thermocouple (K · J · R · T · N · S · B)
Temperature Measuring Resistor (Pt100Ω, JPt100Ω)
Switchable depending on the panel setting
Thermocouple at the time of shipment (K)
Conditions of Operation Temperature: 0 to 30°C (No condensation)
Over Current Cut-off: Brea

■Circuit(MTCD has two identical circuits)

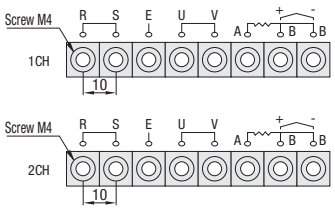


- MTCS / MTCD **- MTCRM** **- MTCH**

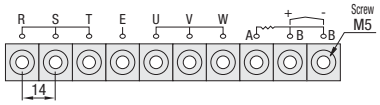


* Maximum current is heat resistance load.

■Connection



- MTCS (Universal - Compact)



- MTCRM (Universal - Compact with Alarming Function)

- MTCD (Universal - Two-series)

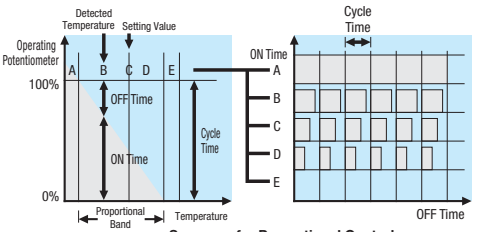
- MTCH (Universal - High Electrical Current)

- Connection with Sensors

Thermocouple
\+ Red
\- White or Black
Temperature Measuring Resistor
A – Red
B – Black or White
b – White or Black
(B and b have a choice between black and white.)

- Connection with alarm operation

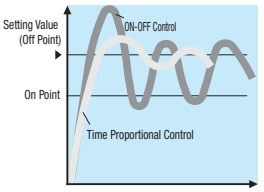
(MTCRM only)
AL – For alarm



- Connection with Power Supply

Single-phase 100V/200V
R, S – Power Connection
E – Grounding Connection
U, V – Heater Connection

Three-phase 200V
R, S, T – Power Connection
E – Grounding Connection
U, V, W – Heater Connection



■Control by Solid State Relay (SSR)

This is the control method where using proportional control (time proportional control) in the form of ON-OFF control, change the length of ON and OFF times in proportion to the variation against the setting value in the proportional band.

Summary for Proportional Control

This one set of ON and OFF cycle is constant, and is called a Cycle Time. Suppose one cycle time is 10 seconds. If the present value is lower than the Proportional Band, the controller output will remain ON. On the other hand if the present value is higher than the Proportional Band, the controller output will remain OFF.

Comparison of Time Proportional Control and ON–OFF Control

Within the proportional band, the time proportion between ON and OFF may change in proportion to the variation against the setting value depending on the temperature. For example, when the current value is lower than the setting value and ON time is 7 sec., OFF time can be 3 sec. and ON time can be longer than OFF time.

■Warranty

Warranty Period: One year from the shipping date
Warranty Condition: Please present the guarantee card included at the time of delivery. Coverage of Warranty:Problems or damages arising through the proper usage in compliance with the instruction manual included at the time of delivery. If trouble occurs during the warranty period even though the unit has been operated in the normal manner, we will recover and repair or replace the unit.
In the following cases, repairs are for consideration. We will recover the product and make an quotation.
(1) When the damage caused by the factors out of warranty range and the product is repairable.
(2) When the damage has occurred beyond the warranty period and the product is repairable.

- Contact for Repairs

MISUMI Corporation, Fluid Control Business Division,
Fluid Control Business Team, TEL:03-3647-7300 FAX:03-3647-7481

Precautions for Safety

Although this product is designed and manufactured with safety in mind, safety cannot be guaranteed for everything about it.
For example, when the SSR (load switch) incorporated in the product is damaged, the incidents, i.e. temperature increase, can be caused in spite of being controlled by TIC (temperature controller). To ensure safety in such a case when the temperature exceeds a preset level, consideration that a safety circuit may be provided to cut off primary power of this product is necessary. The closer the current of the product approaches to the maximum rating level, the higher its temperature becomes. This can affect other equipment or shorten the service life, etc. (Expected service life can be doubled by a temperature drop of 10°C according to Arrheneius' Law.)
Be sure to keep sufficient allowance, considering each rating and safety in mind. Wire connection should be conducted by someone with expertise. Electrical power plug and cord are not included. Select them according to the capacity of the heater you use.

Safety precautions are particularly required in the following cases.
- **Use under operating conditions not specified in the instruction manual.**
- **Use in nuclear power systems, trains, motor vehicles, combustion and medical equipment.**
- **Use that may seriously affect human life or property and that particularly requires safety considerations.**

For orders larger than indicated quantity, please request a quotation.

- MTCD (Double Type)

For power source of 1CH and 2CH, be sure to wire separately. Avoid using by shortening the space of terminals of 1CH and 2CH shown below. Heat generation and ignition may occur when power source capacity of 1CH and 2CH are added and allowable power source value exceeds.

Be sure to avoid the wiring shown above.

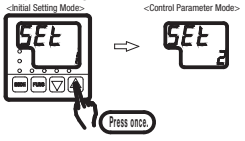
Order Example — Part Number

Days to Ship — 8 Days

■ Types of Sensors

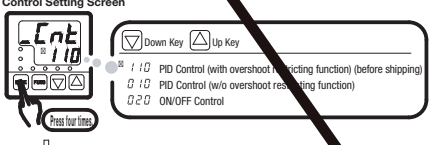
Thermocouples (K, J, R, T, N, S, B) and Pt100Ω, JPt100Ω sensors can be used for the universal type.
* Thermocouple K is used before shipping.

■Methods of Changing Sensor Types



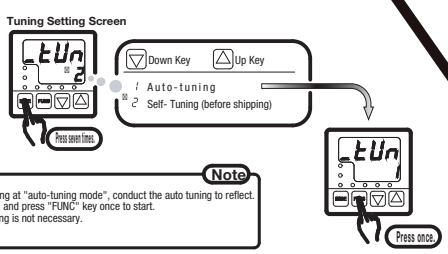
1. Switching of Display

Press "MODE" key for 2 seconds to change displays.



2. Change of Display Setting Mode

When Display Setting Mode is shown, press UP key and change from "Initial Setting Mode" to "Control Parameter Mode".



3. Setting of PID (Before Shipping) ON/OFF

Set at Control Parameter Mode, press MODE key four times and the control setting screen will be on display.
Use UP/DOWN keys.

4. Setting of Self-tuning (Before shipping) and Auto-tuning

Set at Control Parameter Mode, press MODE key seven times and the tuning setting screen will be on display.
Use UP/DOWN keys.

Note
After setting at "auto-tuning mode", conduct the auto tuning to reflect.
Set at "1" and press "FUNC" key once to start.
*Self-tuning is not necessary.

■Other Displays

Auto tuning is running.
*This message and standard display will be shown alternately.

The sensor is disconnected or above the temperature range.
*Check the connected sensor.

The temperature is below the sensor temperature range.

- Memory Error
*If the error message is displayed after reboot, temperature regulator is damaged.
It is not operational.

- Sensor type is different.
*Ex. When Temperature Measuring Resistor (Pt100Ω) is connected at the setting of thermocouple.

- Auto Tuning Error
*Try Auto Tuning Again.

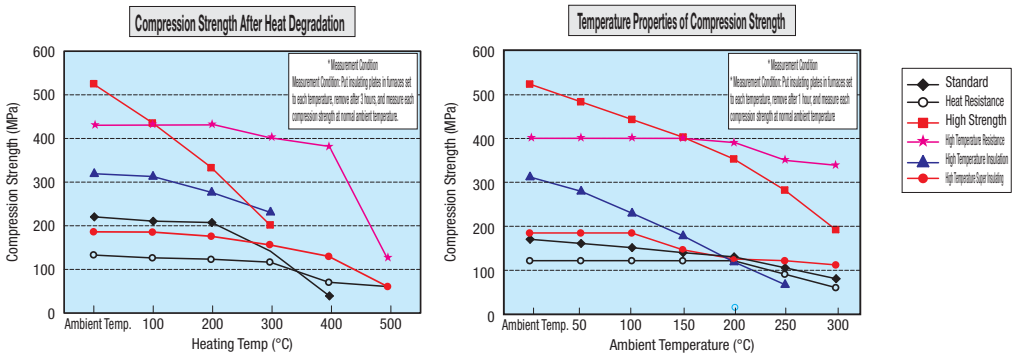
Resin Plate Characteristics

-Insulating Plates · Thermal Plates-

■Characteristics of Insulation Plates

MISUMI heat insulating plates provide excellent heat insulation. These plates are laminated heat resistance sheets which are made with glass fiber (that is forming frames) and combined material with high heat resistance.
They are asbestos-free new materials. Seven grades of heat insulating plates are available to meet various applications.

- Standard Grade: It is suitable for a use of a heat resistant structural material for heating presses and die spacers.
- Heat Resistant Grade: It can be used as heat resisting structural material in much higher temperature and is more cost-effective than the standard grade.
- High Strength Grade: It has excellent compression and bending strength properties and is suitable to use as heat insulating material for the outside of heating furnaces.
- High Temperature Resistant Grade: It maintains compression strength property under high temperature and is suitable for a use of heat resisting and insulating material for the outside of electric furnaces.
- High Temperature Insulating Grade: As both of low heat conductivity and high strength were realized, it provides excellent heat insulation effect with smaller thickness of plate.
- High Temperature Super Insulating Grade: Low temperature conductivity, lightweight and strength in high temperature provide excellent insulation.
- Very High Temperature Resistant Grade: Excellent heat resistance up to 1000°C. Usable for heating furnaces with high temperature.
- Free-cutting Grade: It has excellent mechanical strength and dimension stability. It can be used as cement board for electric insulation.



■Characteristics of Thermal Plate

MISUMI's Insulation Plates are lightweight and provide excellent heat insulation effect.
The Heat Insulation Plates make it possible to improve operational environment such as heat reservation of equipment and prevention of burns at a low cost.

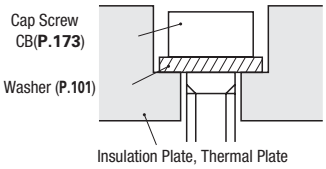
(Testing method conforms to JIS K6911. (Listed values are not guaranteed values but representative values.
(Note 1) "Recommended Operation Temperature" is the temperature when a long-term use does not reduce the quality rapidly. (Refer to next page "Insulation Plates Characteristics Graphs".)
(Note: 2) "Destructive Temperature" is a temperature where carbonization, collapse, and meltdown will begin.
(Note 3) "Compression Strength" of thermal plate (HIPCA) is the value for 5% deformation.
(Note 4) Condition for "Volume Resistivity" of free-cutting grade (HIPMA) is 24h/150°C.
(Note 5) Values of "Surface Resistance" and "Bending Strength" of free-cutting grade (HIPMA) are those after drying.

■Insulating Plates Properties Graphs (The following graph is an example of actual measurement. The data are reference values because of variations depending on measurement conditions.)

■Notes on Usage of Insulating Plates and Thermal Plates

(1) Be sure to use a washer with a bolt. The insulating plate may break when the bolt is tightened too hard. Especially, thermal plate (HIPCA) must be handled with care because of its softness. (Fig. A)



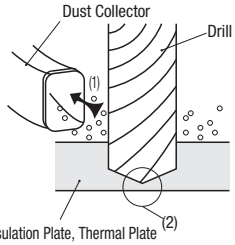
(2) Do not use in places where there may be splashes of water, chemicals, Insulation plates that have absorbed moisture may cause cracks or significant performance deterioration due to increased temperature. Especially, Free Cutting Grade (HIPMA) should be used when absolutely dry due to its water absorption.

(3) They are laminated products, so do not apply load in the direction of the layer (cleavage direction).

(4) Initial smoke and slight odor (thermal plates (HIPCA) have slight odor) may occur when using heat resisting grade (HIPHA) and thermal plates (HIPCA) at 300°C and above. Take equivalent measures for usual smoke agent such as ventilation and keep face away from it, although the smoke and odor have no especial toxicity.

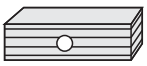
(5) High Insulating Plates have a hollow to provide excellent heat insulation. They may have lines on the surface, but the lines do not affect the property and heat insulating effect.

(Fig. A)



■Notes on Usage of Insulating Plates and Thermal Plates

(1) When machining, vacuum dust into a dust collector so that it may not scatter. (Fig. B-(1))
Be sure to firmly fix a High Insulating Plate on the bench because it is soft.
The dust does not contain the designated chemicals such as asbestos, but safety measures for usual works in dust, such as masks and goggles are required.
It may affect the skin such as itching, because it contains glass fiber. Wear gloves when handling the plates. In addition, when dusts adhere to the sliding parts of machine tools, there may be degradation in accuracy due to abrasion.



(2) Drilling of the insulating plate may cause cracks. Attention should be taken to hole pitches, hole diameters, machining conditions, etc. (Fig. B-(2))

(3) They are laminated products, and not suitable for tapping and three-dimensional machining. Especially, machining such as drilling or cutting in the direction of lamination may cause cracks and should be avoided.
(Fig.C)

(Fig. B)

(Fig.C)

Avoid the machining in the direction as shown in the above figure.

Notes on Metal Plate Product Transactions

(1) Condition of Product Delivery
In principle, products over 30kg will be delivered on F.O.B..
Please note that we do not provide loading and unloading equipment such as forklifts at the time of delivery.

(2) Packaging for Large Size Plates
Products over 50kg will be delivered in wooden crates.
Products weighting 50kg or less may also be delivered in wooden crates depending on the dimensions.

All prices listed here are subjected to steel price changes.

Metal Plates Guide

MISUMI Metal Plates are available in the catalog or "Material Shop 24".

[Material Shop 24 Metal Plate Website Contents]

- **Selectable from all products including products not shown on the catalog made of 51 materials such as finishing plates, Cut plates or Flat bars.**
- **Select specifications, part number, delivery date and the price are automatically displayed. Please proceed to ordering with the information.**
- **Conformed products to the specifications are displayed in price ascending order. Easy to select the most economical product.**

For "Material Shop 24" details, refer to **P.1581**

Material Shop 24 Metal Plate Website

Part number, Delivery Time and Price are displayed in just 6 seconds!

Selection Procedure

1	**Specification Selection**	Material, Finish, Size, Quantity
2	**Automatic Selection of Products**	Product number, Delivery Time and Price are displayed.
3	**How to Order**	Order on WOS
		Print a fax ordering sheet
		CSV data downloading

* Please register with "MISUMI EC Service ID Registration" and "WOS ID Registration" to use WOS.

Metal Plate Product Guide

- **Configurable Plates [Features] Surface finish methods, dimensions and dimension tolerance can be specified.**

(1) Surface Finish Method (Please refer to the finished surface comparison on the right.)
(2) 0.5mm Increment Dimension Specified (Length, Width, Plate Thickness) *For aluminum and copper rolled types, thickness should be material thickness.
(3) Dimension tolerance (length, width and plate thickness can be selected from : ++Tolerance, +Tolerance, ± Tolerance and -Tolerance.)

Comparison of 2-Surface Finish (Sample Material: 1.0038/S235JR)

* The photographs are magnified.

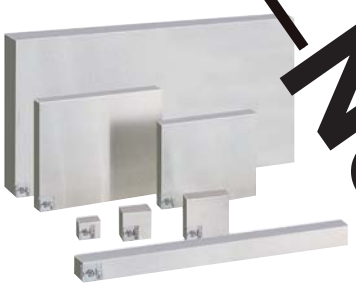
For high precision plates ALA_ · ANP79 plates P79_ _ _, internal stress is removed while rolling.
Because the remaining stress is small, the machining distortion is less than general EN AW-5052 · EN AW-7075

Metal Plates Materials

Property Comparison of Metal Plate Materials



Structural Steel		1.0038/S235JR	The most general steel grade. Widely used as it has strength and high machinability and is low price.
		1.0038/S235JR Annealed Material	1.0038/S235JR is annealed to relieve its internal stress. It is effective for prevention of warp by machining.
JIS STKM		1.1206/C50E	Carbon steel with adequate level of toughness and durability
		1.1203	Normalized 1.1203/C55E, which relieves its internal stress. Added free-cutting elements enhance its machinability. It has higher mechanical strength than 1.1206/C50E.
Chrome Molybdenum Steel		1.7220/34CrMo4	Material with added small amount of Molybdenum into Chrome Steel. Improved resistance for anneal-softening, excelling in toughness.
Specialty Steel		JIS SKS93	Carbon steel for oil hardening which excels in toughness and abrasion resistance.
		1.2510/100MnCrW4	It has good machinability as spheroidizing annealing is applied. Has higher hardenability and less heat-treating distortion than JIS SKS93.
		1.2379/X155CrVMo12-1	Both air hardening and vacuum hardening are applicable due to its high hardenability. Very little heat treat distortion and has high abrasion resistance.
		DC53® (Daido Steel)	Tougher than 1.2379/X155CrVMo12-1. Good machinability and grindability. About the same strength as 1.2379/X155CrVMo12-1 after low-temperature tempering, and as 62HRC after high-temperature tempering.
		1.3343/S6-5-2	Excels in toughness and abrasion resistance. Very little heat-treatment distortion.
Stainless Steel	Austenite	1.4305/X10CrNiS18-9	Has better machinability than 1.4301/X5CrNi18-10. However, corrosion resistance is inferior. No magnetism.
		1.4301/X5CrNi18-10	The most general stainless steel. Excels in corrosion resistance and is widely used. No magnetism.
		Annealed 1.4305	1.4305/X10CrNiS18-9 is treated with stress-relief heat-treatment to relieve internal stress. It is effective for prevention of warp by machining. They have inferior corrosion resistance compared to 1.4305/X10CrNiS18-9. No magnetism.
		1.4301 Annealed Material	1.4301/X5CrNi18-10 is treated with stress-relief heat-treatment to relieve internal stress. It is effective for prevention of warp by machining. They have inferior corrosion resistance compared to 1.4301/X5CrNi18-10. No magnetism.
		1.4401/X5CrNiMo17-12-2	Stainless steel to which Molybdenum is added. Excels in corrosion resistance and acid resistance. No magnetism.
		1.4404/X2CrNiMo17-12-2-L	1.4401/X5CrNiMo17-12-2 ultra-low carbon stainless steel categorized within austenitic stainless steels. Suitable for the operations requiring corrosion resistance or good weld-ability.
	Ferrite	1.4016/X6(8)Cr17	Excels in corrosion resistance. It is effective for prevention of warp by machining. Its hardenability is poor. Has magnetism.
	Martensite	1.4125/X105CrMo17	Has high strength and hardness because of the heat treatment applied. Has high abrasion resistance and is hardest in stainless steel. Has magnetism.
Pre-Hardening Steel	Martensite Free-cutting Stainless Steel	G-STAR~1.2085	Has corrosion resistance and excels in machinability. Has high hardness because of the heat treatment applied. (1030°C Hardening Hardness 48HRC)
	SCM	PX5 ~1.2316	Excels in machinability and has toughness. Excels in weldability.
	Precipitation Hardening	NAK55® (Daido Steel)	Excels extremely in machinability. Smooth machined surfaces facilitate grinding machining afterward.
Aluminum Alloy	A5000	EN AW-5052/AlMg2,5	The most general aluminum alloy. Excels in corrosion resistance and weldability.
	A2000 (Duralumin)	EN AW-2017/AlCu4MgSi	Though it inferiors in corrosion resistance and weldability, it has high strength and forging is possible.
	A6000	EN AW-6061-P	Heat-treatable alloy, excelling in strength and corrosion resistance.
	A7000 (Extra Super Duralumin)	ANP79	Compared with Iron 15C, it is harder and its machinability is at least 10 times higher. Compared with 7075 material, it has about the same hardness, higher uniformity, and lower internal stress.
		EN AW-7075/AlZn5,5MgCu	Has the highest strength in aluminum alloy. Extremely strong and be widely used for aircrafts or mechanical parts.
Rolled Copper	Tough Pitch Copper	CW004A/Cu-ETP	The most widely used copper generally, and excellent in electrical and thermal conductivity.
	Oxygen Free Copper	CW008A/Cu-OFP	Commercially-available highest purity Copper. The oxygen free nature prevents hydrogen embrittlement.
	Chromium Copper	Z3234	Excellent in mechanical strength and abrasion resistance at high temperature.
	Brass Board	CW505L/CuZn30	Excellent in strength and ductile.
3.7035/Ti99.5 (Ti2)		3.7035/Ti99.5 (Ti2)	Most common titanium material categorized into 3.7035/Ti99.5 (Ti2), and well-balanced in machinability and strength. Lightweight (Specific gravity 4.51) and excels in corrosion resistance.

Material Shop 24 Guide

Material Shop 24 Metal Plate Site Outline

[Material Shop 24 Metal Plate Website Contents]

- Selectable from all products including products not shown on the catalog made of 51 materials such as Finishing plates, Cut plates or Flat bars.
- Select specifications, part number, delivery date and the price are automatically displayed. Please proceed to ordering with the information.
- Conformed products to the specifications are displayed in price ascending order. Easy to select the most economical product.

Material Shop 24 Metal Plate Website

Part number, Delivery Time and Price are displayed in just 6 seconds!

Selection Procedure

1	Specification Selection	Material · Finish · Size · Quantity
2	Automatic Selection of Products	Product number, Delivery Time and Price are displayed.
	How to Order	Order on WOS
		Print a fax ordering sheet
		CSV data downloading

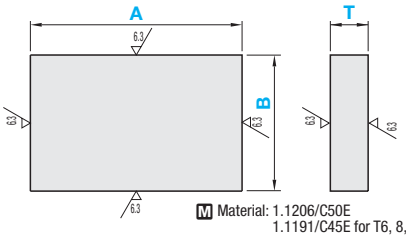
1.1206/C50E Dimension Selectable Plates

-6F (Economy Type)-

■Features of Precision Cut Plates : Economical and Short Lead Time



Base material is milled on top, bottom, and side surfaces for cut to precise lengths for shipments. Economical and short delivery time.

RoHS

1.1206/C50E A dimension Configurable Plates

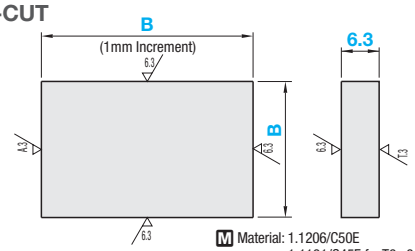
-6F (Economy Type)-

Features of Precision Cut Plates: Economical and Short Lead Time



Base material is milled on top, bottom, and side surfaces for cut to precise lengths by 1mm increment for shipments. Economical and short delivery time.

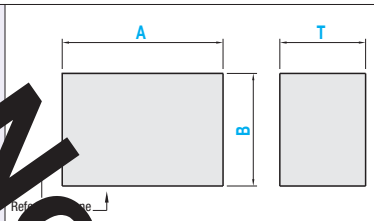
Premium Plates only available on Material Shop 24 website.

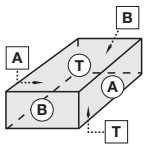
■Material Shop 24 Metal Plate Website Outline



[Material Shop 24 Metal Plate Website Contents]

- Selectable from all products including products not shown on the catalog made of 51 materials such as Finishing plates, Cut plates or Flat bars.
- Select specifications, part number, delivery date and the price are automatically displayed. Please proceed to ordering with the information.
- Conformed products to the specifications are displayed in price ascending order. Easy to select the most economical product.

■Material Shop 24 Exclusive Metal Plate Website Product "Premium Plates" Outline



Premium Plates -- Configurable plates for finished surface and dimensional tolerance.

Finish Method		Finished Surface	Finish Surface Roughness		
			Steel, Special Steel	Stainless Steel	Aluminum
F	Milling	Side Faces	1.6a		
		Upper-Lower Surface	6.3a	6.3a	6.3a
RG	Rotary Grinding	Upper-Lower Surface	3.2a	3.2a	3.2a
G	Surface Grinding	Upper-Lower Surface	1.6a	3.2a	3.2a
-	Unfinished	Side Faces	Not guaranteed	Not guaranteed	6.3a
		Upper-Lower Surface			Not guaranteed

■Milled Finish Surface Free Selection (Selectable Milled finish surface)

Finish Code	Finished Surface	Accuracy Guaranteed (or without machining accuracy warranty)				
		Surface Perpendicularity	Flatness * Except Aluminum	Dimension		
				Length	Width	Plate Thickness
A	Length**A** One-surface milling on length A	X	X	X	X	X
T	Upper Surface **T**	X	X	X	X	X
AA	Length **A**+ Length **A**	X	X	X	0	X
AB	Length **A**+ Width **B**	X	X	X	X	X
ABTT	Length **A**+ Width **B**+ Upper-Lower Surface **TT**	0	0	X	X	0
AATT	Length **AA**+ Upper-Lower Surface **TT**	X	0	X	0	0

■Main Finish

Finish Code	Finish	
2F	Upper-Lower Surface Milling	(4-Side not finished)
2RG	2-Surface Rotary Grinding	(4-Side not finished)
4F	4-Side Milling	(Upper-lower surface not finished)
6F	6-Surface Milling	
4F2RG	2-Surface Rotary Grinding	(4-Side Milling)
4F2G	2-Surface Grinding	(4-Side Milling)
6G	6-Surface Grinding

AABB		0.015	±0.05 (Min. Tolerance)	±0.05 (Min. Tolerance)	±0.025 (Min. Tolerance)	±0.025 (Min. Tolerance)	±0.02 (Min. Tolerance)	±0.02 (Min. Tolerance)
AABB	Surface (G)	0.01	±0.01 (Min. Tolerance)	±0.01 (Min. Tolerance)	-	-	-	-

- For 1.1206/C50E with the length of 500mm or less and the width of 300mm or less, width tolerance of A, B, BB, AB, 2F and 2RG is +3~+10mm.
- For A, B, AA, BB and AB of carbon steel and special steel without 2-surface finish, shear drops may occur up to 4mm on unfinished sides.
- Finished surface A and B might be AA and BB respectively depending on the size.

- Plate thickness, flatness and parallelism are not guaranteed when finish is applied only on the upper plane (Finish T).
  Cuts the convex of the warpage of the material and applies finish as a reference plane by seamless insertion. This causes variation of the plate thickness.

■Material Thickness Tolerance

* Thickness tolerance is as follows when finish is not applied on upper and lower surfaces.

- 1.0038/S235JR, Annealed

Only * marked dimensions are applicable when length is 500 or less and width is 300 or less.

Plate Thickness	*12	*14	16	*19	*22	*25	*28	30	32	35	*38	40	*45	50	*55	*60	*65	*70	*75	*80	*85	*90	*95	*100	*110	*120	*130	*140	*150	*160
Tolerance	±0.55		±0.65			±0.7						±0.8						±0.9						±1.3						

- 1.1206/C50E

Only * marked dimensions are applicable when length is 500 or less and width is 300 or less.

	Circumference Chamfering	Corner Cut
Alterations		 Surface roughness of corner cut for large size: A>1000 or B>300✓
Code	CSC · CBC	CCA · CCB · CCC · CCD
Spec.	Changes the circumference chamfering dimension. Chamfering Dimension: Standard C0.2~0.5; CSC C0.1 or less; CBC C0.5~1.0	Arbitrary corner can be cut. 1≤Corner Cut≤50 1mm Increment. Ordering Code (Ex.) When the corners of A and D are cut by C5, ···› CCA5-CCD5. 1mm Increment: 1~5 200,00; 6~10 250,00; 11~20 4,50; 21~30 6,00; 31~40 7,00; 41~50 800,00
Price Adder	Standard size (A<500 and B<300): Free of Charge; Large Size: 8,00	Refer to spec.

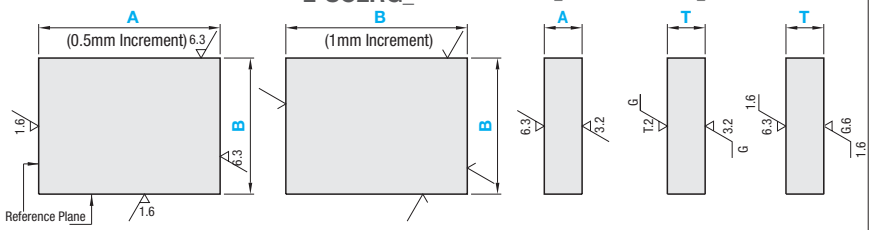
1.1206/C50E Configurable Plates

Annealed 1.1191/C45E or JIS S48C are used as materials for some large sizes.



RoHS

Hot rolled, torch cutting, and saw cutting surfaces might remain on A and B surfaces of 2-Surface Finished products. Also, rust might adhere.

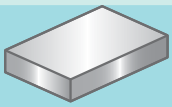
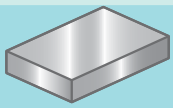
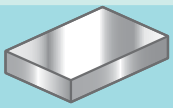
■ Comparison of Flatness Variation Caused by Top / Bottom Milled Cutter





[Testing Method]1.1203/C55E normalized and 1.1206/C50E (205mmx205mmx19mm) are placed on the same table, and machined with a milling path of 2mm at the same time. Each of the flatness is then measured with a three-dimensional measuring instrument.



Although it is assumed that 1.1203/C55E has higher internal stress than 1.1206/C50E, the test results show that normalized 1.1203/C55E, or 1.1203/C55E normalized, has as low internal stress as 1.1206/C50E.

■ Features of 1.1203/C55E normalized

Normalized 1.1203/C55E, which relieves its internal stress.
Added free-cutting elements enhance its machinability.
It has higher mechanical strength than 1.1206/C50E.

■Features of 1.2510/100MnCrW4
It has good machinability as spheroidizing annealing is applied.
Higher hardenability and less heat-treating distortion than JIS SKS93.

■Features of 1.2379/X155CrVMo12-1
High hardenability. Both vacuum quenching and air quenching are applicable.
Heat-treating distortion is very little.
High Abrasion Resistance.

■Features of DC53® (Daido Steel)
Tougher than 1.2379/X155CrVMo12-1.
Strength equal to 1.2379/X155CrVMo12-1 is obtained by low-temperature annealing, strength equal to 62HRC is obtained by high-temperature annealing.
Good machinability and grindability.

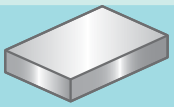
Temperature of Quench and Temper of G-STAR

■Features of G-STAR



Martensitic Free-Cutting Pre-hardened Stainless Steel with good corrosion resistance. Excels in machinability. Made into high hardness steel by quench and temper. (1,030 quench hardness 48HRC)

■Features of PX5 ~1.2316 X36CrMo17 ~1.2316/X36CrMo17

JIS SCM Pre-Hardening Steel with good machinability and toughness.

■Features of NAK55® Daido Steel

Free-cutting Pre-Hardening Steel with excellent machinability.
Smooth machined surfaces facilitate grinding machining.

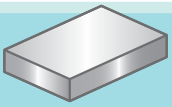
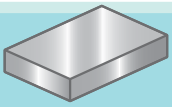
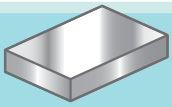
Comparison of Flatness Variation Caused by Upper-Lower Surface Milling Cutter

1.4305/X10CrNiS18-9 / 1.4301/X5CrNi18-10 and Annealed 1.4305/X10CrNiS18-9 / 1.4301/X5CrNi18-10 Flatness Variation after Machined (Reference)





[Testing Method] Four materials shown above (155x155x12mm) are machined with a milling path of 0.5mm and the flatness is measured with a three dimensional measuring instrument.



The test results above show that, after machined, annealed 1.4305/X10CrNiS18-9 / 1.4301/X5CrNi18-10 have better flatness than 1.4305/X10CrNiS18-9 / 1.4301/X5CrNi18-10

■Features of 1.4305/X10CrNiS18-9 Stainless Steel and 1.4301/X5CrNi18-10 Annealed

Provided stress-relief heat treatment to avoid distortion when machined. Suitable for warpage prevention during machining. However, it has inferior corrosion resistance.

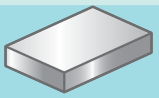
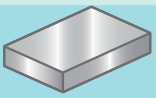
Corrosion Resistance of Stainless Steel (Reference)

Testing Method: Conforms to the JIS H 8502 Cycle Test Method as a complex corrosion test.



Test Conditions: (1) Salt Water Spray Test (5% NaCl, 35°C) 2hr
(2) Dry (60°C)
(3) Wet (85% RH 50°C)



Appearance comparison among before the test, 48hr after the test and 168hr after the test.

	1.4016/ X6(8)Cr17	1.4305/ X10CrNiS18-9	1.4301/ X5CrNi18-10
Before test			
48 H			
168 H			

■Features of 1.4016/X6(8)Cr17

Ferrite Stainless Steel. Excellent corrosion resistance.
Its magnetism is effective for prevention of warp caused by machining.
Its hardenability is low.

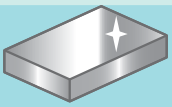
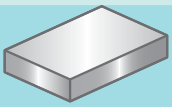
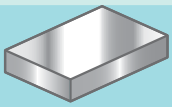
Flat charges of A: 21,60 EUR and B: 13,50 EUR for 3 or more identical pieces.



Alterations



Part Number - A - B - T -(CSC / CBC / etc.)
PNFNM - 300 - 280 - 20 - CSC



Alterations	Circumference Chamfering		Corner Cut
			
Code	CSC	(See below)	CCA / CCB / CCC / CCD
Spec.	Changes the circumference chamfering dimension. C0.3⋯› C0.1 or less. Available for Standard Size only.	Changes the circumference chamfering dimension.	Cuts any corners. 1≤ Corner Cut ≤501mm Increment. C≤ A/2, B/2. Ordering Code. (Example)When the corners of A and D are cut by C5 ⋯› CCA5-CCD5
Price Adder	Free of Charge	Refer to spec.	Refer to spec.

Size	Standard	Modified Value	Code	Price Adder
Standard Size	C0.3 or less	C0.5~C1.0	CBC	Free of Charge
Narrow size Large Size	C0.1 Thread Chamfering	C0.2~C0.5	CBB	10,00
		C0.5~C1.0	CBC	12,00

Features of ANP79

Compared with Iron 15C, it is harder and its machinability is at least 10 times higher.
Compared with 7075 material, it has about the same hardness, higher uniformity, and lower internal stress.
Suitable for applying to things that require high strength, lightweight and high accuracy such as base plates, robot components, jigs and dies.

■Features of Tough Pitch Coppers
The most widely used copper generally, and excellent in electrical and thermal conductivity.

■Features of Oxygen Free Coppers
Commercially-available highest purity Copper. The oxygen free nature prevents hydrogen embrittlement.

■Features of Chrome Coppers
Excellent in mechanical strength and abrasion resistance at high temperature.

■Features of Brass Plates
Excellent in strength and ductile.

■Material Shop 24 Shape Machining Website Product Lineup (Exclusive Merchandise for Material Shop 24)

Different Angle Corners

Plate corners can be cut at any combination of different angles (1~4 corners).
Convenient when there is no relief or enough width to insert plates.

■Surface Treatment (Not available for Large Size)

1.0038/S235JR · 1.1206/C50E · 1.1203/C55E normalized-	Black Oxide, Electroless Nickel Plating, Trivalent Chromate
EN AW-5052/AlMg2,5 · 52 High Precision · EN AW-2017/AlCu4MgSi · EN AW-7075/AlZn5,5MgCu	Clear Anodize, Black Anodize

1~2 tapped holes might be placed on the side of long surface depending on the sizes.

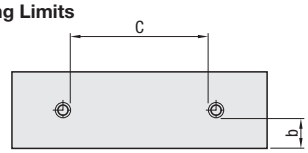
Side Female Thread, Precision Holes

Female Thread holes and precision holes (H7) are machined on the sides.
Best suited as holes for hanging and assembling.

■Surface Treatment (Not available for Large Size)

1.0038/S235JR · 1.1206/C50E · 1.1203/C55E normalized-	Black Oxide, Electroless Nickel Plating, Trivalent Chromate
EN AW-5052/AlMg2,5 · 52 High Precision · EN AW-2017/AlCu4MgSi · EN AW-7075/AlZn5,5MgCu	Clear Anodize, Black Anodize

1~2 tapped holes might be placed on the side of long surface depending on the sizes.



■Side Female Thread Hole

Nominal Dia. (M)	Pitch	Effective Depth	Size	
			Standard	Large
3	0.5	Mx2	○	-
4	0.7			
5	0.8			
6	1			
8	1.25			○
10	1.5			
12	1.75			
14	2			
16	2			

Female Thread holes may go through when the depth of the side (ex. B dim. for side A) is Mx3 or less.

When Both Sides are specified and the depth is Mx4 or less, tapped holes go through.

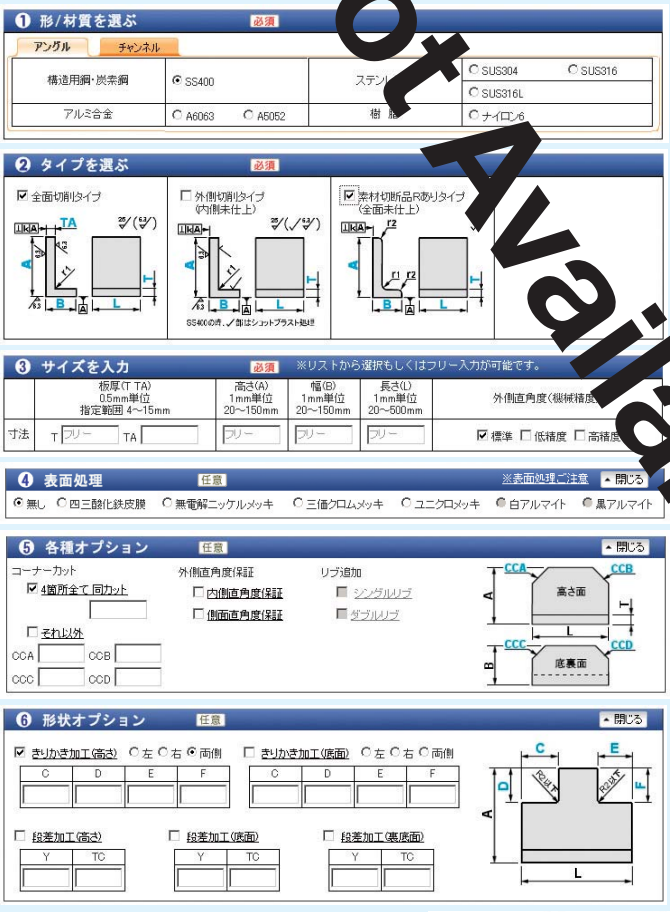
[Site Details]
After selecting the specs, MISUMI part numbers, Delivery Time and Prices are automatically generated, and the ordering can be placed directly from the web site.

"Material Shop 24 Angles / Section Steels site"



Displays MISUMI Part Numbers, Days to Ship and Prices in an instant!

■Selection Steps

1	**Specification Selection**	Shape / Material / Type / Size / Qty.
2	**Item Auto-extraction**	List up MISUMI Part Numbers, Days to Ship and Prices
3	**Select Ordering Method**	Ordering by WOS
		Printing FAX order sheet
		Downloading CSV data

Screen shots of Material Shop 24 Angles / Section Steels site

Not Available

Selection Steps

1Select shapes / materials.
Angles / Channels are selectable with the tab.

2Select types.
Max. 4 types from cut-off hot-rolled and mill finished materials are available.
Multiple types can be selected.
*All the types may not be listed on the quotation results.

3Enter sizes.
"Configurable" means the size can be specified by 1mm increments.

4Options (optional)
Many useful alterations are available.
- Surface treatment
- Corner cut
- Higher perpendicularity guaranteed
- Side plane parallelism guaranteed
- Gusset addition (welding only)
- Notching
- Stepping

Consider this to improve your factory operational status and total costs!

Enter quantity and click the Quotation button.

Quotation results are listed in the lowest price order.
We confirm the selected item specs and precision for you.
If no problem is found, check the box on the left and click the Order button.

***The web-only standard cut-off materials of 178 Angles and 58 Chanel Steels are available.**

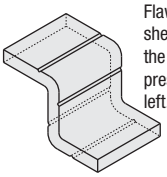
■Machining Dimension Tolerance and Machining Limits

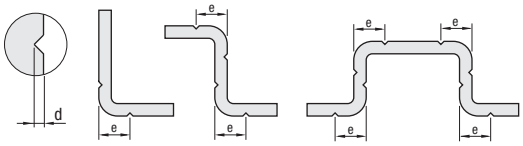
•Sheet Metals



1. General Tolerance of Cutting Dimension

Standard Dimension (A·B Dimension)	6 or less	6 to 30 or less	30 to 120 or less	120 to 400 or less
Flat Plate (No Bending) Tolerance (a·b)	±0.1	±0.2	±0.3	±0.5
Bending Parts Tolerance (a·b)	±0.3	±0.5	±0.8	±1.2

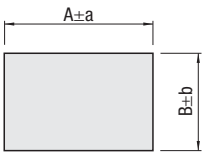
* Tolerance Class for JIS B 0408 Metal Press Parts : Class B is adopted.



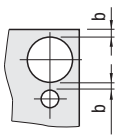
2. Position and Depth of Flaws Caused by the Press Brake

Flaws will be on bent sheet metal caused by the brake support of press brake as shown on left.

Plate Thickness		Position	Depth
1.0330/DC01 (St.12)	1.4301/ X5CrNi18-10-D	e	d
1.6	1.5	6	0.05
2.3	2.0	7.5	0.1
3.2	3.0	10.5	0.2
4.5	4.0	13.5	0.3
6.0	–	15.0	0.4

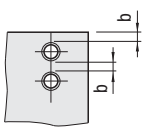


•Metal Plates



1. General Tolerance of Cutting Dimension

Standard Dimension (A·B Dimension)	0.5 to 6 or less	6 to 30 or less	30 to 120 or less	120 to 400 or less
Tolerance (a·b)	±0.1	±0.2	±0.3	±0.5



* Tolerance Class for JIS B 0405 Cutting Dimensions : Middle Class (m)

2. Machining Limits (Distance Between Holes, Thickness between Holes and Edges)

Drill Hole Diameter	b (Min. Value)
3.0~5.0	0.8
5.5~25.0	1
25.5~50.0	2
51.0~	3

Tapped Hole Dia.	b (Min. Value)
3 · 4 · 5	0.8
6 · 8 · 10	1.0

[Technical Data]
SI (International System of Units) Excerpt from JIS Z 8203(2000)

1. International System of Units(SI)and Usage.

1-1. Scope of Application This standard specifies how to use the International System of Units(SI)and other international unitary systems, as well as units used in correlation with units from international systems, and other units which may be used.

1-2. Terms and Definitions Terminology used in this specification and definitions thereof are as follows.

(1) International System of Units(SI) Coherent system of units adopted and recommended by the International Committee on Weights and Measures. It contains base units and supplementary units, units derived from them and their integral exponents to the 10th power.

(2) SI Unit Generic term used to describe base units, supplementary units or derived units of the International System of Units(SI).

(3) 1 Base Unit Those units are given in **Table 1**.

(4) 2 Supplementary Units Those supplementary units are given in **Table 2**.

Table 1. Base Units

Base Quantity	Unit	Symbol	Definition
Length	Meter	m	A meter is the length of the path traveled by light in a vacuum during a time interval of $\frac{1}{299\ 792\ 458}$ of a second.
Mass	Kilogram	kg	A kilogram is a unit of mass(neither weight nor force), it is equal to the mass of the international prototype of the kilogram.
Time	Second	s	A second is the duration of 9 192 631 770 periods of radiation corresponding to the transition between the two hyperfine levels of the ground state of the cesium 133 atom.
Current	Ampere	A	An ampere is that constant current which, if maintained in two straight parallel conductors of infinite length, of negligible circular cross-section, and placed 1 meter apart in a vacuum, would produce between these conductors a force equal to 2×10^{-7} Newton per meter of length.
Thermodynamic Temperature	Kelvin	K	Kelvin, a unit of thermodynamic temperature, is the fraction $\frac{1}{273.16}$ of the thermodynamic temperature of the triple point of water.
Amount of Substance	Mole	mol	A mole is the amount of substance of a system that contains as many elementary particles(1) or aggregation of elementary particles as there are atoms in 0.012 kilogram of carbon 12 and when the mole is used, the elementary particles must be specified.
Luminance Intensity	Candela	cd	A candela is the luminous intensity, in a given direction, of a source that emits monochromatic radiation of frequency 540×10^{12} hertz and that has a radiant intensity in that direction of $\frac{1}{683}$ watt per steradian.

Note(1) The elementary particles here must be atoms, molecules, ions, electrons or other particles.

Table 2. Supplementary Units

Base Quantity	Unit	Symbol	Definition
Plane Angle	Radian	rad	A radian is the plane angle between two radii of a circle that cuts off an arc on the circumference equal in length to the radius.
Solid Angle	Steradian	sr	A steradian is the solid angle which, having its vertex in the center of a sphere, cuts off an area of the surface of the sphere equal to that of a square with sides equal in length to the radius of the sphere.

(5)3 Derived Units The supplementary units algebraically expressed using mathematical symbols such as plus, minus, etc. The SI derived units with special names and symbols are given in Table 3.

Examples of SI Derived Units Expressed in Terms of Base Units

Base Quantity	Base Quantity	
	Name	Symbol
Area	Square	m^2
Volume	Cubic Meter	m^3
Velocity	Meter/Second	m/s
Acceleration	Meter/Second×2	m/s^2
Wave Number	Every Meter	m^{-1}
Density	Kilogram Every Cubic Meter	kg/m^3
Current Density	Ampere Every Square Meter	A/m^2
Magnetic Field Strength	Ampere Every Meter	A/m
Concentration (of Substance)	Mole Every Cubic Meter	mol/m^3
Specific Volume	Cubic Meter Every Kilogram	m^3/kg
Luminance	Candela Every Square Meter	cd/m^2

Table 3 SI Derived Units with Special Names and Symbols

Base Quantity	Base Quantity		Expression in Terms of Base Units or Supplementary Units, Supplementary Units or Other SI Units
	Name	Symbol	
Frequency	Hertz	Hz	1 Hz =1 s^{-1}
Force	Newton	N	1 N =1 $kg\cdot m/s^2$
Pressure, Stress	Pascal	Pa	1 Pa =1 N/m^2
Energy, Work, Heat Quantity	Joule	J	1 J =1 N·m
Work Rate, Process Rate, Power, Electric Power	Watt	W	1 W =1 J/s
Electric Charge, Quantity of Electricity	Coulomb	C	1 C =1 A·s
Electric Potential, Potential Difference, Voltage, Electromotive Force	Volts	V	1 V =1 J/C
Electrostatic Capacity, Capacitance	Farad	F	1 F =1 C/V
Electric Resistance	Ohm	Ω	1 Ω =1 V/A
Conductance	Siemens	S	1 S =1 Ω^{-1}
Magnetic Flux	Weber	Wb	1 Wb =1 V·s
Magnetic Flux Density	Tesla	T	1 T =1 Wb/m^2
Inductance	Henry	H	1 H =1 Wb/A
Celsius Temperature	Degree Celsius or Degree	℃	1 t℃ =(t+273.15)k
Luminous Flux	Lumen	lm	1 lm =1 cd·sr
Illuminance	Lux	lx	1 lx =1 lm/m^2
Radioactivity	Becquerel	Bq	1 Bq =1 s^{-1}
Absorbed Dose	Gray	Gy	1 Gy =1 J/kg
Dose Equivalent	Sievert	Sv	1 Sv =1 J/kg

1-3. Multiples of 10 of SI Units

(1)Prefix The multiples and the names and symbols of prefixes to express integer multiples of 10 of SI Units are shown in Table 4.

Table 4 Prefix.

Multiples of Unit	Prefix		Multiples of Unit	Prefix		Multiples of Unit	Prefix	
	Name	Symbol		Name	Symbol		Name	Symbol
10^{18}	Exsa	E	10^{2}	Hecto	h	10^{-9}	Nano	n
10^{15}	Peta	P	10^{1}	Deca	da	10^{-12}	Pico	p
10^{12}	Tera	T	10^{-1}	Deci	d	10^{-15}	Femto	f
10^{9}	Giga	G	10^{-2}	Centi	c	10^{-18}	Atto	a
10^{6}	Mega	M	10^{-3}	Milli	m			
10^{3}	Kilo	k	10^{-6}	Micro	μ			

2. Conversion Tables for SI and Conventional Units

(The units enclosed by thick lines are the SI units.)

	N	dyn	kgf
Force	1	1×10^{5}	$1.019\ 72\times10^{-1}$
	1×10^{-5}	1	$1.019\ 72\times10^{-6}$

Calculation of Cubic Volume and Weight / Physical Properties of Materials

Greek Symbols

Uppercase	Lowercase	Pronunciation	Conventional Usage
A	α	alpha	Angle, Coefficient
B	β	beta	Angle, Coefficient
Γ	γ	gamma	Angle, Weight Per Unit Area, Relationship(Uppercase)
Δ	δ	delta	Small Change, Density, Displacement
E	ε	epsilon	Small Amount, Distortion
Z	ζ	zeta	Variable
H	η	eta	Variable
Θ	θ	theta	Angle, Temperature, Time
I	ι	iota	
K	κ	kappa	Radius of Gyration
Λ	λ	lambda	Wavelength, Characteristic Value
M	μ	mu	Friction Coefficient 10^{-6}(Micro)
N	ν	nu	Frequency
Ξ	ξ	xi	Variable
O	o	omicron	
Π	π	pi	Circle Ratio(3.14159...) Angle Symbol of Product(Uppercase)
P	ρ	rho	Radius, Density
Σ	σ	sigma	Stress, Standard Deviation Summation(Uppercase)
T	τ	tau	Time Constant, Time, Torque
Υ	υ	upsilon	
Φ	ϕ, φ	phi	Angle, Function, Diameter
X	χ	chi	
Ψ	ψ	psi	Angle, Function
Ω	ω	omega	Angular Verocity=2πf Ohm:Unit of Electric Resistance(Uppercase)

Reference unless otherwise specified, lowercase letters are the norm.

Characteristics of Materials

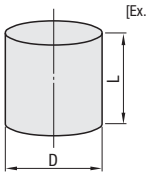
Reference This table is based on Appendix A(Names and Symbols of Elements)of ISO 31/8-1980 (Amounts and Units of Physical Chemistry and Molecular Physics) and Appendix C(Names and Symbols of Radionuclides) of ISO 31/9-1980(Amounts and Units of Atomic Physics and Nuclear Physics).

How to Calculate the Volume

Solid	Volume V
Turncated Cylinder 	$V=\frac{\pi}{4}d^2h$ $=\frac{\pi}{4}d^2\left(\frac{h_1+h_2}{2}\right)$
Pyramid 	$V=\frac{h}{3}A=\frac{h}{6}arn$ A=Area of Base r=Radius of inscribed circle a=Length of a side of a regular polygon n=Number of the sides of a regular polygon
Spherical Crown 	$V=\frac{\pi h^2}{3}(3r-h)$ $=\frac{\pi h}{6}(3a^2+h^2)$ a is the radius.
Ellipsoid 	$V=\frac{4}{3}\pi abc$ In case of spheroid (b=c) $V=\frac{4}{3}\pi ab^2$



Solid	Volume V
Oval Ring 	$V=\frac{\pi^2}{4}d^2\frac{\sqrt{a^2+b^2}}{2}$
Cross Cylinder 	$V=\frac{\pi}{4}d^2\left(\ell+\ell'-\frac{d}{3}\right)$
Hollow(Cylinder) 	$V=\frac{\pi}{4}h(D^2-d^2)$ $=\pi th(D-t)$ $=\pi th(d+t)$
Turncated Pyramid 	$V=\frac{h}{3}(A+a+\sqrt{Aa})$ A.a=Area of both ends

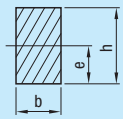
Solid	Volume V
Spherical Segment 	$V=\frac{2}{3}\pi r^2h$ $=2.0944r^2h$
Torus 	$V=2\pi^2Rr^2$ $=19.739Rr^2$ $=\frac{\pi^2}{4}Dd^2$ $=2.4674Dd^2$
Circular Cone 	$V=\frac{\pi}{3}r^2h$ $=1.0472r^2h$
Sphere 	$V=\frac{4}{3}\pi r^3=4.1888r^3$ $=\frac{\pi}{6}d^3=0.5236d^3$

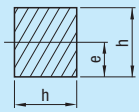
Solid	Volume V
Spherical Belt 	$V=\frac{\pi h}{6}(3a^2+3b^2+h^2)$
Barrel 	When the circumference makes a curve equal to the circular arc, $V=\frac{\pi\ell}{12}(2D^2+d^2)$ When the circumference makes a curve equal to a parabolic line, $V=0.209\ell(2D^2Dd+1/4d^2)$

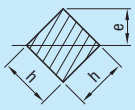
How to Calculate the Weight

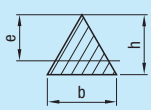
Weight W[g]= Volume[cm³]× Specific Gravity

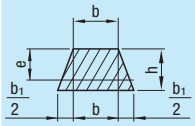
[Ex.]Material:Mild Steel

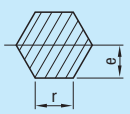


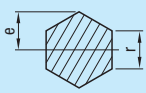


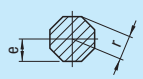


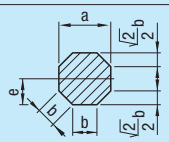


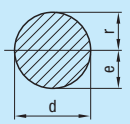


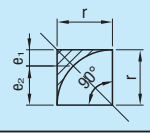




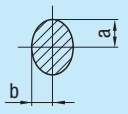


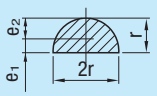


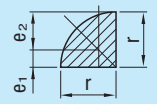


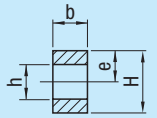


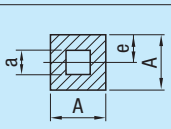
D=Ø16 L=50mm the weight is:

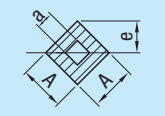


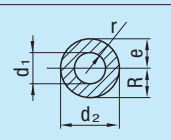


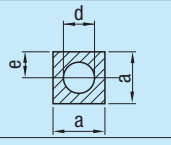


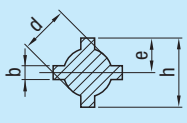


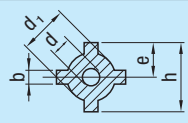












The specific gravity of W= $\frac{\pi}{4}D^2\times L\times W$

$=\frac{\pi}{4}\times1.6^2\times5\times7.85$

≈79[g]

Geometric Tolerance Indications

Excerpts from JIS B0021(1984)

Geometric Tolerances and Symbols

Tolerance Types		Symbols	Definition of Tolerance Zones		Illustrated Examples and Interpretations	
Form Tolerance	Straightness	—		If the tolerance value is preceded by a Ø symbol, this tolerance zone is the range within a cylinder of diameter t.		If a tolerance frame is connected to a dimension that indicates the diameter of a cylinder, the axis line of the cylinder shall be contained within a cylinder of 0.08mm diameter.
	Flatness	▱		The tolerance zone is the area between two parallel planes separated by distance t.		This surface shall be contained within two parallel planes separated by 0.08mm.
	Circularity	○		The tolerance zone in the subject plane is the area between two concentric circles separated by distance t.		The circumference of arbitrary axis perpendicular cross sections shall be contained between two concentric circles separated by 0.1mm on the same plane.
	Cylindricity	⌭		The tolerance zone is the range contained between two coaxial cylinder surfaces separated by distance t.		The subject surface shall be contained between two coaxial cylinder surfaces separated by 0.1mm.
	Profile of Line	⌒		The tolerance zone is the range contained between the two enveloping lines formed by a circle with diameter t with the center located on the theoretically correct profile curve.		On arbitrary cross-sections parallel to the projection plane, the subject profile shall be contained between the two envelope lines formed by a 0.04mm diameter circle with the center located on the theoretically correct profile curve.
	Profile of Surface	⌓		The tolerance zone is the range contained between the two enveloping surfaces formed by a sphere with diameter t with the center located on the theoretically correct profile surface.		The subject surface shall be contained between the two enveloping surfaces formed by a 0.02mm diameter sphere with the center located on the surface containing the theoretically correct profile.
Orientation Tolerance	Parallelism	//		The tolerance zone is the range contained between two planes parallel to the datum plane separated by distance t.		The surface indicated by the arrow leader shall be contained between two planes parallel to the datum plane A separated by 0.01mm in the direction of the arrow leader.
	Perpendicularity Tolerance	⊥		If the tolerance value is preceded by a Ø symbol, the tolerance zone is the range contained within a cylinder of diameter t perpendicular to the datum plane.		The axis of the cylinder indicated by the arrow leader shall be contained within a 0.01mm cylinder perpendicular to the datum plane A.
	Angularity	∠		The tolerance zone is the range contained between two parallel planes inclined at a specified angle to the datum plane and separated from each other by distance t.		The surface indicated by the arrow leader shall be contained between two parallel planes inclined theoretically exactly by 40 degrees to the datum plane A, and separated by 0.08mm in the direction of the arrow of the leader.
Positional Tolerance	Positional Tolerance	⌖		The tolerance zone is the range contained within a circle or sphere of diameter t with its center located at theoretically true location of the subject point (True Position).		The point indicated by the arrow leader shall be contained within a 0.03mm diameter circle with its center located at the true location 60mm from the datum line A, and 100mm from the datum line B.
	Coaxiality or Concentricity	◎		If the tolerance value is preceded by a Ø symbol, the tolerance zone is the range within a cylinder of diameter t with axis coinciding matching the datum axis line.		The axis of the cylinder indicated by the arrow leader shall be contained within a cylinder of diameter 0.01mm with axis coinciding the datum axis line A.
	Symmetry	⌯		The tolerance zone is the range contained between two parallel planes separated by distance t and located symmetrically with relation to the datum plane.		The central plane indicated by the arrow leader shall be contained between two parallel planes separated by 0.08mm and located symmetrically in relation to the datum plane A.
Runout Tolerance	Runout Tolerance	↗		The tolerance zone is an arbitrary surface perpendicular to the datum axis between two concentric cylinders with centers common with the datum axis, separated in radial direction by the distance t.		The radial run-out of the cylinder surface indicated by the arrow leader shall not exceed 0.1mm on any measuring plane perpendicular to the datum axis line when the cylinder is rotated about the datum axis A-B.
	Total Runout	⌰		The tolerance zone is between two concentric cylinders with centers common with the datum axis, separated in radial direction by distance t.		The total radial runout of the cylinder surface indicated by the arrow leader shall not exceed 0.1mm at any point on the cylinder surface when the cylinder is rotated about the datum axis A-B.

The lines used in the Tolerance Zone definitions mean the following.
Thick solid or broken line: Shape Thin dash-dot line: Center line Thick dash-dot line: Datum
Thin alternating long and two short dashed line: Supplementary projection plane or cross section plane Thin solid or broken line: Tolerance range
Thick alternating long and two short dashed line: Projection of shape onto supplementary plane or cross section plane

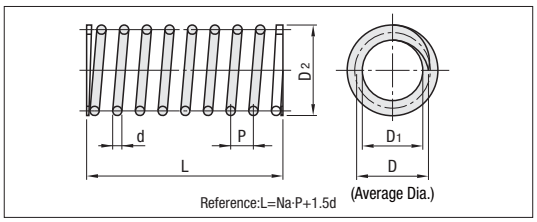
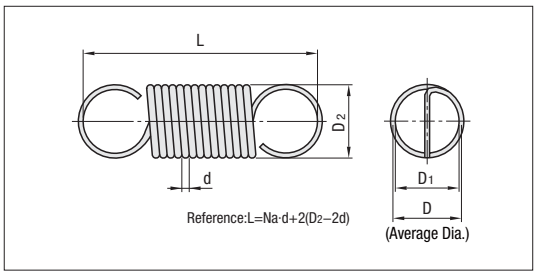
Spring Calculations
Excerpts from JIS B 2704(2000)

1. Calculation



1.1 Symbols Used in Spring Design Formulae



Symbols used in spring design formulae are shown in Table 1.

Table 1 Meaning of Symbols

Symbol	Meaning of Symbols	Unit
d	Diameter of Material	mm
D_1	Inner Diameter of a Coil	mm
D_2	Outer Diameter of a Coil	mm
D	Coil Mean Diameter= $\frac{D_1+D_2}{2}$	mm
N_t	Total Number of Winding	–
N_a	Number of Active Winding	–
L	Free Length(Length)	mm
Hs	Solid Length	mm
p	Pitch	mm
P_i	Initial Tension	N{kgf}
c	Spring Index $c=\frac{D}{d}$	–
G	Shear Modulus of Elasticity	N/mm²{kgf/mm²}
P	Load on Spring	N{kgf}
δ	Spring Deflection	mm
k	Spring Constant	N/mm{kgf/mm}
τ_0	Torsional Stress	N/mm²{kgf/mm²}
τ	Corrected Torsional Stress	N/mm²{kgf/mm²}
τ_i	Initial Stress	N/mm²{kgf/mm²}
χ	Stress Correction Factor	–
f	Frequency	Hz
U	Spring-Retained Energy	N·mm{kgf·mm}
ω	Per Unit Volume Material Weight	kg/mm³
W	Mass of Moving Parts	kg
g	Gravitational Acceleration (1)	mm/s²

Note (1) In spring calculations, a gravitational acceleration of 9806.65mm/s², is used.

1.2 Basic Formulae Used in Designing of Springs

1.2.1 Compression Springs, and Tension Springs without Initial Tension

$$\delta=\frac{8N_aD^3P}{Gd^4} \quad \cdots(1)$$

$$k=\frac{P}{\delta}=\frac{Gd^4}{8N_aD^3} \quad \cdots(2)$$

$$\tau_0=\frac{8DP}{\pi d^3} \quad \cdots(3)$$

$$\tau_0=\frac{Gd\delta}{\pi N_aD^2} \quad \cdots(4)$$

$$\tau=\chi\tau_0 \quad \cdots(5)$$

$$d=\sqrt[3]{\frac{8DP}{\pi\tau_0}}=\sqrt[3]{\frac{8\chi DP}{\pi\tau}} \quad \cdots(6)$$

$$N_a=\frac{Gd^4\delta}{8D^3P}=\frac{Gd^4}{8D^3k} \quad \cdots(7)$$

$$U=\frac{P\delta}{2}=\frac{k\delta^2}{2} \quad \cdots(8)$$

1.2.2 Tension Springs with Initial Tension (Where:P>Pi)

$$\delta=\frac{8N_aD^3(P-P_i)}{Gd^4} \quad \cdots(1)$$

$$k=\frac{P-Pi}{\delta}=\frac{Gd^4}{8N_aD^3} \quad \cdots(2)$$

$$\tau_0=\frac{8DP}{\pi d^3} \quad \cdots(3)$$

$$\tau_0=\frac{Gd\delta}{\pi N_aD^2}+\tau_i \quad \cdots(4)$$

$$\tau=\chi\tau_0 \quad \cdots(5)$$

$$d=\sqrt[3]{\frac{8DP}{\pi\tau_0}}=\sqrt[3]{\frac{8\chi DP}{\pi\tau}} \quad \cdots(6)$$

$$N_a=\frac{Gd^4}{8D^3k}=\frac{Gd^4\delta}{8D^3(P-P_i)} \quad \cdots(7)$$

$$U=\frac{(P+P_i)\delta}{2} \quad \cdots(8)$$

1.3 Points to Note when Designing Springs

1.3.1 Shear Modulus of Elasticity

Shear modulus of elasticity(G)listed in Table 2 is recommended for the designing of springs.

Table 2 Shear Modulus of Elasticity(G)

Material		G Value N/mm²(kgf/mm²)	Symbol
Spring Steel		$78\times10^3\{8\times10^3\}$	JIS SUP6,1.7108, JIS SUP9,1.7176, 1.8159, 1.7138,1.7102, ISO 60CrMo33
Hard Steel Wire		$78\times10^3\{8\times10^3\}$	JIS SW-B,JIS SW-C
Piano Wire		$78\times10^3\{8\times10^3\}$	JIS SWP
Oil Tempered Steel Wire		$78\times10^3\{8\times10^3\}$	SWO,SWO-V,SWOC-V, SWOSC-V,SWOSM,SWOSC-B
Stainless Steel Wire	1.6900	$69\times10^3\{7\times10^3\}$	1.6900
	1.4301		1.4301
	1.4301-N1		1.4301-N1
	1.4401		1.4401
	1.4568-J1	$74\times10^3\{7.5\times10^3\}$	1.4568-J1

1.3.2 Number of Active Winding

The number of active winding can be determined as follows.

(1) Compression Springs

$N_a=N_t-(X_1+X_2)$

Where X1 and X2: are the number of turns at each end of the coil.

(a) When only the end of the coil is in contact with the next free coil

[Corresponding to (a) ~ (c) in Fig.2]

$X_1=X_2=1$

Therefore, $N_a=N_t-2$

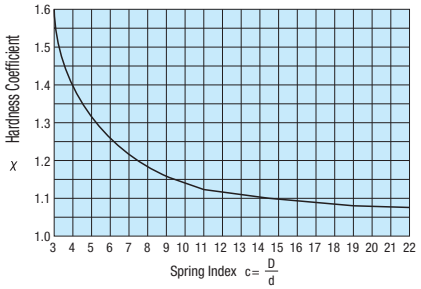
(b) When the end of the coil is not in contact with the next coil, and the spring end has $\frac{3}{4}$ of a turn.

[Corresponding to (a) ~ (e) in Fig.2]

$X_1=X_2=0.75$

Therefore, $N_a=N_t-1.5$

(2) Tension Springs The number of active winding can be determined as follows. But hooks are ignored.



$N_a=N_t$

1.3.3 Stress Correction Factor

The stress correction factor relative to the spring index (C) can be determined by using the following formula or based on Fig.1.

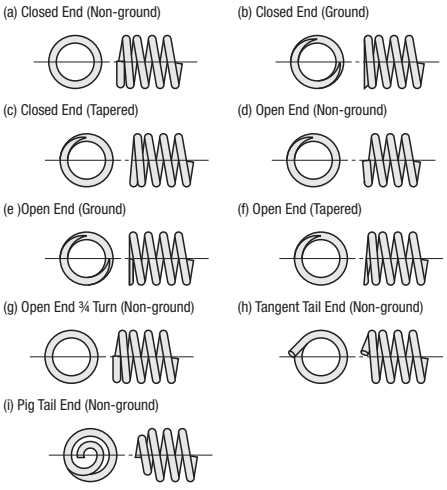
$$\chi = \frac{4c-1}{4c-4} + \frac{0.615}{c} \quad \cdots\cdots (9)$$

Fig-1.Hardness Coefficient : χ

1.3.4 Solid Length

The solid length of a spring can normally be obtained by using the following simplified formula. Generally, the purchaser of a compression spring does not specify the solid length of the spring.

$$Hs=(Nt-1)d+(t_1+t_2) \quad \cdots\cdots (10)$$



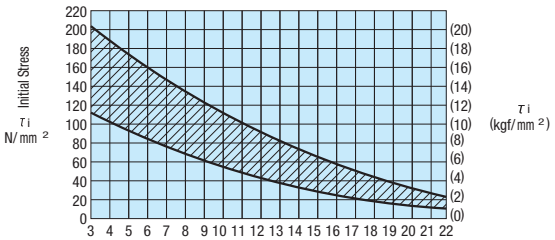
where, (t_1+t_2) : is the sum of the thicknesses of the coil ends.

As for those compression springs, both ends of which are shaped as shown in (b), (c), (e) or (f) of Figure 2 and for which the solid length needs to be specified, the following formula can be used to obtain the maximum solid length. However, the actual maximum solid length can be greater than the value thus calculated depending on the shape of the spring in question.

$$Hs=Nt\times d_{max} \quad \cdots\cdots (11)$$

where dmax : d is the material diameter with the maximum tolerance.

Fig-2. Coil End Shape



1.3.5 Initial Tension of Tension Springs

Cold-formed solid-coiled tension springs are subjected to initial tension (Pi). The initial tension can be obtained using the following formula.

$$P_i = \frac{\pi d^3}{8D}\tau_i \quad \cdots\cdots (12)$$

On solid-coiled piano wire, hard steel wire, and other steel wires that are not low-temperature annealed, the initial stress occurs within the hatched range shown in Fig.3. However, if materials other than steel wire are used, or the wire in question is low-temperature annealed, the initial stress taken from within the hatched range in Fig.3 should be corrected as follows.

Fig-3 Initial Stress : τi (Spring formed from steel coil, not low-temperature annealed)

(1) When using stainless steel wire, decrease the initial stress value for steel wire by 15%.

(2) If the spring is low-temperature annealed after being formed, decrease the value by 20~35% for springs made of piano wire, hard steel wire, or other stainless steel wires, and by 15~25% for springs made of stainless steel wire.

Reference In place of Fig.3, the following empirical formula can be used to establish the initial stress for springs before low-temperature annealing.

$$\tau_i = \frac{G}{100c}$$

The following examples are for applications of this formula to obtain the initial tension.

(1) Piano Wire / Hard Steel Wire [$G=78\times10^3$N/mm^2{8×10^3kgf/mm^2}]

Initial Stress $\tau_i = \frac{G}{100c}\times0.75$ (0.75 by 25, reduction by low-temperature annealing).

Initial Tension $P_i = \frac{\pi d^3}{8D}\tau_i = \frac{Gd^4}{255D^2}\times0.75 = \frac{229d^4}{D^2}\left\{\frac{24d^4}{D^2}\right\}$

(2) When using stainless steel wire [$G=69\times10^3$N/mm^2{7×10^3kgf/mm^2}]

Initial Stress $\tau_i = \frac{G}{100c}\times0.8$(0.8 by 20, reduction by low-temperature annealing).

Initial Tension $P_i = \frac{\pi d^3}{8D}\tau_i = \frac{Gd^4}{255D^2}\times0.8 = \frac{216d^4}{D^2}\left\{\frac{22d^4}{D^2}\right\}$

1.3.6 Surging

In order to prevent surging, the spring selected should be as that its natural frequency does not resonate with any of the natural frequencies that may act upon the spring.
The initial tension can be obtained using the following formula.

$$f=a\sqrt{\frac{kg}{W}}=a\frac{70d}{\pi N_a D^2}\sqrt{\frac{G}{\omega}} \quad \cdots\cdots (13)$$

Where, $a=\frac{i}{2}$:when both spring ends are either free or fixed

$a=\frac{2i-1}{4}$:When one spring end is fixed while the other end is free $i=1,2,3\cdots\cdots$

$G=78\times10^3$N/mm^2{8×10^3kgf/mm^2},
$w=76.93\times10^{-6}$ N/mm^3{7.85×10^{-6}kgf/mm^3} If both spring ends are either free or fixed, the natural primary frequency of a spring can be obtained as follows.

$$f_1 = 3.56\times10^5\frac{d}{N_a D^2} \quad \cdots\cdots (13)$$

1.3.7 Other Points to Note

In spring design calculations, the following points should also be taken into account.

(1) Spring Index Excessive local stress can result from too small spring index. Machinability is compromised if the spring index is too great or small. The spring index should be selected from the range of 4~15 when hot forming, and from the range of 4~22 when cold forming.

(2) Slenderness Ratio In order to ensure the correct number of active winding, the slenderness ratio for a compression spring (Ratio of free height to coil mean diameter) should be 0.8 or greater. Furthermore, buckling considered, it is generally recommended that the slenderness ratio be selected from the range of 0.8 ~ 4 to prevent buckling.

(3) Number of Active Winding The number of active winding should be 3 or more in order to stabilize spring characteristics.

(4) Pitch Generally, when the pitch exceeds 0.5D, the spring deflection (load) increases to the extent that the coil diameter changes. This requires correction of the deflection and torsional stress values obtained by the basic formulae. Therefore, the pitch should be 0.5D or smaller. The pitch can generally be estimated using the following simplified formula.

$$p=\frac{L-H_S}{N_a}+d \quad \cdots\cdots (14)$$

[Technical Data]
How to Use Coil Springs and Precautions

How to Use Coil Springs and Precautions

MISUMI is engaged in a constant effort to design coil springs(excluding Round Wire Springs)with optimum cross-sectional shape and maximum durability. When using the springs, pay due attention to the following precautions and undesirable usage that should be avoided for the sake of safety.

(1) Always Use A Spring Guide
When used without a spring guide, the coil spring may buckle or bend midway. This can cause it to break since the internal surface of the bending is subjected to concentrated high stress. Be sure to use a spring guide, such as a shaft and an outer diameter guide, with the coil spring.
*In most cases, the best results are obtained by inserting a shaft all the way through the coil spring, from top to bottom, as an inner diameter guide.

(2) Clearance between the Spring Inner Diameter and Shaft
When clearance between the spring and the shaft is insufficient, the coil spring's internal surface may come into contact with the shaft and be subject to abrasion at that point. This can lead to the spring eventually breaking at the point of wear. Excessive clearance with shaft, on the other hand, can lead to buckling of the coil spring. It is recommended that the shaft diameter be set approximately 1.0 mm smaller than the inner diameter of the coil spring.
When the coil spring has a long free length(i.e., free length/OD is 4 or larger), set up a step on the shaft as shown in Fig.-1 to prevent the coil spring's internal surface from touching the shaft when it bends.

(3) Clearance between The Spring OD and Counterbore Hole
The coil spring expands in the outward direction when it deflects. Insufficient clearance between the spring and the counterbore hole restrains expansion, and the resulting concentration of stress can cause the coil spring to break. It is recommended that the counterbore diameter be set approximately 1.5mm larger than the outer diameter of the coil spring. The counterbore configuration shown in Fig.-1 is ideal for a coil spring with a long free length.

(4) Avoid A Short Shaft Length and Shallow Counterbore Hole Depth
If the guide is too short, the coil spring may touch the guides tip when it is buckled. The resulting friction can cause the coil spring to break. It is recommended that the guide length be set longer than half of the initial height. Also make sure to chamfer the shaft to around C3 level.

(5) Do Not Use in Excess of The Maximum Deflection(300,000 times limit)or Near Its Solid Length
When the coil spring is used in excess of the 300,000 times limit, its Cross-section starts receiving stress that is higher than the theoretical value. This can cause the coil spring to break. Furthermore, when the coil spring is used at around its solid length, its active coils gradually adhere to each other, increasing the spring constant value and causing the load curve to rise, as shown in Fig.-2. Do not use the coil spring in excess of the 300,000 times limit.

(6) Set up An Initial Deflection
When there is a gap for the coil spring to move vertically, it receives an impact force that causes it to bend midway or to buckle.
Setting up an initial deflection stabilizes the top and bottom ends of the spring.

(7) Avoid Entrapment of Debris or Foreign Matter
Debris or foreign matter that becomes caught between the coils cause that part of the coil spring to stop functioning as active coils, forcing the other coils to deflect, as shown in Fig.-3. This effectively reduces the number of active coils, increasing the stress on the spring, and eventually causing it to break. Be careful not to allow debris or foreign matter to clog the coils.

(8) Keep Mounting Faces Parallel
The coil spring should be mounted properly, with its mounting faces top and bottom faces parallel to each other. Misalignment can cause the spring to bend midway, subjecting the bend to high stress. This can cause the spring to break at the point. The same applies to the dies in which the coil spring is used, if the parallel alignment between the dies is poor, as shown in Fig.-4, the coil spring can bend midway or exceed the 300,000 times limit prematurely. Keep the coil spring mounting faces as perfectly parallel as possible to prevent this from occurring.

(9) Do Not Use Coil Springs in Series
If you use two coil springs in series, they will tend to bend, as shown in Fig.-5. This can cause them to move out of the shaft, counterbore holes. If this happens, this coil spring will eventually break for the same reasons described in (1) above. Moreover, due to spring load differences, the weaker spring is overcome by, and deflects more than, the stronger spring, as shown in Fig.-6. This will make the weaker spring more prone to damage, or cause it to break.

(10) Do Not Use Two Coil Springs in Parallel
Use of two coil springs in parallel, as shown in Fig.-7, may result in the inner coils being sandwiched between the outer coils, or vice versa, when they contract. This can cause the coil springs to break for the same reason noted in (4).

(11) Do Not Use the Coil Spring Horizontally
When the coil spring is used horizontally, the internal surface of the spring will come into contact with the shaft, causing abrasion at those spots. The spring will eventually break at these weakened spots.

MISUMI Endurance Test Conditions

(1)Spring Guide Formula
Shaft Penetration
Shapt Dia.: -1.0mm less than d dimension

(2)Initial Deflection
1.0mm

(3)Amplitude
Deflection with 300,000 time limit value

(4)Velocity
180spm

*The maximum number of allowable operating times may vary depending on the service conditions.

Basis of Fitting Selection/Dimensional Tolerances and Fitting
Drawing Manual in JIS (How To Use) Series　Excerpts from JIS B 0401 (1998)

			H6	H7	H8	H9	Applicable Part	Functional Classification		Application Example
Can be Moved Relatively	Clearance Fit	Loose Fit				c9	Part which accommodates a wide gap or moving part which needs a gap. Part which accommodates a wide gap to facilitate assembling. Part which needs an appropriate gap even at a high temperature.	Part whose structure needs a gap. {Inflates. Large position error {Fitting length is long.		Piston Ring and the Ring Groove Fitting by means of a loose set pin.
		Light Roll Fit			d9	d9	Part which accommodates or needs a gap.	Cost needs to be reduced. {Manufacturing Cost {Maintenance Cost		Crank Web and Pin Bearing(Side) Exhaust Valve Box and the Sliding Part of a Spring Bearing Piston Ring and the Ring Groove
		Roll Fit		e7	e8	e9	Part which accommodates a wide gap or needs a gap. Fairly wide gap, well greased bearing. Bearing subjected to a high temperature, high speed and heavy load(high-degree forced lubrication).	Regular Rotary or Sliding Part (Must be well greased.)		Fitting of the Exhaust Valve Box Main Bearing for the Crank Shaft Regular Sliding Part
			f6	f7	f7 f8		Fitting so as to provide an appropriate gap to permit movement(high-quality fitting). Regular normal temperature bearing lubricated with grease or oil.	Regular Fitting (Often comes apart.)		Part in which a cooled exhaust valve box is inserted. Regular Shaft and Bushing Link Device Lever and Bushing
		Fine Roll Fit	g5	g6			Continuously revolving part of a precision machine under a light load. Fitting with a narrow gap so as to permit movement(spigot and positioning). Precision sliding part.	Part required to make a precision motion with virtually no play.		Link Device Pin and Lever Key and its Groove Precision Control Valve Rod
Cannot be Moved Relatively	Transition Fit	Sliding Fit	h5	h6	h7 h8	h9	Fitting so as to permit movement by hand, with a lubricant applied.(high-quality positioning) Special High Precision Sliding Part Unimportant Stationary Part	Can be disassembled, reassembled without damaging component parts.	Force cannot be transmitted by the fitting force alone.	Fitting a rim and a boss together Fitting the gear of a precision gear device
		Push Fit	h5 h6	js6			Fitting which accommodates a light gap. Precision fitting which locks both parts while the unit is used. Fitting which allows assembling and disassembling with a wooden or lead hammer.			Fitting Coupling Flanges Together Governor Path and Pin Fitting a Gear Rim and a Boss Together
		Driving Fit	js5	k6			Fitting which requires an iron hammer or hand press for assembling, disassembling(a key or the like is necessary to prevent inter-part shaft rotation). Precision positioning.			Fixing the Shaft of a Gear Pump and a Casing Together Reamer Bolts
			k5	m6			Same as the above for assembling and disassembling. Precision positioning which allows no gap.			Reamer Bolts Fixing the piston of hydraulic equipment and a shaft together Fitting a Coupling Flange and a Shaft Together
		Light Press Fit	m5	n6			Fitting which requires considerable force for assembling, disassembling. Precision stationary fitting(a key or the like is necessary for high torque transmission purposes)		Slight force can be transmitted by the fitting force alone.	Shaft of a Flexible Coupling and Gear(Passive Side) Precision Fitting Insertion of a Suction Valve and Valve Guide
	Interference Fit	Press Fit	n5 n6	p6			Fitting which requires much force for assembling, disassembling(a key or the like is necessary for high torque transmission). Light press fitting or the like is necessary for non-ferrous component parts. Standard press fitting is required for iron component parts and a bronze part and a copper part.	Hard to disassemble without damaging component parts.		Insertion of a Suction Valve and Valve Guide Fixing a Gear and a Shaft Together(Low Torque) Shaft of a Flexible Coupling and a Gear(Drive Side)
			p5	r6			Same as the above for assembling and disassembling Shrinkage press fitting, cold press fitting or forced press fitting is required for large component parts.			Coupling and Shaft
		Strong Press Fit, Shrinkage Fit, Freeze Fit	r5	s6 t6 u6 x6			Firmly coupled together and requires shrinkage press fitting, cold press fitting or forced press fitting. Permanent assembly, which can not come apart. Press fitting or the like is required for light alloy members.		Considerable force can be transmitted by the fitting force alone.	Attaching and Fixing a Bearing Bushing Insertion of a Suction Valve and Valve Box Fixing a Coupling Flange and a Shaft Together(High Torque) Fixing the Rim of a Drive Gear and a Boss Together Attaching and Fixing a Bearing Bushing

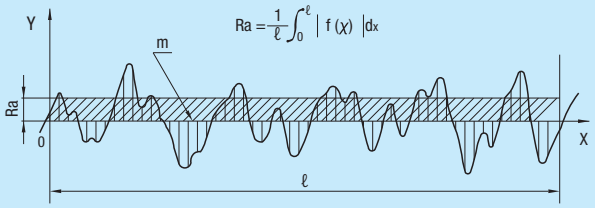
Reference In each column, the upper value is the upper dimensional tolerance, and the lower figure is the lower one. [Note]*:n5 is the previous version of JIS. Presented here because many MISUMI products conform to this version.

[Technical Data]
Surface Roughness

JIS B 0601(1994)
Excerpts from JIS B 0031(1994)

1. Varieties of Surface Roughness Indicators



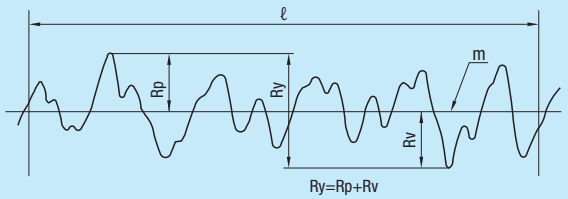
Definitions and presentations of arithmetic average roughness(Ra), maximum height(Ry), 10 spot average roughness(Rz), average concave to convex distance(Sm), average distance between local peaks S and load length rate tp are given as parameters indicating the surface roughness of an industrial product. Surface roughness is the arithmetical average of values at randomly extracted spots on the surface of an object.

[Centerline average roughness(Ra_{75})is defined in the supplements to JIS B 0031 and JIS B 0601.]

Typical calculations of surface roughness

Arithmetic Average Roughness Ra

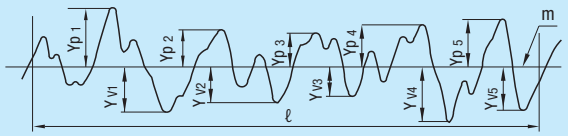
A portion stretching over a reference length in the direction in which the average line extends is cut out from the roughness curve. This portion is presented in a new graph with the X axis extending in the same direction as the average line and the Y axis representing the magnitude. Ra is represented by the equation shown at right, in microns(μm).



$$Ra = \frac{1}{\ell}\int_0^{\ell} |f(x)|dx$$

Maximum Height Ry

A portion stretching over a reference length in the direction in which the average line extends is cut out from the roughness curve. The gap between the peak line and the trough line is measured in the direction in which the magnitude axis extends, in microns(μm).



Reference A portion without an abnormally high peak or abnormally low trough, which may be regarded as a flaw, is cut out over the reference length.

Ry=Rp+Rv

Ten-spot Average Roughness Rz

A portion stretching over a reference length in the direction in which the average line extends is cut out from the roughness curve. The average of the levels(Yp)of the highest peak to the fifth highest peak as measured from the average line and the average of the levels(Yp)of the lowest trough to the fifth lowest trough similarly measured in the said portion are added together. Rz is this sum, in microns(μm).

$$Rz = \frac{|Yp_1 + Yp_2 + Yp_3 + Yp_4 + Yp_5| + |Yv_1 + Yv_2 + Yv_3 + Yv_4 + Yv_5|}{5}$$

$Yp_1, Yp_2, Yp_3, Yp_4, Yp_5$: Levels of the highest peak to the fifth highest peak in the said portion with the reference length ℓ.

$Yv_1, Yv_2, Yv_3, Yv_4, Yv_5$: Levels of the lowest trough to the fifth lowest trough in the said portion with the reference length ℓ.

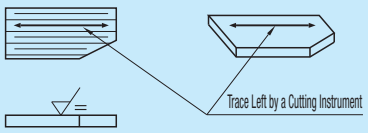
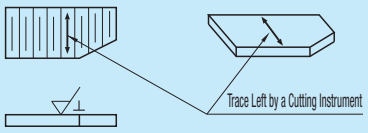
Drawing Indications of Surface Texture

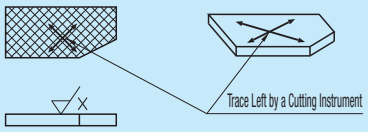
Excerpts from JISB0031(1994)

1. Positions of Auxiliary Symbols for Surface Symbol

A surface roughness value, cut-off value or reference length, machining method, grain direction, surface undulation, etc. are indicated around the surface symbol as shown in Fig. 1 below.







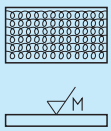


Fig. 1 Positions of Auxiliary Symbols

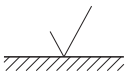
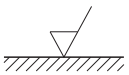
a : Ra Value
b : Machining Method
c : Cut-Off Value, Evaluation Length
c : Reference Length, Evaluation Length
d : Grain Direction
f : Parameter other than Ra(tp:Parameter/Cut-Off Level)
g : Surface Undulation(JIS B 0610)



Reference These symbols except a and f are provided when they are needed.

Reference Under ISO 1302, a finish range should be indicated as e in Fig. 1.



Code	Meaning	Illustration
=	The trace left by a cutting instrument is parallel to the projection plane in the drawing. Ex. Shaped Surface	
⊥	The trace left by a cutting instrument is perpendicular to the projection plane in the drawing. Ex. Shaped Surface(Side View) Circular Cut, Cylindrical Cut	
X	The pattern left by a cutting instrument diagonally crosses the projection plane in the drawing. Ex. Honed Surface	
M	The pattern left by a cutting instrument crosses in various directions or has no grain direction. Ex. Lapped Surface, Superfinished Surface and Surface Finished with a Front Mill or End Mill	
C	The pattern left by a cutting instrument is virtually concentric around the center of the plane in the drawing. Ex. Faced Surface	
R	The pattern left by a cutting instrument is virtually radial around the center of the plane in the drawing.

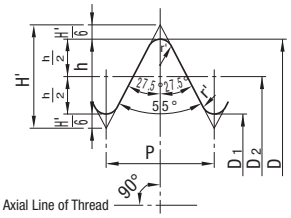
Taper Pipe Threads Excerpts from JIS B 0203 (1999)

Reference Thread Shape and Reference Dimension

Reference Thread Shape and Basic Dimension for a Tapered Male/Female Thread

Thick Solid Lines: Reference Thread Shape



$P=\frac{25.4}{n}$

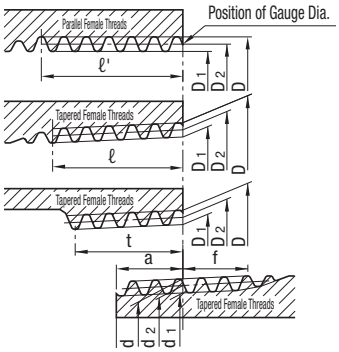
$H=0.960237P$

$h=0.640327P$

$r=0.137278P$

Reference Thread Shape for a Parallel Female Thread

Thick Solid Lines: Reference Thread Shape



$P=\frac{25.4}{n}$

$H'=0.960491P$

$h=0.640327P$

$r'=0.137329P$

Fitting together a tapered female thread or parallel female thread and a tapered male thread.

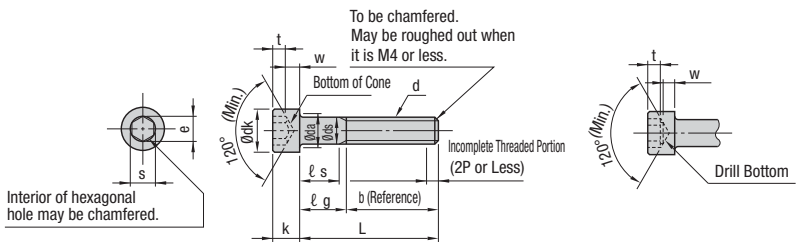
Note(1): The nominal of a tapered male thread is given here. For a taper female thread or parallel female thread, R should be replaced with Rc or Rp. (Refer to*)

(2): Tapered thread: length from position of gauge dia. spot to a minor dia. spot. /Parallel female thread: length from a pipe end or pipe fitting end.

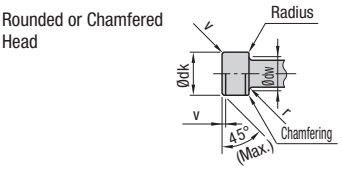
Reference 1. The threads should be at right angles to the central axial line, and the pitch should be measured along the central axial line.

2. The length of the effective thread means the length over which threads are fully provided. A pipe or a pipe fitting may be left in place on the crests of the last few threads. A chamfered end, if any, of a pipe or a pipe fitting should be included in the length of the effective thread.

3. When the value of a, f and t does not meet the requirements, the criteria of other standard is provided.



(*) Tapered threads type for a pipe are specified as taper male thread for a pipe, taper female thread and parallel female thread for a pipe.



The parallel female thread for a pipe should be mated with a tapered male thread for a pipe, and differs in dimension tolerances from the parallel female thread specified by JIS B 0202.

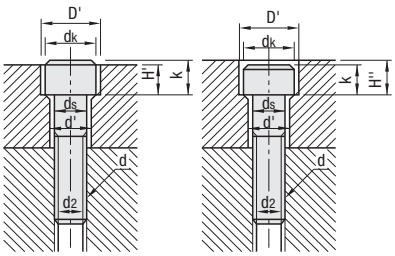
Note (1): Column 1 for s (max.) is applicable to strength class 8.8, 10.9, A 2-50 and A 2-70; Column 2 should be applied to strength class 12.9.
Column 1 may be applicable to strength class 12.9 in accordance with an agreement made between the delivering and receiving sides.
When the nominal of thread is M20 or larger, s (max.) should be applied to all strength classes.

Note (2): Nominal of thread in brackets should not be used unless it is absolutely necessary.

Reference 1. A side of the head should be knurled into a straight line or crisscross pattern [refer to JIS B 0951 (knurling pattern)]. dk(max.) should be the value marked with**.
If no knurled pattern is needed, purchasers can indicate that. However, dk(max.) should be the value marked with*.

2. Recommended nominal lengths (L) for individual nominal of thread are shown within the bold lines.
If L is shorter than the dotted line, the thread should be fully threaded, and the incompletely threaded part length beneath the neck should be approximately 3P.



3. ℓg (max.) and ℓg (min.) for a screw, whose length (L) exceeds the dotted line, are obtained by the equations below:
ℓg(Max)=Nominal Length(L)-b
ℓs(Min)=ℓg(Max)-5P

2. L, s and g of Hexagon Socket Head Cap Screws

[Technical Data]
Proper Bolt Axial Tightening Force and Proper Tightening Torque

■Axial Tightening Force for Bolt and Fatigue Limit

- The proper axial tightening force for a bolt should be calculated within an elasticity range up to 70% of the rated yield strength when the torque method is used.
- The fatigue strength of bolt under repeated load should not exceed the specified tolerance.
- Do not let the seat of a bolt or nut dent the contact area.
- Do not break the tightened piece by tightening.

A bolt is tightened by torque, torque inclination, rotating angle, stretch measurement and other methods. The torque method is widely used due to its simplicity and convenience.

■Calculation of Axial Tightening Force and Tightening Torque

The relation between the axial tightening force and Ff is represented by Equation(1)below:

$Ff=0.7\times\sigma y\times As$……(1)

Tightening torque TfA can be obtained by using the following formula(2).

$T_{fA}=0.35k(1+1/Q)\sigma y \cdot As \cdot d$……(2)

k : Torque Coefficient
d : Nominal Diameter of Bolt[cm]
Q : Tightening Coefficient
σy : Tensile strength(When the strength class is 12.9, it is 112kgf/mm^2)
As : Effective Sectional Area of the Bolt[mm^2]

■Calculation Example

Proper torque and axial force for Mild steel pieces tightened together by means of a hexagon socket head cap screw, M6(strength class 12.9), with the pieces lubricated with oil can be calculated.

· Proper Torque, by using Equation(2)

$T_{fA}=0.35k\ (1+1/Q)\ \sigma y \cdot As \cdot d$
$=0.35 \cdot 0.17\ (1+1/1.4)\ 1098 \cdot 20.1 \cdot 0.6$
$=1351[N \cdot cm]\ \{138[kgf \cdot cm]\}$

· Axial Force Ff, by using Equation(1)

$Ff=0.7\times\sigma y\times As$
$=0.7\times1098\times20.1$
$=15449[N]\ \{1576[kgf]\}$

■Surface Treatment for Bolt and Torque Coefficient Dependent on the Combination of Material for Area to be Fastened and Material of Female Thread

■Standard Value of Tightening Coefficient Q

Tightening Coefficient Q	Tightening Method	Surface Condition		Lubrication
		Bolts	Nuts	
1.25	Torque Wrench	Manganese Phosphate	Not treated or Treated with Phosphate.	Lubricated with oil or MoS2 paste
1.4	Torque Wrench	Not treated or Treated with Phosphate.		
	Limited-Torque Wrench			
1.6	Impact Wrench			
1.8	Torque Wrench	Not treated or Treated with Phosphate.	No Treatment	Unlubricated
	Limited-Torque Wrench			

Strength Class
Ex. 12.9
- Tensile Strength(Yield Stress):90% of the minimum value of tensile strength
- The minimum value of tensile strength is 1220N/mm^2 { 124kgf/mm^2 }

10.9
- Tensile Strength(Yield Stress):90% of the minimum value of tensile strength
- The minimum value of tensile strength is 1040N/mm^2 { 106kgf/mm^2 }

(Note) · Tightening Conditions:Use of a torque wrench(Lubricated with Oil, Torque Coefficient k=0.17, Tightening Coefficient Q=1.4)
· The torque coefficient varies with the conditions of use. Values in this table should be used as rough referential values.
· The table is an excerpt from a catalog of Kyokuto Seisakusho Co., Ltd.

[Technical Data]
Strength of Bolts, Screw Plugs and Dowel Pins

■Strength of Bolt

1)Tensile Load Bolt

$P=\sigma t \times As$ ·····(1)

$=\pi d^2 \sigma t/4$ ·····(2)

Pt : Tensile Load in the Axial Direction [N]
σb : Yield Stress of the Bolt [N/mm²]
σt : Allowable Stress of the Bolt [N/mm²]
($\sigma t=\sigma b$/Safety Factorα)
As : Effective Sectional Area of the Bolt [mm²]
$As=\pi d^2/4$
d : Effective Dia. of the Bolt (Core Dia.) [mm]

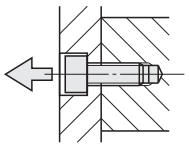
■Safety Factorα of Unwin Based on Tensile Strength

Materials	Static Load	Repeated Load		Impact Load
		Pulsating	Reversed	
Steel	3	5	8	12
Cast Iron	4	6	10	15
Copper, Soft Metal	5	5	9	15

$\text{Allowable Stress} = \frac{\text{Reference Strength}}{\text{Safety Factor}\alpha}$ Reference Strength:Yield Stress for Ductile Material
Fracture Stress for Fragile Material

(Ex.)The proper size of a hexagon socket head cap screws, which is to bear a repeated tensile load(pulsating) at P=1960N {200 kgf} , should be determined.(The hexagon socket head cap screws are 1.7220, 38 to 43 HRC, strength class 12.9)

(1)Using Equation



$As=Pt/\sigma t$

$=1960/219.6$

$=8.9\ [mm^2]$

∴By finding a value greater than the result of the equation in the Effective Sectional Area column in the table on the right, M5, 14.2[mm²], should be selected.

M6, allowable load of 2087N {213 kgf} , should be selected from the column for strength class 12.9, with the fatigue strength taken into account.

The yield stress, strength class 12.9, isσb=1098[N/mm²] {112[kgf/mm²]}.
Allowable Stress $\sigma t = \sigma b$/Safety Factor(from the above table Safety Factor 5)
=1098/5
=219.6[N/mm²] {22.4[kgf/mm²]}

2) If the bolt, like a stripper bolt, is to bear a tensile impact load, the right size should be selected from the fatigue strength column.(Under a load of 1960N {200kgf}, stripper bolt made of 1.7220, 33 to 38 HRC, strength class 10.9)

By finding a value greater than the allowable load of 1960N {200 kgf} in the Strength Class 10.9 column in the table on right, M8, 3116[N] {318[kgf]} , should be selected. Hence, MSB10 with the M8 threaded portion and an axial diameter of 10 mm should be selected.

If it is to bear a shearing load, a dowel pin should also be used.

■Fatigue Strength of Bolt(Thread:Fatigue Strength is 2 million times)

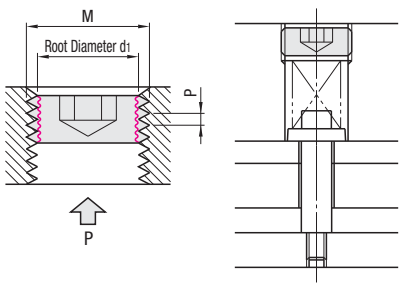
Fatigue strength* is a revision of an excerpt from "Estimated Fatigue Limits of Small Screws, Bolts and Metric Screws for Nuts" (Yamamoto).

■Strength of Screw Plug

When screw plug MSW30 is to bear an impact load, allowable load P should be determined. (The materials of MSW30 are 1.1191, 34 to 43 HRC, tensile strength σt 637N/mm² {65kgf/mm².})

If M S W is shorn at a spot within the root diameter section and is broken, allowable load P can be calculated as shown below.



Allowable Load $P=\tau t \times A$

$=3.9\times107.4$

$=40812[N]\ \{4164[kgf]\}$

Find the allowable shearing force base on the core diameter of female thread if a tap is made of soft material.

Area A=Root Diameter $d_1\times\pi\times L$
(Root Diameter $d_1\approx M-P$)
$A=(M-P)\pi L=(30-1.5)\pi\times12$
$=1074\ [mm^2]$
Yield Stress≈0.9×Tensile Strength $\sigma b=0.9\times637=573[N/mm^2]$
Shearing Stress≈0.8×Yield Stress
$=459\ [N/mm^2]$
Allowable Shearing Stress τt=Shearing Stress/Safety Factor12
$=459/12=38\ [N/mm^2]\ \{3.9\ [kgf/mm^2]\}$

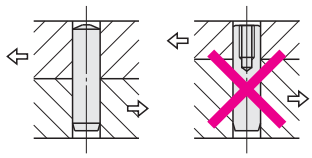
■Strength of Dowel Pins

The proper size of a dowel pin under repeated shearing load of 7840N {800 kgf} (Pulsating) should be determined.(The material of Dowel Pins is SUJ2. Hardness 58HRC~)

$P=A\times\tau$

$=\pi D^2\tau/4$

$D=\sqrt{(4P)/(\pi\tau)}$



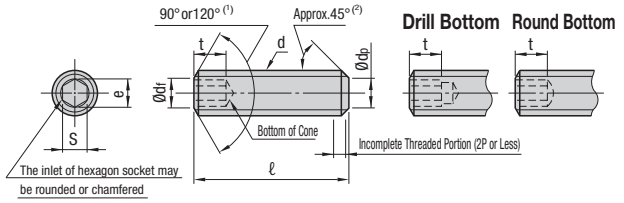
$=\sqrt{(4\times7840)/(3.14\times188)}$

≈7.3

∴D8 or a larger size should be selected for MS.

If the dowel pins are of a roughly uniform size, the number of the necessary tools and extra pins can be reduced.

Yield Stress for SUJ2 $\sigma b=1176\ [N/mm^2]\ \{120\ [kgf/mm^2]\}$
Allowable Shearing Strength $\tau=\sigma b\times0.8$/Safety Factor α
$=1176\times0.8/5$
$=188\ [N/mm^2]\ \{19.2\ [kgf/mm^2]\}$



The dowel pin must not be loaded.

Typical strength calculations are presented here. In practice, further conditions including hole-to-hole pitch precision, hole perpendicularity, surface roughness, circularity, plate material, parallelism, quenching or non-quenching, precision of the press, product output, wear of tools should be considered. Hence the values in these examples are typical but not guaranteed values.

[Technical Data]
Hexagon Socket Set Screws Flat Type

1. Shape and Dimension of Hexagon Socket Set Screws and Its Flat End (JIS B 1177-1997).

Note (1): Should be chamfered to 120° if I falls short of the dotted line, which forms stairs, in the table.
(2): 45° Slanted portion below the trough diameter line of the male thread.

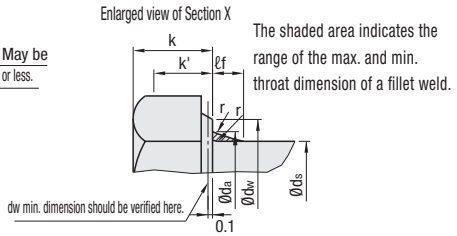
Note (3): when **e** min.=1.14×s(min.) Excluding nominal of thread M25 or less for screws.
(4): The values in Column 1 for **t** min. are applicable to the nominal lengths (ℓ) falling short of the dotted border, and the values in Column 2 to the nominal lengths beyond the border.
(5): Min.rand max. are based on JIS B 1021. They are rounded to the first digit below zero.



Reference
1. Recommended nominal lengths (ℓ) for individual nominal of thread are enclosed by thick lines.
If the required ℓ-value is not given in the table, it should be specified by the ordering side.
2. The shape and dimensions of the flat end of the screw are based on JIS B 1003 (shape and dimensions of the end of the screw).
3. The shape of the hexagon socket bottom may be a conical, drill or round bottom.

The shape and dimensions indicated in the reference table are based on ISO 4026-1977.

[Technical Data]
Hexagon Bolts Excerpts from JIS B 1180 (1999)

1. Shape and Dimensions of Hexagon Bolt (Parts Grade A)

The shaded area indicates the range of the max. and min. throat dimension of a fillet weld.

Reference
1. Priority should be given to the nominal of thread in Column Ⅰ. The screw size codes are based on JIS B 0123.
2. Recommended nominal lengths(L)for individual nominal of thread are enclosed by thick lines.
3. When the thread part length (b) of a bolt exceeds the max. nominal value given within the thick lines, the tolerance of the thread part length should be agreed upon by the delivering and receiving sides, corresponding to JIS B 1021.
4. Max. value ℓg and Min. value ℓs as follows: ℓg max Nominal Length(L)-b, ℓs min.=ℓg max-5P(P=Coarse Thread Pitch)
5. da and r in this table are based on JIS B 1005.
6. "Chamfered" and "Unpointed", the shape of the end screw should be decided according to JIS B 1003.
7. The asterisked figures in the table are values after correction with the relevant international standard.

*With some of the hexagon bolts and hexagon nuts for M10 and M12 distributed at present, the opposite side S is based on JIS prior to the revision.

Reference 1. The nominal diameter is dependent on the diameter of the pin hole.
2. d is a value for a spot somewhere between the end and the ℓ/2 spot.
3. The end may be pointed or flat. If a pointed end or a flat one is needed, it should be specified.
4. The length (ℓ) should be one enclosed by thick lines. The value in an enclosed area is a tolerance. If the required r-value is not given in the table, it should be specified by the ordering side.
5. The head must not tilt excessively from the axial center.

Shape and Dimensions of Spring Pins

*The size of Gap C should be able to avoid the contact between the spring pin and the hole in which the pin is to be inserted.

Note(1): d should be measured with a limit plug gauge.
Note(2): thickness(t)=1.6mm, may be kept at 1.5mm for the time being. m should be 1.65mm.
Reference: The recommended dimensions of the applicable shaft are given here for reference.

[Technical Data]
Retaining Rings C Type
Excerpts from JIS B 2804(2001)

1. Retaining Rings-C Type-External

The hole with diameter d_0 should be positioned to protrude out of the groove when the retaining ring is inserted in the shaft.

d_5 is the max. outer diameter when the retaining ring is fitted onto the shaft.

Retaining Rings-C Type-External

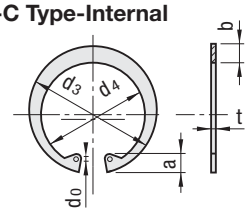
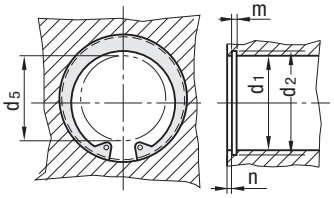
Note(1): Priority should be given to values not in ( ). A value in ( ) may be used if necessary.

Note(2): Thickness(t)=1.6mm, may be kept at 1.5mm for the time being. m should be 1.65mm.



Reference: 1. The minimum width of the ring of the retaining ring should be less than the plate thickness t.

2. The recommended dimensions of the applicable shaft are given here for reference.



3. d_4 (mm) should preferably be equal to $d_4=d_3+(1.4\sim1.5)b$.

Reference: The thickness t, conforms to the Japan Spring Manufactures Association Standard, JSMA No. 6-1976 (steel belt for a spring).

2. Retaining Rings-C Type-Internal

The hole with diameter d_0 should be positioned to protrude out of the groove when the retaining ring is inserted in the hole.

d_5 is the minimum diameter of the internal circumference when the retaining ring is fitted.

Retaining Rings-C Type-Internal

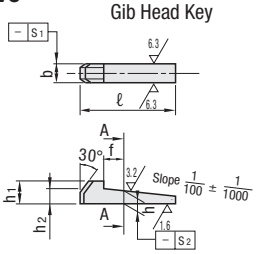
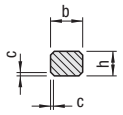
Note(1) The applicable shaft diameter is calculated from the torque corresponding to the strength of the key, for presentation as referential data for general-purpose use. When the key is of an appropriate size relative to the torque to be transmitted, a shaft thicker than the applicable shaft diameter may be used. In some cases, t_1 and t_2 should be adjusted so that a side of the key will come into uniform contact with the shaft and the hub. A shaft narrower than the applicable shaft diameter should not be used.



Reference The nominal sizes given in ( ) do not conform to the relevant international standard and must not be used in new design.

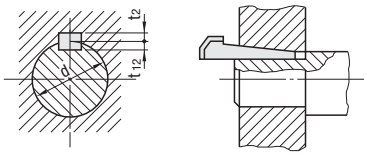
2. Slope Key, Gib Head Key and Key Groove



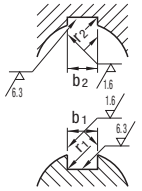
Slope Key (Code T)

Gib Head Key

Section of Key (A-A)



S_1=Tolerance of b×$\frac{1}{2}$



S_2=Tolerance of h×$\frac{1}{2}$

h_2=h, f≈h, e=b

h_2=h, f=h, e≈b

Section of Key Groove

Unit: mm

Note(1): From the values for ℓ given below, which are in the appropriate range in the table, one should be selected.
The tolerance for l should be h12 under JIS B0401 (dimension tolerance and fitting), in principle.
6,8,10,12,14,16,18,20,22,25,28,32,36,40,45,50,56,63,70,80,90,100,110,125,140,160,180,200,220,250,280,320,360,400

Note(2): The appropriate shaft diameter should be matched with the torque corresponding to the strength of the key.

Reference: The nominal sizes given in ( ) should not be used unless they are absolutely necessary.
The groove for the boss should be slanted to 1/100, in principle.

Metal Table EN - JIS 1

JIS denomination is binding for orders. EN denominations are started as comparative material. (Partly there is no existing equivalent EN material for JIS material existing or contrary).
All information ist based on values and properties which are achieved typically and are only for assessment of materials (typical values). Properties herein shall not be located directly to a product and there is no supposition that any product achieves these values. For proof values own checks are necessary or you may request the direct related value from Misumi.

Plastic Table 1

iPlastics

Abreviation (DIN ISO 1629)	common denomination	typical technical values
CR (ISO)	Chlorbutadien-Rubber	Operating Temperature: -40°C ~ +110°C (short time use +130°C), Density: 1.25 g/cm³
Good resistance against mineral oil, very good resistance against ageing by exposure to exposure to ozone, resistance against acid and alkalines, good abrasion resistance, high flame resistant, restricted lightwigthed fuel resistance. (Similar to NBR in chem. and phys. area: smaller resistance against mineral oil, better resistance against ageing by exposure to ozone, resistance against acid and alkalines).		
CFK CRP (ISO)	Carbon Reinforced Plastic	
Carbon fibres are Fibres with very high strength and rigidity and very small elongation at break. Carbonization temperatures for the fibres are in the area from 1300 - 1500 °C, whereby the carbon content is increasing to 96% -%98%. In cooperation with thermoset resin or thermoplastic resin CFK's enable to create light, stiff and high strength composite materiale with small elongation. The properties of composite materiales are adjustable in a wide range depending on typ of plastic, lenth of fibres and thickness of fibres. Temperature resistance is primary depending on the basic plastic.		
EPDM (ISO)	PolyEthylenePropyleneDieneRubber	Operating Temperature: -40°C~+130°C (short time use +150A), steam up to 200°C, hot water / air up to 150°C; Density: 1.05~1.2 g/cm³
Exelent resistance against weathering, agening, exposure to ozone, chemicals, hot water and vapour. good resistance against medium like acetone, mathanol, acids, alkaline solutions, ketones and flame resistant hydraulic fluids. Small permeability to vapour, good thermal stability, excessively deep embrittlement temperature. very good electr. insulating properties.		
EPM (ISO) EPR	Ethylen Propylen Rubber	Operating Temperature: -25 °C~+200°C, short time use +250°C, (-40°C at static load), Density: 1.8 g/cm³
Properties as far as possible same to EPDM. EPR. Often used as insulator for wires and conduction.		
FPM (ISO) FKM (ASTM)	Fluorcarbon Fluorrubber Polyfluoralkylmethylen	Operating Temperature: -25°C~+200°C, short time use +250°C (-40°C at static load), Density: 1.8 g/cm³
Very good Oil- and Chemical resistance, very good heat resistance, exelent exposure to ozone-, agening- and weathering resistance, high resistance against inflammation. very small elasticity, middlesized mechanical strength. Permeability to gas ist very small and similar to permeability of Butylrubber.		
GFK GRP (ISO)	glass reinforced plastic	Operating Temperature: 120°C+180°C max. 2h, bis 500A for high temperature resistant types (Epoxy basic), Density: 1.8 - 2.2 g/cm³
Glasfibres are fibres with high strength and stiffness and small elongation at break. In cooperation with thermoset resin or thermoplastic resin light, stable and strength composite materials with small elongation. The properties of composite materiales are adjustable in a wide range depending on typ of plastic, lenth of fibres and thickness of fibres. Temperature resistance is primary depending on the basic plastic.		
IIR (ISO)	Butyl-Rubber Isopren-Rubber Isobutylen-Rubber Polyisobutylen-isoprene	Operating Temperature: -40°C~+130°C, short time use +150°C, Density: 1.5 g/cm³
Good resistance against acids and alkaline solutions, very good agening resistance, exposure to ozone, very good electric insulating properties, small permeability to gas. Low elasticity and no resistance against oil and grease. Extremly damping properties for aperiodic vibrations. Middlesized mechanical properties.		

All information is based on values and properties which are achieved typically and are only for assessment of materials (typical values).
Properties herein shall not be located directly to a product and there is no supposition that any product achieves these values.
For proof values own checks are necessary or you may request the direct related value from Misumi.

Abreviation (DIN ISO 1629)	common denomination	typical technical values
NBR (ISO)	Acrylnitrilbutadiene Rubber Acrylnitril Rubber Nitrilrubber Polyacrylnitrilbutathen	Operating Temperature: Fluids up to +70°C, air up to +90°C, temp. depending on ACN-content max. -50°C, Density: 1.6 g/cm³, Elongation at Break: 100~350%
Acrylnitril content (small, middle, high). High Acrylnitril content = high Resistance against aromatic hydrocarbon. Small Acrylnitril content = high flexibility at low temperatures. The typ with normaly best combination in normal using areas has a middlesized Acrylnitril content. Permeability to gas nearly same to IIR. Very good resistance against mineral oil.		
NR (ISO)	Natural Rubber Polyisoprene	Operating Temperature: -45°C~+100°C, Density: 1.2 g/cm³
Good mechanical properties(very high strength, high elongation at break and very high impact resilience, good abrasion resistance). No resistance against mineral oil and mineral grease; poor exposure to ozone and agening. Natural rubber is comparable to with Polyisoprene. Permeability to gas for NR is approx 20 times higher IIR.		
PA (ISO)	Polyamide	Operating Temperature: +80°C~+110°C (short time use +140°C~+170°C), Density: 1.17 g/cm³
Semicrystalline thermoplastic resin, i.e. PA 6 and PA 6,6. The number is representing the amount of carbon atomes within amine- and acid monomeres. Low temperature resistance, shock restistant and impact resistant, even on rough surfaces abrasion resistant, high internal working capacity.		
PBT (ISO) PBTP	Polbutylenterephthalat Dimethyl Terephthalat und Butandiol Polyester	Operating Temperature: -30°C~+100°C (160°C short time use), Density: 1.3 g/cm³
Small tendency for leakage current, very high stability for dimensions (better than POM), low slip friction, high strength and stiffness (smaller than POM and PET, but higher impact resistance), very good abrasion resistance.		
PC (ISO)	Polycarbonate Lexan	Operating Temperature: -130°C~+130°C, Density: 1.2 g/cm³, Elongation at Break: 90~120%
Extremly high impact resistance, high strength, high temperature resistance, good optical properties and self-extinguishing. Sensibel against chemicals and sensible for stress cracking, not usable for continunous endurance above 20 Mpa, under temperature effect continuous load up to maximum 10 MPa, unusable at higher dynamic load , at edges and stepped shapes with small and sharp edges very notch sensitive.		
PE (ISO)	Polyethylene	Operating Temperature: ~+80°C (short time use +100°C), Density: hard condition: 0.95 g/cm³, soft condition: 0.92 g/cm³ / HDT/A42-49 (HDUHMW)
Waxy and non adhasive surface. Low density high tenacity, low strength and hardness, exelent chemical resistance, poor temperature resistance for steam and permeable for Oxygen, Carbon dioxide and aromatic substances.		
PET (ISO)	Polyethylenterephthalat Poly(ethylendioxytereftaloyl) Polyester	Operating Temperature: -50°C~+110°C (short tim use 180°C), Density: 1.34 g/cm³
Dimensionally stable (better than POM), low sliding resistance, high strength and stiffness (worse than POM), very good abrasion resistance.		

All information is based on values and properties which are achieved typically and are only for assessment of materials (typical values).
Properties herein shall not be located directly to a product and there is no supposition that any product achieves these values.
For proof values own checks are necessary or you may request the direct related value from Misumi.

Plastic Table 3

Abreviation (DIN ISO 1629)	common denomination	typical technical values
PF (ISO)	Phenolformaldehyd Bakelite	-50~+100, up to 2h at 130°C, at 180°C breakdown, Density: 1.4 g/cm³
Hard and brittle, insoluble, infusible, flame-resistant, self-extinguishing, resistant against agening. By Polycondensation from carbolicum acidum with formaldehyde manfactured phenoplast.		
PMMA (ISO)	Polymethylmethacrylate	Operating Temperature: -40°C~+90°C (short time use +100°C), Density: 1.2 g/cm³, HDT/A 95, HDT/B 100
Lightfast, glas clear, nearly unbreakable, sensitive against dust, scratch-resistant, UV-resistant, resistantant against weak acids and alkaline solutions, resistant against mineral oil and gasoline, partially resistant to solvent.		
Polyolefine		
Polymer out of hydrocarbon (formula CnH2n) built up in one double link. (polymerized alkene). Polyolefines are semikrisalline thermoplastic resins, distinguished by good chemical resistance and good electrical insulation properties. This group is very reasonable in price and can be manufactured by conventional procedures. That's the reason for often use and that they are one of the most important group of plastics. In polymeric conditon the Polyolefine are robust and flexible plastics with numerous possibilities in use. Inherent plastics: PE (Polyethylene), PP (Polypropylene), PB (Polybenzimidazol), PMP (Poly-4-methylpenten), PB (Polybuten-1), PIB (Polyisobuten). {Olefine = artificial word from fr. olefiant which is built out of lat. oleum and fiacre. Alkene = unsuturated, aliphatic hydrocarbon with one double link inside molecule}		
POM (ISO) POM-C	Polyformaldehyd Polyoxymethylen Copolymer Polyacetal	Operating Temperature: -40°C~+110°C (short time use +150°C), Density: 1.4 g/cm³
Low frictional resistance, good abrasion resistance, very good endurance limit, high insulating strength, good chemical resistance (especially against solvents), robust against stress fracturing.		
PP (ISO)	Polypropylene Neoprene® (DuPont)	Operating Temperature: 0°C~max. +110°C (embrittlement in cold condition), Density: 0.90 g/cm³
Higher stiffnes, hardness and strength than PE, however lower than PA, average value for impact strength, low density, very good chemical resistance, high bending stress fatigue limit, good stress fracturing resistance(better than PE), very limited properties in cold condition, very good dielectric strength.		
PPO (ISO) PPE	Polyphenyleneoxide	Operating Temperature: -20°C~+90°C (short time use -35°C~ +130°C), HDT/A 88A, HDT/B 93°C
Stiff, high strength and dimension stable, good electrical and thermal properties, good hydrolysis- and chemical resistance, resistance against deformation at high temperatures and high humidity. For parts where humidity and temperature is a criterion but on the other hand difficult to machine.		
PPS (ISO)	Polyphenylensulfid	Operating Temperature: +200°C~+240°C (short time use +300°C), Density: 1.6 g/cm³
High hardness and stiffness, good abrasion resistance, low absorbtion of humidity, favorable insulation properties, small dielectric loss, high flame resistance, high chemical resistance.		
PTFE (ISO)	Polytetrafluorethylen Polytetrafluorethen Polytetrafluoräthylen	Operating Temperature: -270°C~+260°C (short time use +300°C, over 400°C toxic outgassing!), Density: 2.17 g/cm³
Resistant against nearly all organic and inorganic chemicals (except elementary fluor under pressure at high temperatures, lowest coefficient of friction (stat. 0.03; dyn. dry 0,05 - 0,20), not in any way adhasiv.		

All information is based on values and properties which are achieved typically and are only for assessment of materials (typical values).
Properties herein shall not be located directly to a product and there is no supposition that any product achieves these values.
For proof values own checks are necessary or you may request the direct related value from Misumi.

Plastic Table 4, Ceramics Table

Abreviation (DIN ISO 1629)	common denomination	typical technical values
PU (ISO) AU (ISO)	Polyurethan Esterbase Polyurethan Etherbase	Operating Temperature: -40°C (from approx. -20°C increasing stiffness) ~+80°C (+120°C short time use), charing at +500°C, Density: 1.2 g/cm³, Elongation at Break: 350-700%
Very good wear resistance, high resilience, good up to very good resistance against weathering, good UV-resistance and good exposure to ozone (Yellowing due to influnce of wathering over longer time incl. small surface brittleness and small reduction of mechanical values), flexible in a wide temperature range, high buccklingstrength and tensile strength(high tear growth resistance), good dynamic load properties, hydrolysis- and mikrobe resistance (for polyether typ), oil resistant, grease resistant, solvent resistant (especially at higher aromatic content). No resistance to hot water! There is an endangering for typ without microbe resistance, to be destingerated by longer existing infestation by microbes. Humidity together with heat and a higher amount of organism can push up this process. Due to released enzymes the Ester links will be divided and the material will be destroyed. Mostly there is a selective infestation, in opposite to hydrolytic infestation, which takes place on the whole surface. (Hydrolys		
PVAC (ISO)	Polyvinylacetate	Operating Temperature: +30°C, max. 80°C afterwards softening, Density: g/cm³
Soft, at normal temperatures elastic up to hard, resistant against weathering and light resistant, no solubility in water, oil and paraffines, soluble in organic solvent, aromatic and halogenated hydrocarbon).		
SIR (ISO) MVQ (ISO)	Silicon (SIR) Silicon Rubber Styrol - Isopren - Rubber Polysiloxan (MVQ)	Operating Temperature: -90°C~+180°C (short time use +250°C), without influence of water or steam, Density: 1.2 g/cm³
High heat resistance, soft and high flexibility, exelent properties in cold use , very good resistance against oxygen, very good exposure to ozone and resistance against UV and weathering, very good electrical insulation properties, no physiological effect, bad gas tightness, normal mechanical properties, low abrasion resistance.		
All information is based on values and properties which are achieved typically and are only for assessment of materials (typical values). Properties herein shall not be located directly to a product and there is no supposition that any product achieves these values. For proof values own checks are necessary or you may request the direct related value from Misumi.		

iCeramics

Abreviation (DIN ISO 1629)	Familar denominations and names	Typical technical values
Al2O3	Aluminiumoxide	Operating Temperature: max. 1200°C, Density: 3.7 g/cm³, Compression Strength: 1450~2450 N/mm², Resistance to Bending 250~350 N/mm², Hardness: 2300 HV, Thermal Conductivity: 30 W/m•K, 1014 Ohm•cm
High strength and hardness, high wear resistance, very good chemical resistance and corrosion resistance, high thermal conductivity, high thermal shock resistance, high electric insulation values.		
ZrO2	Zirkonoxide	Operating Temperature: max. 800°C, Density: 6.0 g/cm³, Compression Strength: 2100 N/mm², Resistance to Bending 900~1000 N/mm², Hardness: 1300 HV, Thermal Conductivity: 2.5 W/m•K, 1010 Ohm•cm
High strength and hardness, high wear resistance, very good chemical resistance and corrosion resistance, high thermal conductivity, high thermal shock resistance, high electric insulation values.		

Surface Treatments

Anodizing– /Hard Anodizing

ELOXAL is a contrived word and the abbreviation for ELectrolytic Oxidized ALuminum. During anodic or electrolytic oxidation of aluminum and its alloys, anodically charged aluminum (Al = pos. pole) is converted by passing electric current through a cooled acidic solution onto a surface as an Al203 (aluminum oxide) layer. This oxide shift is many times stronger (x 100) than a natural oxide layer. Its strength is defined and limited by the specific process used. While a layer can be deposited from the bath onto the surface of the workpiece in conventional electroplating (purely layer by layer build up), aluminum oxide can only be built up from the inside out from the boundary surface between the oxide layer and metallic aluminum. Metallic aluminum is also acquired from the conversion process and is continuously removed and converted. [Al203 directly forms aluminum (2/3 inwards, 1/3 outwards).]

Properties:

Type:	oxide layer, hard and dense
Color:	colorless/natural colors, colored or black
Hardness:	approx. 250 ~ 300 HVH
Layer thickness:	~ 5-25 Om.
Corrosion protection:	Protection against weather and corrosive attack.
Miscellaneous:	Special wear protection properties occur in hard anodizing due to the increased layer thickness.

Black Oxiding

In black oxiding a dense, black and adhesive iron oxide layer is created on a steel surface. After subsequent immersion in oil, the shine is highlighted and an optically appropriate corrosion protection is achieved, which is, however, limited in its protective effectiveness. Black oxided surfaces do not change the dimensional accuracy of the workpiece. Black oxiding is a chemical process. The workpiece is immersed in a 135-145°C alkali and oxidizing solution (sodiumhydroxide solution and oxidizing agent) a thin oxide layer of black iron oxide (Fe304) is created on the surface of the part.

Properties:

Type:	Oxide layer
Color:	black surface
Layer thickness:	~ 0.5 to 2 Om.

Chromating/Passavating

Chromating and passivating are secondary treatment methods (often after zink plating) in which the workpiece is treated without an external electrical supply. This process creates transparent, shiny, yellow, olive-green, blue, black and other color top coats. They are used as corrosion and tarnish protection layers or for improving adhesion of subsequent painting. Passivated conversion layers occur from a chemical reaction with chrome containing acids, where a reaction occurs between the workpiece surface and the solution. Chromates are salts from chromic acid H2CrO4 and are derived from CrO3 (chromium (VI) oxide). They are highly poisonous. Chromating and passivating are differentiated visually according to color (e.g. blue, yellow chromating and olive-green passivating). In technical terms typically only III-value bonds are used for passivating and only VI-value bonds for chromating. Looked at closely, however, even chromates can also be from group III bonds. Yellow chromates are the most common and in them the chromium is usually in the group VI bonding form. However, recently also yellow chromates are on the market based on group III bonds. Blue chromates are usually based on group III chromium bonds, however some are also group IV bonds. Thick film passivates (olive-green chromates) are foodstuff compatible “chromates” . Here the layer is formed from chrome-III ions (Cr2O3 [chromium (III) oxide]). Therefore, on the basis of the color or designation alone, no definite conclusion is possible.

Properties:

Type:	Non-metallic coating, conversion layer
Layer thickness:	~ 15 Om.

Black chromium-plating properties:

Color:	deep black matte layer
Light return:	good absorption properties
Friction/abrasion:	Abrasion resistance lower than with bright finish or hard chromium
Hardness:	HRC 68-74. All coated steel parts <HRC 36 should be tempered after coating with 190°C +/- 25°C.

Hard chromium-plating properties:

Color:	metal colored
Corrosion:	very good corrosion resistance
Friction/abrasion:	high abrasion and wear resistance
Hardness:	800 - 1100 HV
Miscellaneous:	high temperature resistance

Chrome Plating (Chromium-Plating)

Bright chromium-plating:
There is a differentia here between mirror finish chromium-plating (ground and polished before electroplating, where a mirror finish surface is the goal after processing) and technical chromium-plating (the pretreatment is eliminated and machining marks can be seen, for example).

Industrial chromium-plating:
Chromium-plating without pretreatment and copper-plate is referred to here. A matte surface (light gray) can also be the result of chromium-plating. A relatively inexpensive process, since the cost-intensive work is eliminated. Hard chromium-plating is the direct deposit of thicker chromium layers without an intermediate layer.

Black chromium-plating:
Using a very high current density, black chromium can be deposited at room temperature. The deposited layers have a high oxygen content. It is assumed that they contain approx. 60% chromium and approx. 40% chromium(III)-oxide.

Dicoat

Refer to: TD coating (Toyota diffusion)

Elektroless Nickel-plating

The nickel is dissolved in the electrolyte and is not available as a metal plate. The advantage is in the contour definition. Chemical nickel-plating is a process in which the workpiece can be coated with high contour conformity and dissolved nickel penetrates everywhere. In contrast to electroplated deposited nickel, the layer in this process is applied absolutely uniformly, even in less accessible areas. This layer distribution therefore guarantees an exceptionally high corrosion resistance. Chemical nickel-plating is carried out without external power supply, normally with sodium-hypophosphite as a reducing agent. The bath temperature is approx. 95°C. The chemical nickel-layer contains 6-10% phosphorous, which results in high hardness and outstanding corrosion protection. The disadvantage is in the significantly higher price. Today layers to 50 Om thick can be deposited with 5 µm accuracy.

Properties:

Type:	metallic pore-free
Color:	light shiny
Hardness:	600 HV (In deposited condition significantly harder than electroplated nickel and other layers), through thermal treatment up to 1200 HV Phosphorous contents: 10-12 %
Resistance:	60-70 Oq (insulating layer function)

KANIGEN® (chem. Nickel)

KaNiGen: Catalytic nickel generation. KANIGEN coating was originally a process developed by the General American Transportation Company (GATC in USA). (It is currently patented in many countries). In comparison to other mech. coating processes hydrogen embrittlement is avoided with this chem. nickel deposition. The process is comparatively expensive, offset by a high degree of corrosion resistance and the better soft satin finish appearance.

Microstructure:	shapeless, amorphous, (amorphous layer which crystallizes when heated over 300°C).
Density:	7.75 kg/dm³
Melting point:	890°C
Coercivity/magnetism:	Magnetism does not exist at room temperature, but can occur by heating the part over 300°C.
Hardness:	500HV; (HRC 49) after coating at 20°C, 900HV (HRC 67) after heat treatment at 400°C and 1hr, 1100 HV (HRC 70) maximum.
Coefficient of friction:	KANIGEN against steel; 0.13 lubricated, 0.4 unlubricated. (It prevents scoring and burning-in based on friction between metals such as titanium and austenitic stainless steel).
Attachment/adhesion:	It does not chip off like electroplated nickel. Even if a part is bent after coating the layer stays adhered. The same applies to heating. Max. adhesion is 240 N/mm² for soft steel (up to 400 N/mm² max.).
Layer thickness: Particular	emphasis should be placed on the uniformity of the layer, similar to chemical nickel plating.
Corrosion resistance:	The corrosion resistance is outstanding. The reason is that it is available as an alloy. It is not attacked by most organic liquids and demonstrates high resistance especially to organic acids, salts, alkaline etching fluids and dilute inorganic acids. It protects iron and steel from oxidation at high temperatures. In particular, spot corrosion is avoided.
Other properties:	It effectively prevents material removal due to cavitation.
Wear resistance/abrasion:	Much better than nickel plating. Better wear resistance results after heat treatment at 650°C, similar to hard chrome. In general heat treatment above 400°C is recommended.

LTBC Plating

Low Temperature Black Chrome Plating
Coating technology by which an alloyed surface is formed by an electrochem. reaction below 0°C. A part of this surface forms an alloy like time diffusion layer in the periphery of the metal. This way the base material and layer are completely integrated into each other and are joined “permanently”. Through this total integration into the base material, the layer can neither flake or peel off. The resulting surface consists of a uniform film and forms an rust protection film based on chromium ceramic.

Advantages:
No hydrogen embrittlement, no tempering process necessary (material’s original properties are retained completely)/ improved relationship between hardness and elasticity/ most suitable film for carbon steels (C45)/ most resistant and effective rust protection layer of all conventional processes/ in friction or wear resistant applications no peeled particles occur/ ideal option to increase service life of parts in rust protection and abrasion applications.

LTBC as some general treatment is avaible in 2 layer versions.
Layer thickness: 1~2 µm (without fluoropolymer layor on top)
Layer thickness: 5µm (with fluoropolymer layer on top)

Friction/abrasion:	very resistant, since no particles can be flaked or peeled of
Miscellaneous:	No change in microstructure during the process

Nickel plating

Nickel electroplating is used for corrosion protection reasons and also for decorative purposed. Basically: The thicker the nickel layer the more reliable the corrosion protection. Nickel is a prized coating material because of its specific chemical and physical properties and is today perhaps the most significant metal deposited by electroplating.

Properties:
Higher degree of gloss
Increased corrosion resistance
Very good ductility (without separating particles)
Low tarnish
Good resistance to acids and alkali
Can passivate in the air (significantly higher resistance against corrosive influences)
Weldable, magnetic and can be polished
Hardness is located between 450 - 600HV, depending on the layer thickness (with good formability)

Phosphating

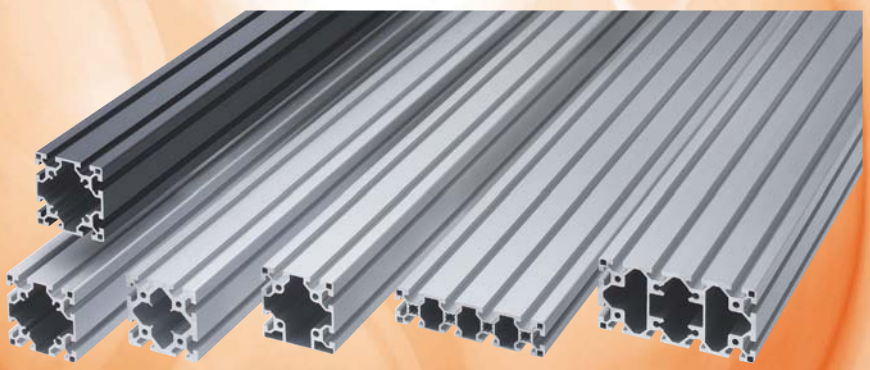
In phosphatizing a phosphoric acid solution is used to form a thin, finecrystalline, water insoluble phosphate on part surfaces. Depending on the solution used, iron, manganese, zinc or zinc/calcium-phosphate layers are formed on the surface. These light to dark grey phosphate layers have pores and capillaries because of their fine-crystalline structure, which in the next step fill with oil or wax. High corrosion resistance results. Besides high corrosion resistance, phosphatizing is also used to reach an optimum paint adhesion. Furthermore, frictional forces which occur with pulling and forming processes are reduced.

Properties (Manganese phosphate process):

Type:	Phosphate based, fine-crystalline
Color:	dark gray to black
Corrosion protection:	significantly improved by oiling or waxing
Friction:	improved sliding properties
Miscellaneous:	Corrosion protection by oil absorption

TD coating (Toyota diffusion)

Development by Toyota Central Research Institute Co. Ltd. Coating with properties similar to TiCN, however coating process is carried out by heat treatment diffusion at 1020°C and an insoluble surface layer (typically vanadium carbide) forms. Common names: Dicoat, TD-VC COATING, TD thermoreactive diffusion. In this process the part is immersed in a salt bath. Active vanadium combined with C atoms in steel now form the vanadium carbide layer and simultaneously an enormous adhesion of the layer occurs. Layer thickness can be precisely controlled by processing times, bath temperature and substrate composition. This multiple step coating process consists of a pre-heat to a given temperature, coating, ultrasonic cleaning and heat treating. TD coatings are found in similar areas of application as CVD coatings due to their similar properties. However, there are areas where their advantages are put to full use, e.g. for Al and Zn die casting, hot forging tools and forming die for stainless steel.



Properties:
Coated parts can be coated again multiple times (up to 9 times is known of).

Hardness:	Surface harden between 3200 HV and 3800 HV
Layer thickness:	from 5µm ~ 10µm are common
Miscellaneous:	Particularly resistant to abrasion and wear. TD coatings increases ductility (in hardened steel even the toughness)

Product Name Index –1–

[A]
Abrasion Resisting Polymer Guide Rails---------- 1-1063
Accessories for Factory Frames ---------- 2-791
Accessory Parts for Pipe Frames ----------2-796~
Adhesive for Urethane ---------- 2-448
Adjustable Hose ---------- 2-1349
Adjusting Bolt ---------- 1-1433~
Adjusting Pins ---------- 1-1436
Adjusting Stopper Screws ---------- 1-1417
Adjustment Pads
- Adjuster Feet---------- 2-986·987~
- Antivibration Mounts---------- 2-990
- Antivibration Type---------- 2-983
- Economy Adjustment Pads ---------- 2-981
- Fixing Nuts for Adjustment Pads ---------- 2-984
- Fixing Plates for Adjustment Pads ----------2-981·984
- Heavy Load Type---------- 2-982
- Non-slip Type ---------- 2-980
- Rubber Base Adjustment Pads ---------- 2-988
- Selectable Type---------- 2-981
- Space Saving Type ---------- 2-981
- Standard Type ----------2-795·979
- Table-Top Type----------2-795·991

Air Hoses ---------- 2-1190
Aluminum Frame Manifolds ---------- 2-1113
Aluminum Extrusions
- 90-degreee Curved Aluminum Frames for Corner ----2-538
- Accessories for Factory Frames---------- 2-700
- Accessory Hooks ---------- 2-702
- Air Volume Adjustment Controller---------- 2-751
- Aluminum Bracket Extrusions---------- 2-660
- Aluminum Extrusions - Mixed Series (5 and 6), Mixed Base (20 and 30), Y Style ----2-520
- Aluminum Extrusions -Angles----------- 2-667
- Aluminum Extrusions -Channels- ---------- 2-667
- Aluminum Extrusions -Flat Bars----------- 2-668
- Aluminum Extrusions -Square Shape-- ---------- 2-668
- Aluminum Extrusions for Sliding Door ---------- 2-766
- Aluminum Extrusions Standard Units ---------- 2-768
- Aluminum Extrusions with Built-in Joints ------2-625~
- Aluminum Extrusions with Milled Surface ------ 2-481
- Aluminum Handles ---------- 2-738
- Aluminum Pipe Handles---------- 2-744
- Anchor Stands for Aluminum Extrusions-------- 2-717
- Anchors for Aluminum Extrusions ----------2-715·716
- Assembly Brackets for Different Extrusion Sizes--- 2-531
- Ball Catch ---------- 2-733
- Black Anodizing Spot Repair Pen ---------- 2-748
- Blind Joint Components ----------2-633~
- Brackets HFS3 Series ---------- 2-659
- Brackets HFS5 Series ----------2-483~
- Brackets HFS6 Series ----------2-523~
- Brackets HFS8 Series ---------- 2-563·564~
- Brackets HFS8-45 Series ---------- 2-601·602~
- Brackets with Caps ---------- 2-601
- Cable Clamps ---------- 2-701
- Cable Covers---------- 2-701
- CAF5 Series (Clear Coating) ----------2-477·478
- CAF6 Series (Clear Coating) ----------2-511~
- CAF8 Series (Clear Coating) ----------2-553~
- CAF8-45 Series (Clear Coating)---------- 2-591·592~
- Caster Kits for Safety Mesh Fence Units-------- 2-715
- Casters & Leveling Mounts Assembly---------- 2-704
- Casters for Aluminum Extrusions -----2-709·710·796·813~
- Clamps for Aluminum Extrusions ---------- 2-699
- Clean Exhaust Units---------- 2-754
- Conductive Washers for Aluminum Extrusions ---2-549
- Conveyor Roller Shaft Holders---------- 2-692
- Corner Bracket for Door Extrusion ---------- 2-762
- Curtain Fasteners---------- 2-697
- Curtains ---------- 2-697
- Curved Aluminum Frame ---------- 2-482
- Curved Panels ---------- 2-876
- Design Support Software for Aluminum Extrusion Shapes-- 2-784
- Door Units ---------- 2-761
- Doorstop ---------- 2-760
- Drilling Jigs ---------- 2-748
- EFS6 Series (New Shape)----------2-511~
- EFS8 Series (New Shape)----------2-553~
- EFS8-45 series (New Shape)---------- 2-591·592~
- Extrusion Components for Doors ---------- 2-762
- Extrusion End Caps HFS5 Series---------- 2-509
- Extrusion End Caps HFS6 Series----------2-551·552
- Extrusion End Caps HFS8 Series---------- 2-589
- Extrusion End Caps HFS8-45 Series---------- 2-623
- Extrusion for Safety Fence ---------- 2-759
- Fence Extrusions ---------- 2-665
- Flanged Nuts for Aluminum Extrusions --------- 2-506
- Flat Aluminum Extrusions ---------- 2-661
- Fluorescent Light Unit---------- 2-698
- Folding Door Units---------- 2-763
- Foot Base ---------- 2-707
- Foot Mount Brackets ---------- 2-710
- Free Angle Brackets ---------- 2-496
- GFS6 Series (High Rigidity)---------- 2-511
- GFS8 Series (High Rigidity)----------2-553~
- GFS8-45 Series (High Rigidity) ---------- 2-591·592~
- Handle ----------2-1045·740~
- Handle Covers---------- 2-738
- HEPA Filter Units---------- 2-751
- HEPA Filter Units with Air Volume Adjustment -- 2-751
- HFS3 Series ---------- 2-659
- HFS5 Series ---------- 2-477·478~
- HFS6 Series ----------2-511~
- HFS8 Series ----------2-553~
- HFS8–45 Series---------- 2-591·592~
- HFSV6 Series (Small Corner R)---------- 2-520
- HFSY5 Series (Baked-on Finish, Yellow)--------- 2-477
- HFSY6 Series (Baked-on Finish, Yellow)--------- 2-511
- HFSY8 Series (Baked-on Finish, Yellow)--------- 2-553
- Hinges ----------2-1057·719~
- Holders for Aluminum Extrusions ---------- 2-699
- Jigs for Assembly---------- 2-748
- Joint Components for Fence Extrusions -------- 2-666
- L-shaped Connectors ---------- 2-701
- Latch Magnets for Folding Doors ---------- 2-763
- Latch Sets for Extrusions---------- 2-734
- Leveling Mounts Units---------- 2-705
- Leveling Mounts+Plate with Caster Unit -------- 2-705
- Locks for Aluminum Extrusions---------- 2-736
- Long Nuts for Aluminum Extrusions ---------- 2-507
- Magnetic Catch Sets----------2-730~
- Metal Stoppers for Square Nuts for Aluminum Extrusions ----2-502
- Mounting Brackets for Filter Units ---------- 2-752
- Non-Slip Covers---------- 2-689
- Panel Clamps ---------- 2-685
- Panel Mounting Screws---------- 2-644
- Panel Spacers ---------- 2-689
- Panel Support Bracket ----------2-683·684
- Plastic Covers ---------- 2-692
- Plate with Casters ---------- 2-705

Plates ---------- 2-706
Polyethylene Laminated Sheets ---------- 2-696
Post-Assembly Insertion Nut / Stopper Sets for Aluminum Extrusions ---2-503~
Post-Assembly Insertion Nuts for Aluminum Extrusions -- 2-503
Post-Assembly Insertion Spring Nuts for Aluminum Extrusions --- 2-547
Post-Assembly Panel Clamps ---------- 2-686
Post-Assembly Panel Holder ---------- 2-686
Post-Assembly Insertion Bolts for Aluminum Extrusions -- 2-506
Post-Assembly Insertion Metal Stoppers for Aluminum Extrusions - 2-503
Post-Assembly Insertion Stopper Nuts for Aluminum Extrusions ---2-503
Post-Assembly Insertion Stoppers for Aluminum Extrusions -- 2-503
Pre-Assembly Insertion Metal Stoppers for Aluminum Extrusions --- 2-500
Pre-Assembly Insertion Stoppers for Aluminum Extrusions ---2-500
Pre-Assembly Insertion Bolts for Aluminum Extrusions --2-506
Pre-Assembly Insertion Nuts for Aluminum Extrusions ---2-500
Protection Covers ---------- 2-689
PVC Sheets ---------- 2-695
Reinforcing Covers ---------- 2-738
Replacement Filters ---------- 2-752
Rollers for Aluminum Extrusions ---------- 2-691
Safety Door Switches ---------- 2-735
Safety Mesh Fence Units ----------2-757·758
Screws for Aluminum Extrusions ----------2-643·644
Seal Covers ---------- 2-689
Sheet Holders ---------- 2-695
Sheet Metal ----------2-497·498
Sheet Metal Brackets ----------2-497·498
Slide Bolts ---------- 2-734
Slide Hooks ---------- 2-702
Slide Locks ---------- 2-737
Slide Rail Connectors ---------- 2-694
Slide Rails ---------- 2-766
Slide Rails -Aluminum / Slide Spacers- ---------- 2-694
Slide Rails -Resin- ---------- 2-694
Sliders for Aluminum Extrusions ---------- 2-693
Sliders for Folding Door ---------- 2-764
Sliding Door Units ---------- 2-765
Sliding Doors Components ---------- 2-745
Slot Covers ---------- 2-687
Square Nuts for Aluminum Extrusions ---------- 2-502
Square Nuts for Aluminum Extrusions ---------- 2-659
Stainless Steel Wires for Tensioners ---------- 2-747
Support Spacer ---------- 2-762
Temporary Assembly Service for Aluminum Extrusions Standard Units---2-776
Tensioners for Aluminum Extrusions ---------- 2-747
Toothed Washers for Aluminum Extrusions ---- 2-549
ULPA Filter Units ---------- 2-751
Aluminum Panels ---------- 2-823
Anchor Brackets / Sheeting Plates ---------- 2-995
Angle Plate ---------- 1-1871~
Angle Plate for Jig ---------- 1-1564
Angle Plate Sets for Jigs ---------- 1-1563
Angle Plate Support Stand ---------- 1-1564
Antistatic Sheets ----------2-455~
Antivibration Pads ---------- 2-439
Antivibration Rubbers ----------2-431~
Arrow Sign Plates ---------- 2-264
Arrow Sign Stickers ---------- 2-264
Articulated Connector ---------- 2-1297
Attachments for Antivibration ---------- 2-983

[B]
Baked Finish Steel Panels ----------2-831~
Ball Buttons ---------- 1-1474
Ball Knobs ---------- 2-1009
Ball Lock Pins ---------- 1-1494
Ball Plunger Switches ---------- 1-1782
Ball Plungers ---------- 1-1469·1473~
Ball Roller ---------- 1-1059~
Ball screw
Brackets for Ball Screws ---------- 1-695
Joint Units ---------- 1-696
Low Particle Generation Type ---------- 1-651
Precision Left-hand, Shaft Diameter 10 --------- 1-675
Precision Left-hand, Shaft Diameter 12 --------- 1-677
Precision Left-hand, Shaft Diameter 15 --------- 1-679
Precision Left-hand, Shaft Diameter 8 ---------- 1-673
Precision, Shaft Diameter 10 ---------- 1-675
Precision, Shaft Diameter 12 ---------- 1-677
Precision, Shaft Diameter 15 ---------- 1-679
Precision, Shaft Diameter 20 ---------- 1-681
Precision, Shaft Diameter 25 ---------- 1-683
Precision, Shaft Diameter 6 ---------- 1-673
Precision, Shaft Diameter 8 ---------- 1-673
Rolled Ball Screws Block Nut ---------- 1-669
Rolled, Shaft Diameter 10 ---------- 1-657
Rolled, Shaft Diameter 12 ---------- 1-659
Rolled, Shaft Diameter 14 ---------- 1-659
Rolled, Shaft Diameter 15 ---------- 1-661
Rolled, Shaft Diameter 20 ---------- 1-663
Rolled, Shaft Diameter 25 ---------- 1-665
Rolled, Shaft Diameter 28 ---------- 1-667
Rolled, Shaft Diameter 32 ---------- 1-667
Rolled, Shaft Diameter 8 ---------- 1-655
Rolled, Shaft Ends Configurable ---------- 1-671
Support Units ---------- 1-693·694~
Ball Splines ----------1-312~
Band Heaters ---------- 2-1531
Beam Sensors ---------- 1-1727
Bearings
Angular Contact Bearing ---------- 1-923
Bearing Cover Plates ---------- 1-935
Bearing Nut ---------- 1-937
Bearing Shaft Screws ---------- 1-943
Bearing Shaft Screws w/Retaining Rings ------- 1-944
Bearing Spacer ---------- 1-941
End Caps for Shafts ---------- 1-933
Fine U Nut ---------- 1-938
Grease Seal Rings ---------- 1-924
Hard Lock Nut for Bearing ---------- 1-940
Heat-Resistant Grease Filled ---------- 1-917
Hook Spanners for Bearing Lock Nuts ---------- 1-939
Needle Roller Bearings with Thrust Ball Bearings--- 1-921
Precision Lock Nuts ---------- 1-939
Resin Bearings ---------- 1-916
Self-aligning Ball Bearings ---------- 1-925
Stainless Steel Deep Groove Bearings ---------- 1-926
Thrust Ball Bearing ---------- 1-919
Thrust Needle Roller Bearings ---------- 1-920
With Set Screws ---------- 1-918
Bearings with Housings
Angular Contact Bearings with Housing -------1-892~
Block Type ---------- 1-881
Bottom Mount Type ---------- 1-883
Double ----------1-851~
Double with Pilot ----------1-859~
For Space Saving ---------- 1-842
Front Mount Type ---------- 1-886
L-Shaped ---------- 1-871
Long Double Type ---------- 1-867
Low Particulate Generation Grease Filled ------ 1-869

Product Name Index –2–

- Non-retained ---- 1-847
- Outer Ring Fixed Type ----1-888~
- Retaining Ring Type ---- 1-851
- Short Double Type ---- 1-850
- T-Shaped Type ----1-872~
- Thrust Bearing ---- 1-849
- With Pilot, Retained ---- 1-859

Bevel Gear----1-1247
Blocks for Shim Adjustment of Welding Jigs ------- 1-1459
Bolts with Magnets ---- 2-277
Box set
- Cover Screws ----2-160~
- Cross Recessed Flat Head Machine Screws --- 2-166
- Cross Recessed Pan Head Screws ---- 2-164
- Cross Recessed Truss Machine Screws---- 2-165
- Flat washers / Spring Washers---- 2-170
- Hexagon Socket Button Head Cap Screws---- 2-161
- Hexagon Socket Flat Head Cap Screw ---- 2-162
- Hexagon Socket Set Screw Set---- 2-167
- Low / Ultra Low Head Hex Socket Cap Screws--- 2-159
- Nut ---- 2-169
- Retaining Rings -C Type / Retaining Rings -E Type----2-171
- Socket Head Cap Screw ---- 2-157
- Tangless Inserts---- 2-172
- Threaded ---- 2-172
- Washer Assembled Cross Recessed Pan Head Screws ---2-164
- Washer Assembled Hexagon Socket Head Cap Screws---2-163

Brackets for Cam Followers---- 1-956
Brackets for Sensor with Stands---- 1-1733·1734
Brackets for Stopper Screws ---- 1-1421
Brush----2-465~
Bubble Levels---- 2-260
Bushings for Inspection Jigs ---- 1-1549~

[C]
C-Shaped Section Steels---- 2-1734
Cable Carriers----1-641~
Cam Follower----1-947·948~
Cams for Photo Sensor---- 1-1749·1750
Cantilever Shafts
- For Tension ---- 1-817
- Flanged Type ---- 1-815
- Heavy Load Type ---- 1-813
- Pilot - Threaded with Retaining Ring Groove -- 1-801
- Pilot - Threaded with Tapped End---- 1-803
- Pilot - Threaded with Threaded Ends ---- 1-805
- Screw Mount with Retaining Ring Groove ------ 1-807
- Screw Mount with Threaded End---- 1-811
- Screw Mount, with Tapped End---- 1-809
- Thread Mount / Retaining Ring Groove---- 1-795
- Threaded with Tapped End---- 1-797
- Threaded with Threaded Ends ---- 1-799

Caps for Plastic Joints----2-804~
Cartridge Heater---- 2-1487~
Caster
- Ball Casters ---- 2-959
- Cast Frame Casters---- 2-973
- Caster Holders ---- 2-976
- Casters & Leveling Mounts Assembly---- 2-969
- Casters for Clean Environment ---- 2-972
- Casters with Integrated Plate and Adjustment Pads - 2-970
- Compatible Type Casters---- 2-944
- Dual Wheels ---- 2-964
- Electrical Conductivity ---- 2-946
- Extra Heavy Load ---- 2-954
- Floor Stoppers---- 2-978
- Foot Mount Brackets ----2-710·960
- Heavy Load Type---- 2-953
- Light / Medium Load Type---- 2-945
- Light Load Type ---- 2-958
- Low Profile----2-951·959
- Medium Load Type ---- 2-945
- Nylon Casters---- 2-960
- Pulley----2-976
- Replacement Wheels ---- 2-975
- Stainless Steel---- 2-956
- Swivel Lockable---- 2-949
- Vibration Insulating Casters ---- 2-971
- Wheel Shafts ---- 2-975
- With Angle ---- 2-944
- With Level Adjusters ----2-965~

Chain Guide---- 1-1275
Chains ---- 1-1253~
Circuit Board Guide---- 1-1586
Circuit Board Guide Pins ---- 1-1586
Circuit Board Pusher Pins---- 1-1586
Circular Posts ---- 1-1799~
Clamp Levers----2-999~
Clamp Plates---- 1-1444
Clamp Plates for Inspection Components---- 1-1565
Clamping Screws---- 1-1439~
Collars
- Ceramic Collars ---- 2-139
- Metal Collars ---- 2-119·120~
- Pipe Collars---- 2-116
- Resin Collars----2-133~

Components / Units for Inspection Components-- 1-1559
Conductive Rubber ---- 2-449
Configurable Length Screws with Hexagon Sockets-- 2-201
Constant Load Spring---- 2-322
Construction Balls ---- 1-1567
Contact Probes / Receptacles---- 1-1572~
Contact Switches---- 1-1773·1776~
Contact Switches -Non Contact Point Type- ------- 1-1784
Conveyor Components ---- 1-1046~
Conveyors ---- 1-1073~
Cooling Plates---- 2-1505
Copper Foil Tape---- 2-463
Copper Pipes ---- 2-1157
Copper Pipe Fittings---- 2-1157~
Cord Heaters ---- 2-1529
Couplers ---- 2-1297~
Couplings----1-963~
Coupling Rod for Air Cylinders ---- 2-1445
Couplings for Hoses---- 2-1187
Cover Screws----2-196~
Cross Recessed Screws---- 2-223
Cross Tables ----1-594~
Cylinder ---- 2-1371·1372~

[D]
Device Stands ---- 1-1817~
Digital Position Indicators ----1-725~
Disk Springs ---- 2-318
Dowel Pins ----2-243~
Driving Shafts
- Both Ends Stepped Type----1-785~
- One End Stepped Type ----1-783~
- One End Stepped with Flange---- 1-791
- One End Stepped, One End Double Stepped--- 1-787

Shoulder Type---1-789~
Straight Type---1-781
Dual–Fit Dowel Pins---2-249
Duct Boxes---2-1202
Duct Hoses---2-1194~

[E]
Electromagnet Holders / Rectifiers for Electromagnet Holders---2-279
Electromagnetic Circuit Contactor---2-1550
Engineered Plastic Bearings---1-1041~
Engineered Plastic Plates
ABS Plates---2-917
Bakelite Plates -Paper / Fabric----2-895~
Ceramics Circular Plates---2-926
Ceramics Plates---2-925
Epoxy Glass Plates---2-893
Fluororesin Plates---2-911
Free-cutting Resin Plates---2-919
MC Nylon Plates---2-901~
PBT Plates---2-919
PEEK Plates---2-913
Polyacetal Plates---2-905
PPS Plates---2-917
Precision Resin Plates---2-921
Resin Blocks---2-922
Resin Circular Plates -Precision----2-923
Ultra High-molecular-weight Polyethylene Plates---2-909
Exhaust Valves---2-1289
Extension Joints---2-1142

[F]
Factory Frames---2-788~
Fall Prevention Valves---2-1324
Feed Fingers---1-1463~
Felt---2-413~
Fence Nets---2-850
Filters for Vacuum Generators---2-1320
Finned Pipes---2-1516
Flanged Plungers---1-1484
Flat Belt---1-1087
Flat Plungers---1-1484
Flat Springs---2-319
Flexible Hoses---2-1172·1173~
Floating Joints---2-1403~
Fluoro Resin Flexible Hoses---2-1184
Folding Nets---2-853
Foot Jack Bolts---2-993
Free Guide Arms---1-1719·1720~
Fulcrum Pins---1-837
Fulcrum Pins -Configurable----1-836·837
Fulcrum Pins -Standard----1-835

[G]
Gas Springs---2-350~
Gear Heads for Geared Motors---1-999
Geared Motor Brackets---1-1007
Geared Motors---1-999~
Gibs---1-628~
Glass---2-889~
Grease Fittings---2-260
Grounding Blocks---1-1760
Guide Plates---1-1456
Guides---1-1447·1448~
Gussets---1-1863~

[H]
Hair Pins / Cotter Pins---2-254
Handles---2-1037·1038~
Handles---2-1013~
Hardened Precision Balls---2-260
Heat Insulation Plates---2-1561~
Heat Resistant Aluminum Tapes---2-1529
Heat Resistant Duct Hoses for Hot Air Generating Units---2-1518
Heat Resistant Piping Parts for Hot Air Generating Units---2-1518
Heat-Resistant Contact Switches---1-1781
Heat, Cold Retention Pipe Covers---2-1145
Heater Peripheral Parts---2-1487·1488~
Heaters for Air Heating---2-1515~
Heaters for Liquid Heating---2-1523~
Heatsinks---2-418
Height Adjusting Blocks---1-1367
Height Adjusting Pins for Inspection Components 1-1560
Helical Gears---1-1248
Hexagon Bolts---2-179
Hexagon Material---2-291
Hexagon Nuts---2-227
Hexagon Socket Button Head Cap Screws---2-183
Hexagon Socket Set Screws---2-213
Hexagonal Posts---1-1788
High Precision Touch Switches---1-1772
High Pressure Screw Fittings---2-1137·1138
High Temperature Insulation Sheets---2-417
Hinge Bases---2-1462~
Hinge Units for Jig---1-1561
Hinges---2-719
Hose Bands---2-1191
Hot Air Generating Units---2-1519
Hot Air Generators---2-1517
Hot Plates---2-1505
Hydraulic Resin Hoses---2-1171
Hydraulic Rubber Hoses---2-1169

[I]
Idlers---1-1175·1176~
Idler Sprockets---1-1267~
Idlers for Flat Belts---1-1090~
Idlers for Round Belts---1-1105
Indexing Plungers---1-1485~
Inspection Stands---1-1721
Insulating Dowel Pins---2-250
Insulating Papers---2-1570
Ionizers---2-459~

[J]
Jet Air Coolers---2-1535
Joints---2-1264~
Joints for Factory Frames---2-789
Joints for Pipe Frames---2-802~

[K]
Keyless Hub Spur Gears---1-1243
Knobs---2-1020~
Knuckle Joints---2-1431~
Knurled Wing Screws---2-194

[L]
L-shaped Angles---2-1725~
L-shaped Machined Angles---0-0000
Laminated Resin / Metal Plates---2-829
Latches---2-1074·1078

Product Name Index –3–

Lead Screw Nuts ---------- 1-717~
Lead Screws ---------- 1-715~
LED Lamps ---------- 1-1714~
Lens ---------- 1-1709
Lift Pins ---------- 1-1462
Lifting Eye Bolts ---------- 2-208
Lifting Units ---------- 2-992
Linear Ball Bushings ---------- 1-308
Linear Bushings
- Flanged Type ---------- 1-274~
- Housing Unit Type ---------- 1-277~
- Options ---------- 1-288
- Straight Type ---------- 1-274
- With Clamp Lever ---------- 1-307~

Linear Encoders ---------- 1-438
Linear Guides for Medium and Heavy Load
- Dust-proof with Double Seals and Metal Scrapers --- 1-553
- Height Adjusting Block ---------- 1-584
- Linear Guide Clamps ---------- 1-581·582
- Slide Guide Mounting Hole Caps ---------- 1-586
- Stainless Steel Standard Rails Standard Blocks -- 1-557
- Standard Rails with Blocks with Tapped Holes ---- 1-508
- Standard Rails with Blocks with Through Holes -- 1-508
- Standard Rails with Standard Blocks ---------- 1-508
- Standard Rails with Standard Blocks with Dowel Holes -- 1-508~
- Standard Rails with Wide Blocks with Dowel Holes ---- 1-563
- Stopper Plates ---------- 1-586
- With Plastic Retainers ---------- 1-573~
- With Stainless Steel Plastic Retainers ---------- 1-567~

Link ---------- 2-1451~
Locating Block Set ---------- 1-1453~
Locating Blocks for Inspection Jigs ---------- 1-1558
Locating Bolts ---------- 1-1419
Locating Kits for Inspection Components ---------- 1-1567
Locating Pins
- Bushings for Locating Pins ---------- 1-1405~
- Detection Pins for Weld Nut ---------- 1-1402
- Double Stepped ---------- 1-1364
- Eccentric Type ---------- 1-1366
- Equal Dia. Tapered ---------- 1-1347
- Feed Pins ---------- 1-1369~
- Flanged Flat Type ---------- 1-1366
- Flanged Mount Type ---------- 1-1367
- Height Adjusting Caps ---------- 1-1375
- Height Adjusting Pins ---------- 1-1371·1372~
- Height Adjusting Pins and Washers for Jigs -- 1-1404
- Hexagonal Support Pins ---------- 1-1381~
- Holders for Locating Pins ---------- 1-1376
- Insulating Locating Pins ---------- 1-1401
- Large / Small Head - Set Screw- ---------- 1-1298
- Large Flat Head ---------- 1-1321~
- Large Head Bullet Nose Shaped ---------- 1-1305
- Large Head Round Tapered ---------- 1-1299
- Large Head Tapered ---------- 1-1283~
- Large Screw Mounted ---------- 1-1365
- Locating Pilot Pins ---------- 1-1363
- Locating Pin for Jig ---------- 1-1383~
- Locating Pins for Grippers ---------- 1-1368
- Marker Pins ---------- 1-1350
- Pilotted Type ---------- 1-1365
- Plastic Type ---------- 1-1359~
- Plate Centering Pins ---------- 1-1368
- Pusher Pins ---------- 1-1362
- Screw Mounted Type ---------- 1-1365
- Side Locating ---------- 1-1328
- Small Diameter Locating Pins ---------- 1-1352~
- Small Flat Head ---------- 1-1329~
- Small Head Round Tapered ---------- 1-1303
- Small Head Tapered ---------- 1-1293~
- Spherical Large / Small Head - Set Screw- ---- 1-1320
- Spherical Large Head ---------- 1-1307~
- Spherical Small Head ---------- 1-1315~
- Support Pins ---------- 1-1377~
- Tip Shape Selectable ---------- 1-1335~
- With Air Vent Threaded / Tapped ---------- 1-1363

Long Timing Belts ---------- 1-1203
Low Pressure Screw Fittings ---------- 2-1133·1134~

[M]
Machined Plates ---------- 0-0000
Magnets ---------- 2-268~
Magnetic Catchs ---------- 2-1074·1078~
Magnets with Holders ---------- 2-273~

Peltier Cooling Units ---------- 2-1532
Perforated Metals ---------- 2-837~
Photomicrosensors ---------- 1-1746~
Pillow Blocks ---------- 1-933~
Pins for Inspection Components ---------- 1-1527~
Pipe Frames ---------- 2-799~
Pipe Manifolds ---------- 2-1115~
Pipe Stands ---------- 1-1857~
Pipe Supports ---------- 2-1129
Pipes ---------- 2-292~
Pivot Pins
Both Ends Tapped Type ---------- 1-827
Both Ends Threaded Type ---------- 1-827
Diameter Tolerance Selectable ---------- 1-833
Double-sided Type ---------- 1-830
End Shape Selectable ---------- 1-831
Extra Low Hexagon Socket Head ---------- 1-825
Keys for Precision Pivot Pins ---------- 1-828
Keyway Type ---------- 1-828
Lock Nut with Flange ---------- 1-823
Lock Nut with Hexagon Socket Head ---------- 1-824
Retaining Ring with Flange ---------- 1-822
Set Screw Flat ---------- 1-829
Split Pins ---------- 1-819
Split Pins with Flange ---------- 1-821
Straight Retaining Rings ---------- 1-820
Tapped with Flange ---------- 1-826
Tapped, Hexagon Socket Head with Flange ---- 1-826
Plastic Dowel Pins ---------- 2-250
Plastic Spur Gears ---------- 1-1239
Plate Heaters ---------- 2-1511~
Plumbing Clamps ---------- 2-1153
Plumbing Terminals ---------- 2-1155
Plumbing Terminals Tapered Screw ---------- 2-1156
Plywoods ---------- 2-843~
Pneumatic Module Units ---------- 1-475~
Pneumatically Driven Linear Guides ---------- 1-597~
Point Pads ---------- 1-1461
Polyethylene Laminated Sheets ---------- 2-696
Posts for Stands ---------- 1-1816~
Posts for Tension Springs ---------- 2-315~
Precision Pivot Pins ---------- 1-838
Press-Fit Plungers ---------- 1-1475
Pressure Gauge ---------- 2-1295·1296
Pressure Sensors ---------- 2-1292
Pressure Switch ---------- 2-1293
Pressure Tanks ---------- 2-1234~
Protection Caps ---------- 2-984
Proximity Sensor ---------- 1-1737~
Pulleys for Flat Belts ---------- 1-1089~
Pulleys for Round Belts ---------- 1-1103~
Pusher Pins ---------- 1-1362
Pushers ---------- 2-1437~
PVC Sheets ---------- 2-695

[Q]
Quartz Far Infrared Heaters ---------- 2-1531

[R]
Rack Gears ---------- 1-1249~
Regulators ---------- 2-1290~
Resin Pipes ---------- 2-303
Resin Rods ---------- 2-299~
Resin Sheets ---------- 2-141
Retaining Ring Type C ---------- 2-253

GENERAL TERMS AND CONDITIONS for BUSINESS of MISUMI Europa GmbH

1. Purchases of products (the "Products") from MISUMI Europa GmbH (hereinafter referred to as the "Company") , including (without limitation) such purchases of products related to the Mechanical Standard Components for Factory Automation Catalog (the "Catalog") and special orders by the customer (the „Customer") (see Article10) will be governed by these Terms and Conditions for Business (the "Terms and Conditions"). Purchasers who utilize the Catalog service (the "Service") must strictly adhere to these Terms and Conditions.

2. These Terms and Conditions shall exclusively apply, save changes made by express agreement accepted in writing by both parties. The offer, order acknowledgement, order acceptance of sale of any Products, whether through the Service or otherwise, are subject to these Terms and Conditions. Any conditional or different terms proposed by the Customer are not recognized and will not be binding upon the Company unless agreed upon in writing by the Company.

3. These Terms and Conditions shall apply to every future individual purchase transaction between the Customer and the Company (each a „Contract"), unless overriding written agreements have been made by the parties. Any typographical, clerical or other error or omission in any sales literature, quotation, price list, acceptance of offer, invoice or other document of information issued by the Company shall be subject to correction without any liability on the part of the Company.

4. These Terms and Conditions shall exclusively apply to Customers that are merchants and/or registered companies. The sale of products to private individuals is excluded.

Article 1 Registration

1. Customers must complete all appropriate registration applications and procedures established by the Company prior to any use of the Service. After the Customer has properly completed the registration process, and has subsequently been approved by the Company as a registered Customer, the Company shall then issue the Customer a customer identification number that will enable the Customer to use and access the Service.

2. The Company reserves the exclusive right, in its sole discretion, to deny approval of any Customer's application, for any reason, including without limitation, the following:

   (a) the Customer is not a duly registered company;

   (b) the Customer is a previously registered customer with the Service;

   (c) the Customer's principal place of business or postal address at the time of registration is outside of the European Union (the „EU") or outside those countries that Company has sent the Catalog;

   (d) the Customer has previously had its registration revoked by the Company;

   (e) the Customer has provided untrue, inconsistent or false statements in connection with its registration application; and

   (f) any other reason (including, without limitation, the Customer's credit situation and business category) that the Company deems appropriate by its sole discretion.

3. When ordering Products from the Company, the Customer must provide the customer identification number issued to it at the time of registration as a registered Customer under Article 1.1.

4. The Company may notify Customers via facsimile, mail or electronic mail, from time to time, with respect to upcoming sales campaigns and other related Company matters. Such notification will be not sent if so requested by the Customer in writing.

5. The Customer is responsible for maintaining the security of its registered Customer identification number.

6. The Customer may not transfer, lend or disclose its registered Customer identification number to any third-party

Article 2 Details of Service

1. The Customer may purchase Products listed in Catalog using the Service subject to the provisions of these Terms and Conditions (including, without limitation, specifications, price, delivery date, and terms of use). However, due to the nature of the Products, the Customer's business or other standards prescribed by the Company, or at the discretion of the original manufacturer or Company, some Products may be discontinued, modified, improved, replaced, or declared as obsolete without prior notice or warning to the Customer.

2. The Service is provided within the EU and those countries outside the EU within which the Company has distributed a catalogue. For the avoidance of doubt, the Service is not available in countries or areas to which deliveries by the Company are not made. Any inquiries regarding delivery locations should be directed to the Company.

Article 3 Ordering Products

1. A Customer may apply to use the Service by utilizing the following methods as set forth in Catalog. The Company may restrict the ordering method with respect to special orders (see Article 10) or based on the type or quantity of the Products ordered. The date and time the Company may receive an application are set forth in the Catalog.

2. If the Customer sends its order via email, the Company shall confirm receipt of the order with a return email or via an alternative appropriate means. This acknowledgement of receipt of the order does not constitute acceptance of the Customer‘s order by the Company.

3. Internet orders: Customers may access the Company's website at www.misumi-europe.com and should enter information in all of the required entry fields. Users of the Company's website should also see the Company's Website Terms and Conditions of Use and Privacy Policy prior to any use of the Company's website. Any inquiries with respect to the Company's website should be directed to the Company.

4. Verbal orders are not possible.

5. A quotation by the Company does not constitute an offer. The Company reserves the right to withdraw or revise any quotation at any time prior to the Company's acceptance of the Customer's order.

6. Each order for Products submitted by the Customer to the Company shall be deemed to be an offer by the Customer to purchase Products subject to these Terms and Conditions. The Company shall not be obliged to accept any order for Products. The Contract shall be formed when acceptance of the Customer's order is confirmed in writing by the Company.

7. Please be aware that the Company may claim from the Customer any associated expenses (including, without limitation, insurance and special delivery), which the Company incurs in connection with requests from the Customer.

Article 4 Obligations regarding Use of Products

1. The Customer is referred to the following with respect to the nature of the Products:

   (a) the Products are only suitable to be used in general production equipment. (General production equipment means: automatic assembly equipment; devices for machine processing; inspection equipment and devices; and plant automation machines).

   (b) the Products are, in particular, not appropriate for use in the following types of equipment:

      I. transportation equipment, including semi trucks, ships, railed vehicles,airplanes, etc.;

      II. all types of medical devices or equipment;

      III. all types of commercial goods that are sold to customers or will be sold to customers;

      IV. aeronautics and aerospace equipment;

      V. equipment for use in nuclear energy production; and/or

      VI. military products (for example: weapons, rifles, etc.)

2. The parties agree that the inherent nature of the Products renders them suitable to use only according to the terms in Article 4.1(a)

3. Use of the Products in the areas list above in Article 4.1(b) is prohibited.

4. In general, the Customer should bear in mind and observe all of the duties and obligations listed in the catalog in regard to the Products as well as all details and descriptions in the written material sent with products (or accessories). These duties and obligations include (but are not limited to) product specifications, intended usage, terms and conditions of use, and/or product markings.

Article 5 Delivery Time

1. The number of days required for Products to be delivered to the Customer, -- meaning the number of days required to deliver Products as set out on the relevant page of Catalog (the “Delivery Time”) -- depend on the type and quantity of the Products ordered (such as when Products cannot be delivered right away or there is a large order). The Delivery Time set out in the Catalog is an estimate only and is not binding.

2. The Delivery Time set out in the offer, order acknowledgement, order acceptance is an estimate only and is not binding unless explicitly otherwise agreed upon.

3. Compliance with duty of delivery further assumes that the Customer has fulfilled its obligations in a timely and proper way. Defense under non-fulfillment of contract shall remain reserved.

4. Should the Customer be in default of acceptance, or should it culpably infringe any other duties of collaboration, the Company shall be entitled to claim restitution of such damages as it has suffered thereby, including any additional expenditure. Further claims are hereby reserved.

5. The Company shall be liable in accordance with statutory regulations should deliveries be in default due to a malicious or grossly negligent infringement of contract for which it is responsible; a fault committed by its representative or vicarious agent shall be attributed to the Company itself. Providing that such defaults of delivery are not due to any malicious infringement or grossly negligent infringement of contract for which it is responsible, its liability for damages shall be restricted to foreseeable, typical damage.

6. The Company shall also be liable in accordance with statutory regulations should any defaults of delivery for which it is responsible be due to culpable infringement of a major contractual duty. In this case, however, when such infringement is not malicious, its liability for damages shall be restricted to foreseeable, typical damage.

7. In other cases of defaults of delivery for which it is responsible, the Company's liability for damages shall be restricted to a maximum of the value of said delivery.

8. The above restrictions shall not apply to liability for damage to life, body or health.

9. All further statutory rights and claims of the Customer shall be reserved, excepting claim for damages.

10. The regulations contained in Article 15 shall not be affected by the above regulations.

Article 6 Delivery of Products

1. The place of fulfillment for all obligations of the contractual relationship is the Company's location unless explicitly otherwise agreed upon.

2. The products are shipped to the Customer at its risk and cost according to the following regulations. The means of delivery and the packaging material are subject to the sole discretion of the Company.

3. Delivery will be made to the Customer's address, which is provided in the order acknowledgement. For orders within Germany, the Company will pay applicable delivery charges. The Company has the right to choose the way of transportation.

4. For deliveries outside of Germany, the Customer is responsible for paying the shipping and handling charges per the Company's price list at the time.

5. Responsibility and risk for loss or damage to the Products are passed on to the Customer upon transfer of the Products to the shipper, freight carrier, or designated third party assigned with delivery. The beginning of the loading of the Products will be used to determine when these risks and responsibilities are transferred.

6. The Company will add transportation insurance only when requested by the Customer. The Customer shall be responsible for paying for this insurance.

7. The Customer is responsible for import clearance as well as for all costs related to import clearance.

Article 7 Retention of Title

1. Notwithstanding delivery and the transfer of risks for the Products, or any other provision of these conditions, ownership of the Products shall not pass to the Customer until the Company has received payment in full for the price of the Products and all other Products agreed to be sold by the Company to the Customer for which payment is then due.

2. The Company shall have absolute authority to retake, sell or otherwise deal with or dispose of all or any part of the Products in which title remains vested in the Company.

3. Until such time as ownership passes to the Customer, the Customer shall hold the Products as the Company's fiduciary agent, and shall keep the Products properly stored, protected and insured. The Customer may use or resell processed Products by way of its normal business operations until such time as full payment has been made, but the Customer must hold any proceeds from the sale of such Products for the benefit of the Company and keep such moneys separate from the Customer's own assets and those of third parties. However, the Customer cedes to the Company here and now all receivables to the final sum (including VAT) of such Company's receivable due to the Customer by way of resale or transfer to a its customer or third parties, irrespective of whether or not, the item purchased has been resold after being processed. The Customer shall be empowered to collect this receivable even after cession. The right of the Company to collect this receivable itself shall not be thereby affected. However, the Company shall have a duty not to collect such receivable as long as the Customer fulfils the duties of payment arising from the agreed proceeds, is not in default of payment, and provided in particular that no application has been made to institute a creditors' composition or to open insolvency proceedings and no suspension of payments has been declared. Should this be the case, however, the Company may require the Customer to inform the Company of ceded receivables and debtors, to provide all information needed for collection, to hand over all related documents, and to inform all debtors (Third Parties) of such cession.

4. If the Products are processed or reshaped by the Customer and if processing is done with Products that the Company does not own, the Company shall become co-owner of the Products. The same shall apply if the Company's Products are completely reshaped and mixed with other Products.

5. If third parties take up steps to pledge to otherwise dispose of the Products, the Customer shall immediately notify the Company in order to enable the Company to seek a court injunction. If the Customer fails to do so in due time it will be held liable for any damages caused.

6. The Company shall on demand of the Customer release any part of the collateral if the value of the collateral held in favor of the Company exceeds the value of the claims being secured. The Company may decide to release whichever parts of the collateral it deems suitable.

Article 8 Duty to examine

1. The Customer must examine the Products promptly following delivery by the Company insofar as this is practicable in the proper course of business, and promptly notify the Company of any defects or mistakes in the delivery.

2. If the Customer fails to advise the Company of any defect or mistake within a reasonable period of time following delivery, the Products are deemed to have been accepted (approved) by the Customer, unless there is a defect which was not apparent during the examination.

3. When such a defect becomes apparent at a later time, notice must be given promptly following the discovery, otherwise, the Products are to be deemed accepted (approved) by the Customer, also with regard to this defect.

Article 9 Excess Products

If the Company delivers to the Customer a greater quantity of Products than that which Customer ordered and such mistake is attributable to Company, the Customer will inform the Company within one (1) week of delivery and agrees to return the surplus Products to the Company. In such case, the Company will pay applicable shipping costs to return the excess Products. The Customer shall maintain the excess Products with reasonable care from the time it receives such Products until the Products are returned to Company.

Article 10 Special Orders

1. The Customer may place special orders for Products with specifications set out in schematic drawings provided by Customer, specifications other than those prescribed by Company or other special orders not for Products with the specifications listed in Catalog ("Special Orders") by submitting appropriate drawings and specifications to the Company and the Company shall, if possible, issue a quotation (offer) for the Special Order. On the basis of such quotation, Article 3 shall then apply.

2. These Terms and Conditions shall apply to all Special Orders, provided that in the event of any conflict between the Terms and Conditions and any terms, set out in a Special Order, agreed between the parties in writing, the terms as set out in the Special Order shall prevail to the extent of such inconsistency.

Article 11 Price and Applicable Taxes

1. The price of Products shall be the price quoted by the Company to the Customer or, where no price has been quoted, the price listed in Catalog at the date of acceptance of the order ("Contract Price").

2. The Company shall charge and the Customer shall pay the applicable delivery rate notified, of which the Company will from time to time notify the Customer ("Delivery Charge") in addition to the Contract Price.

3. The Contract price shall be exclusive of any value added tax and any other taxes and duties, which shall (if and to the extent applicable) be payable by the Customer at the rate and in the manner from time to time prescribed by law.

Article 12 Payment

1. Unless otherwise agreed in writing, the Company shall be entitled to invoice the Customer for the Contract price (together with the Delivery Charge) and any applicable taxes and duties payable pursuant to the provisions of Article 11 on or at any time after delivery.

2. The Customer shall make payment of any amount invoiced by the Company in full within thirty (30) days of the date of the invoice, notwithstanding that title to the Products may not have passed to the Customer.

3. All amounts due under a Contract shall be paid in full without any deduction. The Customer shall enjoy rights of set-off only if its counterclaims have been legally upheld by a final verdict, are undisputed, or are recognized by the Company. Furthermore, the Customer shall only be entitled to exercise a right of retention if its counterclaim is based solely and directly on the contractual relationship between the Customer and the Company.

4. Payments hereunder shall be made by way of credit card, cheque or direct bank transfer to the Company's nominated bank account or by such other means as may be agreed between the parties in writing from time to time. The Customer shall be responsible for any bank charges levied for payments made by direct bank transfer.

5. All payments hereunder shall be made by the Customer in Euros.

Article 13 Maximum Amount

1. The Company will set a maximum amount the Customer can owe the Company for the purchase of Products at any given time (the "Maximum Amount").

2. The Company may respond, at its sole discretion, in any of the following ways if the total price for Products ordered by the Customer meets or exceeds the Maximum Amount:

    (a) requesting the Customer to pay in advance or to pay the outstanding amount;

    (b) refusing, revoking or cancelling the order(s); and/or

    (c) any other action as deemed reasonably necessary by Company.

3. The Customer may verify its Maximum Amount by contacting the Company.

Article 14 Refusal to Receive Products

If for any reason the Customer will not accept delivery of Products when they are ready for delivery, or the Company is unable to deliver Products on or before the agreed delivery date because the Customer has not provided adequate delivery instructions, documents, licenses or authorizations or due to any other act or omission on the part of the Customer then, without prejudice to any other right or remedy available to the Company, the Company shall reship the Products back to its warehouse or other premises and the Customer shall indemnify the Company against any and all claims, actions, liabilities, losses, damages and expenses incurred by the Company which arise out of or in connection with the Customer's failure to take delivery of the Products. All further statutory rights and claims of the Company shall be reserved.

Article 15 Force Majeure

The Company shall not be liable for the inability to deliver or delays in delivery caused by circumstances or events beyond the Company's control, which could not be foreseen at the time of signing the Contract and which include Acts of God and events such as all types of business disruption; difficulty or increased expense in obtaining labor, materials or transport; difficulties in obtaining regulatory authorization; the effects of regulatory measures; labor strikes and lock-outs; or failures on the part of the shipper to timely or completely deliver the products. To the extent that these events considerably hinder or render impossible the execution of the contract and these events are not temporary, the Company reserves the right to rescind the contract. Shall the events be of a temporary nature, the terms of delivery or execution of the service will be prolonged or the terms of delivery or execution of the service will be postponed for the duration of the hindrance plus an additional appropriate time period. If the Customer does not agree to the delay in the terms of delivery or the execution of the service, it can withdraw from the Contract having given prompt written notice to the Company.

Article 16 Changing or Cancelling Orders

The customer may change the details of an order and cancel a contract according to the hereafter detailed "Cancellation rules". The Customer is then obligated to pay fees according to these following rules:

Cancellation Rules:

(a) These rules do not affect the Customer's legal rights. They are applicable only when MISUMI allows for the cancellation of a contract and is not legally bound to cancel the contract. MISUMI reserves the right for exceptions to these rules, when due to the manner, type, quantity or shipment date of the product or the utilized distribution system, MISUMI cannot accept the cancellation.

(b) As a basic principle, cancellation of an order is free of charge, when it is made on the day that an order was placed. Express orders have to be cancelled until 12:00 a.m. on the day the order was placed. For cancellations, which are given to MISUMI on the next day (i.e., the day after placement of the order), the customer is responsible to pay a cancellation fee of 40% of the value of the order, including taxes, shipping charges etc according to these following rules. The work day at the facility at MISUMI, Schwalbach / Ts, Germany will be used to determine on which day cancellations were received.

(c) For all parts, which have an estimated delivery time of 2,4,5 or 6 days, it is possible to cancel free of charge on order date, later cancellation is not possible. Stock items can be cancelled free of charge until the day before shipment.

(d) For all parts, which have an estimated delivery time of 8 days, the customer is responsible to pay a cancellation fee of 40% of the value of the order, if the cancellation is made on the next work day following placement of the order. Cancellations at a later date are not possible.

(e) For all parts, which have an estimated delivery time of 10, 12 or 13 days, cancellation 1 day after placement of the order is free of charge. Cancellation 2 or 3 days after receipt of the order will result in a cancellation fee of 40% of the value of the order. Cancellations at a later date are not possible.

(f) For all parts, which have an estimated delivery time of 14, 15, 16 or more days, cancellations on the day of placing the order and 1 or 2 days after are free of charge. Cancellations 3 or 4 days after order placement will result in a cancellation charge of 40% of the value of the order. Cancellations at a later date are not possible.

(g) As exceptions to the rules listed above, special orders (see Article10), as well as express orders cannot be cancelled.

Article 17 Returning and Replacing Products

1. The Customer may only return Products ("Return") to the Company, if mistakes in delivery or damage to the Products are attributable to the Company, and provided that the Customer has notified the Company of such mistake in delivery or damage pursuant to Article 8. The Customer is requested to contact the Company by telephone prior to making a Return. The Customer shall not return any Products actually delivered to the Company without the written consent of, and upon terms agreed to, by the Company.

2. The Company will pay for all reasonable delivery costs incurred in replacing the Products according to the provisions in Article 17.1. The goods should be shipped DDU from outside EU and DDP (Incoterms 2000) from inside EU. The company will refund the actual shipping costs.

3. If the Customer returns Products without having a legal or contractual right to do so, the company reserves the right to refuse the acceptance of the returned Products.

4. Returning stock items may be accepted by the Company, under the condition that the Products are returned to the Company without any costs to the Company, and arrive there completely and undamaged within a period of 4 weeks from the order date. In this case, the Company has the right to take back the Products and to charge the Customer a re-stocking charge of 20% of the order value and the complete Delivery Charge.

5. The purchase price of the Products that have been returned to the Company will not be calculated in the aggregate amount that is used to determine any volume discounts to be offered by the Company and all prices will be re-calculated accordingly.

6. The regulations contained in Article 16.A and Article 17.A shall not be affected by the above regulations.

Article 18 Claims for Defects and Liabilities

1. Any claims for defects by the Customer assume that it has fulfilled its duties of inspection and complaint (examination and notice) as set out in Article 8 in a due and proper way.

2. Insofar as any item of purchase should be defective), the Customer shall be entitled to require subsequent fulfillment . Such subsequent fulfillment shall be made either by removal of said defect, or by the supply of a new, defect-free item, as the Company shall determine.

3. Should such subsequent fulfillment fail, the Customer shall be entitled, under the conditions prescribed by law, to require either rescission or price reduction , as it shall determine.

4. The Company shall be liable in accordance with statutory regulations should the Customer claim damages grounded on malice or gross negligence, including malice or gross negligence by the Company's representatives or vicarious agents. Provided the Company is not accused of malicious infringement of contract, liability for damages shall be restricted to foreseeable, typical damage.

5. The Company shall be liable in accordance with statutory regulations should it culpably infringe on a major contractual duty; in this case, however, when such infringement is not malicious or grossly negligent, liability for damages shall be limited to foreseeable, typical damage.

6. Liability for culpable damage to life, body or health shall not be affected hereby; this shall also apply to compulsory liability under the terms of the German Product Liability Act (Produkthaftungsgesetz).

7. Unless a different regulation is contained above, all liability for defects is hereby excluded.

8. The period of limitation governing claims for defects shall be 12 months, calculated from transfer of risk.

9. The regulations contained in Sections 478 and 479 of the German Civil Code (§§ 478,479 BGB) shall not be affected by this agreement.

10. Any further liability for damages beyond those set out in the above regulations is hereby excluded, irrespective of its legal justification (in particular, by way of other infringements of duty arising from contractual obligations or claims in tort). This shall also apply should the Customer require restitution of fruitless expenditure in place of damages. However, liability for default shall be regulated by Article 5.A and Article 15.A.

Article 19 Revocation of Customer's Registration and Termination of Sales Agreements

1. If any of the following cases apply to the Customer, the Company may revoke the Customer's registration and immediately terminate any Contract without notice for important reasons:

   (a) If it becomes evident that the case set forth in Article 1.2 (e) applies to Customer;

   (b) if a receiver, administrative receiver, administrator or equivalent is appointed over the whole or any part of the Company's business or assets;

   (c) if the Customer is subject to a petition for attachment or provisional attachment;

(d) if a petition for bankruptcy, reorganization or other insolvency proceeding is filed against or by Customer;

(e) if the Customer passes a resolution to dissolve or merge with another company; or

(f) if the Customer breaches a material provision of these Terms and Conditions.

2. If any of the above circumstances apply to Customer, all obligations owed by Customer through use of the Service will become immediately due and payable, and the Customer must promptly pay all such obligations. Further, the Customer must indemnify and hold the Company harmless for any damages incurred by the Company due to the Customer's breach of any provisions of these Terms and Conditions.

Article 20 Notification of and Changes to Registered Information

1. If there are any changes to the company name, address, representative, telephone number, fax number, contact person or other information registered by the Customer at the time of registration, the Customer must immediately notify the Company of such changes in writing.

2. In addition to Article 20.1, if (i) the Customer transfers its business to a third party, receives an assignment of a business from a third party or undergoes a merger, or (ii) any of the circumstances set out in Article 19.1 occur, the Customer must immediately notify the Company. In such cases, the Company may, if it deems it necessary, at its sole discretion, request consultation with the Customer about the status of Customer's registration. The Customer may not assign any of its rights or obligations under a Contract without the prior written consent of the Company.

3. If the Customer fails or delays in giving the appropriate notice provided in Article 20.1 or 20.2, and the Products and Catalog and any administrative communications are not delivered to the Customer or such delivery is delayed, the Company will deem such items to have been received by the Customer. Further, the Customer must pay for all delivery costs in re-sending such items to its new address, costs incurred in replacing Products and any additional fees incurred by the Company.

Article 21 Cancellation of Registration by Customer

The Customer may cancel its registration by notifying the Company in a writing signed by an authorized officer of the Customer. Upon receipt of such notification, Company will revoke the registration of Customer, and Customer will lose its status as a registered Customer.

Article 22 Revisions to Price and Specifications

1. The Company may change, revise or suspend sales of Products listed in its Catalog ("Revisions"), and may choose the timing, media and other methods concerning notification at its discretion in giving notification of Revisions to the Customer.

2. If a Customer orders Products after such Revisions, the Customer will be deemed to have approved such Revisions.

3. Please note, however, that the Company will not notify its Customer of minor changes that do not affect the specifications listed in the Catalog.

Article 23 Approval to Amend these Terms and Conditions

1. The Company may revise, modify or amend these Terms and Conditions ("Alterations"). The valid version of these Terms and Conditions is published by the Company on its homepage under www.misumi-europa.com.

2. If the Customer orders Products after such Alterations, the Customer will be deemed to have approved such Amendments.

Article 24 Effective Term of Catalog

1. The Catalog is effective only until the end of the effective period set forth in Catalog (the "Catalog Effective Term"). Unless the Company indicates otherwise, the Customer will be unable to make any orders from the Catalog after expiration of the Catalog Effective Term. This also applies to orders from any prior Catalog issued that are made before the expiration of the current Catalog Effective Term.

2. The Company will not be liable in any way to the Customer for any expenses or damages incurred by the Customer as a result of making an order from a Catalog whose Catalog Effective Term has expired.

Article 25 Intellectual Property

1. To the extent permitted by law, the Company gives no warranty that the Products shall not infringe the intellectual property rights of any third party.

2. The Customer acknowledges and agrees that it uses the Products at its own risk as regards infringement of third party intellectual property rights.

3. The Customer may not without the approval of the Company or intellectual property rights holder use any of the information provided in the Catalog beyond the scope of intellectual property rights (included, but not limited to copyright) and other applicable law.

Article 26 Confidentiality

Each party agrees and undertakes that it will keep confidential, and will not use for its own purposes nor without the prior written consent of the other party disclose to any third party, any information of a confidential nature (including trade secrets and information of commercial value), which may become known to such party from the other unless such information is public knowledge (other than by breach of this Article) or is required to be disclosed by a court of competent jurisdiction or government or competent authority.

Article 27 Miscellaneous clauses

1. Should individual provisions of the purchase contract or of these Terms and Conditions be void, the other provisions shall nevertheless remain in force.

2. The Customer may not assign or transfer any Contract to a third party except with the written consent of the Company.

3. Except as expressly stated in the Terms and Conditions to the contrary, all notices and other communications required or permitted to be given under the Terms and Conditions shall be in German and in writing and shall be delivered or transmitted to the intended recipient‘s registered office or principal place of business or such other address as either party may notify the other from time to time.

Article 28 Governing Law, Jurisdiction

All Contracts and these Terms and Conditions shall be governed by and construed in accordance with German law and each party agrees to submit to the exclusive jurisdiction of the courts having jurisdiction for MISUMI Europa GmbH. The Company shall have the right to bring a claim before a court at the Customer’s principal place of business or at its discretion before any other court being competent according to any national or international law. The UN Convention on the International Sale of Goods is hereby excluded.

Delivery times outside Germany:
The times mentioned here are for reference purposes and refer to the delivery times stated in working days in the catalogue (valid inside Germany only).

INFO: Delivery to destinations outside Germany may be longer due to customs procedures.
Notwithstanding our general terms of delivery (see AGB — general terms and conditions), other modes of dispatch may be used, depending on the size, weight and dimensions of the product in question.
For deliveries made by a forwarding company, the customer should have a forklift or elevating truck to receive the goods because the goods are delivered free loading ramp.

Please add the time mentioned in the table (according to your location) to the corresponding time in the catalogue.
The times are valid for economic centres in Europe approximately 98% of the cases.
In case you need an accurate delivery time for your delivery address, please contact your local service office.
